We have heard a great deal since our entrance in the war about the shortage of labor in certain factories, in the shipyards, and on the farm. That is undoubtedly true. I am more familiar with the farm situation, and I believe it is true as it applies to the farms of the country. Now, the question arises, Are we short the man power to obtain maximum agricultural and industrial production from the farms and factories of the Nation and at the same time maintain intact an army of two or three million soldiers? I am sure we are not—especially is this true if every able-bodied man works or is made to work. In this conclusion I am in accord with Secretary of Labor Wilson. He said January 9 of this year, "There is an ample supply of labor both for the Army and for industry, the problem is one of proper adjustment." Again, he said, "Of course the draft will interfere with industry to some extent, but we have 35,000,000 workers, of whom approximately 1,500,000 will be taken the first year of the war, less than the normal number of unemployed. Our problem, then, is one of readjustment to supply the demand for workers."

I am inclined to think that the Secretary of Labor is right, and that there is an ample supply of labor if it is properly readjusted. On January 3, six days before this statement of the Secretary of Labor was made public, I introduced a bill intended to aid in the readjustment of labor in this country. The bill is H. R. 8001, and the title states its purpose, as follows:

> Providing for the registration of all male persons of the United States between the ages of 16 and 60 years, both inclusive, for industrial and military service during the present war and for one year thereafter; to prevent idleness; for the assignment of all able-bodied male persons between the ages of 18 and 60 years, both inclusive, to labor in some industry, business, trade, or profession essential to the maintenance of the Military Establishment and necessary to the protection and welfare of the people of the United States, and for other purposes.

Sections 1 and 2 of this bill provide for the registration of all male persons between the ages of 16 and 60 years, both inclusive. These sections are copied almost verbatim from the draft law of May 18, 1917. The object of the registration provided for in these sections is to ascertain where the man power of the Nation is located and how it is employed. Information absolutely necessary before an intelligent readjustment of the labor of the country is possible. The information thus obtained is also necessary to enforce other sections of the bill. The records of this registration can also be used from which to draft men into the Army in event Congress changes the age limits for compulsory military service or in event Congress by law provides for universal military training.

Section 4 makes it the duty of every able-bodied male person between the ages of 18 and 60 years, both inclusive, to be regularly and continuously engaged or employed during the present war and for one year thereafter in some lawful and useful industry, trade, business, or profession, or in some public service. Idleness during this period is punishable as a crime.

Sections 5, 6, and 7 make provisions for listing essential industries in the order of their importance to the Military Establishment and also for listing nonessential industries, and empowers the President, in case of labor shortage in the essential industries, to draft laborers from the able-bodied male persons between the ages of 18 and 60, both inclusive, who are either idle or engaged or employed in the nonessential industries and to assign them to labor in the essential industries.

This, in brief, is the bill. Those of you who are interested can get a copy of the bill and study it in detail. The object and purpose of my bill is to give the Government the power to mobilize the man power of the Nation for industrial service necessary for the maintenance of the Military Establishment as well as for military service. It is simply the principle of compulsory military service applied to industrial service during the war. And why not? One service is just as essential as the other. The one is of no avail without the other. The bill proposes to require or compel every able-bodied man within the age limits to serve where his services shall be most effective in bringing about a successful termination of the war. Idlers and slackers at home are no better than are idlers and slackers in the Army, and should receive the same treatment. It is high time that the weary loafers and the well-to-do idlers go to work. If they do not, the wrath of the Nation will surely fall upon their heads. The principles of this bill will make us truly democratic and this democratic war will be carried to a successful conclusion in a truly democratic way. If the war is carried on in a broad democratic way, as this bill contemplates, we will not only conquer the enemy but we will conquer ourselves.

Criminal or regulatory laws are never enacted for the majority but for the minority, who do not appreciate or understand the

obligations and duties they owe to their fellows. So this bill, if enacted into law, will not affect or disturb in any way the vast majority of the people of this country, who are already regularly and continuously engaged or employed in useful and productive industries, such as the farmers, the miners, and others engaged in the many essential industries. The fundamental purpose of the bill is to make all the man power of the Nation useful in the prosecution of the war, and to induce—and if necessary to compel—every able-bodied man to contribute his might to the country's welfare. [Applause.]

Mr. SHALLENBERGER. Mr. Chairman, will the gentleman yield for a question?

Mr. RAMSEYER. Yes.

Mr. SHALLENBERGER. To whom does the gentleman propose to have the profits of the man's labor go—to the private individual?

Mr. RAMSEYER. The bill in detail provides that drafted laborers shall be paid the same compensation as other persons in the same industry doing similar work. I have not time to go into the details of the bill.

Mr. SHALLENBERGER. The gentleman made a comparison between drafting a man for military service for the Government and for industrial service. In the military service the man serves the Nation; in the industrial service he would serve the individual. Would the gentleman have the profit from the labor go to the Nation or to the individual?

Mr. RAMSEYER. In modern war the farmer is just as essential to victory as is the man in the line, and men should be required to serve wherever the Nation needs them.

Mr. SHALLENBERGER. If he is serving the Nation, but when he serves me as a farmer it is a different situation, is it not?

Mr. RAMSEYER. There is some difference, I admit.

Mr. SHALLENBERGER. Did not we fight a war in this country for four years over the question of denying to a man the profits of his own labor?

Mr. RAMSEYER. The bill designates the services to which men shall be assigned, and among the first are the industries of the Government. The bill contemplates that the idle and those in nonessential industries shall be assigned wherever needed.

Mr. SHALLENBERGER. If we should take these industries over, then I think the gentleman's bill would apply; but if we leave them in private hands, I would have to differ with him.

Mr. RAMSEYER. I am glad to know we agree in part.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. RAMSEYER. Yes.

Mr. LEVER. Mr. Chairman, the gentleman has made a very interesting statement. Has the gentleman considered the proposition of calling men into the Army, men engaged in the industries, agricultural, and other essential industries, and then furloughing them back to the industries, the continuance of their furloughs being conditioned upon their remaining in the industries, on the farm, for instance?

Mr. RAMSEYER. There is nothing in the bill that covers that. Of course, the question of furloughing a man from the Army, for instance, next spring, taking the farmer boys and sending them back to the farm to help in planting and in the harvest, if they are not needed overseas, I think is a matter for the Executive to handle. After a man once gets into the Army, then he is wholly under the control of the Commander in Chief.

Mr. LEVER. The thought I had in mind is this: Let us take a young man 25 years old, in good physical condition, except, perhaps, that he has lost a finger, which might give him exemption on account of physical disability. That man may be a very good farm hand. Is it quite right that he should be exempted from all services, or is it worth while to think of lowering the physical requirements, drafting them into the Army and then furloughing that type of man back to the industries?

Mr. RAMSEYER. It is not right to exempt any able-bodied man from rendering service to the country during the war? I am not undertaking to discuss the bill in detail, but I think the bill covers that situation.

Mr. LEVER. The point I am getting at is what kind of machinery are you going to develop that is going to do that thing. I agree with the gentleman's principle absolutely, and I have thought a good deal about it.

Mr. RAMSEYER. Sections 5 to 7 of the bill provide for the machinery, and in fact places it in the hands of and authorizes the President by order to use the same organization that he has for conscripting the Army, and such other agencies as may be available and appropriate to aid him in carrying out the provisions of the bill.

Mr. LEVER. If the gentleman will permit me one moment further, the gentleman understands, of course, that the disruption of labor has not come so much from the operation of the selective-draft law, because that has made comparatively small drains upon the labor supply, as it has come, as he knows, from other causes, one of the chief causes being that men have gone from the farm into industrial pursuits, which pay higher wages. For example, in my own immediate country many farmers left the products on the farm to waste while they went to the cantonment near by to work as carpenters. A good many of them left the State to go into the munition factory down here on the Potomac River. And that is true, I take it, all over the country.

Now, the gentleman's proposition is properly to adjust that situation by some method or other which the gentleman has worked out in the bill. I shall certainly read the bill with a great deal of pleasure.

Mr. LITTLE. The gentleman from Nebraska [Mr. SHALLENBERGER] suggested that the bill is well framed to meet the conditions industrially that the Government should take over. Does not the gentleman think perhaps, in view of the way the Government is stepping along in that direction it is about time to make some arrangement to meet that situation?

Mr. RAMSEYER. It not only applies to the industries the Government shall take over, but to other industries which are designated in section 6 of the bill.

Mr. DENISON. Will the gentleman yield?

Mr. RAMSEYER. Yes.

Mr. DENISON. I will ask the gentleman his opinion on this question, as to whether or not there is any right under the Constitution for the Government to make men work unless they are taken into the military service and be made part of the military force?

Mr. RAMSEYER. Oh, I have not thought so much of that. I think there is as much right there, inasmuch as this service is necessary for the maintenance of the Military Establishment, to make the men work to support that establishment as to make them serve in the Army.

Mr. DENISON. I will grant that is true, if taken into the military organization, but if he is still a private citizen has the Government the constitutional right under any circumstances to make him work, unless, of course, he was a prisoner?

Mr. RAMSEYER. That does not worry me. An able-bodied man has no more right to be idle than he has to steal.

Mr. SHALLENBERGER. What is the meaning of the words "involuntary servitude," unless it means a man working for another person against his will?

Mr. RAMSEYER. That very point was raised in the selective-draft law and decided by the Supreme Court in favor of the constitutionality of the law.

Mr. SHALLENBERGER. That is military service; I am speaking of industrial service.

Mr. RAMSEYER. I admit there is a difference, but not that such industrial service would be unconstitutional.

Mr. HULL of Iowa. Has the gentleman any idea of the number of idle men in this country?

Mr. RAMSEYER. Yes; an idea but no statistics except what is contained in the statement of the Secretary of Labor referred to. I will now take up the discussion of the food production.

FOOD PRODUCTION.

In this connection, I desire to make some observations with reference to the farming situation and outlook. We spend most of our time talking about the Army and Navy. These subjects are important, very important; but there is another subject more fundamental; that is, the production of an adequate amount of food. Without food, which is growing scarcer daily, our cause is lost. It is about time that Members of Congress and the people wake up to that fact, for it is the man behind the plow who keeps the man behind the gun. Listen to the authorities that I present to show you the seriousness of the food situation:

ROME, *January 21, 1918.*

"Food is the most important matter now before the allies," David Lubin, American representative in the International Institute of Agriculture, said to-day. He added: "It is useless to deceive ourselves. In view of the increasing consumption of food and decreasing production we shall be unable to feed our armies unless exceptional weather prevails this spring and unless extraordinary measures are applied. Europe's crops may be worse than last year's. The mobilization of women of the United States for farm work may be necessary."

This morning I received through the mail a memorial presented to the President by the Federal Board of Farm Organizations, which represents 2,000,000 farmers. Here are a few paragraphs of the memorial:

We know that the world is short of food. The crops now available are barely sufficient to meet the urgent need, and next year the world shortage is certain to be worse. Insufficient food supplies involve a most serious threat to the early and victorious conclusion of the war, for a starving people can not fight. Unless the farmers of the United States can fill the mouths of our own people and our allies, they will not be filled. Just how great the demand for American food will be we can not yet foretell, but we know already that a larger crop is absolutely necessary.

If food is to win the war, as we are assured on every side, the farmers of America must produce more food in 1918 than they did in 1917. But unless present conditions are radically changed, increased crops next year are impossible. Under existing conditions we can not equal the production of 1917, much less surpass it, and this for reasons over which the farmers have no control.

The American farmer does not ask to be relieved of any task or any burden which belongs to him. He asks for no class exemption, nor special consideration of any sort. The duty which the Nation and the times have laid upon him he desires to fulfill. But he can not make bricks without straw. The conditions which prevent increased production are national conditions, and only the National Government can remove them. It is the duty of the Nation to give the farmer a fair chance to succeed in raising the food the Nation needs, just as it is the duty of the farmer on his part to leave no furrow unturned.

A dispatch appearing recently in one of the great dailies of Iowa states:

Interviews with farmers in various parts of Iowa have revealed the fact that 10 per cent less corn will be raised this year in the Hawkeye State than in 1917, principally because of a lack of farm labor.

I do not wish to be understood as expressing my judgment that there will be less raised in Iowa this year than last. On this subject I have had some correspondence with county farm agents, chairmen of county councils of defense, and others. These gentlemen differ in their views as to the outlook for increased food production in Iowa, but most of them agree that the shortage of farm labor presents a serious situation.

Iowa is the leading corn-producing State in the Union. If less foodstuffs will be raised in Iowa this year, what can we expect from the rest of the country? Along this same line a certain publicity bureau on January 3 had this statement:

In the East the matter is being taken up, and the press of New York City is giving it prominent notice. Word has come from Connecticut that that State has been "positively combed clean" of laborers of every description, and thousands of valuable farms in that section of the country are lying idle as a consequence.

I could cite you further proofs along this line, but these are enough. It presents a situation that is appalling. There is no use to talk about winning this war if we do not produce more foodstuffs this year than we did last, and more next year than we do this year. If we do not increase our food production, we are going to be licked. We ought to quit wrangling about the creation of a war council and go to farming. We must dig a hole and bury politics until after the war and go to work. [Applause.] What the war needs right now more than a secretary of munitions is 1,000,000 and more additional farm hands. The farm hands will keep this country and the allied nations from starving, while the President already has more secretaries and councils than he can handle to advantage. The people are demanding that this Congress differentiate between essentials and nonessentials, and that we get busier in actions than in words.

What do we propose to do to increase the production of the farms? We can not pass it by. We must face and solve that problem or face defeat. Last spring the Department of Agriculture seriously proposed a plan to conscript the idlers and high-school boys of the cities to relieve the shortage of farm labor. Why the combination of idlers and high-school boys I never quite understood. But the plan is so utterly impractical that it never received serious consideration from anyone who ever saw or knows anything about a farm.

There is a certain group of college presidents and certain boards of financiers who are urging a change in our laws to permit the importation of Chinese coolies for farm labor To me such a plan, even though it might be practical, is unthinkable. The American farmers are patriotic and are willing to offer up their sons to die for their country's cause. But the American farmer is hardly in a frame of mind to receive into his home a Chinaman to take the place of a son who has gone to serve his country in the trenches. With that I pass up this plan as not worthy of further consideration.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. I yield the gentleman five additional minutes.

Mr. RAMSEYER. An examination of the 1910 census figures shows that the total farming population between the ages of 18 and 60 at the time was 9,304,700, of which there were farm owners 3,372,500, farm managers 55,600, farm tenants 2,051,400, and farm laborers 3,825,200. The Department of Agriculture estimates that at this time the number of retired farmers not engaged in any gainful occupation is 1,400,000, of which about one-half, or 700,000, probably are under 60 years of age. I think it is fair to presume that most of the 700,000 retired farmers under 60 years of age are physically able to render valuable farm service. There ought to be some way to induce or to compel them to render such service during the war.

Mr. LONDON. Will the gentleman yield?

Mr. RAMSEYER. I will.

Mr. LONDON. Now, is that the very fact which the gentleman has to establish—that the retired farmers are of an age which would permit them to do physical work? Are not these retired farmers of an age which would make it impossible for them to do hard physical work?

Mr RAMSEYER. No; I have just gotten through saying that half of the 1,400,000 are under 60 years of age, and the bill only applies to able-bodied male persons.

Mr. LONDON. Where does the gentleman get that figure?

Mr. RAMSEYER. From Secretary Houston.

Mr. LONDON. How does he get it?

Mr. RAMSEYER. I do not know. I have a letter in my pocket to that effect. Many of these men are around 40 and 50 years of age and physically as able as you or I.

It is also estimated that there are several million boys and young men not now engaged in farm work but who have had more or less farm experience. There is absolutely no use to attempt to place boys or men on the farms who have had no farm experience and who can not or do not want to adjust themselves to the social conditions of farm life. To get more farm production we must have men and boys of farm experience. Others would be a detriment rather than a benefit to farming operations. Only by liberal exemption of farm labor from military service, by enlisting the retired farmers, and by utilizing the men and boys of farm experience but who are now engaged in something else, can the shortage of farm labor be relieved and an increase of food production brought about.

I fully appreciate the difficulties of placing into effect a draft law for industrial service. However, whatever else we do, the male population within certain ages ought to be registered to give the Government needed information for the readjustment of labor. It would also have a good psychological effect, as it would tend to impress each person required to register of his duty to render useful service during the war. I am abidingly convinced that a law should be enacted at once making idleness a crime, which should apply with equal rigor against the well-to-do and the improvident alike. This country has before it a herculean task, which will require the united efforts of the manhood of the entire country. [Applause.]

I append herewith the following letter:

DEPARTMENT OF AGRICULTURE,
Washington, January 23, 1918.

Hon. C. W. RAMSEYER,
House of Representatives.

DEAR MR. RAMSEYER: I have your letter of January 14 inclosing a copy of H. R. 8901 and requesting information regarding the number of farm owners, tenants, farm laborers, and retired farmers.

So far as I am aware, there is no information available on these points later than the census of 1910. An examination of the 1910 census figures show that the total farming population between the ages of 18 and 60 at that time was 9,304,700, of which 3,372,500 were farm owners, 55,600 were managers, 2,051,400 were tenants, and 3,825,200 were farm laborers. The census reports do not give any information regarding the number of retired farmers. On the basis of farm surveys made in different parts of the country, it has been estimated that the number of retired farmers not engaged in any gainful occupation is approximately 1,400,000, of which about one-half, or 700,000, probably are under 60 years of age. The department has no information as to the number of male persons previously engaged in agriculture who are now employed in some other vocation not necessary to the maintenance of the Military Establishment.

The Department of Agriculture has been giving very active attention to the farm-labor problem. It recognizes that the situation is serious and has been doing, and is doing, everything in its power to furnish relief. The inclosed statement indicates some of our activities in this direction and suggests what seems to me to be the most promising lines of effort. As indicated in the statement, a farm-labor specialist has been stationed in nearly every State of the Union to cooperate with State and Federal agencies in dealing with the matter. The department also is working in very close harmony with the Department of Labor and especially with the various employment offices of that department located in different sections of the country. In order to ascertain the possible needs of farmers and to determine ways of meeting them, a systematic survey of the farm-labor situation will be made by the department before the beginning of the next crop season through its agents stationed in the various States and in cooperation with the Department of Labor and the State councils of defense.

Arrangements already have been made with 37 States to undertake such a survey. Farm-help specialists of the department, with the cooperation of the extension departments of the agricultural colleges and the field agents of the Bureau of Crop Estimates, will promptly tabulate the results, and the department will then have reliable information regarding the prospective labor needs on farms throughout the country.

It should be borne in mind that many of the disturbing factors of last year in the farm-labor situation have been eliminated, and therefore in some respects the problem may not be quite so acute another year. Naturally the disturbances are much more violent immediately after a great shock has been given the industrial system. This Nation had been organized on a peace basis. When it entered the war it was necessary not only to create vast additional facilities and machinery, but also to provide on an enormous scale for the operation of the new establishments and of those previously existing. Many shipyards had to be expanded and others had to be created. Large cantonments had to be built, and built quickly. In every direction there were urgent demands for great expansions. Furthermore, it was necessary to have an Army, and this necessarily caused additional labor drains and dislocations. In the haste of the first draft it was impossible to work out a satisfactory classification of labor with reference to the national needs.

The Army cantonments and many of the aviation fields and camps have now been completed and will not have to be duplicated. A part of the great industrial expansion has been accomplished. The new regulations promulgated by the War Department provide a system of classification of the men subject to the draft which contemplates the placing of skilled farm labor engaged in necessary agricultural enterprises in class 2, assistant or associate managers of necessary agricultural enterprises in class 3, and heads of necessary agricultural enter-

prises in class 4. The Secretary of War has asked Congress for authority to furlough soldiers of the National Army whenever the interests of the service or the national security and defense render it necessary or desirable during harvest and planting time, to enable them to assist in the agricultural production of the country. It is reasonable to suppose that, in view of these facts, many of the difficulties previously encountered will be removed or minimized. However, it is well to recognize that the situation will continue to be difficult and that a satisfactory solution will require the best thought of the Nation and the fullest and most complete cooperation of all agencies. The matter will continue to receive the earnest consideration not only of the Department of Agriculture but also of other branches of the Government, including especially the Department of Labor and the Council of National Defense.

Very truly, yours, D. F. HOUSTON,
Secretary.

Mr. LEE of Georgia. I yield 15 minutes to the gentleman from Alabama [Mr. BANKHEAD].

Mr. BANKHEAD. Mr. Chairman, I trust I will not be deemed either censorious or presumptious by taking this opportunity to present some observations upon one phase of the state of the war which, in my judgment, is entirely worthy of the earnest consideration of the entire membership of the House, and which challenges the real patriotism of America. I bespeak the indulgence of both sides of the Chamber. What I shall say will not offend any, but I trust may make some impression for fruitful thought upon both my Republican and Democratic colleagues.

The main thought is this: In the midst of and throughout this war, until it shall end in triumph for our arms, we owe it to the country and ourselves and to our cause to give to our Commander in Chief the full measure of sympathetic and helpful aid, comfort, and assistance, and, in addition thereto, to stand behind and back to the limit his policies, and to grant the adequate powers he asks us to grant. We are engaged in a life-and-death struggle with the most malignant form of centralized temporal power, and it might appear illogical and inconsistent to advocate the lodgment of such powers during the period of the war in our own Commander in Chief, but a correct and dispassionate analysis of both the psychology and logic of our necessities will refute and dispel such probable criticism. Because, by the fickle fortuity of the ballot the present Commander in Chief happens to be a member of my own political faith does not alter or modify in the least the inherent soundness of the philosophy sought to be impressed, nor should the natural inclination of the partisan in ordinary times to make capital out of the vulnerable mistakes or blunders of the opposition prevent that partisan in an hour like this from approaching the subject with a very high order of intellectual candor, and should not estop him from asking himself this question: "When the citadel of my country's security and life is assailed, within and without, by most formidable and dangerous adversaries, what can I do to help save it from destruction?" And I submit this proposition with the full knowledge that the present Executive has able and honorable opponents, both in the ranks of the opposition and within his own party.

But to revert to the main proposition. Ask any Member of this House to-day, "What, in the present posture of affairs, do you consider your paramount duty to your home people and the National Government?" and his instantaneous reply will be: "To do everything in my power, by vote, act, counsel, and effort, to bring this terrible war to a speedy and triumphant conclusion." If he does not make that answer, he has no adequate or commendable conception of his moral, political, or representative duty. Mark the matter of his answer—not a tithe or fragment of his possibilities, but everything that he can do. And surely one of the things we all can do is to remember that under our Constitution the President is, whether he ought to be or not, the one person clothed with the power and authority and directly charged with the responsibility of conducting our naval and military operations. The presumption is that for the time being he is the ablest and best equipped man in the country for such a trust; otherwise he would not have been commissioned by the Nation to assume it. The people of this country have said: "We call Woodrow Wilson up out of the multitude of his fellow citizens for this task," and the Constitution says: "Woodrow Wilson, I lay upon you as the elect of your people the great burden of leading and directing the operations and policies of this war, and therein fail not, for by my mandate you alone must answer for this terrible responsibility to your people and to posterity." It would have been the same edict had Charles E. Hughes been the present occupant of the White House. It will be the same in the future if—may Almighty God forbid it—we engage in war. It is our system, and it is a good system. It is so excellent in its conception and ideal administration that I invoke the adherence of Congress and the country to its profound desirability now and hereafter.

No measure of that responsibility is lodged upon the shoulders of Congress in its true significance. We have the exclusive power of declaring war, and we have the duty of raising moneys to carry it on, and the legislative function of furnishing the agencies and instrumentalities for its prosecution, but there our perogative ends, and when we attempt to go further we usurp a function not bestowed by warrant of the Constitution and occupy untenable and precarious ground.

The facts of history show how indispensable to military success is the bestowal or assumption of full and unquestioned authority, plenary and absolute, in one head and hand. What would have been the careers of Cæsar, Cromwell, Napoleon, or Alexander without it? And what dreary and dismal results where not reposed! I cite as an instance the lamentable debacle in Russia, where every newly liberated citizen held himself entitled to vote or act through a committee on questions of military movements and administrative policy. God save this Nation from accomplishments such as the Bolsheviki have achieved.

I do not mean to intimate that we should blindly close our eyes to the deficiencies and remediable mistakes or even blunders that may have been made by subalterns of the President to whom specific duties of equipment and preparation have been intrusted. To do so would be supine and stupid. But I submit to every thoughtful Member, that instead of using such examples as a pretext for intemperately arraigning our whole scheme and system, they can and should be used as things hereafter to be sedulously avoided, and thereby to perfect and strengthen our program of ultimate preparation.

Mr. DENISON. Will the gentleman yield?

Mr. BANKHEAD. My friend, I have only a very limited time, and I fear I can not yield.

I beg no man to withhold helpful, friendly, constructive criticism, but I beseech men high and low alike to refrain, for their country's sake, to stay the tongue of slander, intrigue, and mendacity.

But it will not aid us to say that all our war preparations have fallen down, or our initiative or organization are inherently faulty, for in addition to being untrue, such statements not only hearten the disloyal and seditious among us but terribly discourage our own patriotic citizens. We should rededicate ourselves to the cause of American solidarity and freedom; we should remember that every father and mother who has a son in the Army are not looking on their sacrifice as one of section or cult or party, but are sitting these winter nights in desolate homes, but with resolute hearts and heroic patience, awaiting the news of their boy's supreme sacrifice, if need be, in order that our Republic may live. Do not double their boy's jeopardy by divided and halting counsel and authority. And those men in the ranks—they care not for party quibble or personal spleen between those in authority, and it is nothing less than they should expect that all of us here in Washington should set them the inspiring example of national cohesion and an identical purpose. [Applause.]

Let me repeat, the great thing is to win this war at the earliest day. That happy day can only be delayed by discord and recrimination. It is of small concern to those who are making the master sacrifices of this tragic period as to who shall be Speaker of the next House of Representatives or what aspiring politician may have the bestowal of some sordid patronage. Speaking for myself alone, I would gladly surrender the political control of the House and the Senate, too, in the next election if I could thereby insure the saving of the lives of only a few of those gallant boys who are cheerfully offering their all to make men free and to save forever the peace and security of this Republic. [Applause.]

I fear that the end of this heart-sickening business of war may be a long way off. If so, our people must inevitably make sacrifices enough. Let them be not augmented by internal discord and malignant censure. Let us subordinate the whimsical and unprofitable and set our whole hearts upon the very desirable business of thrashing the eternal daylights out of the German Kaiser.

Remember, you northern men, what infinite anxiety and trouble the so-called copperheads gave Abraham Lincoln when he was dedicating his very soul to the task of saving the Union. Remember, all you men, from every State, that to-day the breed of the political copperhead is not extinct, and they are covertly seeking now to hamstring and hamper Woodrow Wilson, who is dedicating his very soul to the sublime task of saving civilization. [Applause.]

Mr. LEE of Georgia. Mr. Chairman, how much time has been consumed in general debate?

The CHAIRMAN. The gentleman from South Carolina [Mr. LEVER] has consumed 4 hours and 27 minutes, and the gentleman from Iowa [Mr. HAUGEN] 4 hours and 50 minutes.

Mr. LEE of Georgia. I yield to the gentleman from Mississippi [Mr. QUIN] 20 minutes.

Mr. QUIN. Mr. Chairman, what the gentleman from Alabama [Mr. BANKHEAD] said touching the loyalty we should show to our Commander in Chief, President Wilson, is indeed true, and I trust that the heart of every patriotic American will imbibe that same spirit.

This bill that is before the Congress now is not a war measure, and yet it constitutes the mudsills for the successful prosecution of this war. The agriculture of this country, the production of the fields, comes ahead of all, because no people can carry on a war unless they have full stomachs. Soldiers may have all the ordnance that the combined resources of the world may produce, they may have the finest cannon and musketry, cavalry, aeroplanes, and navy, but they would be bound to fail if they are not properly fed. They must have food.

The Agricultural Committee has brought forth a good bill for this coming fiscal year. The people of the United States of America are called upon not only to feed the people of this Republic and the soldiers of the United States but to provide food and provender for our allies in this great world conflict.

Labor has been taken from every field of activity in the United States. In all the industrial plants labor has been called to arms. From the fields devoted to the production of agricultural products young men have been called from the hoe and the plow to take up arms in defense of their country. Naturally there will be bound to be a smaller crop in 1918 than there was in 1917. The reason is apparent to all. Our land is no more productive this year than it was last and our labor is less. Where will the labor come from to produce the great corn crops that will be required? Where will that labor come from to produce the great wheat crops, all the food crops, and the cotton crops? Some people have an imaginary idea that you are going to get socialists and anarchists out of the cities to go to work out on the farms. You will never get one of those fellows from the cities to go to the farms and call in the hogs, take up the hoe, to get the mule out at daylight, and go to the field and plow. You are not going to get that type of men out in the country to split rails, build up fences, dig ditches, carry on farm operations. These city fellows do not know anything about farming. They can not even put gears on a horse or a mule, much less farm. It requires time, practical experience, and brains to be a farmer. The natural consequence is, my friends, that the farmers of this country, who work all day and part of the night, will not be able to get the great and abundant crops that the management of this war expects.

Then, it is incumbent on the Government to pursue the same activities in the same manner and in the same way, so far as money is concerned, to produce and conserve these farm products as the Departments of War and Navy have pursued in providing ordnance, equipment, and supplies to the soldiers and seamen who prosecute the war.

The Military Committee, of which I have the honor to be a member, does not talk in millions, like some of these other committees. Here sits Gov. SHALLENBERGER, of our committee, who knows that we are now talking about seven billions and eight billions, and the probability of going on up to $10,000,000,000 to provide the United States with clothing and armament for our soldiers in the field. I happen to be chairman of the subsistence committee, a subcommittee of the Military Committee. Do you know what subsistence means? It means that these soldiers must have provided for them clothing to wear and food to put in their stomachs. Naturally I consider where this food is to come from, knowing in my own congressional district, as I do, the scarcity of labor; that thousands of men have been called from the farm to go into the Army. I know this same condition exists in every congressional district in the United States.

It must give us all concern as to whether or not we will be able to produce the necessary food to feed our 104,000,000 people and feed our soldiers in the camps and on the battle fields and on the battleships, and our allies in Europe, who have their man power on the battle field and in the industrial factories producing armament to prosecute the war. Every man in the United States must recognize the fact that not only what we produce must be conserved but that every ounce of energy of the men, women, and children on the farm must be exerted to produce to the utmost capacity in every line of productivity the food and clothing for the people of this country, our soldiers, and our allies.

As it now stands we are almost on the verge of breaking ground to begin planting our crops in the South. Whether or not the Government activity will provide the dehydrating plants discussed here in order that all the vegetables may be conserved and the water extracted from Irish and sweet potatoes and all kinds of vegetables, so that these food crops can be carried through the fall and winter to take the place of the scarce substantials, I do not know, but I do know tin has become very scarce and there may not be a sufficient quantity of tin cans to can all the vegetables raised in the South and in the eastern portion of this Republic. It strikes me that it ought to be called to the attention of the Agricultural Department to ask them in this crisis to grant whatever amount of money is needed to conserve all the vegetables in this country so that in their dry state all food elements are intact, and in the winter months they may be put in the stomachs of the people. It occurs to me that the Agricultural Department, through its Bureau of Markets, would be able to see to it, now that the Government has control of the railroads of this country, that there is proper distribution of all perishable articles that come from the farms of this country, so that nothing could rot in transit, so that nothing would be on the road too long for lack of ice or because of overheating, which would destroy and make it useless for the human stomach. And that the Government could go further than that and lend its activities in getting the necessary fertilizers to the farmers to produce these vegetables, the corn and the wheat and the other food products, in order that we may not have that scarcity which seems to me impending in the food production of this country.

No doubt if this war continues another year there will be a rationing of our people. That time is going to come, and our people had just as well get prepared to put their stomachs on lighter rations morning, noon, and night. The patriotism is here. The people will be willing to do that, but can we call on our soldiers in the field to do on less in their stomachs? Then, the American Government should exert its whole influence in getting the necessary quantity of food produced from the fields of this country, and I believe our Government should look a long time before it takes too many of the young men from the farms and places them under the draft law into the Army. If there is a man that is essential, if there is a man indispensable to industry, it seems to me from what we see before us now, the farm worker, the farm manager, the producer of meat, the producer of corn, of vegetables, and of wheat is the most essential man in this Government to the successful prosecution of the war and the continuance of the different industries of our Republic.

Mr. SMITH of Michigan. Is it not true that the local draft boards can exempt these young men for agricultural purposes?

Mr. QUIN. I would say to the gentleman that under the orders of the Provost Marshal General the local boards are afraid that they would get in the penitentiary if they did that. Do you not know that all of the local boards in all of the rural communities of this country would love to do that very thing if they were not afraid of violating the law. I stated on the floor of this House when they had the draft bill up that the War Department did not intend to exempt the farmers. When some of you people were killing our voluntary bill and putting the conscript law on the books, I quoted what the Secretary of War said before our committee. I knew they were not going to exempt the farmers of the country. I endeavored to get that done in the committee. I saw it was necessary to leave the farmers on the farms to produce food. The War Department said they could not do it and be fair under all the principles of the law.

Apparently inspired editorial articles were sent out all over the country that the farmers were going to be exempted, and for that reason many farmers urged the passage of the bill, because it was going to exempt the farmers. Well, however that may be, it is water that has passed the wheel. We have the law on the books, in many respects a fine law, and all must obey it and live up to it, and the people are going to do that unhesitatingly everywhere; but now is the time for the War Department to realize that the farms must not have their labor taken away from them. What is the use of our committee putting up $8,000,000,000 to carry on this war, with all of these things belching forth fire and lead and brimstone and hell and damnation on the Germans, unless you are going to have the farmers of the country with the necessary labor and ability produce the food to feed those soldiers and keep up our people and our allies?

Mr. SHALLENBERGER. Mr. Chairman, will the gentleman yield?

Mr. QUIN. Yes.

Mr. SHALLENBERGER. I think the gentleman is borne out by the facts of experience that every nation that goes into war finds it is impossible to fight a war and at the same time increase their food and agricultural production. So to look the matter fairly in the face, I agree with the gentleman that we must prepare to save and ration and come to a lower consumption, rather than hope to meet this thing by an increased production as we go on. No nation has ever achieved that.

Mr. JACOWAY. Mr. Chairman, will the gentleman from Mississippi yield until I ask the gentleman from Nebraska a question?

Mr. QUIN. Yes.

Mr. JACOWAY. I would like to ask the gentleman if he thinks it would materially lessen our chance of winning this war if furloughs could be extended to men who are now in the Army who have been taken from the farms, to go back and raise the crop for this year?

Mr. SHALLENBERGER. I think it would be the proper thing to furlough them back to the farms.

Mr. QUIN. I desire to say that every man who realizes the necessity of the production of food thinks the same thing. Surely the Government would be served best if the farmers now doing soldier duty were furloughed back to their farms to make a crop of foodstuffs this year and that no more farmers be drafted during the year at least. But you can not get that notion into the War Department, and I can see why the War Department hesitates to do it, because they say, "We will demoralize the Army, and we can not afford to have the Army disrupted right here when they are crying for us to get trained soldiers into France." But we can keep them from taking any more men from the fields at this time if the War Department can ever see this matter as I do. We must have food just as much as we must have guns and ammunition.

Mr. SLOAN. Will the gentleman yield?

Mr. QUIN. I will.

Mr. SLOAN. Is it more difficult to get an impression of that kind into the War Department than some others? The gentlemen say it is difficult to get that into the War Department.

Mr. QUIN. They are the ones who have the drafting of these men. Do you know we have on the statute books the draft law that allows them to exempt every man from any essential or indispensable place? As I see, the exigencies of the occasion are arising where it is necessary under the very terms of that bill to keep this indispensable and essential labor on the farm. What foolishness it looks to me to take a man from a farm who can produce thousands of bushels of corn and great droves of hogs and cattle, to take him from the farm and put him in the Army to serve as a private which you could get from any class that produces nothing of material aid for the Government in this war. The Government is taking from the farm able-bodied young white men who are producing food, the very thing we must have to properly carry on this war. It seems to me that the War Department ought to realize the necessity of what I suggest as to leaving these powers on the farms; and how can it realize it unless the question is agitated on the floor of Congress? Some people say it is not fair to leave these farmers back home and take somebody else. It is not altogether a question of fairness; it is a question of absolute necessity and what is best for the Government in this crisis, and so it looks to me that farmers should not be taken into the Army now.

Mr. MORGAN rose.

The CHAIRMAN. Does the gentleman yield to the gentleman from Oklahoma?

Mr. QUIN. I can not yield now. Consider the men producing the ammunition in these factories, and you know it will not do to take all of those factory workers who are producing our cartridges, our artillery, our rifles, and our powder. Is the rifle, is the cannon, is the artillery of any more importance than food? If we were to have a food famine in this country, like the coal famine in the eastern portion of this Republic here in the last five weeks, what do you think our people would do? They would, when they get hungry, when they get into desperate straits, act like wild people. Hunger will drive the best people to desperation, as when they broke in all those show windows and breadbasket places in New York City. That desperation would run rampant from one end of this Republic to the other. It would be the case, because people grow desperate when they get hungry for a long time, and if you have a famine, how could the war continue? How could you prosecute it if people at home and abroad are crying for meat and bread? If God sends plenty of rain and good snows on our farms, and the farmers and their wives and children work with all of their energy, we can not expect to have as much food produced as we will need. Too many farmers are in the Army, and too many have gone into the factories.

The CHAIRMAN. The time of the gentleman has expired.

Mr. QUIN. I thank you, gentlemen. [Applause.]

Mr. RAMSEYER. Mr. Chairman, I ask unanimous consent to extend and revise my remarks.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. CONNELLY of Kansas. Mr. Chairman, I ask unanimous consent to extend my remarks.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. GRAY of Alabama. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. HAUGEN. Mr. Chairman, I yield 15 minutes to the gentleman from Pennsylvania [Mr. ROBBINS].

Mr. ROBBINS. Mr. Chairman, I shall not devote the time given to me to a strict discussion of this bill, because it has already been analyzed and discussed very extensively and very ably by the members of the committee and others.

There is, however, passing over the United States at the present time a wave of dissatisfaction with the management of the war by the administration. The immediate cause of this outburst of public opinion was the speech made by Senator CHAMBERLAIN, chairman of the Military Committee of the Senate, and he by reason of his position is supposed to know more about the conditions of the Army and Navy and the deficiencies in the management of the war, if any exist, than any other man in Congress.

At a public dinner given in his honor last week in New York he made this declaration:

> The Military Establishment of America has fallen down. There is no use to be optimistic about a thing that does not exist. It has almost stopped functioning because of inefficiency in every bureau and department.

This statement from a Democratic Senator who occupies the most prominent position in the Senate, so far as the management of the war is concerned, is startling, and it has shocked the American people. It was of sufficient importance to draw from the President a prepared statement in answer and denial, in which he states:

> Senator CHAMBERLAIN'S statement as to the present inaction and ineffectiveness of the Government is an astonishing and absolutely unjustifiable distortion of the truth.

Thus we have the issue between the Executive and a leading Democratic Senator as to the management of this war.

There has been no opposition in Congress from the Republican Party, or any considerable number of it, as to the management of the war by the President.

Personally I have voted for every measure the administration asked or desired in the prosecution of the war against Germany and have unhesitatingly supported the administration and the President in every effort looking toward that end, and it is my plan and purpose to continue to support the administration most earnestly in all war legislation until the war is ended and American arms victorious. [Applause.]

But the Senate Committee on Military Affairs has recently investigated the conditions in the cantonments, of the troops in France; and of the various inactivities of the War Department; and, while this testimony has not been printed and I am informed, will not be published in full, but only in part, yet the press reports have shown that the troops in the field are without sufficient clothing; that the large death list from pneumonia, measles, and mumps is largely the result of undue exposure in overcrowded tents and incomplete hospitals; that hospitals are in some cases without heat or water or toilet facilities; that the troops are without sufficient guns; and that our Army in France is entirely without ordnance of our own make or providing. This testimony, so far as it has been printed in the public press, has been supplemented by the speeches and statements of the 10 Members of this Congress who have visited the battle front in France and Italy; and they have stated with unanimity and fierce emphasis that our troops in France are not properly protected by cannon, and to send them into the trenches now is to simply send them into a slaughter pen. We were compelled to buy clothing from England and guns and ordnance from France. With these facts before us, the question that confronts every Member of Congress is, Is it right to sit still and remain quiet and simply say that the responsibility of fighting this war is on the President? While that is true, that therefore Congress may remain silent and allow these conditions to continue, or are we not rather duty bound as a part of the Government and responsible to the people, at least for all legislation affecting the war, now, by constructive suggestion, by high patriotic advice, to aid in every way we can the administration in bettering these conditions and in overcoming these and other difficulties and inefficiencies that are now hindering and delaying our war preparations?

No man ought to be characterized as lacking in patriotism or ought to be charged with playing politics or be accused of unfair criticism of the administration when he seeks in good faith to make suggestions that will, he believes, overcome existing failures or give advice that will lead to ultimate success and bring about the complete overthrow of German militarism. No one appreciates, I think, more than I do the magnitude of this war and the rapid expansion of our Military Establishment. Fifteen years' service in the National Guard of Pennsylvania, part of which time as a private soldier,

and finally in the capacity of commissary general of the State, together with my service in the United States Army, covering the entire period of duration of the Spanish-American War, has given me some knowledge of military affairs.

Mr. SLOAN. Mr. Chairman, will the gentleman yield right there?

Mr. ROBBINS. Yes.

Mr. SLOAN. Just touching the question of criticism. Is it not a fact, recognized in education, literature, and politics that criticism is more wholesome and contributes more to good and betterment than praise?

Mr. ROBBINS. I think fair criticism, given in good faith, does. That is as far as I am going to go. Yet I believe the present management of the war lacks coordination; lacks unity of purpose; lacks harmony of action; and above all there is inefficiency in the execution of plans that has produced startling failures in the War Department. Not every plan has failed by any means, not every officer is incompetent, but there are too many failures.

It is true, under our form of government, the President of the United States is the constitutional head of the Nation and the Commander in Chief of our Army and Navy. Congress can not legally interfere with the management or conduct of the war. No Congressman or body of Congressmen, and certainly no party, in Congress wishes to interfere, but there is a widespread feeling in Congress and throughout the country that having voted ungrudgingly and quickly unprecedented large sums of money to the administration to be used in preparing this Nation for war, that Congress ought to at least be permitted to know and be allowed to act with the administration in a broad, high-minded, nonpartisan, patriotic way, for the purpose of obtaining results from the expenditure of this money.

Personally I believe the President, when war was thrust upon us, should have adopted the plan for the war which has proven successful in France, England, and Italy, by organizing a nonpartisan Cabinet.

When Mr. Lincoln became President of the United States, with rebellion threatening the Nation, he wisely selected a nonpartisan Cabinet. The Secretary of State was William H. Seward, of New York, a Whig; Secretary of the Treasury Salmon P. Chase, of Ohio, was a Democrat; Secretary of War Simon Cameron, of Pennsylvania, was a Democrat, succeeded by Edward M. Stanton, of Ohio, a Democrat; Secretary of the Interior Caleb B. Smith, of Indiana, was a Democrat; Secretary of Navy Gideon Welles, Connecticut, was a Democrat; Postmaster General Montgomery Blair, of Maryland, was a Republican, formerly a Whig; Attorney General Edward Bates, of Missouri, was a Whig. Judge Davis said of this Cabinet:

> Lincoln's original design was to appoint Democrats and Republicans alike to office. He carried this theory so far that the radical Republicans regarded the make-up as a "disgraceful surrender to the South," while men of less extreme views saw with some alarm that he called to his advisory council four ex-Democrats and only three ex-Whigs, a criticism which he met by saying that he himself was an "Old-Line Whig" and would be there to make the parties even.

This plan of Mr. Lincoln worked out admirably; it drew to the support of the war all political parties. It became a national war, not a war in which one party is entirely excluded from the active management, and the Cabinet then actually took a part in executive action, with all parties represented in the Cabinet. All our people felt that they were represented, and the war soon became a great national war.

During the recess of Congress I made many speeches in my district and adjacent parts of Pennsylvania upholding vigorously the administration, and advocating most strenuously the prosecution of this just and righteous war to a successful termination.

The situation now demands of every citizen the highest patriotic service that he can render, whether in official life or out of it. We must all be Americans, we must all rise to the highest plane of patriotic devotion and unselfish and unhesitating, vigorous service, and do everything we can to assist the administration in the crisis that confronts us.

It does seem that the organization of the War Department is not working smoothly. The charges made appear to be undeniable, that there is lack of coordination between the purchasing departments of the Army, that they have been bidding against each other until prices have been advanced and industries disorganized. The first shipbuilding organization has gone to pieces. There has been an attempt to reorganize it, with what success is not yet known. It is admitted on all hands that it is away behind with its work and its accomplishments are practically very little up to this time. This can easily be explained by the confusion that seems to prevail in that department of the Government. Let me give a concrete case in point. A large industry in my district that manufactures valves, brass stopcocks, and fittings for the engines of these ships which the Shipping Board are to build has by the Fuel Director been directed to stop all operations to save fuel. How are these ships to be built and completed when the Fuel Director will not permit the manufacture of the necessary fittings required to finish them? This company is, moreover, subject to a penalty if they do not complete the work in a given time. Yet the Fuel Director, disregarding this, prevents them from working. This concern, it seems, is going to get it both coming and going. If it does not make the engine fittings, the ships can not be built and it will be compelled to pay a penalty; if it works it will be fined by the Fuel Administration.

There are seven or more such purchasing departments for the Army, hence there necessarily is overlapping of jurisdiction, competitive bidding in the market, confusion, and delay. No private corporation of much less magnitude than the United States Government for one moment would tolerate such confusion and inefficiency. To point this out is not treason against the Government nor disloyalty to the President, but it is merely a suggestion seeking to draw attention to an existing glaring evil with the hope that it may be remedied. I might present and analyze other bureaus of the War Department and show that this inefficiency seems to prevail to an alarming extent throughout some of its other branches.

Under the act of Congress providing for the national defense there has been organized in connection with the War Department about 150 committees. These are known as the $1 a year men, and these include some of the most efficient men in the country, but they find themselves without any power, and they have in a great many instances quit, and the usefulness of most of the others seems to be at a standstill.

The Republican Members of Congress in conference in the face of this crisis passed a resolution, not condemning the President, not proposing to interfere with the President, but, profiting by the experience of Great Britain and France, as we have a right to profit from their experience, which has been sad and expensive to them, respectfully suggesting to the President the propriety of establishing a bureau of munitions.

This suggestion is made from the highest patriotic impulse and motive. It springs from the hope that the President may turn to the example of Mr. Lincoln, and under this new authority, if given to him by Congress, organize a bipartisan war bureau of the biggest men in the Nation regardless of politics, who shall act under him and aid and help him in more definitely organizing and preparing this Nation to fight Germany and bring quickly to the relief of our hard-pressed allies a completely equipped and efficiently organized military force.

This proposition is constructive. It is in aid of the President; it takes away none of his powers, but it enlarges his authority and enables him to call in the greatest talent in the country in any special line that he may deem proper and use it. This bureau, appointed and selected by the President, will be under his direct control and supervision and responsible to him alone. By means of it he can lift from his own shoulders some of the burdens that doubtless oppress him. By constantly advising with such board that unity of purpose, that effectiveness of action and completeness of accomplishment will be brought about that is not now possible in the preparation for and management of this great war.

Indeed, this course of fair public discussion and suggestion is in complete accord with the principles laid down for our guidance by the President in such cases. The Boston Transcript recently published the following extract from Woodrow Wilson's (now President) work on "Congressional Government":

> Unless Congress have and use every means of acquainting itself with the acts and disposition of the administrative agents of the Government the country must be helpless to learn how it is being served, and unless Congress both scrutinize these things and sift them by every form of discussion the country must remain in embarrassing and crippling ignorance of every force which it is most important that it should understand and direct.
>
> The informing function of Congress should be specially preferred even to its legislative function. The argument is not only that the discussed and interrogated administration is the only pure and efficient administration, but more than that that the only well self-governing people is that people which discusses and interrogates its administration. * * *
>
> It is the principle upon which I shall act and upon which I hope every upright and faithful servant of the people in Congress will act.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. ROBBINS. I ask for two minutes more.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman two minutes more.

Mr. ROBBINS. If this was good doctrine when the President was a professor at Princeton University teaching the science of government, it ought to be good now in practice.

Let us rise to the occasion. Let it not be said that this is a political move or partisan action. It is entirely American, it is wholly patriotic, and it is purely loyal. Mr. Chairman, when the casualties begin to come back from the front the mothers and widows of Americans will accept no excuse if it should appear that these men have been sacrificed unduly by reason of lack of preparation, even in the minutest detail.

The undertaking before us is of such tremendous magnitude that we must throw aside all our personal feelings, our personal affiliations, our personal comfort, and our personal fortunes and make one grand united effort to quickly win this war for freedom and for America. The course above advocated will certainly, I firmly believe, bring about such result, and I submit it for the respectful consideration of the President and of Congress. [Applause.]

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Missouri [Mr. DICKINSON].

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. DICKINSON. Mr. Chairman, I desire to discuss some features of this Agricultural bill, and for that purpose I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield to my friend from Texas, Mr. BLANTON.

The CHAIRMAN. The gentleman from Texas is recognized.

Mr. BLANTON. Mr. Chairman, I likewise want to discuss some of the features of the bill, and I ask unanimous consent to extend my remarks generally.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Georgia [Mr. LARSEN].

The CHAIRMAN. The gentleman from Georgia is recognized.

Mr. LARSEN. Mr. Chairman, I do not intend to make a speech at this time, but I rise to state that I desire to express my views on this bill, and ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, how does the time stand?

The CHAIRMAN. The gentleman from South Carolina [Mr. LEVER] has consumed 4 hours and 55 minutes. The gentleman from Iowa [Mr. HAUGEN] has consumed four hours and seven minutes.

Mr. LEVER. I will say to the gentleman from Iowa that I have only one more request for time on this side. How many has the gentleman?

Mr. HAUGEN. I have three more that I have promised and would like to accommodate.

Mr. LEVER. Very well. I will ask the gentleman from Iowa to use some of his time now. I will use mine later.

Mr. HAUGEN. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. WALDOW].

The CHAIRMAN. The gentleman from New York is recognized for five minutes.

Mr. WALDOW. Mr. Chairman, for a Member of Congress to launch an attack upon the executive or administrative branch of this Government in the midst of the greatest war the world has ever known is assuming an enormous responsibility, and on the other hand to accept without question conditions entailing tremendous consequences is to accept an equally grave responsibility.

I will not attempt to criticize to any great extent any of the executives or their departments, but I confess to a belief that there is the gravest necessity for immediate reorganization in many of our present executive and administrative departments. The decision taken by the Fuel Administrator proclaiming a compulsory suspension of business was a drastic decision and can only be justified by the urgent necessity of relieving railroad congestion—the securing of coal for ships in our ports, and the individual need for coal throughout the northeastern section of this country. That the conditions which have led to the present state of things should never have been permitted to occur may be admitted without question. I believe such an order would have been unnecessary if better judgment and foresight had been used three or four months ago when transportation upon our railroads and rivers was not handicapped by ice and snow. If that order and the more recent one of an embargo upon freight will relieve the present situation and prevent a food and fuel famine in this country this winter, I believe that their autocratic demands upon the industrial institutions and the people of this country will be a justification for their issuance. The cost in dollars and individual sacrifice of that order and that embargo I know will be tremendous, but if we prevent a coal and food famine and are able by virtue of this experience to prevent a repetition in the future of this present critical condition I believe the experience will be worth the price the American people have had to pay.

There can be no question that moments will arrive during this great war when heroic remedies become conservative policy by reason of the very fact that they are necessary to prevent more radical or perhaps disastrous consequences.

Mr. Chairman, this bill carries an appropriation of about $26,000,000. This sum fades into insignificance in comparison with the billions that will be necessary to be raised by bonds and taxation and appropriated for war purposes. I hope the Members of this House will in the near future present a new revenue bill to the country that will distribute the burden of taxation in a more just and equitable manner than the one now in operation. I am very candid in stating that unless this course is pursued many of the large industrial concerns in my State and city will be forced into bankruptcy.

I am interested not so much with the past as I am with the future. I am gravely disturbed with the business conditions and their present outlook in this country, and when the business of this country is violently disturbed and demoralized every man, woman, and child's personal welfare is at stake.

I refer particularly to the assumption and statement of some Government officials that in order to win this war we will be compelled to abandon all business known as nonessential. I sincerely hope that the executive department of this Government will not be in haste to act, and that they will investigate from every possible angle and point of view before issuing a proclamation upon essential and nonessential business undertakings—and if nonessential is going to be interpreted to exclude everything except that which is really a part of our war machine, then I predict the greatest financial panic and disaster and the greatest suffering for our citizens that this country has ever known.

The business interest and the people of this country are in favor of a curtailment of the use and the restricting of the manufacturing of the real luxuries of life. Most of us are practicing economy, which I hope will become a habit, for that will enable us to meet after the war industrial conditions without experiencing deprivations and financial distress, and this saving habit will assist materially in the floating of new bond issues and future Red Cross contributions that are really essential for the winning of this war.

Mr. Chairman, American business and American business men realize that the present predicament of commerce and industry is a concrete demonstration of the fact that business as usual is impossible when our Nation is at war. The fact that our industrial organization is one long series of interlocking gears must be taken into consideration when the breaking of a single cog is apt to be the means of stopping industrial cooperation of our entire industrial machine. This, I believe, will be vital not only to a successful prosecution of our war but to the future self-preservation of our business, our citizens, and our Nation. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. MCFADDEN].

The CHAIRMAN. The gentleman from Pennsylvania is recognized for 10 minutes.

Mr. MCFADDEN. Mr. Chairman, I am not going to speak on this bill, but on another subject that is equally as important as this bill at the present time.

This is an industrial war. The greatest financial and industrial organization and the biggest brains that the country possesses are what is needed, and needed now, for to-morrow may be too late. I am wondering whether in the administering of the legislation already enacted recently—legislation said to be necessary to win the war—we have not, in the machinery created, provided a theoretical system which is proving a failure. In other words, are we not now in this the country's greatest crisis living in a theorist's paradise?

In support of that argument I may say that I am receiving constantly letters respecting the situation referred to. I quote from one the following:

The President's statement contained in to-day's papers can be construed as nothing less than a demand for autocratic powers.

His demand that he be allowed to conduct the war without regard to the wishes of Congress, or the people as expressed by Congress, is a contradiction to the public rights as guaranteed by the Constitution.

As between the President and the Constitution, I stand by the Constitution.

It is intolerable that this country be under the rule of the President under the terms which he indicates.

The Garfield lockout edict is but the beginning of many such measures which would follow.

It is distressing to oppose the President. It is distressing to cause any additional delay of anything tending to further prosecution of the war, but in this instance our rights are at stake, and I call upon you as the Representative in Congress from this district to fight for our rights.

I want to quote from another letter from a constituent. I read:

I am one of your constituents from whom you do not hear very frequently, the last occasion being at the time war was declared on Germany, when I asked for your vote in favor of the declaration. The events of the last few weeks, culminating in Dr. Garfield's order closing all the factories and the President's defense of his program and of Secretary Baker, have convinced me that we are now confronted by a crisis no less real than that of last April; that if affairs are allowed to drift on in the direction they have taken we shall become so hopelessly entangled that we shall be in a fair way to lose the war we are righteously waging, not for want of courageous men or material resources but because the Nation's most effective weapon—the executive and administrative ability of her most capable business men and engineers in private industries—is not being directly utilized in cutting away the antiquated and needless complications of established institutions so as to put them on an effective war basis and in building up new organizations when they are necessary. It is true that business men are called upon to advise and suggest, but they are not appointed to the places of power and authority, and their best efforts are thus nullified.

It is needless to recount the results of the administration's past policy in the matter of appointments to anyone who has been in touch with national affairs as you have. The pitiable inability to understand the relation of government to business, the woeful lack of comprehension of their own jobs, displayed by Secretary Baker and Fuel Administrator Dr. Garfield before the Senate committees are too evident to need pointing out. We do not expect that every man appointed will prove to be ideal for his place, but we have a right to expect that the selection shall be made with some regard for previous experience and probable fitness for his duties, and that when incompetence has been clearly shown, the man who has failed shall be speedily replaced.

The people of this country, no less than those of France and England, are ready and glad to make any sacrifice that will contribute to the success of our cause, but our temper is fast changing, because we feel that much is being required that is nothing less than camouflage for some one's failure to handle his job, and in view of this unmistakable change, I believe that there should be a corresponding change in the attitude of Congress from one of unquestioning, almost blind acquiescence in every request made by the administration, to one of insistence upon a businesslike use of the unprecedented powers already conferred.

This serious situation as regards coal is caused primarily by the failure of the administration to fix, in the first instance, a fair and equitable price for the coal at the mines, and then by not having a competent business man with knowledge of the subject to administer the department. The railroad situation was caused by interference on the part of the Government with the technical business of running a railroad, and, in the second place, by a combination between the two departments—fuel and railroad—and the fact that the industries were speeded up and exceeded the ability of the railroads to handle the increased business under the restrictions imposed and the insistence on the part of department heads in the War Department upon issuing priority orders for goods not immediately needed, together with not sufficient coordination of these heads. That is responsible for this serious breakdown.

I want to protest against a policy that would close industries, whether it be by embargo, proclamations from the Railroad Administrator, or the Fuel Administrator, or by the manipulation of the Federal reserve banks or other banks refusing loans to industry, or in any other way restricting the full operation of the industries of the country, first, to furnish the materials necessary for the Government to win the war, and, second, to furnish employment affording a livelihood to the great mass of people who depend on their favorable employment for their existence.

We need the full cooperation of all of the industries of this country, and if we do not get that our system is going to break down.

To my mind it is a most serious situation that confronts us. Some people say, "Shut down the manufacture of nonessentials." I do not know what nonessentials are. I wish somebody would explain to me what are nonessentials. We certainly must keep industry going to the extent of supplying the things that are necessary for the Government to win this war; and, secondly, we must keep the network of industries going to supply employment to men who are engaged in other production, who must live and by their work support their families, or else we will have a more serious condition internally than might be brought about by the war. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. RANDALL].

Mr. RANDALL. Mr. Chairman, the consideration of this great bill, the Agricultural appropriation bill, may well consume four or five days of time. In times of peace agriculture is the most important question of mankind. In time of war agriculture rises higher than the military, naval, or diplomatic affairs of a nation. Agriculture spells life or death for the people of a nation and of the world.

Just now we are encouraging increased production, and in many ways we are urging conservation of our products—of food and fuel.

Some months ago the distinguished chairman of the Committee on Agriculture brought before this House a measure designed to conserve food supplies by giving the Food Administration power to save the grains, sugar, and fruits wasted in the manufacture of beer and wine. That act has now been on the statute books for months.

In spite of that fact, Mr. Chairman, I hold here in my hand a letter signed by Mr. Hoover, the Food Administrator, in which he admits that he is permitting the destruction of 42,000,000 bushels of barley annually in the manufacture of beer. He says nothing about the 2,000,000 bushels of rice, the 10,000,000 bushels of corn, and the millions of pounds of sugar which go into the manufacture of beer, not whisky. All of this after the 30 per cent reduction recently ordered in production.

I ask the distinguished chairman of this committee, when this barley alone will make four million 1-pound loaves of bread daily, why his committee does not bring in an amendment to his bill making it compulsory upon the Food Administration to save this food?

And while we are speaking of the food wasted by brewers, let me remind you that the brewers are adding to the problems of the Fuel Administrator also. It takes a pound of coal to make a pint of beer.

Why, Mr. Chairman, the brewers of the United States use three and one-half times as much coal as all the bakeries do, nearly six times as much coal as all the printers and publishers, nine times as much as the manufacturers of boots and shoes, and twenty times as much as the manufacturers of men's clothing.

And, Mr. Chairman, the Director General of Railroads finds on his tracks blocking the way of the food trains the fuel trains for homes and manufacturers, the munition trains, and the troop trains bearing our boys toward the battle front—literally thousands of cars of coal tagged to breweries and other thousands of cars of beer tagged back again.

Mr. Chairman, "What fools we mortals be!"

I ask unanimous consent to insert in the RECORD a statement from the census report of 1910 showing the amount of fuel used by brewers in the United States, and so forth.

The CHAIRMAN. The gentleman from California asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

"BREWERS IN THE UNITED STATES USE OVER 3,000,000 TONS OF COAL.

"The latest authentic figures for the amount of coal used by the brewers in the production of malt liquor in the United States are given in the Government census reports for 1910, Volume VIII, page 363, as follows:

	Tons.
Anthracite	554,629
Bituminous	2,424,798
Coke	11,530
Total	2,990,357

"This equals 128,000 carloads of 25 tons each.

"In the year ending June 30, 1909, the production of malt liquors in the United States was 56,364,360 barrels. In 1917 the production was 60,729,509 barrels, an increase of 7.7 per cent over 1909. Assuming that there would be a proportionate increase in the amount of coal used, an addition of 7.7 per cent to the 2,990,357 tons used in 1909 gives 3,220,000 tons as the approximate amount used in 1917.

"BREWERS IN MASSACHUSETTS USE OVER 80,000 TONS OF COAL A YEAR.

"According to the same census report, the brewers of Massachusetts used, in the year 1909, 76,231 tons of coal. That year they produced 2,043,018 barrels of beer. In 1916 they produced 2,450,411 barrels, an increase of 19.9 per cent. Assuming a proportionate increase in coal used, gives the amount of coal used by the brewers in 1916 as approximately 91,400 tons.

"BREWERS USE MUCH MORE COAL THAN THE BAKERS.

"The real significance of the amount of coal used by the brewers, however, is better understood when taken in connection with the amount used by other leading industries in the United

States. On page 373 of Volume VIII of the census report for 1910 are given the following statistics:

Industry.	Cost of fuel and rent of power.	Total coal used.
		Tons.
Boots and shoes	$1,847,885	332,758
Bread and baked goods	7,357,847	829,526
Clothing, men's	2,240,019	146,126
Printing and publishing	7,601,152	506,525
Liquors, malt	8,570,892	2,990,357
Liquors, distilled	1,500,049	841,410

"The above figures from the census reports reveal the fact that the brewers use three and one-half times as much coal as the bakers, nearly six times as much as the printers and publishers, nine times as much as the manufacturers of boots and shoes, and twenty times as much as the manufacturers of men's clothing.

"As the total cost of power and fuel for the various industries does not show the same ratio as the amounts of coal used, it is clear that some industries use more electric power or water power than others. It is significant, however, that the total cost of the power and fuel for the production of malt liquors is more than for the production of bread and baked goods, and over four and one-half times that for the manufacture of boots and shoes.

"Shall we be more tender with the profits of the brewers than with the lives of our sons?

"BREWERS OF MASSACHUSETTS USE THOUSANDS OF TONS OF COAL BUT EMPLOY FEW MEN.

"The following statistics, taken from the Massachusetts Supplement of the last United States census report (1910, p. 680, and Vol. VIII, p. 349), are very significant during these days of coal shortage:

Statistics of Massachusetts manufactures.

Industry.	Number establishments.	Capital.	Persons employed.	Total horsepower.	Total coal used in tons.
Boots and shoes	762	$90,243,000	90,048	35,051	102,193
Bread and baked products	282	12,752,000	9,755	4,316	61,242
Clothing (men's)	198	8,242,000	8,208	1,753	8,144
Liquors, malt	31	20,288,000	2,091	9,917	76,231

"The above figures reveal the fact that the manufacturers of boots and shoes employ forty-three times as many people but use only one and one-fourth times as much coal as the brewers. Capital invested four and one-half times as much. A specific example:

Industry	Number establishments.	Persons employed.	Wages paid.	Cost of fuel.	Capital invested.
Lynn: Boots and shoes	207	17,942	$9,532,137	$53,656	$17,488,156
Boston:					
Malt liquor	20	1,338	1,019,213	161,565	13,435,765
Boots and shoes	43	6,790	3,046,000	91,990	11,257,336

"The above figures taken from the Massachusetts Supplement of the last United States census report (1910, p. 684) reveal the facts that the boot and shoe manufacturers of Lynn employ thirteen and one-half times as many people, pay over nine times as much in wages, but use only one-third as much fuel as the manufacturers of malt liquors in Boston.

"The boot and shoe manufacturers in Boston employ five times as many people, pay three times as much in wages, and use fuel costing only a little over one-half as much as that used by the manufacturers of malt liquors in Boston.

"Which shall we close—the shoe factories making shoes for soldiers or the breweries turning food into alcohol?"

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Indiana [Mr. FAIRFIELD] five minutes.

Mr. FAIRFIELD. Mr. Chairman, the attitude of the people of this country has been the right attitude of a great people toward an executive, burdened as the Chief Executive of the United States is with the most momentous problems that ever have confronted any country in any age. The spirit of this House has been the right spirit. I am glad to say that even in the conference the other night not one discordant note was uttered, so far as a desire to prosecute the war effectually was concerned. True, there has recently been a little criticism. We are fighting the idea that the king can do no wrong, and in a free country it certainly is proper that the legislative department should become an informing body in its answer to the people. And as bearing immediate fruit of this criticism I call your attention to a statement in the Washington Star of this evening:

BUYER FOR ARMY APPOINTED BY U. S.—SECRETARY BAKER PICKS E. R. STETTINIUS TO SUPERVISE U. S. PURCHASES—BEGINS WORK AT ONCE.

Edward R. Stettinius, of New York, was appointed to-day as surveyor general for all Army purchases.

Secretary Baker in making the announcement said:

"Mr. Edward R. Stettinius, of New York, has been appointed surveyor general of all Army purchases. He will be in charge of the procurement and production of all supplies by the five Army bureaus, viz, Ordnance, Quartermaster, Signal, Engineer, and Medical. It will be his duty to coordinate such purchases and properly relate the same to industry, to the end that the Army program be developed under a comprehensive plan which will best utilize the resources of the country.

"From the outbreak of the war Mr. Stettinius has been in sole charge of the allied purchases in this country and has been responsible for the development of the production of war materials. His intimate knowledge of war conditions in Europe and in the United States, as related to industry, and the practical means he has used to accomplish his plans, preeminently qualify him for his position.

"Mr. Stettinius will assume his new duties at once and establish his office in Washington."

Gentlemen of the committee, it seems strange that not until the criticism had been voiced in another body, not until there had been suggestion of possible criticism on the floor of this House, was such action taken; but it is a source of gratification that promptly the effort is made to answer the constructive criticism that has been suggested, by following out the lines that have been indicated. I did not call attention to this any earlier, for the gentleman who spoke a few moments ago [Mr. ROBBINS] was urging, and properly urging, the very thing that the Secretary of War has undertaken to do.

I am concerned, gentlemen, more with the spirit of the country than I am with discussions that may arise here now and then. Above all else we ought to keep the spirit of the country united behind the Government for efficiency in the prosecution of the war. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CRISP, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 9054, the Agricultural appropriation bill, and had come to no resolution thereon.

CHOCTAWS AND CHICKASAWS.

The SPEAKER. There is a bill, H. R. 329, which is clearly a private bill and ought to be on the Private Calendar. By accident it went to the Union Calendar. Without objection, it will be changed to the Private Calendar.

There was no objection.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 7 minutes p. m.) the House adjourned until to-morrow, Saturday, January 26, 1918, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of the Interior submitting a proposed clause of legislation for inclusion in the urgent deficiency bill (H. Doc. No. 859); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of the Treasury, transmitting copy of communication from the Secretary of State submitting supplemental estimates of appropriation required for the expenses of foreign intercourse for the fiscal years 1918 and 1919 (H. Doc. No. 860); to the Committee on Foreign Affairs and ordered to be printed.

3. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of San Francisco Bay, Cal. (H. Doc. No. 861); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. TIMBERLAKE, from the Committee on the Public Lands, to which was referred the bill (H. R. 175) to amend an act entitled "An act making appropriations to supply deficiencies in appropriations for the fiscal year 1915, and for prior years, and for other purposes, reported the same without amendment, accompanied by a report (No. 258), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. TAYLOR of Colorado, from the Committee on the Public Lands, to which was referred the bill (H. R. 5559) to authorize a preference right of entry by certain Carey Act entrymen, and for other purposes, reported the same with amendment, accompanied by a report (No. 259), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

The bill (H. R. 7558) granting an increase of pension to William A. Strong; Committee on Pensions discharged, and referred to Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. FRENCH: A bill (H. R. 9247) granting certain lands to Boise, Idaho, for park purposes; to the Committee on the Public Lands.

By Mr. JOHNSON of Kentucky: A bill (H. R. 9248) to prevent extortion, to impose taxes upon certain incomes in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

Also, a bill (H. R. 9249) providing for the conservation of certain foodstuffs in the District of Columbia; to the Committee on the District of Columbia.

By Mr. PADGETT: A bill (H. R. 9250) to provide promotion for retired officers performing active duty in time of war; to the Committee on Naval Affairs.

By Mr. BYRNS of Tennessee: A bill (H. R. 9251) to relieve Congress from the adjudication of private claims against the Government; to the Committee on the Judiciary.

By Mr. DENT: A bill (H. R. 9252) to authorize the appointment of two colonels and four lieutenant colonels in the Veterinary Corps of the Army; to the Committee on Military Affairs.

By Mr. CARTER of Oklahoma: A bill (H. R. 9253) for the purpose of conferring citizenship upon all Indians and segregating the competent Indians from the supervision of the Indian Bureau; to the Committee on Indian Affairs.

By Mr. McLEMORE: Resolution (H. Res. 235) authorizing the District of Columbia Committee to investigate reports of an alleged scheme or conspiracy by certain real estate dealers or agents to get possession of the National Guard Armory Building and to rerent it to the United States; to the Committee on Rules.

By Mr. REAVIS: Joint resolution (H. J. Res. 228) to provide notification of illness of soldiers; to the Committee on Military Affairs.

By Mr. CARY: Joint resolution (H. J. Res. 229) to permit the naturalization of certain aliens whose parents neglected to take out naturalization papers prior to their death, to relieve a large number of persons from unmerited hardships, and to strengthen the military resources of the United States; to the Committee on Immigration and Naturalizaion.

By Mr. MOORES of Indiana: Joint resolution (H. J. Res. 230) authorizing and requiring the Secretary of War to prescribe all rules and needful regulations for the government of the various internment camps; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 9254) granting a pension to George F. Bostwick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9255) granting an increase of pension to Jacob Moses; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9256) granting an increase of pension to William Anspacker; to the Committee on Invalid Pensions.

By Mr. CARY: A bill (H. R. 9257) granting an increase of pension to Michael McCormick; to the Committee on Invalid Pensions.

By Mr. CRAGO: A bill (H. R. 9258) for the relief of Andrew Ohler; to the Committee on Military Affairs.

By Mr. DEWALT: A bill (H. R. 9259) granting a pension to John A. Ferree; to the Committee on Pensions.

By Mr. DICKINSON: A bill (H. R. 9260) granting a pension to Sarah Weaver; to the Committee on Invalid Pensions.

By Mr. GOODWIN of Arkansas: A bill (H. R. 9261) granting an increase of pension to Eleam Welch; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9262) granting an increase of pension to James Flanagan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9263) granting an increase of pension to George Rush; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9264) granting an increase of pension to Josiah Vauscyre; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9265) granting an increase of pension to Joshua Markley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9266) granting an increase of pension to Jerry A. Fitzgerald; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9267) granting an increase of pension to George Bowery; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9268) granting an increase of pension to Michael P. Wells; to the Committee on Invalid Pensions.

By Mr. GOULD: A bill (H. R. 9269) for the relief of Capt. Fred S. Johnston; to the Committee on War Claims.

By Mr. LEA of California: A bill (H. R. 9270) granting an increase of pension to Hiram E. Turner; to the Committee on Invalid Pensions.

By Mr. LEVER: A bill (H. R. 9271) granting a pension to Ja Dee Stroman; to the Committee on Pensions.

By Mr. MAPES: A bill (H. R. 9272) granting a pension to Louisa M. Robinson; to the Committee on Invalid Pensions.

By Mr. MILLER of Minnesota: A bill (H. R. 9273) for the relief of Alfred B. Andrews; to the Committee on Claims.

By Mr. MOORES of Indiana: A bill (H. R. 9274) granting a pension to Charlotte Lewis; to the Committee on Invalid Pensions.

By Mr. PAIGE: A bill (H. R. 9275) granting a pension to Edwin D. Goodell; to the Committee on Pensions.

By Mr. ROSE: A bill (H. R. 9276) granting an increase of pension to Robert Dignan; to the Committee on Invalid Pensions.

By Mr. SCHALL: A bill (H. R. 9277) granting an increase of pension to Silas C. Robbins; to the Committee on Invalid Pensions.

By Mr. SELLS: A bill (H. R. 9278) granting an increase of pension to Jakue R. Greenway; to the Committee on Invalid Pensions.

By Mr. SWITZER: A bill (H. R. 9279) granting an increase of pension to Adam A. Worthington; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9280) granting a pension to Elmer Kinder; to the Committee on Pensions.

By Mr. WARD: A bill (H. R. 9281) for the relief of Lieut. Col. Henry C. Davis; to the Committee on Naval Affairs.

By Mr. WEBB: A bill (H. R. 9282) granting a pension to the minor children of Ephraim G. Gray; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. FULLER of Illinois: Memorial of Illinois Audubon Society, favoring the migratory-bird-treaty bill; to the Committee on Agriculture.

By Mr. GRAHAM of Pennsylvania: Resolutions of the Pennsylvania Manufacturers' Association and the Knitting Manufacturers of Philadelphia, protesting against the fuel order; to the Committee on Agriculture.

Also, resolution of the physicians' group of the Chamber of Commerce, Philadelphia, Pa., objecting to that part of the war-revenue act dealing with the income of physicians; to the Committee on Ways and Means.

Also, resolutions of the Veterans' Home, Napa County, Cal., for the relief of volunteer officers of the Civil War, placing them on the same footing as officers of the Regular Army; to the Committee on Invalid Pensions.

By Mr. KENNEDY of Rhode Island: Petition of war council of the Providence (R. I.) Chamber of Commerce, favoring passage of daylight-saving legislation; to the Committee on Interstate and Foreign Commerce.

By Mr. MOORE of Pennsylvania: Petitions of R. C. Sutton, Joseph Antenson, William Evans, and others, favoring passage of the Keating and Nolan wage bills; to the Committee on Appropriations.

Also, resolution of the board of representatives of Federal Employees' Union, No. 2, protesting against recommendation of the Postmaster General for the repeal of the act permitting postal employees to organize for their mutual welfare; to the Committee on the Post Office and Post Roads.

Also, resolutions adopted by the Miami Chamber of Commerce, urging Government improvement of the Florida Coast Line Canal; to the Committee on Interstate and Foreign Commerce.

By Mr. MORIN: Petition of the Pittsburgh (Pa.) Preachers' Meeting of the Methodist Episcopal Church, for immediate and complete war prohibition; to the Committee on the Judiciary.

By Mr. PARK: Resolutions adopted by the student body of the Atlanta Law School, Atlanta, Ga., opposing the creation of a war cabinet, expressing confidence in and loyalty to the President, and deploring recent criticism; to the Committee on Military Affairs.

HOUSE OF REPRESENTATIVES.

SATURDAY, *January 26, 1918.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We wait upon Thee, Almighty God, our Heavenly Father, before entering upon the duties of the hour, that the Members of this deliberative body may be better prepared to take up the problems which confront them and discharge with patience, insight, and clear vision every duty devolving upon them, in consonance with Thy Holy Will; that truth may have its sway, to the honor and glory of Thy Holy Name. Amen.

The Journal of the proceedings of yesterday was read and approved.

DIGEST AND MANUAL.

Mr. FOSTER. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution which I send to the desk and ask to have read.

The Clerk read as follows:

House resolution 236.

Resolved, That there be printed 2,000 copies of the Digest and Manual of the Rules and Practice of the House of Representatives for the second session of the Sixty-fifth Congress, the same to be bound and distributed under the direction of the Clerk and Doorkeeper of the House.

The SPEAKER. Is there objection?

Mr. FOSTER. Mr. Speaker, this is the usual resolution that is passed each year.

Mr. GILLETT. There has been no change, has there, since the printing of the last one?

Mr. FOSTER. I do not know what change there has been.

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I would like to inquire the method of the distribution of these copies of the rules?

Mr. FOSTER. I think there are so many copies placed in the folding room that go to the Members; then I think there are a certain number that go into the document room unbound.

Mr. STAFFORD. Under prior practice I do not recall any copies ever having been placed to the credit of Members of the House. I think they should be.

Mr. FOSTER. I think the gentleman is mistaken; I am sure he is; and if he will go to the proper officer he will find that he can get so many from that officer always.

Mr. STAFFORD. I do not think they are placed to the credit of Members in the folding room, but one has to make an application with the Clerk of the House or some other official for four copies, I believe it is.

Mr. FOSTER. I think that is the number.

Mr. STAFFORD. I would like to know why it is that we can not have these copies placed to the credit of the Members direct in the folding room, so that every Member may have them. I venture the prediction that one-half, perhaps, of the Members of the House do not know that there are copies of the rules available to them under these authorizations.

Mr. FOSTER. I do not know about that, but they are always there, and they are available.

Mr. ESCH. They are secured through the House stationery room, and every Member is credited with four copies. Sometimes they do not know it or do not draw them, but they are credited with them.

Mr. STAFFORD. I think some provision should be incorporated in the resolution providing that the copies be placed to the credit of Members in the folding room.

Mr. FOSTER. That is all right, so far as I am concerned.

Mr. STAFFORD. Until that amendment is proposed, I shall object. I have no objection to the authorization.

Mr. FOSTER. They go to the folding room.

Mr. STAFFORD. I have no objection to the resolution, but I think there should be some such provision incorporated as to their distribution.

Mr. FOSTER. The resolution provides that they are to be distributed through the Clerk and the Doorkeeper of the House.

Mr. HARRISON of Mississippi. May I say that for seven or eight years they have been placed in the folding room to the credit of each Member?

Mr. STAFFORD. I wish to take issue with the gentleman. We have not had them to our credit in the folding room. As my colleague, Mr. ESCH, has stated, they are distributed through the stationery room of the House. Members ought to know that these rules are available.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, I object.

EXTENSION OF REMARKS.

Mr. OVERMYER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein an address delivered by my colleague from Ohio, Mr. JOHN S. SNOOK, on the subject of the news-print situation, before the Ohio City Editors' Association on the 19th and 20th of the present month.

The SPEAKER. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD by printing therein a speech delivered by his colleague, Mr. SNOOK. Is there objection?

There was no objection.

Mr. SHERWOOD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein a letter from an old soldier, Mr. Isaac T. Cross, of Seattle, Wash.

The SPEAKER. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

There was no objection.

WASHINGTON'S BIRTHDAY.

Mr. GILLETT. Mr. Speaker, I ask unanimous consent that on the 22d of February next, Washington's Birthday, the gentleman from Ohio [Mr. FESS] be permitted to address the House, after the approval of the Journal, for 30 minutes on the subject of the influence of Washington on modern government.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent that on the 22d of February next, after the reading of the Journal and the disposition of business on the Speaker's table, not to interfere with privileged matters, the gentleman from Ohio [Mr. FESS] be permitted to address the House for not to exceed 30 minutes on the subject of the influence of Washington on modern government. Is there objection?

There was no objection.

PENSIONS.

Mr. SHERWOOD. Mr. Speaker, I call up the bill H. R. 9160, granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

The SPEAKER. The gentleman from Ohio calls up a pension bill, which the Clerk will report.

The Clerk reported the bill by title.

The SPEAKER. This bill is on the Private Calendar.

Mr. SHERWOOD. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Ohio asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

Mr. SHERWOOD. Mr. Speaker, I ask unanimous consent to dispense with the first reading of the bill.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill for amendment.

The Clerk read as follows:

A bill (H. R. 9160) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

The name of William Turnham, late of Company C, Twenty-fifth Regiment Iowa Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of John L. C. Cline, late of Company E, One hundredth Regiment Pennsylvania Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Pleasant H. Ripley, late of Company E, First Regiment Arkansas Volunteer Cavalry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Oliver P. Krutz, late of Company E, Fifty-fourth Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of William V. Yeager, late of Company H, First Regiment Ohio Volunteer Heavy Artillery, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Ezra Cleveland, late of Company C, Fiftieth Regiment Illinois Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of John S. Thorp, late of Company C, Thirty-third Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Isaac Q. Wiggins, late of Company H, Ninety-seventh Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Joseph C. Hammond, late of Company K, Twenty-ninth Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Valentine Fish, late of Company H, Tenth Regiment Michigan Volunteer Cavalry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Ellen Hawkes, late of the Medical Department, United States Volunteers, and pay her a pension at the rate of $25 per month in lieu of that she is now receiving.

The name of Henry B. Hall, late of Company D, Fifth Regiment Rhode Island Volunteer Heavy Artillery, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Mary A. Luther, former widow of Edwin Otis Evans, alias Edward Jones, late of Company A, Twenty-sixth Regiment Massachusetts Volunteer Infantry, and pay her a pension at the rate of $25 per month.

The name of Ellen M. Cornell, widow of Joseph P. Cornell, late of the Signal Corps, United States Volunteers, and pay her a pension at the rate of $25 per month.

The name of Charles L. Shriver, late of Company I, One hundred and fourth Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Anna M. Moak, widow of John W. Moak, late of Company B, One hundred and fifteenth Regiment New York Volunteer Infantry, and pay her a pension at the rate of $37 per month in lieu of that she is now receiving: *Provided*, That in the event of the death of Herbert W. Moak, helpless and dependent child of said John W. Moak, the additional pension herein granted shall cease and determine: *Provided further*, That in the event of the death of Anna M. Moak the name of said Herbert W. Moak shall be placed on the pension roll, subject to the provisions and limitations of the pension laws, at the rate of $12 per month from and after the date of death of said Anna M. Moak.

The name of James Beyea, late of Company H, Fifteenth Regiment New York Volunteer Engineers, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Alexander H. McQueen, late of Companies K and G, Thirteenth Regiment Tennessee Volunteer Cavalry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of William Carpenter, late of Company H, Eighth Regiment Tennessee Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of John McDowell, late of Company C, Dale's Battalion, Pennsylvania Volunteer Cavalry, and pay him a pension at the rate of $27 per month in lieu of that he is now receiving.

The name of George W. Cordray, late of Company F, Ninety-seventh Regiment, and Company E, Twenty-sixth Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Crawford Byers, late of Company C, One hundred and twentieth Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Willis Elben, late of Company E, One hundred and eighty-fifth Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Mary D. Holgate, widow of William Holgate, late of Company G, Ninth Regiment United States Infantry, and pay her a pension at the rate of $25 per month.

The name of John W. Hamon, late of Company I, Fourteenth Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Washington Blankenship, late of Company H, Thirty-ninth Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

This bill is a substitute for the following House bills referred to the Committee on Invalid Pensions:

H. R. 457. George W. Thomas.
H. R. 467. William Baynes.
H. R. 554. William Harris.
H. R. 641. Lizzie Yorker.

H. R. 9023. Washington Blankinship.

During the reading of the bill,

AMENDMENTS.

The Clerk read as follows:

The name of William Baynes, late of Company L, Fourth Regiment Provisional Enrolled Missouri Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

Mr. SHERWOOD. Mr. Speaker, I offer the following amendment.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. SHERWOOD: Page 2, line 3, strike out the word "Infantry" and insert in lieu thereof the word "Militia."

The amendment was agreed to.

The Clerk read as follows:

The name of John Hazlett, late of Battery H, First Regiment West Virginia Volunteer Light Artillery, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

Mr. SHERWOOD. Mr. Speaker, I offer the following amendment: Page 3, line 21, strike out the word "Regiment."

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Page 3, line 21, strike out the word "Regiment."

The amendment was agreed to.

The Clerk read as follows:

The name of Mary Edna Peirce, helpless and dependent child of Edgar Pierce, late of Company I, Fourteenth Regiment Pennsylvania Volunteer Cavalry, and pay her a pension at the rate of $12 per month.

Mr. SHERWOOD. On page 17, line 21, the word is spelled "Pierce" when it should be "Peirce."

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Page 17, line 21, strike out the word "Pierce" and insert in lieu thereof the word "Peirce."

The amendment was agreed to.

The Clerk read as follows:

The name of Beverly M. Stanton, late of Company F, Thirty-fifth Regiment New York Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

Mr. ANTHONY. Mr. Speaker, I would like to ask the chairman of the committee a question. Would it not be good practice to furnish the names of the Members who introduced these special pension bills?

Mr. SHERWOOD. There will be no objection as far as the chairman is concerned, but we have a list of every Member here——

Mr. ANTHONY. Yes; but that is for the committee's private information.

Mr. SHERWOOD. It is for the information of the House.

Mr. ANTHONY. I want to offer this suggestion, Mr. Speaker: I believe it would be in the interest of public business if, when each of these private bills is mentioned in these omnibus bills here, the name of the Member who introduced the bill could be printed at the same time, and I want to ask the chairman if he has any objection to such procedure?

Mr. SHERWOOD. I should not have any objection to it.

Mr. ANTHONY. Or if there is any objection on the part of the committee?

Mr. SHERWOOD. That would be a matter for the committee to decide when they had a meeting, and I would suggest to the gentleman to appear before the committee——

Mr. ANTHONY. I do not care to appear before the committee. I am appearing before the committee now—before the House—and I want simply to get information and find out if there is any objection to it.

Mr. SHERWOOD. There is no objection.

Mr. ANTHONY. The reason I ask that is I am convinced these bills are being reported out in such a manner that it is not exactly fair and just to the soldier population of the entire country. In other words, I think some Members are getting more than their share of these bills, and I want to arrive at some method by which the entire soldier population of the country can receive equitable consideration at the hands of Congress. [Applause.]

Mr. ASHBROOK. If the gentleman will permit me, I should like to say to the gentleman from Kansas that the Calendar Index shows, of course, the author of the bill, and it is an easy matter to find by the calendar who introduces bills and how many.

Mr. ANTHONY. That would be after the bill was passed.

Mr. ASHBROOK. Yes; and also the clerk of the committee keeps a record of the number of bills that each Member has, and it is open to the gentleman or anyone else who may wish to inquire. I want also to say to my friend that I am inclined to think as he does that the districts should be treated with reference to these special bills according to the soldier population and not by districts, as some have very few soldiers, and yet they receive the same number of bills as a district does that may have two or three thousand soldiers. I think that it is unfair, and yet that is the policy of the committee to give the same number to each Representative, providing they have cases entitled to favorable action under the rules of the committee.

Mr. ANTHONY. Then the gentleman is aware of the fact that——

The SPEAKER. The Chair will remark that all of this talk is out of order.

Mr. ANTHONY. I would like to ask the Chair if there is any opportunity for the discussion of these bills? I make a motion to strike out the last word.

The SPEAKER. There are five minutes on a side, but there is no amendment pending.

Mr. ANTHONY. Is this bill being considered in the House as in Committee of the Whole?

The SPEAKER. Of course it is.

Mr. ANTHONY. Then I make a motion to strike out the last word. Will I then be entitled to five minutes?

The SPEAKER. Yes.

Mr. ANTHONY. I make that motion. I am impressed with the fact, Mr. Speaker, that we have some Members of the House who are perhaps more indefatigable in their efforts to obtain these private bills than others, and they are getting a little more than their fair share; in fact, that the committee does listen to the importunities of certain Members of the House to such an extent that they are successful in getting more of such bills than they should have in these omnibus measures, and I want to see these bills considered upon the merits of the individual cases of the soldiers and not upon the merits or work of the Member of the House who presents them to the committee; and I think if my suggestion were adopted and the name of the Member of the House who introduces the bill be printed along with this report or in the bill that is presented to the House, that in the future, when Members' names are connected directly with the bills it might serve to smite their consciences or impress them with the idea that probably they were appearing a little oftener than they should.

Mr. ASHBROOK. If the gentleman will permit me to interrupt him, I would like to suggest to him that that would not relieve the condition, but the thing to do is to get the committee to see the importance of passing on these special bills not by districts but in proportion to the soldiers in that particular district. It is up to the committee to determine whether one Member is entitled to more bills than another. As a member of the committee I can say to the gentleman that these cases are treated absolutely fairly, and that all Members are being treated on an equality. And if you have the evidence in for bills introduced from your district, I am sure you have had just as many special bills allowed so far as any other Member of this House.

Mr. FULLER of Illinois. Mr. Speaker, I call for the regular order.

The SPEAKER. The regular order is the reading of the amendment pending.

Mr. ANTHONY. Is the five-minute debate exhausted?

The SPEAKER. Yes.

Mr. ANTHONY. I want to simply serve notice on the committee, Mr. Speaker, that I hope they will adopt some reform or some change in their method of procedure.

Mr. CRAMTON. Mr. Speaker, I want to call this to the attention of the membership. I am no longer a member of the Committee on Invalid Pensions, but I was at one time, and I was then impressed by this fact: That there are a great many Members who introduce pension bills and think that ends their duty and their obligation to their constituents, with the result that the Committee on Invalid Pensions will have before them nothing whatever but the bill. A bill of that kind never gets any consideration, and the committee can not give it consideration. Other Members will complete the evidence in support of their bills, and naturally those Members will get more consideration, as their cases are in shape for consideration. And oftentimes Members who will blame the committee for lack of action on their bills will find, if they go to the committee, that their bills are not in shape for consideration.

The SPEAKER. The gentleman from Kansas [Mr. ANTHONY] withdraws his point of order.

Mr. SHERWOOD. Mr. Speaker, I desire to state, for the information of the House, that I do not know when a bill comes before the committee who introduced the bill. Every bill is referred to the examiner appointed by the Pension Office, and those bills are examined and reported to the subcommittee, and the subcommittee refers them to the full committee. So far as I know everything has been strictly impartial, so far as the action of the committee is concerned.

The SPEAKER. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

The name of Washington Blankinship, late of Company H, Thirty-ninth Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

Mr. DYER. Mr. Speaker, I move to strike out the last word. I would like to have the attention of the chairman, and also of my colleague, the gentleman from Missouri [Mr. RUSSELL], with reference to the provision here for the pensioning of William Baynes, at the top of page 2. It says here:

The name of William Baynes, late of Company L, Fourth Regiment Provisional Enrolled Missouri Volunteer Infantry, and pay him a pension at the rate of $30 a month in lieu of that he is now receiving.

I would like to know from my colleague whether or not this is one of the cases known as the Missouri Enrolled Militia cases?

Mr. RUSSELL. No; that is entirely different. The Missouri Provisional Militia has long ago been made pensionable upon the efforts of Senator Cockrell while he was in the Senate. But the Enrolled Missouri Militia is not pensionable, while the Provisional Militia is.

Mr. DYER. I would like to ask the gentleman if the bill and report which he has presented to this House, and which I am heartily in favor of, is to pension those who served in the Missouri Militia and the militia in other States?

Mr. RUSSELL. I am glad to say that the Invalid Pension Committee has made a unanimous report recommending that the Enrolled Missouri Militia and the militia of all the States that were in the same position, and that served 90 days or more under the command of Federal officers, shall be given a pensionable status.

Mr. DYER. Will my colleague say whether or not he hopes and expects to get this bill up for consideration at an early date? It is a very deserving bill and a very worthy one.

Mr. RUSSELL. That bill, as I understand it, under the rules of the House is privileged, and I have no doubt we will be able to call the bill up some time during this session and have it considered by the House.

Mr. DYER. Will the gentleman state something as regards the service in a general way of the men that the bill proposes to pension? Some of these men served as much as a year, did they not?

Mr. RUSSELL. I have men in my district who served more than a year.

Mr. DYER. And none of them are now receiving pensions except by some special act?

Mr. RUSSELL. The Missouri Enrolled Militia is not receiving any pension at this time, although they served in the Federal Army and fought in the same battles with regular soldiers. None of them are receiving a pension now, unless it has been by special bill, and I do not think a dozen of them have ever been passed.

Mr. FARR. Will that include the militia of the other States?

Mr. RUSSELL. It will if they served under Federal officers. There are some such soldiers in Pennsylvania.

Mr. FARR. I will be glad to support the measure.

The SPEAKER. The gentleman from Missouri [Mr. DYER] withdraws the pro forma amendment.

Mr. DYER. If my time is not up, I yield to the gentleman from Kansas [Mr. CAMPBELL].

The SPEAKER. The gentleman's time has expired. If the gentleman from Kansas desires to speak, he can secure time.

Mr. CAMPBELL of Kansas. I simply rose in the time of the gentleman from Missouri to ascertain from Judge RUSSELL, of Missouri, whether he expected to call the bill up; but Col. DYER having called that matter out, I have no desire to take up the time of the House.

Mr. RUSSELL. I can state that my purpose is to try to do it whenever it can be done without interfering with an appropriation bill.

Mr. CAMPBELL of Kansas. I hope it can be done.

The SPEAKER. The question is on the engrossment and third reading of the bill as amended.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. SHERWOOD, a motion to reconsider the vote whereby the bill was passed was laid on the table.

ASSISTANT CLERK TO COMMITTEE ON RULES.

Mr. PARK. Mr. Speaker, I submit a privileged resolution from the Committee on Accounts.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 180 (H. Rept. No. 262).

Resolved, That the Committee on Rules be allowed an assistant clerk, at the rate of $100 per month, during the second session of the Sixty-fifth Congress, beginning the 3d day of December, 1917, to be paid out of the contingent fund of the House.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. PARK. Yes.

Mr. STAFFORD. Is this resolution, in effect, that which was voted down on a roll call by the House some time ago?

Mr. PARK. Yes.

Mr. STAFFORD. When it was attacked by my colleague from Wisconsin [Mr. LENROOT], a member of the Committee on Rules?

Mr. PARK. For answer to that, I will yield to the chairman of the Committee on Rules, Mr. POU.

Mr. STAFFORD. I wish to inquire whether my colleague [Mr. LENROOT] has receded from his position in opposition to this assistant clerk?

Mr. POU. I could not answer that.

Mr. GILLETT. Mr. LENROOT is ill. I do not think he will be here to-day.

Mr. POU. The ranking Republican Member of the Committee on Rules is here, and I think, gentlemen of the House, he agrees that this bill ought to pass.

Mr. CAMPBELL of Kansas. I wish the chairman of the committee would state to the House, as was not stated before, just what is being done, as he has stated it to me, showing the necessity for this clerk.

Mr. POU. Mr. Speaker, this assistant clerk, as he is called, has been allowed to the Committee on Rules, according to my best recollection, for the last seven or eight years. There is work for two clerks to that committee, as any gentleman of the House can ascertain if he will take the trouble to make an investigation. The clerk to the committee is busy answering inquiries much of the time and has little time to attend to correspondence. No man can take the position of chief clerk to the Committee on Rules and attend satisfactorily to the duties he ought to attend to and do the necessary correspondence incident to the committee.

Mr. GILLETT. Mr. Speaker, will the gentleman yield?

Mr. POU. I do.

Mr. GILLETT. When the gentleman speaks of "correspondence" does he mean the congressional correspondence or the correspondence of the committee?

Mr. POU. I mean the correspondence incident to the work of the committee.

Mr. GILLETT. I would like to inquire what is that? What correspondence is that?

Mr. POU. I will say to the gentleman that we have or have had 82 resolutions before the Committee on Rules. People all over the United States write to the chairman of the Committee on Rules not only about matters that are before the Committee on Rules but about matters that are before other committees. They seem to have the idea that the Committee on Rules has something to do with every matter that is before Congress. That necessarily involves a large amount of correspondence.

Now, I will say this to the House: The best evidence that I think we need this clerk is the fact that I have kept him in the service of the committee and propose to continue him there for several months, whether this resolution goes through or not. I have undertaken to direct that certain work be done which, in my judgment, will be of benefit to the House, for which we may or may not be entitled to credit. Anyway I thought it ought to be done. There is no volume of precedents or forms available for anyone wishing to draw a resolution, or special rule, as they are called. It is not an easy matter to draw a rule that will run the gauntlet of this House. Let any man who thinks it is start in and try. There ought to be some compilation that Members can refer to—a compilation of resolutions adopted by this House and by the House of former Congresses as well.

Mr. CRAMTON. Mr. Speaker, will the gentleman yield?

Mr. POU. Let me finish this statement, and then I will yield. I have had bound three volumes of resolutions that have been referred to the Committee on Rules, and I propose to leave them as a legacy to the committee when I pass on. We are now having the fourth volume bound. These volumes, I think, will be of very great value for this reason: If a gentleman wants to draw a rule about a certain matter he can take that volume and find a resolution which has been reported favorably, introduced

by such-and-such a gentleman. I could name half a dozen gentlemen of the House here whose handiwork any Member of the House would be glad to adopt as a model for any resolution he might wish to introduce. I have heard Members say they have already been using those compilations up to this time and have found them very helpful.

Mr. DOWELL. Mr. Speaker, will the gentleman yield?

Mr. POU. Yes.

Mr. DOWELL. Does this volume contain the rule, with the ruling of the Chair on the question of order?

Mr. POU. No; it does not. But I will say to the gentleman this: We have taken the resolutions and the reports and have bound them. We are now compiling a volume of the debates that were had upon the floor of the House on the resolutions that have been adopted by the House, so that that can be available also.

Mr. DOWELL. Would not the committee get a better digest by inserting the rule and also inserting the ruling of the Chair or the ruling of the House on the rule as it actually came before the House?

Mr. POU. Oh, yes; certainly. This was just a little voluntary service that we undertook to perform. These resolutions were not being preserved. Many of them had stood the test of criticism. I thought they should be preserved for speedy and convenient reference.

Mr. DOWELL. My only question was that if the committee was presenting a digest, it should be a complete one.

Mr. POU. It is not intended to be a complete digest at all. We are simply preserving resolutions that have been referred to the committee during the last three or four Congresses, together with the favorable reports thereon, and we are now trying to compile the debates that were had upon the resolutions that were favorably reported during the last three or four Congresses. These volumes I have found quite useful. I believe others will find them useful also.

Mr. CAMPBELL of Kansas. Mr. Speaker, a few days ago the chairman of the Committee on Rules spoke to me about the work that is being done and the necessity for this additional clerk. He went over the matter in more detail than he has just done to the House. I was not surprised when he called attention to the increased correspondence arising from committee business before that committe. As a member of the committee I receive almost daily letters or telegrams urging that a rule be given or denied on some bill. This morning I have five telegrams from different parts of the country urging a rule on a bill that I never heard of.

Mr. GILLETT. Does the gentleman think he ought to have an extra clerk to answer those telegrams?

Mr. CAMPBELL of Kansas. Oh, no; and, besides, I am not the chairman of the committee. But what I wish to point out is how the business before the Committee on Rules has grown. There is a vastly greater amount of business done by that committee now than there was a few years ago. So many bills are to be made in order or given a privileged status now that it does involve more work; and there is more work to be done in keeping track of the bills and resolutions that are before that committee, and to keep a record of the work that has been done. I am very sure that there are committees in this House that have two clerks, or a clerk and an assistant clerk, that do not do as much work as the Committee on Rules is now doing.

Mr. SLOAN. Does the gentleman mean to intimate that we are governed in our legislation by more rules, or more by rule, than we were in the Sixty-first Congress?

Mr. CAMPBELL of Kansas. Very much.

Mr. SLOAN. I am surprised at that, considering the discussion that went out over the country during the Sixty-first Congress as to the alleged necessity of reforming the procedure in this regard and preventing legislation by the Rules Committee.

Mr. CAMPBELL of Kansas. If I did not know the gentleman from Nebraska to be somewhat facetious at times I would take what he says seriously. But the fact is that the great power that once rested in the Speaker with regard to much of the business of the House has been transferred to the Committee on Rules, and that Committee has now to do work that was formerly done by the Speaker. The fact that eighty-odd resolutions have been introduced in this session of Congress and referred to that committee will give the House some idea of the volume of work that there is to be done and the number of bills and resolutions to be taken care of there. All this is aside from the many preliminary hearings held by the committee.

Mr. GILLETT. Mr. Speaker——

The SPEAKER. The gentleman from Georgia [Mr. PARK] has the time.

Mr. GILLETT. Will the gentleman yield me three or four minutes?

Mr. PARK. I yield to the gentleman five minutes.

The SPEAKER. The gentleman is recognized for five minutes.

Mr. GILLETT. I merely wish to say that when the chairman of the Committee on Rules [Mr. POU], for whom I have great regard, and the ranking Republican member [Mr. CAMPBELL of Kansas] state after investigation that they need an extra clerk, and the Committee on Accounts have reported accordingly, I personally shall not set up my judgment against theirs. But I do wish to emphasize what the gentleman from Nebraska [Mr. SLOAN] suggested—I do not think facetiously—that we were told long ago by that side of the House that when they obtained power legislation by rule and by the Rules Committee was to be done away with, and that the individual Member was to have more power and be able to assert himself, and that the House was not to be governed by rules, but that the business was to run along by the ordinary course of the control of the regular committees. But instead of that, as we know by our personal experience, the Rules Committee has been bringing in legislation quite as frequently and, we sometimes think, quite as drastically as ever before, and the gentleman from Kansas says the jurisdiction and influence of that committee is so constantly increasing that it is indispensable that the committee have more clerical assistance than they ever used to need. I merely wish to point out the difference between the promises and the conduct of that side of the House as to the Committee on Rules and also to remind them of the economical program which they told us when they assumed power was to be enforced—that the clerkships and employees of the House were to be very much diminished. I suspect now that we have reached a higher level than ever before. And here is another illustration of the constant increase which certainly contradicts their professions of economical reform.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield?

Mr. GILLETT. I yield to the gentleman from Michigan for a question.

Mr. McLAUGHLIN of Michigan. I ask the gentleman from Massachusetts if he thinks it proper that the salary of this assistant clerk should begin on the 3d day of December, nearly two months ago, in face of the fact that this House only a few days ago determined that that clerk should not be appointed?

Mr. GILLETT. I had not observed that fact. I certainly do not think it ought to date back, in face of the previous vote of this House.

Mr. POU. The clerk has been there all the time, ever since the 3d of December.

Mr. McLAUGHLIN of Michigan. But the House determined that he should not be employed.

Mr. POU. As far as I am personally concerned, I am not going to say another word about this clerk. The House can either give him to the Committee on Rules or not, as it sees fit. I have said I think we need him. The House can amend the resolution in any way that it sees fit; but I am going to keep the young man now in the office whether the House authorizes his employment or not, because I know he is necessary.

Mr. McLAUGHLIN of Michigan. Mr. Speaker, I move to amend the resolution by striking out "December 3, 1917," and inserting "January 26, 1918."

Mr. FOSTER. Mr. Speaker, has the gentleman from Michigan the floor to offer such an amendment?

The SPEAKER. He has not.

Mr. McLAUGHLIN of Michigan. The Chair recognized me.

Mr. FOSTER. The gentleman from Georgia yielded to him.

Mr. McLAUGHLIN of Michigan. Will the gentleman from Georgia [Mr. PARK] yield to me to allow me to offer an amendment?

Mr. PARK. Yes; I did yield to the gentleman awhile ago.

The SPEAKER. The gentleman from Michigan offers an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. McLAUGHLIN of Michigan moves to amend by striking out the words "3d day of December, 1817," in line 4 of the resolution, and inserting in lieu thereof "January 26, 1918."

The SPEAKER. The question is on the amendment offered by the gentleman from Michigan.

The question was taken; and on a division (demanded by Mr. McLAUGHLIN of Michigan) there were—ayes 29, noes 69.

Mr. GILLETT. Mr. Speaker, I make the point of no quorum present.

The SPEAKER. The gentleman from Massachusetts makes the point of no quorum present. Evidently there is no quorum. The Sergeant at Arms will notify absentees, the Doorkeeper will

close the doors, and the Clerk will call the roll. Those in favor of the amendment will say "aye"; those opposed, "no."

The question was taken; and there were—yeas 134, nays 186, not voting 108, as follows:

YEAS—134.

So the amendment was rejected.

The following pairs were announced:

Until further notice:

Mr. ASHBROOK with Mr. BACHARACH.

Mr. BARNHART with Mr. BLAND.

Mr. BRODBECK with Mr. BOWERS.

Mr. DALE of New York with Mr. BRITTEN.

Mr. TALBOTT with Mr. BROWNING.

Mr. DENTON with Mr. CANNON.

Mr. DOOLING with Mr. CHANDLER of Oklahoma.

Mr. DOREMUS with Mr. CLASSON.

Mr. EAGAN with Mr. COOPER of Ohio.

Mr. EAGLE with Mr. COOPER of West Virginia.

Mr. ESTOPINAL with Mr. COSTELLO.

Mr. FIELDS with Mr. CRAGO.

Mr. FLYNN with Mr. CURRY of California.

Mr. GREGG with Mr. CURRIE of Michigan.

Mr. HAMILL with Mr. DALE of Vermont.

Mr. HELVERING with Mr. DARROW.

Mr. HOLLAND with Mr. DAVIDSON.

Mr. HOOD with Mr. DAVIS.

Mr. HOUSTON with Mr. DEMPSEY.

Mr. HUMPHREYS with Mr. DRUKKER.

Mr. KEHOE with Mr. DUNN.

Mr. KEY of Ohio with Mr. GEORGE W. FAIRCHILD.

Mr. LINTHICUM with Mr. FOCHT.

Mr. MAHER with Mr. FREAR.

Mr. MONTAGUE with Mr. GOODALL.

Mr. MOON with Mr. GRAHAM of Pennsylvania.

Mr. O'SHAUNESSY with Mr. GREENE of Massachusetts.

Mr. PADGETT with Mr. GRIEST.

Mr. PRICE with Mr. HAMILTON of New York.

Mr. RAGSDALE with Mr. HAUGEN.

Mr. RIORDAN with Mr. HOLLINGSWORTH.

Mr. SANDERS of Louisiana with Mr. WOODYARD.

Mr. SCULLY with Mr. HUSTED.

Mr. SISSON with Mr. HUTCHINSON.

Mr. SHERLEY with Mr. KAHN.

Mr. SLAYDEN with Mr. KELLEY of Michigan.

Mr. SMALL with Mr. KENNEDY of Iowa.

Mr. THOMAS F. SMITH with Mr. KIESS of Pennsylvania.

Mr. SULLIVAN with Mr. WARD.

Mr. WILSON of Louisiana with Mr. MCCULLOCH.

Mr. WATSON of Virginia with Mr. MCLAUGHLIN of Pennsylvania.

The result of the vote was then announced as above recorded.

A quorum being present, the doors were opened.

Mr. OLDFIELD. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore (Mr. SAUNDERS of Virginia). The question now is on the passage of the resolution.

Mr. COOPER of Wisconsin. Mr Speaker, upon that I demand the yeas and nays.

The question was taken.

The SPEAKER pro tempore. Twenty-five Members have risen, not a sufficient number.

Mr. NORTON. I ask for the other side.

The other side was taken.

The SPEAKER pro tempore. Ninety-two Members have risen, a sufficient number, and the Clerk will call the roll.

The question was taken; and there were—yeas 176, nays 113, not voting 139, as follows:

YEAS—176.

The Clerk announced the following additional pairs:

Until further notice:

Mr. KEHOE with Mr. BACHARACH.

Mr. MAHER with Mr. CAMPBELL of Kansas.

Mr. O'SHAUNESSY with Mr. CANNON.

Mr. SMALL with Mr. CURRIE of Michigan.

Mr. BESHLIN with Mr. DEMPSEY.

Mr. BORLAND with Mr. GOODALL.

Mr. BYRNS of Tennessee with Mr. GRAHAM of Pennsylvania.

Mr. CAMPBELL of Pennsylvania with Mr. WOODYARD.

Mr. CANTRILL with Mr. CHANDLER of New York.

Mr. CAREW with Mr. COPLEY.

Mr. DIXON with Mr. FORDNEY.

Mr. DRANE with Mr. FREEMAN.

Mr. FERRIS with Mr. GOULD.

Mr. FISHER with Mr. GRAY of New Jersey.

Mr. HUDDLESTON with Mr. KENNEDY of Rhode Island.

Mr. LARSEN with Mr. LONGWORTH.

Mr. LEA of California with Mr. MADDEN.

Mr. LITTLEPAGE with Mr. MASON.

Mr. NEELY with Mr. PARKER of New York.

Mr. SHERWOOD with Mr. MILLER of Minnesota.

Mr. SIMS with Mr. ROWE.

Mr. CHARLE B. SMITH with Mr. SLEMP.

Mr. STEDMAN with Mr. TEMPLETON.

Mr. STERLING of Pennsylvania with Mr. HERSEY.

Mr. TAYLOR of Colorado with Mr. SWIFT.

Mr. VENABLE with Mr. WILSON of Illinois.

Mr. WALTON with Mr. VESTAL.

Mr. WHALEY with Mr. ZIHLMAN.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

On motion of Mr. PARK, a motion to reconsider the vote by which the resolution was passed was laid on the table.

COMMITTEE ON MILITARY AFFAIRS.

Mr. DENT. Mr. Speaker, I ask unanimous consent that the Committee on Military Affairs may be permitted to sit during the sessions of the House while it is holding hearings and considering the Army appropriation bill.

The SPEAKER pro tempore. The gentleman from Alabama asks unanimous consent that the Committee on Military Affairs may sit during the sessions of the House while it is holding hearings on the Army appropriation bill. Is there objection?

There was no objection.

MARY E. COOK.

Mr. PARK. Mr. Speaker, I present the following privileged resolution, which I send to the desk and ask to have read.

The Clerk read as follows:

House resolution 209 (H. Rept. No. 263).

Resolved, That the Clerk of the House be, and he is hereby, authorized to pay, out of the contingent fund of the House, to Mary E. Cook, daughter of Leonard B. Cook late an employee on the roll of the House, a sum equal to six months of his compensation as conductor of elevator, and an additional amount, not exceeding $250, to defray funeral expenses of said Leonard B. Cook.

Mr. PARK. Mr. Speaker, I wish to state that this is the customary resolution. This man was on the rolls for something like 20 years.

The SPEAKER pro tempore. The question is on agreeing to the resolution.

The resolution was agreed to.

On motion of Mr. PARK, a motion to reconsider the vote by which the resolution was passed was laid on the table.

ADDITIONAL PAGE.

Mr. PARK. Mr. Speaker, I also offer another privileged resolution.

The SPEAKER pro tempore. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 219 (H. Rept. No. 264).

Resolved, That the Doorkeeper be, and he is hereby, authorized and directed to appoint an additional page for the remainder of the present Congress, to be paid compensation out of the contingent fund of the House, at the rate of $82.50 per month.

Mr. GILLETT. Will the gentleman yield for a question?

Mr. PARK. Certainly.

Mr. GILLETT. Will the gentleman explain what this page is for?

Mr. PARK. That is the page for Mr. SCHALL, of Minnesota, who, unfortunately, is blind.

Mr. GILLETT. I recognize, of course, that has to be done, but are not there enough pages without an extra one?

Mr. PARK. The Doorkeeper says not and that he needs this page.

Mr. GILLETT. I have no objection.

Mr. DOWELL. Will the gentleman yield for a question?

Mr. PARK. Yes.

Mr. DOWELL. How many pages have we at present?

Mr. PARK. I think something like 30.

The question was taken, and the resolution was agreed to.

On motion of Mr. PARK, a motion to reconsider the vote by which the resolution was agreed to was laid on the table.

ADDITIONAL CLERK, HOUSE POST OFFICE.

Mr. PARK. Mr. Speaker, I offer another privileged resolution.

The SPEAKER pro tempore. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 200.

Resolved, That the Postmaster of the House be, and he is hereby, authorized to employ an additional registry, stamp, and money-order clerk, who shall be paid out of the contingent fund of the House at the rate of $125 per month on and after the 1st day of January, 1918, during the remainder of the second session of the Sixty-fifth Congress.

The committee amendment was read, as follows:

Strike out the words, "On and after the 1st day of January, 1918," so that the resolution, as amended, will read:

"*Resolved*, That the Postmaster of the House be, and he is hereby, authorized to employ an additional registry, stamp, and money-order clerk, who shall be paid out of the contingent fund of the House at the rate of $125 per month during the remainder of the second session of the Sixty-fifth Congress."

Mr. STAFFORD. Will the gentleman yield?

Mr. PARK. I do.

Mr. STAFFORD. Does the gentleman have any objection to withdrawing this resolution? I do not believe that I violate any confidence when I say that the chairman of the subcommittee framing the legislative, executive, and judicial appropriation bill requested me to advise him when this resolution was presented. He is busy at the present time in the hearings on that bill, and he would like to be present when this bill is considered, and therefore I will ask the gentleman if he will withdraw it.

Mr. PARK. I ask to withdraw the resolution.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

PENSIONS FOR MILITARY ORGANIZATIONS OF THE SEVERAL STATES.

Mr. RUSSELL. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman rise?

Mr. RUSSELL. I rise to a privileged report——

The SPEAKER pro tempore. The gentleman will state it.

Mr. RUSSELL. On House bill 3547. This is a privileged bill providing for pensions to be paid to State troops who served 90 days or more in the States during the Civil War under command of Federal officers. I find that is a privileged bill, and the bill should be reported on as being privileged. Having heretofore filed the report in the basket, and finding that was ..ot in compliance with the rule, I ask now to make the report on the floor of the House.

The SPEAKER pro tempore. The gentleman will send the bill and report to the desk. The Clerk will report it by title.

The Clerk read as follows:

The Committee on Invalid Pensions submits the following report to accompany the bill (H. R. 3547) to give pensions to officers and enlisted men of all State militia, etc.

Mr. STAFFORD. Mr. Speaker, a question of order.

The SPEAKER pro tempore. The gentleman will state it.

Mr. STAFFORD. Do I understand that this bill, which I am not advised as to its purport, is a general pension bill?

Mr. RUSSELL. A general pension bill as the committee construes it, as it applies to all State troops who served 90 days or more under Federal officers.

Mr. STAFFORD. If it is a special pension bill, of course, it is a privileged bill. I shall not present the question of order at the present time. I withdraw it, but reserve the right to present it when the bill is presented for consideration.

CHANGE OF REFERENCE.

Mr. GREEN of Iowa. Mr. Speaker, I desire to ask unanimous consent that the bill H. R. 8584, a private pension bill, which by mistake was referred to the Committee on Pensions, be referred instead to the proper committee, the Committee on Invalid Pensions.

The SPEAKER pro tempore. Without objection, the reference will be made as requested. [After a pause.] The Chair hears no objection.

Mr. SCHALL. Mr. Speaker, I ask unanimous consent to have the bill (H. R. 2863), a private pension bill, referred to the Pension Committee. It was erroneously referred to the Committee on Invalid Pensions.

The SPEAKER pro tempore. Without objection, that request will be conformed to. [After a pause.] The Chair hears no objection.

AGRICULTURE.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 9054, the Agricultural appropriation bill, with Mr. CRISP in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill, the title of which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 9054) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1919.

The CHAIRMAN. Under the order of the House general debate is now closed on the bill, and the same will be read for amendment under the five-minute rule.

The Clerk read as follows:

DEPARTMENT OF AGRICULTURE.

OFFICE OF THE SECRETARY.

Salaries, Office of the Secretary of Agriculture: Secretary of Agriculture, $12,000; Assistant Secretary of Agriculture, $5,000; Solicitor, $5,000; chief clerk, $3,000, and $500 additional as custodian of buildings; private secretary to the Secretary of Agriculture, $2,500; executive clerk, $2,250; executive clerk, $2,100; stenographer and executive clerk to the Secretary of Agriculture, $2,250; private secretary to the Assistant Secretary of Agriculture, $2,250; one appointment clerk, $2,000; 1 assistant in charge of information, $3,000; 1 officer in charge of supplies, $2,000; 1 assistant, $2,000; 1 inspector, $2,750; 1 inspector, $2,250; 1 law clerk, $3,250; 2 law clerks, at $3,000 each; 2 law clerks, at $2,750 each; 4 law clerks, at $2,500 each; 8 law clerks, at $2,250 each; 1 law clerk, $2,200; 5 law clerks, at $2,000 each; 3 law clerks, at $1,800 each; 4 law clerks, at $1,600 each; 1 assistant editor, $2,000; 4 assistant editors, at $1,800 each; 1 assistant editor, $1,600; 1 expert on exhibits, $3,000; 1 assistant in exhibits, $2,000; 1 telegraph and telephone operator, $1,600; 1 assistant chief clerk and captain of the watch, $1,800; 5 clerks, class 4; 13 clerks, class 3; 21 clerks, class 2; 26 clerks, class 1; 1 auditor, $2,000; 1 accountant and bookkeeper, $2,000; 1 clerk, $1,440; 1 clerk, $1,020; 7 clerks, at $1,000 each; 13 clerks, at $900 each; 2 clerks, at $840 each; 14 messengers or laborers, at $840 each; 12 assistant messengers, laborers, or messenger boys, at $720 each; 1 messenger or laborer, $660; 1 mechanical superintendent, $2,500; 1 mechanical assistant, $1,800; 1 engineer, $1,400; 1 electrical engineer and draftsman, $1,200; 1 assistant engineer, $1,200; 2 assistant engineers, at $1,000 each; 1 fireman, $840; 8 firemen, at $720 each; 1 chief elevator conductor, $840; 16 elevator conductors, at $720 each; 3 elevator conductors, at $600 each; 1 superintendent of shops, $1,400; 1 cabinet shop foreman, $1,200; 5 cabinetmakers or carpenters, at $1,200 each; 3 cabinetmakers or carpenters, at $1,100 each; 9 cabinetmakers or carpenters, at $1,020 each; 3 cabinetmakers or carpenters, at $900 each; 1 electrician, $1,100; 1 electrical wireman, $1,100; 1 electrician or wireman, $1,000; 1 electrical wireman, $900; 1 electrician's helper, $840; 3 electrician's helpers, at $720 each; one painter, $1,020; 1 painter, $1,000; 5 painters, at $900 each; 5 plumbers or steamfitters, at $1,020 each; 2 plumber's helpers, at $840 each; 2 plumber's helpers, at $720 each; 1 blacksmith, $900; 1 elevator machinist, $900; 1 tinner or sheet-metal worker, $1,100; one tinner's helper, $720; 1 lieutenant of the watch, $1,000; 2 lieutenants of the watch, at $960 each; 69 watchmen, at $720 each; 4 mechanics, at $1,200 each; 1 mechanic, $1,000; 1 skilled laborer, $1,000; 2 skilled laborers, at $960 each; 2 skilled laborers, at $840 each; 1 skilled laborer, $720; 1 janitor, $900; 21 assistant messengers, messenger boys, or laborers, at $600 each; 1 carriage driver, $600; 23 laborers or messenger boys, at $480 each; 1 messenger or messenger boy, $360; 1 charwoman, $540; 3 charwomen, at $480 each; 15 charwomen, at $240 each; for extra labor and emergency employment, $12,000; in all, $462,000.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph. I take this occasion to secure some information, which is not given in the report, as to the policy of the committee as to increases of salaries. I notice as I have gone through the bill that the committee has not made any decided, if any, increases of salaries over those carried last year, but there are in some instances additional places with stated salaries. This is the first appropriation bill since the Post Office appropriation bill that has carried to any extent salaries for those employed by the Government, and is the only bill that provides for salaries in the departmental service other than those that are included in the legislative, executive, and judicial appropriation bill.

Last year, as I recall, the committee did make some percentage increases in some of the lower grades, and I believe this year has retained those increases, notwithstanding that we granted the 5 and 10 per cent increase of salary to all in the departmental service and in the field service.

Mr. LEVER. Mr. Chairman, the policy of the committee in reference to the matter of salaries in the Department of Agriculture, those appearing on the statutory roll, is this: The chairman of this committee and the ranking Republican member, the gentleman from Iowa [Mr. HAUGEN], conferred with the chairman of the Committee on Appropriations [Mr. SHERLEY], as a result of which the Committee on Agriculture adopted the policy of refusing every increase that had been asked in the estimates, and the new places that are seen on the statutory roll are transfers from the lump fund and at the same salary.

The committee concluded, inasmuch as the probability is that a joint resolution will be offered from the Appropriation Committee taking care of these clerks, we should not increase any salaries whatever in this bill, and we have not done so.

Mr. STAFFORD. Then, as to this bill, wherever there is any new office provided it is the case of a person being taken from the lump-sum roll and transferred to the statutory roll at the existing salary the employee is now receiving?

Mr. LEVER. Except where a new place is actually created, and that fact will be set out in the report.

Mr. STAFFORD. Has the gentleman any information as to the percentage of employees in the departmental service that are paid out of the lump-sum appropriation as to those carried on the statutory roll?

Mr. LEVER. My answer to that would be a guess. I really can not tell the gentleman.

Mr. STAFFORD. Can the gentleman advance any reason given by the department or the bureau heads why officials permanently employed here at the department and paid out of the lump-sum appropriations should be continued to be paid out of those appropriations, and should not be designated and transferred to the statutory roll?

Mr. LEVER. I will say to the gentleman, so far as I know that does not exist in the Department of Agriculture except in the case of the scientific force. And if it does exist it ought not to exist, certainly, because it is the policy of Congress to transfer the permanent clerical positions to the statutory roll.

Mr. STAFFORD. I assume from the reply of the gentleman that the committee did not go into the examination of that question at this session of Congress?

Mr. LEVER. We concluded your committee would handle that perhaps——

Mr. STAFFORD. I mean as to the transfer of clerks paid out of lump-sum appropriations to the statutory roll.

Mr. LEVER (continuing). So we did not go into that very thoroughly.

Mr. STAFFORD. Mr. Chairman, I withdraw the reservation of the point of order.

Mr. BORLAND. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the Federal Trade Commission, under order of the President of the United States and by virtue of an appropriation made by this House, is now engaged in investigating the beef industry, something which is of very grave importance to the agricultural population and to the people of this country generally at this present time. It happened that I was the father of that resolution to investigate the beef industry.

Mr. LEVER. Will the gentleman yield just for a moment?

Mr. BORLAND. Yes.

Mr. LEVER. Possibly I should have made this statement before the gentleman took the floor. I desire to say now, Mr. Chairman, that I propose in the discussion of this Agricultural appropriation bill, that gentlemen who are addressing the committee under the five-minute rule shall confine themselves to the item under consideration. And I make the statement in view of the fact that the committee had two solid days of general debate. Of course, in this case I shall say nothing, because the gentleman did not know.

Mr. MADDEN. Well, I did not know about that. I think all discussions should be had upon the item under consideration.

Mr. LEVER. Undoubtedly.

Mr. BORLAND. I will say to the chairman of the committee that possibly this might come better under some other item, but it is clearly a discussion of the bill.

Mr. LEVER. I wonder, if the gentleman, in order that we may proceed in order, would not defer this matter until he can get time under the item of this bill that will be pertinent or to some other item in the bill?

Mr. BORLAND. I will say to the gentleman that I will take only five minutes at this time.

Mr. MADDEN. I am going to object to any discussion on the bill unless it pertains to the item under consideration.

Mr. LEVER. I hope the gentleman will not insist on it at this time.

Mr. BORLAND. These remarks that I will make apply to this particular paragraph. They will apply to the expenses of the Secretary's office.

Mr. MADDEN. The Secretary of Agriculture?

Mr. BORLAND. Yes.

Mr. MADDEN. What has the Federal Trade Commission got to do with the Secretary of Agriculture?

Mr. BORLAND. If the gentleman will be patient a minute we will see.

Mr. MADDEN. Then we will wait.

Mr. BORLAND. Now, Mr. Chairman, I would not like this taken out of my time.

When this resolution was before the House and this last Agricultural bill was before the House, a very strenuous attempt was made to increase the appropriations in the Agricultural bill with the idea of doing away with the necessity for an investigation of the beef industry by the Federal Trade Commission. I made a very determined opposition to that proposal. I pointed out that the Agricultural Department did not want the work put upon them and had not the facilities for commanding the compulsory production of books and papers that this kind of an investigation would need. Now, if there is any justification necessary for that opposition, it appears in this hearing, because it is the compulsory production of books and papers that has revealed this astonishing, amazing, and corrupt situation to the American people.

Mr. MADDEN. What is the corrupt situation?

Mr. BORLAND. I can not yield to the gentleman.

Mr. MADDEN. I object to the gentleman proceeding, then.

Mr. BORLAND. The gentleman can object.

Mr. MADDEN. Then I object.

The CHAIRMAN. The rule is clear that under general debate in the Committee of the Whole House on the state of the Union, a gentleman having the floor can discuss any subject, but under the five-minute rule he is confined to the amendment. The Chair will ask the gentleman from Missouri to proceed in accordance with the rule.

Mr. BORLAND. The gentleman from Missouri is endeavoring to proceed in accordance with the rule by discussing the Secretary's office. Unquestionably the question was made by the packers——

Mr. MADDEN. Mr. Chairman, I object. The packers have nothing to do with this.

Mr. BORLAND. I hope the gentleman will not continue to interrupt.

The CHAIRMAN. The Chair holds that on an amendment to strike out the last word it is not germane to discuss this proposition.

Mr. BORLAND. I was proceeding to discuss the office of the Secretary of Agriculture.

The CHAIRMAN. That is not germane, under the rule.

Mr. BORLAND. If it is not germane, then the rules are being violated all the time.

The CHAIRMAN. That is done if the point of order is not made, but in this case a point of order has been made, and the Chair must enforce the rule.

Mr. BORLAND. I will endeavor to confine myself to the Secretary's office. An attempt was made to make it appear—in fact, it was an effort by the packers, and there is no question about that, but it had not the sanction of the Secretary of Agriculture. The Secretary of Agriculture was then on record, and is still on record, as opposing that attempt of the packers to throw the work into his department on the ground that his office force, provided for in this section of the bill, was inadequate to the task.

Mr. MADDEN. Mr. Chairman, I object.

The CHAIRMAN. The gentleman from Missouri is not proceeding in order.

Mr. BORLAND. I will have to yield to the Chair, although not to the Representative from Chicago, although I can easily see why he should object to the discussion of this matter.

The CHAIRMAN. This is the House of Representatives, and the Representatives have adopted rules for its guidance. The Chair is obliged to enforce the rule when it is made, and the Chair asks Members to adhere to the rule.

Mr. BORLAND. If the Chair will hear me on that for a moment, this paragraph provides for the Secretary of Agriculture and his force. The question I was discussing was the powers and duties of that particular force—a very proper question, it seems to me, to discuss under this paragraph of the bill.

The CHAIRMAN. The amendment of the gentleman from Missouri was to strike out the last word, which was "$462,000." The gentleman has not been discussing that amendment.

Mr. BORLAND. If the Chair please, I will withdraw that amendment and move to strike out the paragraph.

Mr. MADDEN. Mr. Chairman, I ask whether the gentleman is to be permitted to proceed under that amednment for five minutes more?

The CHAIRMAN. The Chair will not rule on that.

Mr. MADDEN. Then, I will make the point of order that the gentleman can not withdraw an amendment and move another amendment and then proceed to speak on it for five minutes.

The CHAIRMAN. Under the rules an amendment can only be withdrawn by unanimous consent.

Mr. MADDEN. Then I object.

Mr. BORLAND. The Chair ruled that I was out of order in discussing the amendment. I was proceeding to move another amendment.

The CHAIRMAN. The Chair ruled the amendment in order, and then the point of order was made that the gentleman was not discussing the amendment, and the Chair ruled that the discussion was not germane.

Mr. BORLAND. Then I call for a vote.

The CHAIRMAN. The question is on agreeing to the motion of the gentleman from Missouri.

The question was taken, and the motion was rejected.

The CHAIRMAN. The Clerk will read.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last two words.

Mr. STAFFORD. Mr. Chairman, since I interrogated the gentleman, a member of the Committee on Appropriations has directed my attention to a matter that was under consideration in the committee this morning, referring to the pay of telephone operators. It was stated that they are paying higher salaries in the Department of Agriculture than in the other departments which are carried by the legislative, executive, and judicial appropriation bill. I wish to inquire of the gentleman, as there is no designation of telephone operators, what salary the telephone operators in the Department of Agriculture receive?

Mr. LEVER. The ordinary telephone operator receives $1,600.

Mr. STAFFORD. This is the employee, I apprehend, who receives the telegraphic dispatches, and he is a high-grade man. I am referring to the ordinary telephone operator.

Mr. LEVER. I will give the gentleman that information later on.

Mr. STAFFORD. I do not find it in this list.

Mr. McLAUGHLIN of Michigan. It is on page 2, line 22.

Mr. STAFFORD. That is not the ordinary telephone operator. That is the employee that has charge of all the telegrams coming into and going out of the department.

Mr. LEVER. I will give the gentleman that information later on.

Mr. STAFFORD. Mr. Chairman, I will withdraw the pro forma amendment.

Mr. BRUMBAUGH. Mr. Chairman, would it be in order for me to ask the Chairman a question at this point?

The CHAIRMAN. It would not be in order unless there is some proposition before the House.

Mr. BRUMBAUGH. I move to strike out the last three words.

The CHAIRMAN. The gentleman from Ohio moves to strike out the last three words.

Mr. BRUMBAUGH. I notice in this paragraph that, all told, about 26 law clerks are provided for. Has the committee satisfied itself that these are all necessary, these 26 law clerks?

Mr. LEVER. I will say to the gentleman that some years ago the solicitor's office was under very severe fire in this House. The Committee on Agriculture at that time made a very careful investigation into the need for the number of law clerks that are in that office. Since that time the work of the solicitor's office has very greatly increased, and I am sure that these law clerks are absolutely necessary. The solicitor's office is enforcing, if my recollection is correct, some 40 different statutes. They are also helping in the preparation of much of the legislation that is being considered by this House, and it is a very busy office. I am satisfied that these clerks are needed.

The CHAIRMAN. The Clerk will read.

Mr. BORLAND. Mr. Chairman, I move to strike out the paragraph.

The CHAIRMAN. The gentleman from Missouri moves to strike out the paragraph. The gentleman will proceed.

Mr. BORLAND. Mr. Chairman, this paragraph provides for the office of the Secretary of Agriculture and his force. That brings up the question of the duties of that particular office, how far they extend, and whether this force is sufficient for the performance of those duties. When this bill was last under consideration the question arose as to whether that force in the Agricultural Department has sufficient powers and clerical help, and so on, to conduct this Beef Trust investigation.

Mr. MADDEN. I make the point of order that this has nothing to do with the beef investigation.

Mr. BORLAND. I hope the gentleman from Illinois will not be so peeved about my referring to the Beef Trust.

Mr. MADDEN. I am not peeved. I am exercising my rights as a Member of the House. It is not necessary for a man to be peeved in order to exercise his rights, and I hope the gentleman will not misstate the case.

Mr. BORLAND. I have heard the gentleman discuss matters that I thought had very little relevancy——

Mr. MADDEN. I maintain that this has no relevancy whatever to the paragraph.

The CHAIRMAN. The Chair appeals to the gentleman from Missouri to continue his discussion under the rules of the House as he knows them to be. The gentleman from Missouri understands perfectly that where the point of order is made under the five-minute discussion, the discussion must be germane and confined to the amendment before the House. The Chair asks the gentleman from Missouri to proceed in accordance with that rule.

Mr. BORLAND. If the Chair please, I hope and believe that I shall proceed, as I expect to proceed, under the rules laid down by the Chair. For that purpose I want to read a letter from the Secretary of Agriculture, directed to me under date of July 6, 1916, in regard to the powers and duties of his office:

Hon. W. P. BORLAND,
House of Representatives——

Mr. MADDEN. I object to the reading of the letter, because it has nothing to do with the sufficiency of the force

Mr. BORLAND. The gentleman does not know what the letter is yet.

The CHAIRMAN. The Chair can not rule on that proposition. The Chair does not know what the letter is. The amendment is to strike out the whole paragraph providing salaries for the force in the office of the Secretary of Agriculture.

Mr. MADDEN. I maintain that under my point of order there is not anything to be discussed on this question except the sufficiency of the force, the adequacy of the force provided in this paragraph of the bill.

The CHAIRMAN. The Chair will overrule that point of order.

Mr. BORLAND. I will read this letter:

DEPARTMENT OF AGRICULTURE,
Washington, July 6, 1916.

Hon. W. P. BORLAND,
House of Representatives.

DEAR MR. BORLAND: You asked me yesterday whether I thought that the inquiry proposed in your resolution should be conducted by the Federal Trade Commission or the Department of Agriculture. I am very definitely of the opinion that it should be conducted by the Federal Trade Commission. I understand that the commission is created to make just such inquiries.

Mr. MADDEN. Mr. Chairman, I make the point of order that the Federal Trade Commission is not being considered, nor is anything pertaining to the Federal Trade Commission being considered, and that the letter of the Secretary of Agriculture deals with a subject that is not contained in this paragraph.

The CHAIRMAN. The Chair will overrule the point of order.

Mr. BORLAND. The letter continues:

It has the requisite powers and, I imagine, a personnel selected with reference to work of this kind. The Department of Agriculture has not all the powers required for this work or a staff selected with reference to such tasks. If it were to undertake work of this kind, it would necessarily duplicate the machinery and activities of the Federal Trade Commission. The department can and is increasing the investigation of the marketing and other economic problems involved in the production and distribution of all farm products, including live stock. Its data can be well placed at the disposal of the Federal Trade Commission, and perhaps we could extend our inquiry along other lines the commission might suggest.

Very truly, Yours, D. F. HOUSTON, *Secretary.*

Mr. Chairman, that shows conclusively that the Department of Agriculture did not want this investigation, and that it was given to them without their consent——

Mr. MADDEN. I make the point of order that the gentleman is not discussing the amendment.

Mr. BORLAND. And therefore I withdraw the amendment to strike out the paragraph.

The CHAIRMAN. The amendment is withdrawn, without objection. So the Chair will not rule, as the gentleman has yielded the floor, and the Clerk will read.

The Clerk read as follows:

Salaries, Office of Farm Management: One chief of office, $4,000; 1 assistant to the chief, $2,520; 1 executive assistant, $2,250; 2 clerks, class 4; 2 clerks, class 3; 3 clerks, class 2; 8 clerks, class 1; 3 clerks, at $1,100 each; 4 clerks, at $1,080 each; 1 clerk or draftsman, $1,020; 10 clerks, at $1,000 each; 18 clerks, at $900 each; 6 clerks or map tracers, at $840 each; 1 messenger or laborer, $720; 1 messenger, messenger boy, or laborer, $660; 4 messengers, messenger boys, or laborers, at $480 each; 5 charwomen, at $240 each; 1 library assistant, $1,440; 1 library assistant, $900; 1 photographer, $1,400; 1 cartographer, $1,500; 1 draftsman, $1,440; 1 draftsman, $1,200; 2 draftsmen, at $900 each; in all, $83,430.

Mr. MADDEN. Mr. Chairman, I move to strike out the last three words, including the figures.

I wish to ask the chairman of the committee what the Office of Farm Management does toward the betterment of agricultural conditions? What is its specific function?

Mr. LEVER. Mr. Chairman, that question has frequently been asked on the floor of the House, and I have tried more or less to give some answer to it. I may say this, in a general way, that the Office of Farm Management, instead of dealing with any specific problems of the farm, deals with the farm as a unit and undertakes to investigate those farm methods that are proving to be most profitable to those engaged in agriculture and to disseminate to other localities and to other farmers the information thus gathered. In every community, as the gentleman knows, there is some farmer who is more progressive than his neighbor. He has adopted the best methods of agriculture, whatever they may be, and that type of farmer is studied. His methods are studied, and the data collated from this study are disseminated to others engaged in agriculture.

Mr. MADDEN. Upon application by individuals, or without application?

Mr. LEVER. Largely in the way of bulletins.

Mr. MADDEN. And it costs about $300,000 a year to operate the Bureau of Farm Management. Does that include the publication of the bulletins and their mailing?

Mr. LEVER. No; the bulletins that are issued as farmers' bulletins, of course, come out of another fund.

Mr. MADDEN. I know; but are these bulletins that are sent out by Members of Congress prepared by this Farm Management Bureau?

Mr. LEVER. Some of them are; not all of them.

Mr. MADDEN. What kind of bulletins does this bureau prepare?

Mr. LEVER. I have here in my hand a list of some of these bulletins. I notice here Farming in the Bluegrass Region; Economic Study of Farming in the Cotton Belt; The Business of Ten Dairy Farms in the Bluegrass Region of Kentucky; Validity of the Survey Methods of Research; The Cost of Producing Apples in Western Colorado; The Theory of Correlation as Applied to Farm-Survey Data on Fattening Baby Beef; A Study in the Cost of Producing Milk on Four Dairy Farms Located in Wisconsin, Michigan, Pennsylvania, and North Carolina; Cost of Keeping Farm Horses and Cost of Horse Labor; The Economic Winter Feeding of Beef Cows in the Corn Belt; The Cost of Producing Apples in Hood River Valley; The Cost of Producing Apples in Wenatchee Valley, Wash.; How Live Stock is Handled in the Bluegrass Region of Kentucky; The Use of a Diary for Farm Accounts; Saving Labor with the Sweep-Rake; Minor Articles of Farm Equipment; Human Food from an Acre of Staple Farm Products.

Then they have issued a number of circulars. There is a Yearbook contribution on farm tenantry in the United States. Then they have in press more than a dozen bulletins: A Study of Share-Rented Dairy Farms in King County, Ill., and Green County, Wis.; A Brief History of the Sheep Industry in the United States; Farm Management and Farm Profits in Provo Area, Utah Lake Valley; Geography of the World's Agriculture; Cropping Systems for the Moisture Portion of Eastern Washington and Oregon and Northern Idaho; Value of a Small Plot of Ground to the Laboring Man; Pasture Land in the United States; A Farm-Management Survey in Brooks County, Ga.; A Study of Haymaking Crews and Labor Costs; Cost of Producing Hay in Steuben County, N. Y., and Washington County, Pa.; Cost of Producing Apples in Yakima Valley, Wash.; A Simple Way to Increase Crop Yields; Economy in the Selection of Feeds; A Farm-Management Study in Anderson County, S. C.; Factors of Successful Farming in the Vicinity of Monett, Mo.; Cost of Producing Apples in the Payette Valley, Idaho; Fire Prevention and Fire Extinction on the Farm; Cost of Harvesting Wheat by Different Methods.

Mr. MADDEN. Are not such bureaus as this operated in each State of the Nation?

Mr. LEVER. Each State in the Nation has an agricultural experiment station operated under the Hatch Act. The Federal Government deals in a more extensive way with the matter.

Mr. MADDEN. Does not the gentleman think that $300,000 for the work that this bureau does is a large amount of money?

Mr. LEVER. No; the committee has considered that from time to time. There is no increase in the item. It looks as if there was a decrease, but that is due to transfers from the lump-sum appropriation to the statutory rolls. The committee thinks that the office is doing good fundamental work.

Mr. MADDEN. The gentleman thinks that the results are such as to justify the appropriation?

Mr. LEVER. Yes.

Mr. MADDEN. Does the gentleman know of any specific instance where the information as furnished by the bureau has added a dollar of value to the crop in any State or upon any farm?

Mr. LEVER. I will answer that by saying that it is almost impossible to measure the dollar value of education or of scientific or economic research. The Office of Farm Management is dealing more largely with economic problems on the farm than any other office in the Department of Agriculture. It would be impossible to put a finger on the value of scientific research, although all agree that it has been of immense benefit to mankind, as education has been.

Mr. MADDEN. We all realize that.

Mr. LEVER. If the gentleman should ask me to give him the dollar value of the work of the eradication of the cattle tick or hog cholera, I think I could give it to him, but this is an educational and scientific proposition, and it is almost impossible to do it.

Mr. MADDEN. At the same time the investigation of educational, scientific, and economic propositions must be based on the worth of the research and information furnished as the result of the research. There ought to be somewhere and somehow some one who can tell definitely what the outcome is of the information gathered at this enormous expense.

Mr. LEVER. I will say frankly to the gentleman that I do not believe there is anyone who can measure the results of these interesting and valuable bulletins, what effect they have on the farmer as to changing his methods. That is something that no man knows, except we know that agricultural methods are being improved each day under some kind of influence.

Mr. MADDEN. My suggestion may not have any value to the Agricultural Department, and may not meet with the approval of the gentleman from South Carolina, who is always ready to consider problems that will benefit agriculture, but it seems to me that a bureau like this, charged with the responsibility of making economical as well as scientific studies, spending $300,000 a year, disseminating information which is intended to advance the system adopted by the Department of Agriculture, should also investigate the result of their work and have some concrete information as to whether their suggestions have been adopted and with what results. It should be a very easy matter to do it.

Mr. LEVER. I am afraid that the gentleman from Illinois would be asking the department to pass upon the merits of its own work.

Mr. MADDEN. I do not think so. If the department should issue a bulletin advocating a certain method of raising blue grass, they ought to be able to ascertain what the result and outcome of the adoption of that method or suggestion was.

Mr. LEVER. I am sure they do know that. I did not quite understand the gentleman.

Mr. MADDEN. I thought I was talking Anglo-Saxon.

Mr. LEVER. For example, the department has recommended in the South, where we have little dairy industry, the organization of creamery routes. I think the department is in a position to give specific figures on work of that kind.

Mr. MADDEN. The purpose of my suggestion was that the committee, in the consideration of the next Agricultural appropriation bill, might require the department to disclose the results, if any, of the expenditure of this money.

Mr. LEVER. If the gentleman will recall, about four years ago this committee went thoroughly into every line of activity of the Department of Agriculture. Our hearings extended over six weeks. The report discussed in detail every activity in the department, and we did do just what the gentleman suggests we ought to do again. I think the suggestion is a good one. We did go into the matter of seeing what results were obtained by the expenditure of this money.

Mr. MADDEN. I think it ought to be done every year and not quadrennially.

Mr. LEVER. We have done it more or less in this bill. The hearings extended over three weeks.

Mr. MADDEN. I hope in the future they will require the department in all scientific and economic work to give some evidence of the results and outcome of the expenditure.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I think the suggestion of the gentleman from Illinois could hardly be carried out. In the matter of this particular appropriation, for example, the department studies farm methods with the idea of learning those which are profitable and those which are not profitable. It is difficult to tell how many of the suggestions as to proper methods are followed and what the financial results of following the suggestions have been.

This department investigates an area in a State and learns the results reached and the methods employed by those who are engaged, we will say, in general agriculture; that is, farmers who are raising a variety of crops. The one who makes the investigation learns the different methods that are employed, how much of one crop and how much of another is grown, what acreage is devoted to one crop and what acreage to another. He finds out and determines the crops that are profitable in that area and the crops that have proven to be unprofitable and the acreage or the relative portions of a farm devoted to the various crops, pointing out that one farmer, considering the size of his farm and other conditions, is raising too much hay; another is not raising enough corn, that another is trying to raise wheat when perhaps conditions do not justify him in doing so. To a farmer who wishes to engage in dairying more extensively it is pointed out that that section of the country, perhaps, is not suitable to it, or if it is thought that he can engage in dairying profitably, how many cows he should keep and what kind of cows. A farmer is advised also to keep books, which will show him at the end of the year, or when the crops have

been disposed of, how much money, approximately at least, each of his crops or each of his lines of production has cost.

The department official helps the farmer to start his bookkeeping and later helps him to interpret his accounts and offers advice as to how proper use may be made of results as they appear by the books of account. Farmers quite generally accept advice offered along these lines, and the reports we receive as to results of keeping accounts, changed methods, and so forth, are very gratifying.

Reports are made as to the results of the investigation in that section, and statements are made or advice is given to those who are interested; those who are intelligent enough; those who are moved by suggestions made to them to adopt the suggestions. What the financial results are that follow in the case of those who take the suggestions have been difficult to ascertain. It is the statement of the financial results that the gentleman from Illinois [Mr. MADDEN] wishes. In my opinion, it is impossible to learn what results, in dollars and cents, have been.

Mr. MADDEN. Mr. Chairman, the suggestion I made, carried to its logical conclusion, would mean this: That where they make suggestions we may ascertain if those suggestions have been adopted, and if they have been adopted, with what result, compared with previous results before the suggestions were made. That is an easy matter. They could make typical cases. They would not have to take every case.

Mr. McLAUGHLIN of Michigan. The reports show sometimes in detail the number of farmers that have adopted the suggestions and in a general way the results following to those farmers who have followed the suggestions, and from these reports we, the committee, believe the money has been well spent and that the work should be continued, hence this appropriation.

Mr. McFADDEN. Mr. Chairman, will the gentleman yield?

Mr. McLAUGHLIN of Michigan. Yes.

Mr. McFADDEN. I want to inquire if this is not perhaps a duplication, whether this work is not being done by the county agents through the extension departments of the colleges?

Mr. McLAUGHLIN of Michigan. This is a different kind of work from that done by county agents. In the first instance, the surveys, as they are called, are made over quite an area, each survey taking in a large number of farmers engaged in one kind of agriculture. The results may be communicated to the county agents and they undertake to make proper use of them by advising and assisting farmers in their respective counties, but the county agents themselves can not devote time enough to make these surveys, which, to be successful, are usually made over an area larger than that superintended by any one county agent.

Mr. McFADDEN. Can the gentleman tell me how much of this appropriation goes to the extension departments; to be utilized by them to bring this to the attention of the farmers through the county agents?

Mr. McLAUGHLIN of Michigan. This is all extension work, but how much is expended to bring the results to the attention of the county agents I can not tell.

Mr. McFADDEN. The point I am making is whether that fund is consumed entirely by the department here, or does a portion of it go to the State?

Mr. McLAUGHLIN of Michigan. This is all used by the Department of Agriculture.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. McKENZIE. Mr. Chairman, I ask unanimous consent that the gentleman's time may be extended for one minute, in order to make an inquiry

The CHAIRMAN. Is there objection?

There was no objection.

Mr. McKENZIE. Mr. Chairman, take, for instance, 10,000 bulletins that may be printed on a certain subject. They are sent out by the department broadcast over the country. Ten thousand farmers may read that bulletin. No man and no department has any way to find out, and it is not possible to find out, what farmers have taken advantage of that, what improvements they have made, or in what way they have added to the wealth of the country, and yet a good deal of good may have been done.

Mr. McLAUGHLIN of Michigan. The gentleman from Illinois is entirely right, and what he says supplements admirably my feeble effort to answer the inquiry of the gentleman from Illinois [Mr. MADDEN]. No one can tell, certainly not in dollars and cents, the results of disseminating information among the farmers of this country. Some will take advantage of it, and some will fail to take advantage of it.

Mr. NORTON. Mr. Chairman, I move to strike out the last two words. I am anxious to know what part, if any, of the $221,660 is used for printing these bulletins. Can the chairman tell me?

Mr. LEVER. Only a small portion, if any.

Mr. NORTON. From the statement made by the chairman I was led to believe that most of this amount of $221,660 is used for the payment of those who make agricultural surveys throughout the country and in preparing bulletins. Before that statement was made by the chairman I was under the impression, from some experience I have had and from some observations I have made, that a large number—at least a considerable portion—of the bulletins referred to are prepared by persons who receive nothing out of this appropriation; that many of the bulletins are prepared and written by men employed in the departments of agriculture of the different States, and that the articles contained in many of these bulletins are turned over gratuitously to the Department of Agriculture and then published by the Department of Agriculture. What I would like to know and what I trust the Committee on Agriculture has investigated and does know, is whether or not a considerable part of this large appropriation is paid out to men who go around the country looking over the country in a sight-seeing way, doing little helpful work for the farmer, either by personal encouragement or by example or through the preparation of any of these bulletins.

Mr. LEVER. Mr. Chairman, I would state to the gentleman from North Dakota that the men who are being paid from this lump-sum appropriation here are regarded as experts in their line of work, and are carried on a lump-fund roll and paid out of this appropriation.

Mr. NORTON. Does the gentleman say now that a large number of these bulletins are not prepared by men who are not paid for doing it?

Mr. LEVER. I could not tell the gentleman that. I never heard the statement made before.

Mr. NORTON. What do these men who are paid out of the lump-sum appropriation actually do?

Mr. LEVER. They go into communities and study farm conditions. They select an area and make a study in that way. They may select a whole county and make a study of that county.

Mr. NORTON. How many of them are employed at the present time?

Mr. LEVER. That can be shown. We have an exact list here in the Book of Estimates showing the exact number. Then when they come to their conclusions, after gathering the data, they are put in the form of a circular, or farmer's bulletin, or they may be put in the form of a departmental bulletin, which is not generally distributed. The farm bulletins are, of course, distributed in the ordinary way, as the gentleman knows.

Mr. NORTON. Do these men lecture throughout the country?

Mr. LEVER. Very rarely, as far as I know.

Mr. NORTON. But the Department of Agriculture does send lecturers to farmers' gatherings and meetings. They are not paid out of this sum?

Mr. LEVER. I take it occasionally one of these more distinguished men might be called upon to address some great farmers' meeting, such as the Farmers' Union or the Grange or the Nonpartisan League, or something of that sort.

Mr. NORTON. Their expenses would then be paid out of this lump-sum appropriation?

Mr. LEVER. And the time he would lose in going and coming from that point would not be taken out of his salary; but this appropriation is not used generally for such work of the Department of Agriculture.

Mr. NORTON. Will the gentleman have placed in the RECORD the number of men who are paid out of this lump-sum appropriation, the number who were paid out of this appropriation during the last fiscal year, and who are in the regular employ of the Government?

Mr. LEVER. Yes; I have that here and I will try to summarize it. It is all here in this book.

Mr. SHALLENBERGER. Mr. Chairman, I move to strike out the last word. I would like to ask the chairman of the committee how long this particular provision has been included in the bill. Has it been in force and effect since 1911?

Mr. LEVER. Well, I think it has. This provision has been in the bill, I should say, six or eight years.

Mr. SHALLENBERGER. The gentleman from Illinois asked a very pertinent question as to the effect of business management upon this great industry in America. I have a statement here, given out by the Department of Agriculture and published in the press this morning, that the average of agricultural production in America for the five years since 1911 was $6,208,220,000, whereas for 1917 the amount has risen to the vast sum of

$13,683,768,000, which practically equals the entire production of every other line of business endeavor in the country, and I submit that the modest sum of $300,000 is a very modest amount, indeed, to ask for improving the business management of American agriculture.

Mr. MADDEN. If the gentleman will yield——

Mr. SHALLENBERGER. I will.

Mr. MADDEN. That is true, I agree to that; but the gentleman does not assume that the large increase in the output of agriculture is on account of the expenditure of this money?

Mr. SHALLENBERGER. I will leave it to the gentleman to separate the amount to be credited to improved business management from that accountable to the industry of the farmer. Each one has had its effect.

Mr. MADDEN. The number of farms have been, of course, increased in the number of years the gentleman quotes; but surely the expenditure of this money has had nothing to do in the opening up of those farms.

Mr. SHALLENBERGER. I think it is generally understood, I will say, that improved business methods have been somewhat neglected upon our farms, and that the application of economic business ideas to agriculture produces results as in every other line of human effort.

Mr. MADDEN. I agree with the gentleman.

The Clerk read as follows:

To investigate and encourage the adoption of improved methods of farm management and farm practice, $221,660.

Total for Office of the Secretary of Agriculture, $767,090.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. I want to ask the gentleman from South Carolina, in charge of the bill, what rate of compensation is paid to the men who are paid out of this lump-sum appropriation of $221,660? How many men are employed under it and what do they do?

Mr. LEVER. I promised the gentleman from North Dakota [Mr. NORTON] to put in the RECORD that information, but I will read some of it. The chief of this bureau gets $4,000.

Mr. MADDEN. That is already in the bill.

Mr. LEVER. The assistant chief gets $3,250.

Mr. MADDEN. That is another one in the bill.

Mr. McLAUGHLIN of Michigan. They are on the statutory roll, and he asked about the lump-sum appropriation.

Mr. MADDEN. It is the lump sum I am talking about.

Mr. LEVER. The next is an agriculturist who gets $3,250, another agriculturist who gets $3,000, another who gets $3,000, another who gets $2,700, another at $2,520, several more at $2,340, two here at $2,400, three or four here at $2,250, and on down to a scientific assistant and assistant agriculturist, and so forth——

Mr. MADDEN. That will do, all right.

Mr. LEVER. At $1,600.

Mr. MADDEN. Will the gentleman yield for another question?

Mr. LEVER. I will.

Mr. MADDEN. Inasmuch as the gentleman is already able to enumerate the number of men employed and the compensation they are receiving, I would like to ask why it is the committee thought it inadvisable to report these places specifically in the appropriation bill, so that we may not give to the Secretary of Agriculture plenary power to pay any compensation that he pleases?

Mr. LEVER. I would say, Mr. Chairman, in answer to the suggestion of the gentleman, that the Committee on Agriculture has followed the method of every other appropriation committee in Congress, and the Department of Agriculture also follows the same method pursued by other departments of the Government, namely, that the scientific force of these departments is carried on the lump-fund roll and paid from the lump-fund appropriation. The permanent clerical positions are carried on the statutory roll.

Mr. MADDEN. I understood there was a chief of a bureau there, at $4,000, paid out of this?

Mr. LEVER. No; that is a statutory salary.

Mr. MADDEN. An agriculturist.

Mr. LEVER. He is a scientist, and would come out of the lump sum.

Mr. MADDEN. That is what I was going to ask. Now, are all the positions enumerated by the gentleman occupied by scientists?

Mr. LEVER. They are all regarded as scientific people.

Mr. MADDEN. And their work is——

Mr. LEVER. Of a scientific nature.

Mr. MADDEN. And they are educated in the scientific work?

Mr. LEVER. Exactly.

Mr. MADDEN. So that the reason why they are not enumerated in the law and their compensation fixed by law instead of permitting the Secretary of Agriculture to employ them indiscriminately and pay them what he pleases is due to their scientific knowledge?

Mr. LEVER. Exactly. And the limit of their salary is fixed by law at $4,500 per annum.

Mr. McFADDEN. I would like to inquire of the chairman of the committee, in speaking of these scientific men who are to investigate and encourage the adoption of improved methods, and the assignment to this work, the gentleman said a few minutes ago that these experts were assigned sometimes to counties. Will the gentleman explain how these assignments are made?

Mr. LEVER. I conveyed a wrong impression to the gentleman if he has any idea that the assignment to a county is a permanent proposition. What I wanted to say was that one of these agricultrists might be sent into a county in Pennsylvania to make an investigation that would cover a month or two months. The same man, after that, might be sent to the State of Texas. They are not permanently assigned to any place.

Mr. McFADDEN. What I wanted to find out was whether the demand came from the States or counties, or originates in the department.

Mr. LEVER. It originates in the department.

Mr. HAUGEN. Mr. Chairman, I believe a wrong impression can be gathered from the statement of the chairman. I do not believe he wants it understood that the fixing of the salaries under the lump sum is confined entirely to the scientists. We appropriate money in lump sum and the department fixes the salaries all along the line, and in that way Congress has surrendered its power and jurisdiction over fixing salaries. We appropriate lump sums and the departments make the appointments and fix the salaries to suit its own will all along the line. The chairman will remember in the appropriation that we made a year ago we appropriated for a number of places at $720 and $900. Clerks could not be had—or, rather, their services could not be obtained—at the salary fixed, and it was found necessary to increase their salaries; and the only way salaries could be increased was through the appointment of clerks and paying them under the lump-fund roll; and as a result we have hundreds of clerks now drawing $1,200 where it was the intention of Congress that their salary should not exceed $900. The excuse given by the department is that, inasmuch as the services of the clerk could not be had at $900, it was necessary to increase the salary to $1,200.

Mr. LEVER. In order that I may make myself entirely clear, as I do not want to mislead the committee——

Mr. HAUGEN. I understand.

Mr. LEVER (continuing). I will say that this matter of the lump-sum roll has been discussed frequently upon the floor of the House and has disturbed every committee that has handled it to know how to handle it and limit the authority of the executive in employing people on this roll. But the theory is that only scientific persons or people employed temporarily in clerical positions are carried upon this roll. Now, the law requires that where a person is occupying a clerical position to which he is appointed temporarily the executive head of a department shall estimate for his transfer to the statutory roll of that department. In the case of the Department of Agriculture, as my friend from Iowa [Mr. HAUGEN] said—and I am glad he said it—they informed us that many of their lower grade positions—$720, $840, $900 statutory places—are unfilled for the reason that they could not get people at those salaries to serve. The Department of Agriculture and the other departments of the Government here until a few months ago were in competition with each other in bidding for clerks. The enormous increase in the work in Washington has made it almost impossible for the old-established institutions to hold their clerks. But the rule is that the scientific people are carried on the lump-fund roll. The temporary clerk positions are carried on the lump-fund roll, but they must be transferred under the law in the next estimates. I think I state that fairly accurately.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last two words.

There has been presented to the committee a question that has long been agitating Members, as to the way Congress could control the departments in the expenditures of their lump-sum appropriations. We have before us a glaring instance of the abuse that follows by vesting in the Department of Agriculture the lump-sum appropriation, amounting to hundreds of thousands of dollars, which they can utilize at their own will to increase salaries and also in bidding against the same character of employees in other departments of the Government.

The mere fact that they are employed in a scientific position, according to my way of viewing it, is no warrant for not specifying them in this appropriation bill. There is one bureau con-

nected with this Government that is doing more work to advance the welfare of the Government toward winning the war than any other department in the Government service, and yet that bureau has its scientific force restricted by number and salary. I need not mention to this Committee that it is the Bureau of Standards. The Committee on Appropriations requires that every scientific officer, every employee connected with the departments of the Government here at Washington other than the Department of Agriculture, which is the one exception, of which the Committee on Appropriations has not jurisdiction, must in their estimates detail the officials and employees, clerical, scientific, and otherwise, as to their number and salary, and the committee designates them specifically in the legislative, executive, and judicial appropriation bill. Yet here the chairman of the committee in his opening statement has called attention to this anomalous condition, that here in the bill, on the statutory roll in the Office of Farm Management, the chief of the office receives $4,000 and the assistant to the chief $2,520 on the statutory roll, but out of a lump-sum appropriation, of which the Congress knows nothing, and which the committee never examines except, may be, when there is some agitation in the House or in the country demanding a specific investigation of the respective salaries, the salary of the assistant to the chief is $3,250. Is that correct, I will ask the gentleman from South Carolina [Mr. LEVER]? We have no knowledge of it except as it is included in the Book of Estimates, scanned only on occasion by the chairman of the committee or by the committee itself.

I wish to emphasize this fact to the gentleman, and I do it in the best of faith and not in a spirit of criticism. I think it is well, especially in these times when the Department of Agriculture is competing with the other departments for their employees and abstracting them from other departmental services, because they have at their command lump-sum appropriations, whereas the other departments are limited to the statutory salaries carried in the legislative bill, that they should put in their appropriation bill not only the clerical force but the scientific force.

Mr. LEVER. Mr. Chairman, will the gentleman yield for a question?

Mr. STAFFORD. I will be glad to.

Mr. LEVER. Do I understand the gentleman to say that the Committee on Appropriations, in appropriating for these scientific people in other departments of the Government, specify so many at such and such rates of compensation in the bill?

Mr. STAFFORD. The Bureau of Standards, the most scientific department of the Government, where immense military services have been thrown upon them, is required to specify the salaries and rates of compensation.

Mr. LEVER. How about the Geological Survey? I am asking for information.

Mr. STAFFORD. They are limited strictly to the statutory force in the Bureau of Standards. As to the Geological Survey, that is a field service, not carried in the legislative, executive, and judicial appropriation bill, and that bill is limited to departmental services. The Geological Survey is carried in the sundry civil bill. I can not speak of that bill as I can of the legislative bill, framed by the subcommittee of which I am a member.

Mr. LEVER. The gentleman is on the Committee on Appropriations and is a very diligent Member of this House. Is there and other scientific bureau of the Government whose force is carried exclusively on the statutory roll except the Bureau of Standards? I am asking for information.

Mr. STAFFORD. I do not recall any other scientific bureau carried in the legislative, executive, and judicial appropriation bill. Yes; I do recall, for instance, that the professional force in connection with the Naval Academy is provided specifically by places and salaries in the naval appropriation act. That is an instance.

Mr. LEVER. I think I can differentiate that from these.

Mr. STAFFORD. Of course you can differentiate. But I want to emphasize the fact that it is the system I am criticizing. I am not criticizing the committee.

Mr. LEVER. I know that.

Mr. STAFFORD. We all know—those of us who have charge of appropriations for any department—that the department heads always want to be freed as much as possible from restrictions, and yet it is necessary, for the protection of the purse strings of the Government, for Congress to be always on the alert and place limitations upon them. We have been at war for nine months now, and it has been necessary to increase the appropriations for the War Department and the Navy Department extraordinarily. There have been placed at the control of the War and Navy Departments large deficiency appropriations, and yet we find that as soon as those appropriations are placed at the disposal of the War and Navy Departments each bureau immediately resorts to the device of raising the salary of men on the statutory roll and placing them on a roll paid from a lump-sum appropriation, with an increase of $200 or $300 in advance of the appropriation made by Congress.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. STAFFORD. I ask unanimous consent to proceed for two minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for two minutes. Is there objection?

Mr. ANDERSON. Mr. Chairman, does the gentleman intend to offer any amendment to correct this defect that he is talking about?

Mr. STAFFORD. No. I merely want to make some observations. Does the gentleman want to object to my continuing for two minutes?

Mr. ANDERSON. I was making an inquiry of the gentleman. I know what my rights are.

The CHAIRMAN. Without objection, the gentleman will proceed.

Mr. STAFFORD. I wish to emphasize to the committee the fact that the committee should look into and ascertain if it is not feasible in making up the bill to include all the clerical force and all the scientific force by classes and grades, so that the heads of bureaus and departments will not have a free hand to increase salaries as they may be inclined to without the approval of Congress.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. McFADDEN. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Pennsylvania moves to strike out the last two words.

Mr. McFADDEN. In regard to these investigations, I want to ask the chairman of the committee to put into the RECORD the list of States that have been benefited by these investigations; that is to say, in what States the investigations have taken place.

Mr. LEVER. I do not know, this being Saturday afternoon, whether we could get the information in time for to-morrow morning's RECORD or not; but if we can, I will be glad to put it in the RECORD.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

WEATHER BUREAU.

Salaries, Weather Bureau: One chief of bureau, $5,000; 1 assistant chief of bureau, $3,250; 1 chief clerk, $2,500; 1 chief of division of stations and accounts, $2,750; 1 chief of printing division, $2,500; 3 chiefs of division, at $2,000 each; 8 clerks, class 4; 11 clerks, class 3; 23 clerks, class 2; 31 clerks, class 1; 22 clerks, at $1,000 each; 10 clerks, at $900 each; 1 foreman of printing, $1,600; 1 lithographer, $1,500; 3 lithographers, at $1,200 each; 1 pressman, $1,200; 1 printer or compositor, $1,440; 5 printers or compositors, at $1,350 each; 14 printers or compositors, at $1,300 each; 1 printer or compositor, $1,200; 6 printers or compositors, at $1,080 each; 5 printers or compositors, at $1,000 each; 4 folders and feeders, at $720 each; 1 instrument maker, $1,440; 3 instrument makers, at $1,300 each; 1 instrument maker, $1,260; 3 skilled mechanics, at $1,200 each; 5 skilled mechanics, at $1,000 each; 1 skilled mechanic, $840; 1 skilled mechanic, $720; 6 skilled artisans, at $840 each; 1 engineer, $1,300; 1 fireman and steam fitter, $840; 4 firemen, at $720 each; 1 captain of the watch, $1,000; 1 electrician, $1,200; 1 gardener, $1,000; 4 repairmen, at $840 each; 6 repairmen, at $720 each; four watchmen, at $720 each; 18 messengers, messenger boys, or laborers, at $720 each; 6 messengers, messenger boys, or laborers, at $660 each; 31 messengers, messenger boys, or laborers, at $600 each; 99 messengers, messenger boys, or laborers, at $480 each; one charwoman, $360; 3 charwomen, at $240 each; in all, $328,950.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MADDEN. Is this the bureau, the chief of which publishes a statement every afternoon or evening or morning, as the case may be, in which he sets forth that the wind may be in the north, veer to the south, and turn to the west, and that it will be cloudy, and that the sun will shine a few minutes later, and that it may possibly rain or it may possibly be dry? [Laughter.]

Mr. LEVER. This is the regular Weather Bureau service.

Mr. MADDEN. So this is the bureau from which the statement such as I have made is published is it?

Mr. LEVER. I am not willing to admit that. [Laughter.]

Mr. MADDEN. A great many people always after reading the report are in doubt as to what the meaning of the report is. When I read it I always conclude that no matter what happens,

the chief of the bureau has tried to hit it with some word or other that he has put into the statement.

Mr. LEVER. That is a wise thing.

Mr. MADDEN. But he never makes a statement with any intention of getting at the facts. He has certainly become adroit in the use of words, and sometimes it is said by a great many people that the reports of the Weather Bureau are not of much value in the way they are made. I think there are some private institutions in the United States that make weather reports, and these are relied on to a much greater extent than the reports made by the Agricultural Department.

Mr. BORLAND. The gentleman doubtless refers to Prof. Hicks. [Laughter.]

Mr. MADDEN. I think perhaps there is a man of that name who makes reports.

Mr. LEVER. I have a constituent myself who is a great forecaster.

Mr. MADDEN. I think the private reports are much more reliable than the reports we are getting from the Department of Agriculture, that cost $1,900,000 a year. Of course, I suppose it is not possible for any man, no matter who he is or how scientific he may be, or how much knowledge he has concerning the movements of the stars and the heavens, and the moon, and faith, and all that, to tell exactly what is going to happen; but it seems to me he ought to come as near telling the truth as it is possible for him to tell it; and it very frequently happens that just the reverse of his predictions comes to pass. What does the gentleman in charge of this bill have to say about the inaccuracy of these reports?

Mr. LEVER. The information that has come to the committee is to the effect that the forecasts of the Weather Bureau show a percentage of accuracy of 80. In other words, they hit it 80 times out of 100. That is pretty good forecasting.

Mr. MADDEN. The gentleman means that some word in the statement will be found to fit the situation.

Mr. LEVER. No; if they make a positive declaration, they hit it 80 times out of 100, and I think that is pretty good work.

Mr. MADDEN. That would be very good if that should turn out to be the case.

Mr. LEVER. I think their records will show that.

Mr. MADDEN. In reading these reports I have found myself wondering who the necromancer was who found the words that were put into the prediction, because they turn double somersaults and loop the loop five or six times, and then come back and make a straightforward movement, and then put on the reverse lever and move backward, and then veer to the northeast, and sometimes back to the southwest, and finally reach a conclusion that is very much in doubt.

Mr. LEVER. Well, they are dealing with the wind.

Mr. MADDEN. I thought they were dealing in science.

Mr. McFADDEN. I should like to ask the chairman of the committee, in view of the kind of weather we have been having for the last two months, whether he thinks we should continue this appropriation?

Mr. LEVER. I think we ought to increase it. [Laughter.]

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For necessary expenses in the city of Washington incident to collecting and disseminating meteorological, climatological, and marine information, and for investigations in meteorology, climatology, seismology, volcanology, evaporation, and aerology, $109,250.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Wisconsin reserves a point of order.

Mr. STAFFORD. I wish to inquire what is the purpose of the new language in line 15, page 8, "seismology and volcanology"?

Mr. LEVER. I will ask the gentleman from Michigan [Mr. McLAUGHLIN] to give the information which the gentleman from Wisconsin desires.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, the gentleman from Wisconsin asks in regard to the new work that is to be carried on under these words "seismology and volcanology." "Seismology" is a word that has been carried in the paragraph before. "Volcanology" is a new word here.

Mr. STAFFORD. Wherein does volcanology differ from seismology?

Mr. McLAUGHLIN of Michigan. Volcanology is so similar to seismology that the Secretary of Agriculture, the Chief of the Weather Bureau, and the most illustrious gentlemen in the world in relation to these two subjects are unable to distinguish between them. They say they are one and the same thing, so the gentleman from Wisconsin can not expect me to distinguish between them.

Mr. STAFFORD. If they are one and the same thing, what is the purpose of including the word "volcanology" in this paragraph, as a new phrase?

Mr. McLAUGHLIN of Michigan. It is suggested that some new work be done, and it relates to volcanology, in connection with the volcanoes in the Hawaiian Islands. The chairman of the committee thought it advisable to inform Congress of the new work that is to be undertaken, and the use that is to be made of the increased appropriation of $10,000. The chairman made the suggestion simply to advise Congress, not because the Secretary of Agriculture or the Chief of the Weather Bureau thought that the use of the word "volcanology" was necessary.

Mr. STAFFORD. Can the gentleman inform the committee what additional work is contemplated so far as volcanology or seismology is concerned, for which an additional appropriation of $10,000 is desired?

Mr. McLAUGHLIN of Michigan. It is intended to assist in continuing the work that Prof. Jaggar has for several years been carrying on in the island of Hawaii, investigating and collecting data and keeping records in regard to the earthquakes and volcanoes there.

Mr. STAFFORD. Is it contemplated to employ him as a Government official to compile the data that he has been collecting there as the representative of the Massachusetts Institute of Technology?

Mr. McLAUGHLIN of Michigan. I hope that a part of this money will be used properly to compensate Dr. Jaggar for his very important work. Up to this time he has been paid out of private funds supplied by the Massachusetts Institute of Technology, and by private subscription by people of the Hawaiian Islands. He has been engaged in that work for several years, making observations and keeping records, and it is proposed that he shall continue that work, and that the United States Government shall furnish a little money to help pay his salary and expenses. How much of that money will be devoted to that purpose I do not know, but it is only a small part of the sum of money asked for two years ago, and very strongly recommended by the Secretary of Agriculture and the chief of the bureau. About compiling the records, I do not know what will be done in that respect; but the observations Prof. Jaggar is making, and the records he is keeping, have their chief value, or one of their great values, in being continuous and unbroken over a series of years. They ought to be continued without break or interruption. What will be done by way of collating or publishing them I do not know. That will have to be left to the scientific men of the Weather Bureau, acting under the direction of the Secretary of Agriculture.

Mr. STAFFORD. If the gentleman will permit, will he differentiate between work done by individuals connected with universities doing research work in scientific lines for the benefit of the world and of science generally, not paid out of Government funds, and this gentleman, who is engaged in this work there on the Island of Hawaii?

Mr. McLAUGHLIN of Michigan. I know very little of strictly scientific work being done by gentlemen in connection with governmental actitivities in cooperation with private interests or activities in which the Government might engage. I do not know that I can give the gentleman any information of work being done by scientific men connected with private institutions or paid by private funds. But the work Dr. Jaggar is doing is of public interest. It is connected, the Secretary of Agriculture says, with agriculture. He is pursuing a very important and a very interesting scientific investigation.

Mr. STAFFORD. How is it connected with agriculture?

Mr. McLAUGHLIN of Michigan. The Secretary points out that it is related to meteorological investigation, weather conditions, temperature, sun radiation, and so on. There is agricultural meteorology, or the relation of climate and weather to vegetable growth.

Mr. STAFFORD. Mr. Chairman, I question the policy of the Government in taking under its fold every research student that may be employed anywhere throughout the world investigating something of value to humanity and science, but the bureau has been engaged to some extent in the investigation of seismology, and volcanology is rather similar, and I am not going to press a point of order. I hope that this appropriation will not increase abnormally and that the Federal Government will not take under its wing every person that happens to be engaged on research work. I withdraw the reservation of the point of order.

The Clerk read as follows:

For the establishment and maintenance by the Weather Bureau of additional aerological stations, for observing, measuring, and investigating atmospheric phenomena in the aid of aeronautics, including salaries, travel, and other expenses in the city of Washington and elsewhere, $98,740.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order to the paragraph in order to inquire whether there was any item which was carried in last year's appropriation bill providing for the establishment of aerological stations connected with the Weather Bureau?

Mr. LEVER. There were none.

Mr. STAFFORD. What is the increase of $98,000 for?

Mr. LEVER. The Army appropriation bill for the fiscal year carries an appropriation of $100,000 for the establishment of these aerological stations. The Department of Agriculture has one already in the State of Nebraska. The Secretary of War, the Secretary of Agriculture, the Chief of the Signal Corps, and others interested in aeronautics concluded that this work properly belonged to the Weather Bureau and could better be handled by the Weather Bureau since they have made investigations and have experimented along these lines, and this comes into the bill at the suggestion of the parties I have named.

Mr. STAFFORD. There is no intention of having the various departments overlap each other?

Mr. LEVER. No.

Mr. STAFFORD. And, by agreement with all interested, the Department of Agriculture is to have the sole investigation of the work?

Mr. LEVER. Yes; and they propose to establish, in addition to the one in Nebraska, five additional stations.

Mr. STAFFORD. And in the establishment of these stations the Secretary of Agriculture is to cooperate with the War Department and the Signal Corps?

Mr. LEVER. Yes.

Mr. SHALLENBERGER. Will the gentleman yield?

Mr. LEVER. I will.

Mr. SHALLENBERGER. I want to ask if in this appropriation the language "and other expenses in the city of Washington and elsewhere" would in any way authorize operations in Europe? I think the Signal Corps has indicated to the Military Committee that they will require meteorological stations in Europe.

Mr. LEVER. It was not so intended. It was intended to establish five additional stations in this country.

Mr. STAFFORD. This, as I understand it, is a war emergency measure?

Mr. LEVER. Yes.

Mr. STAFFORD. Mr. Chairman, I withdraw the reservation of a point of order.

The Clerk read as follows:

For inspection and quarantine work, including all necessary expenses for the eradication of scabies in sheep and cattle, the inspection of southern cattle, the supervision of the transportation of live stock and the inspection of vessels, the execution of the 28-hour law, the inspection and quarantine of imported animals, including the establishment and maintenance of quarantine stations and repairs, alterations, improvements, or additions to buildings thereon, the inspection work relative to the existence of contagious diseases, and the mallein testing of animals, $503,662.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. In this connection, Mr. Chairman, I desire to ask unanimous consent to insert in the RECORD certain resolutions adopted at a recent meeting of the Wyoming Wool Growers' Association.

Mr. MADDEN. I reserve the right to object.

Mr. MONDELL. The resolutions refer to matters treated of in this paragraph and generally to live stock.

The CHAIRMAN. The gentleman from Wyoming asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

Mr. MADDEN. I object.

Mr. MONDELL. Mr. Chairman, at this time the world is suffering from something of a shortage of wool. For the first time in the history of our country we are placing in the uniforms of our soldiers a large amount of shoddy. Before the outbreak of this war our soldiers wore the best uniforms of any soldiers in the world. The grade of uniform has been reduced by using shoddy, increasing the proportion of cotton, until we have reached a condition in which, in the words of an officer in the United States Army before the investigating committee of the Senate a few days ago, "We have the poorest uniform of any army in the world"—that is, any army of any considerable power.

Mr. LEVER. Will the gentleman yield for a moment?

Mr. MONDELL. Yes.

Mr. LEVER. When the gentleman from Wyoming was necessarily absent attending to duties of his committee I made the statement that I was going to try to enforce the rule on this bill by having the remarks of Members confined to the item under considerartion.

Mr. MONDELL. I am in harmony with the gentleman on that and have no desire to discuss anything except the bill and the provisions of the bill.

Mr. LEVER. I am sure of that, and there is an item in the bill a little further on to which the gentleman might appropriately address his remarks.

Mr. MONDELL. I am going to keep within the rule, I assure the gentleman.

Mr. SHALLENBERGER. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. SHALLENBERGER. I know the gentleman wants to be correct. The hearings before the Military Committee in the Senate and in the House show that there is absolutely no cotton in the uniforms and that the so-called shoddy is reworked wool. The uniform is composed entirely of wool. The question of putting in cotton was considered but was abandoned.

Mr. MONDELL. My friend ought to be better informed. He does not mean to say that there is no cotton in the warp of the overcoats?

Mr. SHALLENBERGER. There is cotton in the warp of the overcoat, but not in the uniform proper.

Mr. MONDELL. There is cotton in the warp of the cloth used for the Army at this time.

Mr. SHALLENBERGER. Only in the overcoats.

Mr. MONDELL. And in addition to the use of cotton warp there is a considerable increase of shoddy and a decrease in the weight of the cloth. No doubt those who decided that matter believed there was such a shortage of wool as to necessitate the change. I do not think so. I believe it was a great mistake. There was plenty of wool available, and I know that it was offered to the Council of National Defense at a very low price compared with the present price at the outbreak of the war, because I was one of those who went before the Council of National Defense with the representatives of the wool growers of the West, who made the offer of sufficient wool for all uses of the Government at a very low price.

Mr. MOORE of Pennsylvania. What was the substance of the resolutions of the Wyoming Wool Growers' Association?

Mr. MONDELL. They related to the use of wool in the making of clothing, the diseases of sheep, the marketing of wool and mutton—matters likely to be treated of in the resolutions of a live-stock association.

Mr. MOORE of Pennsylvania. Did they indicate a shortage of wool?

Mr. MONDELL. They did not. The particular resolution I desire to emphasize at this time is as follows:

We demand that no shoddy or other adulterants shall be mixed with wool that is to be made into soldier garments, and that our soldiers shall be as well or better dressed than the soldiers of any other country.

There is wool enough to be had to do this, and it was offered at a comparatively low price. In fact, the price now is not high compared with that of other articles. It is low compared with the price of cotton. Let us have no more shoddy in our soldiers' clothes.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

The Clerk read as follows:

For investigating the disease of tuberculosis of animals, for its control and eradication, for the tuberculin testing of animals, and for researches concerning the cause of the disease, its modes of spread, and methods of treatment and prevention, including demonstrations, the formation of organizations, and such other means as may be necessary, either independently or in cooperation with farmers, associations, State or county authorities, $250,000.

Mr. STAFFORD. Mr. Chairman, I reserve the point of order on the paragraph.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I desire to offer an amendment, but it would perhaps be well first to dispose of the point of order.

Mr. LEVER. I think so.

Mr. STAFFORD. Would the gentleman be willing to have his amendment read for information? I ask unanimous consent that the amendment be read for information.

The CHAIRMAN. Without objection, it will be read for information. The Clerk read as follows:

Amendment proposed by Mr. McLAUGHLIN of Michigan: Page 13, line 19, strike out the figures "$250,000" and insert in lieu thereof the figures "$500,000."

Mr. STAFFORD. Mr. Chairman, I reserve the point of order in order to obtain some information about this paragraph in respect to its new phraseology. I notice that in last year's act there was a provision as follows:

The inspection work relative to the existence of contagious diseases and the tuberculin and mallein testing of animals.

Does the new phraseology differ in its authorization or purpose from that which is covered in last year's act under the general phraseology just read?

Mr. LEVER. The only difference is that the work in the testing of tuberculin itself is not included in the language to which the gentleman is referring. The new language in the bill, in

my judgment, does not confer upon the Secretary of Agriculture any authority which he does not now have, nor is it the purpose of this language to authorize the department to do any character of work under this language and with this appropriation which is not being done during this fiscal year.

Mr. STAFFORD. It is not contemplated that this appropriation shall be utilized for the payment to owners of tubercular cattle which have been condemned?

Mr. LEVER. Not at all; and there would be no authority in this language to do that.

Mr. STAFFORD. Does the gentleman anticipate that that might be true in the future as the result of authorization along the lines carried in this bill?

Mr. LEVER. I will say frankly to the gentleman that there are those in the House—and I think some members of the committee—who feel that probably one of the best methods of eradicating tuberculosis in cattle and in hogs would be through some system of compensation, either in whole or in part, one-quarter or one-third; but the committee itself has not reached any definite conclusion upon it. In my own mind I will say that I do not feel that Congress would be warranted in going into the matter of compensating for destroyed tubercular cattle at this time. Of course, what may develop from this I can not forecast. It is a very big problem.

Mr. STAFFORD. Another inquiry which may be of interest to the Members of the House is this: How far has this investigation work been performed by the States individually? I know the State of Wisconsin has done considerable work along this line. I am not advised as to what other States have done. I know gentlemen in general debate discussed this question, but I was not privileged to be here, by reason of committee work.

Mr. LEVER. The gentleman from Nebraska [Mr. SLOAN], who has been greatly interested in this matter, yesterday put into the RECORD a statement that 47 out of 48 States of the Union had laws looking to some kind of control of tuberculosis. The testimony before the committee, which I again read last night, informs me that only two or three—I think at most three—States have taken any aggressive action looking to the eradication of tuberculosis. I think Wisconsin and Minnesota, and probably one other State, have done that.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. SLOAN. I would like to answer, in part, the gentleman, because what is in the hearings does not reflect the legislative activities of the country.

Mr. LEVER. If the gentleman will permit me. I thought the gentleman from Wisconsin was driving at the fact of whether or not the States were taking any aggressive action in the way of control.

Mr. STAFFORD. That was my purpose; and I knew that in the State of Wisconsin they had made considerable headway along those lines, and I was wondering how much similar work had been undertaken by other States.

Mr. SLOAN. Twenty States in this Union have appropriated money and have used it for the purpose of eradicating tuberculosis, not only to the extent of using the tuberculin test, which is used and required in 47 out of 48 States of the Union, but for the compulsory slaughtering of the generalized reactors. Fifteen of them compensate to the extent of a portion of the value of the slaughtered brute.

Every other State in the Union has some activity in this line. You will find in the RECORD a compilation which I made at a good deal of expense of time and energy of what each State is doing and has done, and the country, for more than 20 years in some States, other States a less number of years, other States but a short time, has been going into such activities and making expenditures for the purpose of eradicating tuberculosis, so that the country is just ripe for just this kind of a campaign.

Mr. STAFFORD. Will the gentleman inform the committee what is the real purpose of the authorization, as to whether it is supplementary to State efforts or whether it is just merely to go into those States that have manifested little or no activity and do the work of the States for them?

Mr. SLOAN. The chairman can better give the gentleman the purposes of the bill.

Mr. LEVER Let me inquire of the gentleman from Wisconsin if he proposes to press the point of order.

Mr. STAFFORD. I am not inclined, from the information I have received so far, to press the point of order.

Mr. LEVER. I make that inquiry for the reason I happen to know there will be considerable debate on this proposition and an effort to increase this appropriation, and I thought if the gentleman was not going to press the point of order we might fix some time for debate.

Mr. STAFFORD. I am rising in all good faith to get information.

The CHAIRMAN. Does the gentleman from Wisconsin withdraw the point of order?

Mr. STAFFORD. I do not withdraw it at present. I wish this additional information.

The CHAIRMAN. The time of the gentleman has expired.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to proceed for 3 minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. STAFFORD. I wish to inquire whether this work is to be supplemental of the States' activities or whether it is just to lift the burden from the States and perform it in States where they have been negligent in their functioning?

Mr. LEVER. No; the purpose is to expend this money in some States with the cooperation of the States, in other States where the State itself may not have funds and the community is ripe for this kind of work or the breeder is ripe for this kind of work, that money will be expended with that community and with that breeder. They have three lines of work that they are proposing to undertake. The first is the control of hog tuberculosis. The gentleman, of course, knows hogs have tuberculosis. The second is in establishing tuberculosis-free herds of pure-bred cattle. That is applying to the pure-bred herd the tuberculosis test, get rid of the reactors, and then permit shipments of those pure bred for breeding purposes. That is probably the line along which they will devote most of this money at the present time, probably for a year or so to come. Their other line is absolutely educational, teaching the people to segregate their diseased animals from the well animals and adopt better methods of sanitation and the like of that. Those are the lines of work the department has in mind according to the testimony before our committee.

Mr. STAFFORD. Mr. Chairman, there has been some work along this line, and I realize perhaps there should be more investigational work, so as to save the cattle of the country and the health and lives of the people of the country, and I withdraw the reservation of the point of order.

The CHAIRMAN. The point of order is withdrawn, and the Clerk will read the amendment offered by the gentleman from Michigan [Mr. MCLAUGHLIN].

The Clerk read as follows:

Page 15, line 19, strike out the figures "$250,000" and insert in lieu thereof "$500,000."

Mr. LEVER. Mr. Chairman, before the gentleman from Michigan begins I would like to sound out the committee as to the time that will be required on this amendment.

Mr. MCLAUGHLIN of Michigan. Does the chairman think it is best now to try and limit the time? We have been getting along without unnecessary delay, and it is a very important matter, and it is hard to tell how much debate will be wished.

Mr. LEVER. I was going to suggest to the gentleman from Michigan that I would probably ask the committee to rise in the course of 25 or 30 minutes, and I was thinking perhaps we could complete the discussion of this item before we took an adjournment.

Mr. MCLAUGHLIN of Michigan. Really I do not see how we can do that. I would like to speak a little while. Mr. SLOAN wants some time, and Mr. ANDERSON wishes to speak; also Mr. MCKINLEY and Mr. GRAHAM of Illinois.

Mr. HAUGEN. And I would like some time.

Mr. MCLAUGHLIN of Michigan. Also Mr. MCFADDEN, Mr. LITTLE, Mr. WASON, and I do not see how we can do that.

Mr. MOORE of Pennsylvania. I would like to suggest to the gentleman from South Carolina that this is Saturday afternoon, and it has been a pretty long day, and this matter is unquestionably going to cause some debate.

Mr. STAFFORD. May I make this suggestion: That we arrive at the time to-day and then have the committee rise?

Mr. LEVER. I appreciate the suggestion of the gentleman from Wisconsin and think it is a good idea. I recognize, of course, that this is a very important item and many gentlemen will desire to speak on both sides of the aisle and on both sides of the question. Of course it is not a political proposition. I wonder if the gentleman from Michigan would think that three-quarters of an hour on each side would be sufficient? That would be 45 minutes on each side.

Mr. MCLAUGHLIN of Michigan. I think I named 10 gentlemen on this side who wished to speak. Why not make it an hour on a side?

Mr. LEVER. Then, Mr. Chairman, I ask unanimous consent that the debate on this item and all amendments thereto may close in two hours, the Chair to control it, as nearly as he can, on the two sides.

Mr. MOORE of Pennsylvania. It would be simpler the other way.

Mr. LEVER. Then, one half of the time to be controlled by the gentleman from Michigan [Mr. McLAUGHLIN] and myself, or does the gentleman from Iowa [Mr. HAUGEN] wish to control the time?

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent——

Mr. HAUGEN. Let the gentleman from Michigan control the time.

Mr. LEVER. Then, the gentleman from Michigan [Mr. McLAUGHLIN] and myself.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto be closed in two hours, one half of the time to be controlled by himself and the remaining half by the gentleman from Michigan [Mr. McLAUGHLIN]. Is there objection? [After a pause.] The Chair hears none.

Mr. SIEGEL. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CRISP, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 9054, the Agricultural appropriation bill, and had come to no resolution thereon.

WITHDRAWAL OF PAPERS.

Mr. MANN, by unanimous consent, was granted leave to withdraw from the files of the House, without leaving copies, papers in the case of Thomas K. Thorp, H. R. 4362, Sixty-fourth Congress, no adverse report having been made thereon.

MANUAL AND DIGEST.

Mr. FOSTER. Mr. Speaker, I ask unanimous consent for the consideration of the resolution which I send to the Clerk's desk.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 236.

Resolved, That there be printed as a House document 2,000 copies of the Digest and Manual of the Rules and Practice of the House of Representatives for the second session of the Sixty-fifth Congress, the same to be bound and distributed through the folding room.

Mr. FOSTER. I will state, Mr. Speaker, that this is in conformity with the conversation that I have had with the gentleman who objected this morning.

The SPEAKER. Is there objection to the present consideration of the resolution? [After a pause.] The Chair hears none.

The question is on agreeing to the resolution.

The resolution was agreed to.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 44 minutes p. m.) the House adjourned until Monday, January 28, 1918, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Treasury, transmitting a supplemental estimate of appropriation required by the office of the Register of the Treasury for additional clerical force during the fiscal year 1919 (H. Doc. No. 862); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of the Treasury, transmitting copy of communication from the Secretary of War submitting a supplemental estimate of appropriation required by the Quartermaster Corps of the Army for expenses of the War Port Board, port of New York, fiscal year 1919 (H. Doc. No. 863, pt. 1); to the Committee on Military Affairs and ordered to be printed.

3. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of Commerce submitting supplemental estimates of appropriations required by the Department of Commerce for the fiscal year 1918 (H. Doc. No. 864); to the Committee on Appropriations and ordered to be printed.

4. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of Commerce submitting a supplemental estimate of appropriation required by the Department of Commerce for additional computers and draftsmen in the office of the Coast and Geodetic Survey for the fiscal year 1919 (H. Doc. No. 865); to the Committee on Appropriations and ordered to be printed.

5. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of War submitting a supplemental estimate of appropriation required by the Quartermaster Corps of the Army for expenses of the War Port Board, port of New York, fiscal year 1918 (H. Doc. No. 863, pt. 2); to the Committee on Appropriations and ordered to be printed.

6. A letter from the Secretary of War, submitting a change in the wording of an estimate of appropriation for the Military Academy for the fiscal year ending June 30, 1918 (H. Doc. No. 866); to the Committee on Military Affairs and ordered to be printed.

7. A letter from the Chief, Bureau of Efficiency, transmitting report of the United States Bureau of Efficiency covering the work performed by the subtreasuries (H. Doc. No. 867); to the Committee on Appropriations and ordered to be printed.

8. A letter from the Chief, Bureau of Efficiency, transmitting statement showing typewriters purchased by the United States Bureau of Efficiency during the fiscal year ended June 30, 1917 (H. Doc. No. 868); to the Committee on Appropriations and ordered to be printed.

9. A letter from the Chief, Bureau of Efficiency, transmitting statement showing in detail what officers and employees of the United States Bureau of Efficiency have traveled on official business from Washington to points outside the District of Columbia during the fiscal year ended June 30, 1917 (H. Doc. No. 869); to the Committee on Appropriations and ordered to be printed.

10. A letter from the Chief, Bureau of Efficiency, transmitting statement showing in detail the number of employees of the Bureau of Efficiency whose compensation was increased by section 7, appropriation act approved March 3, 1917 (H. Doc. No. 870); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. HASTINGS, from the Committee on Indian Affairs, to which was referred the bill (H. R. 4699) providing for the payment of certain interest on items 1 and 4 of the judgment of the Court of Claims of May 18, 1905, in favor of the Cherokee Nation, reported the same without amendment, accompanied by a report (No. 265), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. FRENCH, from the Committee on Indian Affairs, to which was referred the bill (H. R. 4910) to authorize the establishment of town sites on the Fort Hall Reservation, Idaho, reported the same with amendment, accompanied by a report (No. 260), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. HARRISON of Virginia, from the Committee on Military Affairs, to which was referred the bill (H. R. 8834) authorizing the sale of a tract of land lying below the original high-water line of the Potomac River in what is known as Battery Cove, at Alexandria, Va., reported the same without amendment, accompanied by a report (No. 261), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. BANKHEAD: A bill (H. R. 9283) to amend section 25 of the act of December 23, 1913, known as the Federal reserve act, as amended by the act of September 7, 1916; to the Committee on Banking and Currency.

By Mr. RANDALL: A bill (H. R. 9284) to exclude intoxicating liquors from national parks and national forest reserves; to the Committee on the Public Lands.

By Mr. CARTER of Oklahoma: A bill (H. R. 9285) to create an Indian code commission to codify the laws relating to Indians taxed and not taxed and to define more exactly the privileges and disabilities of the several classes of Indians in the United States; to the Committee on Indian Affairs.

By Mr. LUFKIN, a bill (H. R. 9286) to provide quarters or commutation therefor to commissioned officers of the Army

who have dependents to support; to the Committee on Military Affairs.

By Mr. SIMS: A bill (H. R. 9287) to save daylight and to provide standard time for the United States; to the Committee on Interstate and Foreign Commerce.

By Mr. WISE: Joint resolution (H. J. Res. 231) authorizing the Secretary of Agriculture to certify to the Secretary of the Treasury for payment, and the Secretary of the Treasury to pay, the appropriation for the Georgia Experiment Station of the State of Georgia under act of March 4, 1917, for the fiscal year ending June 30, 1918, to the board of trustees of the Agricultural and Mechanical College of the State of Georgia, and for other purposes; to the Committee on Agriculture.

By Mr. ROBBINS: Joint resolution (H. J. Res. 232) suspending penalty in Government contracts when compliance was prevented by Fuel Administrator suspending operation of plants; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANTHONY: A bill (H. R. 9288) granting a pension to Oscar Walker; to the Committee on Pensions.

By Mr. ASHBROOK.: A bill (H. R. 9289) granting an increase of pension to Jacob Moser; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9290) granting an increase of pension to Charles Fish; to the Committee on Pensions.

By Mr. BRUMBAUGH: A bill (H. R. 9291) granting a pension to Frank W. Tuttle; to the Committee on Pensions.

By Mr. BURROUGHS: A bill (H. R. 9292) granting an increase of pension to George D. Totman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9293) granting an increase of pension to James O. Harriman; to the Committee on Invalid Pensions.

By Mr. ELLIOTT: A bill (H. R. 9294) for the relief of the heirs of John Kensler; to the Committee on Claims.

By Mr. FULLER of Massachusetts: A bill (H. R. 9295) for the relief of Francis M. Roberts; to the Committee on Claims.

By Mr. GARLAND: A bill (H. R. 9296) for the relief of David Steers, alias William Johnson, alias John Hartman; to the Committee on Military Affairs.

By Mr. HAMLIN: A bill (H. R. 9297) granting an increase of pension to Hezekiah Bradd; to the Committee on Invalid Pensions.

By Mr. KETTNER: A bill (H. R. 9298) granting a pension to Kate C. Kraig; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9299) for the relief of Henry H. Staub; to the Committee on Military Affairs.

By Mr. McKINLEY: A bill (H. R. 9300) granting an increase of pension to John Stockwell; to the Committee on Invalid Pensions.

By Mr. MOORES of Indiana: A bill (H. R. 9301) granting a pension to Nancy E. Tennant; to the Committee on Invalid Pensions.

By Mr. MORGAN: A bill (H. R. 9302) granting an increase of pension to James Reppeto; to the Committee on Invalid Pensions.

By Mr. REED: A bill (H. R. 9303) granting an increase of pension to Joseph Crites; to the Committee on Invalid Pensions.

By Mr. SMITH of Idaho: A bill (H. R. 9304) granting a pension to Ambrose M. Barrett; to the Committee on Pensions.

By Mr. SNELL: A bill (H. R. 9305) granting an increase of pension to Samuel Smith; to the Committee on Invalid Pensions.

By Mr. VESTAL: A bill (H. R. 9306) granting an increase of pension to John Ham; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9307) granting an increase of pension to Jasper N. Cooper; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9308) granting an increase of pension to John W. McKinley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9309) granting an increase of pension to Jacob W. Cline; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9310) granting an increase of pension to Jonas Bratton; to the Committee on Invalid Pensions.

By Mr. SMITH of Idaho: Joint resolution (H. J. Res. 233) for the relief of James L. Cardwell; to the Committee on the Public Lands.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Resolution of the City Council of Chicago, Ill., protesting against the discontinuance of the pneumatic-tube mail service in that city; to the Committee on the Post Office and Post Roads.

Also, memorial of Division No. 3 of the Railway Employees, pledging loyalty and support to the administration; to the Committee on Military Affairs.

By Mr. CLARK of Pennsylvania: Petition of John W. Haskins, H. D. Pratt, William J. Cunningham, J. Greenwalt, and 18 others, of Pennsylvania, relative to the preservation of the *Niagara* used in the Battle of Lake Erie; to the Committee on Military Affairs.

By Mr. CURRY of California: Petition of patrons of mail route No. 1, Rural Free Delivery, Orangeville, Sacramento County, Cal., praying that rural carriers be given an increase in salary; to the Committee on the Post Office and Post Roads.

By Mr. DALE of New York: Petition of John S. Sills & Sons, of New York, against repeal of advance in second-class mailing rates; to the Committee on Ways and Means.

By Mr. FULLER of Massachusetts: Petition of Francis M. Roberts, of Malden, Mass., relative to compensation for land grant canceled by the Government; to the Committee on Claims.

By Mr. FULLER of Illinois: Petition of John A. Hynes and others, favoring the volunteer officers' retirement bill; to the Committee on Military Affairs.

By Mr. MERRITT: Memorial of Chamber of Commerce of Stamford, Conn., favoring passage of a bill providing for a war council; to the Committee on Military Affairs.

By Mr. PAIGE: Papers to accompany House bill 9275, granting a pension to Edwin S. Goodell; to the Committee on Ivalid Pensions.

By Mr. SNYDER: Petition of home defense committee of Utica, N. Y., relative to conserving and putting to public use the water power of the country; to the Committee on Rivers and Harbors.

By Mr. TAGUE: Memorial of Westchester County (N. Y.) commission, favoring the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

SENATE.

MONDAY, *January 28, 1918.*

Rev. G. I. Humphreys, of the city of Washington, offered the following prayer:

Almighty and most merciful God, Father of all our mercies, Giver of every good and spiritual gift, the Author of everlasting life, we bow in acknowledgment of Thy sovereignty over us and confess Thy right to us and ours. We thank Thee, our heavenly Father, for Thy blessings, seen and unseen, for the wonders of Thy kindnesses, for the marvels of Thy patience, and for the infinite tenderness of Thy love that moves and wins and ties our hearts unto Thee and unto Thy ways.

We pray Thy favor, our heavenly Father, upon this day's session of the Senate. Bless, we beseech Thee, the presiding officer, the Members, and the officials thereof; and we humbly pray Thee to look with favor upon this our beloved land in these days of stress and strain, of tension and of testing.

Bless, we pray Thee, our heavenly Father, the President of the United States and those associated with him in authority, and grant, we beseech Thee, to let Thy blessing rest upon all the citizens of our land. Give unto each and every one of us, we humbly ask Thee, the intense desire of heart, the purpose of mind and of will that we may prove ourselves worthy, O God of Hosts, in Thy sight, worthy for victory on land and on sea, that we may insure for ourselves and for the generations that are yet to come the principles of liberty, and of justice, and of mercy, and of righteousness.

Bless, we pray Thee, all the peoples and mankind, and grant, we pray Thee, that more and more the hearts of men everywhere may turn to Thee as our Father, to Jesus Christ as our Savior and the Leader of mankind; and unto this end we humbly ask Thee for the Holy Spirit, His presence and His power, that He may guide us through to-day and to-morrow and all the to-morrows of life into the way that leadeth unto the perfect day. We ask in Christ's name. Amen.

The Secretary proceeded to read the Journal of the proceedings of Thursday last, when, on request of Mr. JAMES and by unanimous consent, the further reading was dispensed with and the Journal was approved.

PETITIONS AND MEMORIALS.

Mr. GRONNA. I send to the Secretary's desk a letter from the Tri-State Grain and Stock Growers' Convention and a resolution adopted by that convention favoring woman suffrage. I ask that they may be printed in the RECORD without reading.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

TRI-STATE GRAIN AND STOCK GROWERS' CONVENTION,
Fargo, N. Dak., January 22, 1918.

Senator A. J. GRONNA,
United States Senate, Washington, D. C.

DEAR SIR: I am sending for your consideration a resolution passed by the Tri-State Grain and Stock Growers' Convention at their recent meeting on January 18

This resolution met with the unanimous approval of the convention, and, as the body was a large and representative one, we respectfully ask that you give it your indorsement.

Very truly, yours, W. C. PALMER.

Be it resolved, That, recognizing in this great crisis as never before the important service women have rendered the Government, we earnestly request and recommend the passage of the Federal amendment for woman suffrage.

Mr. JONES of Washington. I have a resolution here from Meridian Grange, No. 265, of Kent, Wash., petitioning Congress to pass a law making it treasonable to purchase or offer to purchase, contract, or bargain for securities of the United States below par. I ask that it may be printed in the RECORD and referred to the Judiciary Committee, I suppose.

There being no objection, the resolution was referred to the Committee on the Judiciary and ordered to be printed in the RECORD, as follows:

MERIDIAN GRANGE, No. 265,
KENT, WASH.

Resolution.

Whereas an attack on the Nation's credit is, in our opinion, equal to an attack on any of our other defenses; and

Whereas such an attack is apparently being made on our liberty bonds, now quoted in financial circles below par: Now, therefore, be it

Resolved, That we request all liberty-loving organizations to join with us in petitioning Congress to enact legislation making it a treasonable offense—punishable as such—for any person, company, corporation, firm, or any association of persons of any nature whatsoever, to purchase, offer to purchase, contract for, or bargain for, in any way any class of United States bonds, securities, or moneys at a price below the face value thereof anywhere within the boundaries of the said United States or her Territories.

Adopted by the patrons of Meridian Grange, No. 265, in regular meeting assembled, January 5, 1918, and a copy ordered mailed President Wilson, our Senators, and Congressmen.

PETER T. NELSON,
Master.
C. R. COTTRELL,
Secretary.

Mr. SHAFROTH. I send to the Secretary's desk a telegram which I ask may be read.

The VICE PRESIDENT. Is there objection? The Chair hears none. The Secretary will read.

The Secretary read as follows:

DENVER, COLO., *January 21, 1918.*

Hon. JOHN F. SHAFROTH,
United States Senate, Washington, D. C.:

If there is in the minds of any Senators a doubt as to the feeling in Colorado on woman suffrage, we urge that you inform them that the people of Colorado, after 24 years' experience, are more strongly in favor of it than ever before. We ask that you have this telegram read into the CONGRESSIONAL RECORD.

WILLIAM A. HILL.
JAMES H. TELLER.
S. H. WHITE.
TULLY SCOTT.
JAMES E. GARRIGUES.
MORTON S. BAILEY.
GEORGE W. ALLEN.

Mr. SHAFROTH. Mr. President, I wish to say with relation to this telegram that the senders are the members of the Supreme Court of the State of Colorado, and they have lived in that State during the full period of the operation of the woman suffrage law. In addition, I wish to say in support of their statement that there never has been even a bill introduced in the general assembly of that State for the resubmission of the question of woman suffrage; that there never has been even a petition presented to either the senate or the house of representatives of that State to resubmit the question. These are the best indications that the people of Colorado are thoroughly satisfied with the operation and effect of equal suffrage.

Mr. SMITH of Georgia. Mr. President, we are seeking to relieve a number of industries in which coal is not used from the unfortunate constructions that have been placed upon the order of Dr. Garfield. In this connection, out of many letters and telegrams I have received pointing out instances where the order is operating not to save coal but to interfere uselessly and, I think, unwisely with industries, I send three short telegrams to the desk and ask that they may be read.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read.

The Secretary read as follows:

COLUMBUS, GA., *January 26, 1918.*

Hon. HOKE SMITH,
United States Senate, Washington, D. C.:

Local mills on Government contracts operated by hydroelectricity ordered to close Monday by local fuel board.

H. H. SWIFT.

Mr. SMITH of Georgia. Mr. President, in connection with the telegram just read I desire to state that there are nearly a dozen of those mills operating at Columbus, Ga., employing over 7,000 hands, and that they have largely been engaged in Government contracts, among others, contracts for the manufacture of blankets, and blankets are still needed in our camps.

The Secretary read the remaining telegrams, as follows:

SAVANNAH, GA., *January 27, 1918.*

Hon. HOKE SMITH,
United States Senate, Washington, D. C.:

Could you not prevail on Fuel Administrator to modify orders for fuelless Mondays, so that business houses may remain open, not using fuel. On account of climatic advantages in the South, on many of these fuelless days no heat is required and business could go on as usual. As it is business is suspended and nothing is gained, while there is serious loss of money to all classes and no saving of fuel. Of course, where fuel would be needed and temperatures are low stores would not open.

MORNING NEWS.

ABBEVILLE, GA., *January 24, 1918.*

Hon. HOKE SMITH,
Senate, Washington, D. C.:

DEAR SENATOR: I am writing you to know if you think that Dr. Garfield's order applies to a small merchant in a small town who is burning small lightwood knots. Abbeville has not been able to get any coal this winter. We are just as loyal as we can be and believe strong in the President and are willing to do anything that will help to win the war.

It could not possibly help anything for the sawmills in Georgia to shut down, as none of them burn coal. We want to win the war, but we do not want any red tape or foolishness about it.

With best regards, I am,
Yours, very truly,

L. C. GOODIN.

Mr. OVERMAN. Mr. President, I send to the desk a resolution adopted at a meeting of merchants in one of the largest cotton-mill centers in the United States, and I ask that it may be read.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read.

The Secretary read as follows:

GASTONIA, N. C., *January 21, 1918.*

Hon. LEE S. OVERMAN,
United States Senator, Washington, D. C.

DEAR MR. OVERMAN: In order that you may let it be known whenever there is opportunity that there is nothing lacking in North Carolina's patriotism I am writing to tell you that the following resolution was adopted by the textile millmen of Gaston County at a meeting held Saturday:

"We have read the order of the National Fuel Administrator, Dr. Garfield, and have secured all information thereon that it has been possible to secure, and while we, individually and collectively, think that the legal and moral right exists under which factories using as motive power hydroelectric current may continue to operate under said order, nevertheless, out of the abundance of our willingness to cooperate to the fullest with the spirit of said order, we frankly and freely pledge ourselves to complete compliance with said order to the effect that we, the mills of Gaston County, remain closed throughout Monday, January 21, and Tuesday, January 22, and during each of the following Mondays—that is, from Monday, January 28, to and including Monday, March 25.

"(Signed) R. R. RAY, *Chairman.*
"J. H. SEPARK, *Secretary.*"

At a meeting of Gastonia merchants, held Saturday morning, the following resolution was adopted:

"Whereas it is the sense of this meeting that the Fuel Administration's order means that grocery stores shall close at noon and that all other stores shall absolutely close their doors for the entire day each Monday for the next 10 weeks: Be it

"*Resolved*, That the merchants of Gastonia pledge their cooperation and support to the government of the ruling and pledge themselves to strictly abide by it to the letter."

Many of our mills will pay their employees for their lost time.

Very truly, yours,

GASTONIA CHAMBER OF COMMERCE,
FRED M. ALLEN, *Executive Secretary.*

Mr. HARDWICK. Mr. President, I desire to present to the Senate for appropriate reference a number of telegrams relating to short-line railroads in the United States. I ask that the first telegram be read to the Senate for its information, and that it and the remainder of them be referred without reading to the Committee on Interstate Commerce, but that all be printed in the RECORD.

The VICE PRESIDENT. The Secretary will read as requested.

The first telegram was read; and all were referred to the Committee on Interstate Commerce and ordered to be printed in the RECORD, as follows:

MOULTRIE, GA., *January 25, 1918.*

Senator T. W. HARDWICK,
Washington, D. C.:

Board of directors Moultrie Chamber of Commerce last night passed resolution in protest of proposed policy by Director General McAdoo with reference to short-line railroads. Copy of this resolution going forward to Georgia Senators and Representatives to-day.

CHAS. B. CALDWELL,
Secretary Chamber of Commerce.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

Majority of food crops of nation are produced in communities dependent upon short lines for transportation. Unless short lines are given same Government protection as trunk lines, food crops will necessarily be reduced. We urge your support of Government operation of short lines in behalf of food supply of Nation.

W. J. MATTHEWS,
President Moultrie Mill & Elevator Co.
G. F. TAYLOR,
President Moultrie Oil & Fertilizer Co.

MOULTRIE, GA., *January 26, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

Of the four lines entering Moultrie, at least two of them will cease to operate within six months and territory served by them will suffer seriously unless Government operates them. I urge you to use all your influence to have all short lines taken over.

J. H. HALL.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

We are greatly alarmed over the project pending in the House and Senate committees concerning the attitude of Director General of Railroads regarding short lines. This community is wholly served by short lines, and a discontinuance of their successful operation would be disastrous to the farming interests of our county. We urge your influence be used accordingly.

G. W. NEWTON,
President Colquitt County Live Stock Association.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

Many of our mills are served by short-line railroads, and unless these lines are taken over on same basis as trunk lines a great number of mills will suffer. We think it only fair that territory adjacent to and served by short lines should be maintained on same basis as that served by trunk lines, and short-line territory not discriminated against. We urge you to use your influence to have the proper legislation passed.

COTTON MANUFACTURERS' ASSOCIATION OF GEORGIA,
W. J. VEREEN, *Chairman.*

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

We heartily indorse and urge your support in behalf of Government operation of short lines as outlined in telegram of this date from our chamber of commerce to you This not only applies to our section but to all sections of the Union served wholly or in part by short lines.

M. L. LEE.
H. I. ASHBURN.
J. BENSON.
A. R. ROGERS.
C. G. WATSON.
C. B. ALLEN.
I. A. HEARD.
J. J. ROONEY.
C. L. STEVENSON.
M. N. MAJORS.
S. P. TURNBULL.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

Sawmills located on short lines of the Nation can not continue cutting lumber if operation of short lines is handicapped by Government's failure to give them equal protection with trunk lines. We urge your influence be used to have short lines operated by Government.

JOHNSON BATTLE LUMBER CO.
LADSON LUMBER CO.
CORBETT LUMBER CO.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

The short lines have been the developers and are now important lines on which a large portion of food crops are originated, and any discrimination against their operation will greatly reduce average planted to food crops, and the result will prove serious. I urge you to support legislation to have them operated on same basis as trunk lines.

V. L. COLLIER,
County Agent in Agriculture.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

The welfare of our city and community is seriously menaced by the announcement of Director General of Railways that short lines will not be taken over. I urge that you use your influence to have the short lines included and operated the same as the trunk lines, in order that serious embarrassment to this town and county, which was developed by and is now wholly dependent upon short lines, may be avoided.

W. A. COVINGTON,
Mayor City of Moultrie.

MOULTRIE, GA., *January 25, 1918.*

Hon. T. W. HARDWICK,
United States Senate, Washington, D. C.:

The announcement of Director General of Railways probability of not taking over short lines is halting plans of our farmings planting food crops for fear of transportation facilities being hampered on account of this section being entirely served by short lines. The situation is serious. We request and urge that you do all in your power to have the short lines put under the same control that trunk or through lines are.

MOULTRIE BANKING CO.,
By W. C. VEREEN, *President Citizens' Bank.*
W. S. STOKES, *Cashier First National Bank.*
C. L. WEST, *Cashier.*

Mr. STERLING. Mr. President, I send to the desk a copy of a resolution and memorial of the Farmers' Equity Union of the United States, adopted at a meeting of the union held at Aberdeen, S. Dak., on January 6. I ask that the resolution and memorial may be printed in the RECORD.

There being no objection, the resolution and memorial were ordered to be printed in the RECORD, as follows:

[Resolution and memorial, Farmers' Equity Union.]

Whereas the successful prosecution of the war is to an important extent dependent upon the American farmer for the increased production of food required, and the supply of farmers and farm laborers has been greatly diminished by enlistment under the colors, thereby still further increasing the burden which the American farmer has cheerfully assumed; and

Whereas in the intensive and increased cultivation being and about to be undertaken the farmer is and will be required to incur an unprecedented increase in both expense and labor, thereby rendering necessary a more extensive and flexible system of temporary farm credits; and

Whereas the Government of the United States has necessarily assumed the control of the railways and many great industries of the Nation and has justly undertaken to guarantee to the owners the payment of prewar dividends; and

Whereas all such industries from their nature will invariably earn dividends at least approximating those guaranteed, while owing to the almost inevitable crop failures in some sections of the country the production of crops is an uncertainty, despite all efforts of man: and

Whereas it is but just and equitable that the farmers of the Nation should have some assurance or guaranty from the Government that they will be enabled to secure at least the actual expenses necessarily attendant upon their present and future efforts to maintain and increase the production of crops in the event of a failure of crops in some or all sections of the country: Therefore be it

Resolved, That a copy of these resolutions and appended memorial be presented to the President and to the Congress of the United States assembled.

[Memorial.]

To the PRESIDENT AND THE CONGRESS OF THE UNITED STATES OF AMERICA:

The Farmers' Equity Union of the United States, as representative of all branches of the farming industry in America, and with conscious pride in the manner in which the American farmers have discharged and are discharging their patriotic duty in maintaining and increasing the production of foodstuffs under the existing circumstances, would respectfully present the following memorial.

It is undebatable that the present emergency has greatly increased the burden of the American farmer. By voluntary enlistment and the operation of the selective-service law great numbers of farmers and farm laborers have been withdrawn from the fields and more will eventually be called. Necessity demands an enormously increased production. New lands must be broken and every acre previously cultivated must be farmed, and the whole farmed most intensively. The conversion of implement factories to the military needs has made new farm machinery scarce in many places and exceedingly expensive everywhere To farm the increased acreage intensively, with experienced farm laborers both scarce and high priced, makes the use of farm machinery imperative and to an extent hitherto unnecessary.

In magnitude and importance farming as an industry is second to none in the land. From the nature of things farming can not be undertaken by the Government. Transportation and many great industries have already been taken over by the Government, with the sole view of increasing production. In justice to the owners the Government has guaranteed these industries not only operating expenses but maintenance and prewar dividends. The farmers are asked to and must increase their own production. Toward this end the farmers must and are willing to work longer hours, but they must also pay extraordinary wages and purchase machinery at prices to an extent justified only by the present emergency.

It is not in the power of the Government to guarantee them a crop. The present minimum price for grain was fixed after the 1917 crop had been produced. The possibility of crop failure had been eliminated. These prices are not such that the farmer should be asked to invest either increased labor, laborers' wages, and overhead expenses, which are justified only by the emergency, and at the same time carry the entire risk of crop failure.

We respectfully submit that the Government should take immediate steps to remedy the situation, and would suggest that there be considered as possible remedies:

1. The immediate fixing of a definite minimum price for 1918 crops at a sufficient increase over present prices to justify the farmers in assuming the risk of crop failure; or

2. That the Government guarantee the payment of actual farm expenses and an allowance for emergency investment in increased machinery in event of and to the extent of a crop failure wherever the same may develop.

In any event, we pledge ourselves to support the Government and perform our duty to the utmost.

II.

Whereas the United States Government has taken over and now has control of the operation of the railways of the United States for the duration of the present emergency; and

Whereas we believe such action to be to the advantage of the Nation and the producers therein, from both a military and economic standpoint: Therefore be it

Resolved, That we do heartily commend and approve the action of the President in taking over the operation of the railways; and be it further

Resolved, That we do hereby urge and recommend to the President and the Congress of the United States that the Federal Government permanently assume the actual ownership and operation of the railways of the Nation for all time to come, after the termination of the existing emergency; and be it further

Resolved, That we do hereby urge and recommend to the President and the Congress of the United States that the Federal Government, upon the termination of the present emergency, assume the ownership and operation of all public utilities whatsoever.

III.

Whereas the drain upon the capital of the Nation by the necessary expenses of the present war has brought about a financial stringency, which has, to a considerable extent, impeded and hindered the operation of the Federal farm-loan associations by the limiting of the market for the sale of farm securities; and

Whereas the successful operation of the farm industries of the Nation necessitate that the farmers be enabled to borrow necessary capital at a reasonable rate of interest, afforded only through the Federal farm-loan associations; and

Whereas there is now before Congress a bill to appropriate $200,000,000 for the stabilizing of the market for such securities by the purchase thereof by the Federal Government: Now, therefore, be it

Resolved, That we do hereby recommend and approve such measure, and do hereby petition and urge the Congress and the President of the United States to exert all efforts to the immediate passage and approval of such measures as will assist in the furthering of the flexible continuation and extension of the Federal farm-loan associations by the purchasing of such securities, where necessary, by the Federal Government.

IV.

Whereas the successful promotion of the war is to a large extent dependent upon the increased production of foodstuffs by American farmers; and

Whereas in many sections of the Northwest there were total or partial failures of crops for the season of 1917; and

Whereas the extensive purchase of liberty bonds throughout the Northwest and the Nation has withdrawn much money from circulation which has heretofore been available to the farmers to tide them over similar crop failures in the past; and

Whereas Congressman J. N. Baer, of North Dakota, has introduced in the House of Representatives a bill to render Federal aid to the farmers of the Northwest in purchasing seed and feed to enable them to continue and increase the production of foodstuffs and thereby support the Government and our armies: Now, therefore, be it

Resolved, That we recommend and approve such measure and do urge and petition the Congress and the President that such measure be passed and approved without delay.

V.

Whereas the Missouri River contains unlimited possibilities for the development of hydroelectric power, navigation, and water power, and at the same time prevent the annual devastation from floods: Now, therefore, be it

Resolved, That we approve and favor a survey to determine the feasibility of the development of the Missouri River, and in the event such development appears feasible the development thereof by joint action of the Federal Government and the several States through which the Missouri River passes.

Respectfully submitted.

H. A. Melgaard,
J. S. Johnson,
H. O. Kjar,
C. C. Talbott,
F. B. Dewey,
Committee on Resolutions.

Mr. CUMMINS. I present a resolution in favor of the proposed constitutional amendment for woman suffrage. I ask that it be printed in the RECORD without reading.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Hon. Albert Cummins,
Senate Office Building, Washington, D. C.:

Whereas the next step toward securing the passage of the Susan B. Anthony amendment enfranchising women will be a favorable majority vote in the Senate: Therefore be it

Resolved, That we, the women of Des Moines, Iowa, assembled at Hotel Chamberlain, January 17, 1918, urge you to use your influence with friends and members of your party to the effect of securing a favorable vote in the upper House of Congress.

Senator Cummins, you have been very helpful. We thank you and count on your active support, and I ask to have this resolution read into the Congressional Record.

Gertrude Hurford Milner,
Chairman Seventh Congressional District,
Iowa Branch National Woman's Party.

Mr. PHELAN presented a petition of sundry citizens of Modesto, Cal., praying for an increase in the salaries of postal employees, which was referred to the Committee on Post Offices and Post Roads.

Mr. HARDING presented a petition of sundry citizens of Mount Vernon, Ohio, praying for an increase of the salaries and equipment allowance of rural mail carriers, which was referred to the Committee on Post Offices and Post Roads.

Mr. GALLINGER presented a petition of the Amoskeag Textile Club, of Manchester, N. H., praying for the passage of the so-called "daylight-saving" bill, which was ordered to lie on the table.

He also presented the petition of Denis Ryan, of Farmington, N. H., praying for an increase in the pensions of veterans of the Civil War, which was referred to the Committee on Pensions.

He also presented the petition of H. W. Lippincott, of Pennsylvania, praying for the enactment of legislation providing for the importation of Chinese farmers into this country during the war, which was referred to the Committee on Agriculture and Forestry.

Mr. McLEAN presented a petition of sundry citizens of Wallingford, Conn., praying for the repair, preservation, care, and future maintenance of the restored historical naval brig *Niagara*, which was referred to the Committee on Naval Affairs.

He also presented a petition of sundry citizens of Sharon, Conn., praying for the submission of a Federal suffrage amendment to the legislatures of the several States, which was ordered to lie on the table.

Mr. THOMPSON presented petition of the Chamber of Commerce of Pittsburg; Chamber of Commerce of Kansas City; of sundry citizens of Sumner County; of the United Trades and Labor Council and Labor Temple, of Pittsburg; of sundry citizens of Ottawa County; and of the Chamber of Commerce of Topeka, all in the State of Kansas, praying for the enactment of legislation to provide increased compensation to postal employees, which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of the Cooperative Club of Topeka, Kans., remonstrating against the repeal of present postage-rate legislation, which was referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Pratt, Geary, Logan, Morris, Miami, Sheridan, Englewood, Clark, Trego, Hodgeman, Sherman, Hamilton, Barber, Meade, Brown, Republic, Chase, Kiowa, Decatur, Doniphan, Graham, Coffey, Lyon, Johnson, Osage, and various other counties, all in the State of Kansas, praying for the enactment of legislation to provide for the creation of a pharmaceutical corps in the Army, which were referred to the Committee on Military Affairs.

He also presented petitions of the Commercial Club of Hutchinson, the Rotary Club of Hutchinson, and the Rotary Club of Topeka, all in the State of Kansas, praying for the enactment of legislation to provide for universal military training, which were referred to the Committee on Military Affairs.

WATER-POWER DEVELOPMENT—SHIELDS BILL.

Mr. SHIELDS. Mr. President, the United States Senate, during the present session—December 14, 1917—passed a bill providing for the improvement of navigation and developing water power in the navigable rivers of the United States with private capital—Senate bill No. 1419, commonly called the Shields bill—by a vote of 46 to 18, as follows:

YEAS—46.

Ashurst	Hitchcock	La Follette	Sutherland
Borah	Hollis	Norris	Townsend
France	James	Poindexter	Trammell
Gore	Johnson, Cal.	Sherman	
Gronna	King	Smith, Mich.	

The provisions of this bill are substantially the same as Senate bill No. 3331, which passed the Senate at the last session of the Congress by a vote of 46 to 22, as follows:

YEAS—46.

Bankhead	Fall	Oliver	Smith, Mich.
Beckham	Gallinger	Overman	Smoot
Brandegee	Harding	Page	Sterling
Broussard	Hardwick	Pittman	Stone
Catron	Johnson, Me.	Pomerene	Swanson
Clapp	Jones	Ransdell	Tillman
Clark, Wyo	Kern	Robinson	Vardaman
Clarke, Ark.	McLean	Shafroth	Wadsworth
Colt	Martin, Va.	Shields	Walsh
Culberson	Myers	Simmons	Williams
Curtis	Nelson	Smith, Ariz.	
du Pont	O'Gorman	Smith, Ga.	

NAYS—22.

Ashurst	Hollis	Lea, Tenn.	Poindexter
Borah	Husting	Lee, Md.	Reed
Chamberlain	James	Lewis	Sheppard
Chilton	Kenyon	Martine, N. J.	Works
Cummins	La Follette	Newlands	
Gronna	Lane	Norris	

While the newspapers of the United States have not been unanimous in their comments upon this bill, the majority of those whose utterances have come to my knowledge have approved it. These editorials approving the bills passed by the Senate demonstrate the demand of the people of the United States that the present laws upon our statute books, which have prohibited water-power development for more than 15 years, should be repealed and proper legislation enacted that will allow this great natural resource to be speedily developed and utilized.

They are able expositions of the subject of water-power development and the necessity of the same, and I believe that a collation of them will be of use to the Congress while considering this legislation. The editorials I have are from newspapers published in all parts of the United States, as follows:

Knoxville Sentinel, Knoxville, Tenn.
Journal and Tribune, Knoxville, Tenn.
Nashville Banner, Nashville, Tenn.
The Merchant and Manufacturer, Nashville, Tenn.
Commercial-Appeal, Memphis, Tenn.
News-Scimitar, Memphis, Tenn.

Resolution on the development of water powers by the American Newspaper Publishers' Association.

I ask that the editorials from these papers be printed in the RECORD.

There being no objection, it was so ordered.

The editorials presented are as follows:

[From the Merchant and Manufacturer, Nashville, Tenn.]

TO UTILIZE NAVIGABLE WATERWAYS.

The Shields bill to regulate the construction of dams across navigable waterways, which passed the Senate recently, now goes to the House. Much interest had been manifested in this measure, which authorized the construction, maintenance, and operation of dams after obtaining the permit of the Secretary of War. Diversion structures and accessory works are permitted for the development and improvement of the navigation and for water power or other purposes in and along any of the navigable waters of the United States. The primary object of the bill is to allow of the development of water power. Where the power to be developed is used or to be used for a public utility the grantee must be a municipal corporation or a political subdivision or other agency of the State, a public-service agent of a State, or a public-utility corporation created and organized under the laws of a State or of the United States, authorized to furnish water, heat, or electrical energy for public or private use, and whose rates or charges and service shall be subject to regulation by the laws of the State or a duly constituted commission or other agency. Where the State has not made provision for such corporations the qualifications of the grantee thus prescribed shall not apply, and no transfer of any permit or the rights granted shall be made without the approval of the Secretary of War.

The bill requires plans and specifications of construction and maps of proposed location to be approved by the Secretary of War and the Chief of Engineers, and no change in such plans or specifications shall be made without the approval of these officials. The navigation facilities are required to be preserved at least equivalent to those existing prior to construction of the dam, etc., without expense to the United States, in accordance with plans and specifications approved by the Secretary of War, and in case such navigation facilities are not a part of the original construction, and the United States shall deem them necessary, the grantee shall convey to the United States such land and right of way as may be required for such facilities. The grantee shall also reimburse the United States for the cost of any investigation necessary for the approval of plans and for supervision or construction, and shall pay to the United States reasonable charges in consideration of the benefits accruing and to accrue to grantees. The right to use the public lands is granted by certification of the Secretary of War. In case of contesting applicants the permit shall be granted to the contestant judged best fitted for expediting and realizing the maximum useful development. The Secretary of War shall have, before granting the permit the report and advice of the Chief Engineer. Control of the level above and below the dam is subject to the rules and regulations of the Secretary of War, and such lights and other signals and such fishways as may be prescribed shall be established under penalty for noncompliance.

The grantee is liable for all damages resulting from construction and operation, and when the grantee is a public-service agent of the State, a municipal corporation, or a political subdivision of the State it may acquire the right to use or damage lands or property of others necessary for construction, maintenance, and operation by the exercise of the right of eminent domain in the district courts of the United States. The permit shall continue for 50 years, and after the expiration of that time until revoked or until compensation shall be made to grantee for its property. After expiration the United States may take over all the property of the grantee dependent in whole or in part upon the rights hereunder granted upon paying the fair value of the property. In the determination of this value no value shall be claimed or allowed for the rights hereunder granted. All charges, rates, and service shall be subject to the laws of the State within which the service is rendered. Where any part of said power shall enter into interstate or foreign commerce, jurisdiction is conferred upon the Interstate Commerce Commission.

Any grantee failing or refusing to comply with any of the provisions of the act or any conditions under it is to be deemed guilty of a misdemeanor and fined not exceeding $1,000 for each offense, in addition to other penalties fixed by law. Work must be begun within two years after the permit is granted, and the grantee shall have in commercial operation such part of it as the Secretary of War shall determine from time to time. If any dam or other part of the work be not completed within the time fixed by the Secretary of War, or if construction shall not be begun in the appointed time, proper proceedings shall be instituted for the revocation of the grant. The Secretary of War may lease to any applicant having the capacity of grantee surplus water from any dam or structure built by the United States on such terms as deemed for the best interest of the United States and reasonable and fair to both parties, preference being given to a municipal corporation, a political division of the State or a public-service agency, provided the plans of the same are deemed by the Secretary of War adapted to conserve and utilize in the public interest the navigation and water resources of the region.

The act does not affect the rights of any person, company, or corporation as to the construction, maintenance, or operation of any structures heretofore constructed or begun under permit of the Secretary of War and Chief of Engineers or other authority lawfully granted, but any conflicting provisions concerning these must be governed by the provisions of this act. Any person, company, or corporation having the capacity of grantee now constructing or operating any structures herein specified under authority heretofore granted, may obtain from the Secretary of War upon application a permit in accordance with the provisions of this act. The act does not apply to irrigation or power dams or grants for municipal corporations affecting those approved or erected under the jurisdiction of the Secretary of War of the United States.

It is specified that works constructed and maintained under this act shall not be owned, leased, controlled, or operated by any device or in any manner so that they form part of or in any way effect any combination in the form of an unlawful trust or monopoly, or any conspiracy to limit the output of electric energy, or in restraint of trade with foreign nations or between two or more States or Territories, or within any one State or Territory, in the generation, sale, or distribution of electric energy.

The right to alter, amend, or repeal this act is reserved, but no grantee under this act who shall have exercised rights under it shall be deprived of any of his rights by such repeal, amendment, or alteration, all rights and the property used under it being considered the property of the grantee, until after the expiration of the 50 years.

—

[From the Nashville Banner, Dec. 1, 1917.]

HYDROELECTRIC POWER.

The scarcity of coal caused by the war demands has given impetus to the development of hydroelectric power, and it is believed the President in his coming message to Congress will recommend legislation to promote it.

It would have been well if the Shields bill, introduced two years ago for this purpose, had been passed. It was opposed by some of the ultra-conservationists of the Gifford Pinchot kind and by others for reasons of a purely political nature.

Whether or not such a measure is urged by the Executive, the present condition makes it imperative that Congress should take some action of the kind.

It will require time for the full development of the water power that may be made available for this purpose. That is why it is to be regretted that there has been unnecessary delay in this legislation. The present exigency in the coal situation has come when it might have been largely averted if the manufacture of electricity by water power had been begun some years ago, as it might have been but for the restrictions placed on the use of navigable rivers for the purpose. It was claimed by the ultraconservationists that this valuable privilege should not be let to private enterprise, to "greedy corporations" was the phrase employed, but reserved for governmental experimentation. It was a sort of Bolsheviki idea that, as usual, resulted in public injury.

It is estimated that there is now developed from coal about 30,000,000 horsepower, used in propelling machinery, by railroads, and by street car systems. Engineers have figured that it is possible to develop 65,000,000 primary horsepower from streams, and with storage reservoirs that this might be increased to 200,000,000.

There has been considerable development of hydroelectirc power from rapids and cataracts in mountain streams in the far West and in other sections, including Tennessee. It is, as is well known, used to a limited extent in Nashville. But the present total horsepower from hydroelectric plants in operation throughout the country is only 6,000,000, a bare fraction of the estimated possibilities.

The European nations, where the war exigencies have been sometimes acute, have developed their water powers. A syndicate article by Norman Hapgood, now in France, recently widely published in this country, told how the fuel shortage there had led to the production of "white coal," the popular name given to water-made electric power.

Mr. Hapgood predicted that the progress made by the French under this compulsion to turn to the use of water power and electricity would more than compensate the nation for the financial losses through the war. That is a very liberal estimate, but the saving will no doubt be great, and it will be of lasting benefit to the country when its commercial and industrial life is resumed.

And France is not the only country that has made this important advance. The Germans early resorted to hydroelectric power for the manufacture of atmospheric nitrogen, the imported supply being shut off. The Italians, also, have been using it in their munition plants.

Hydroelectric power, it has been demonstrated, can be easily transmitted a distance of 250 miles, sometimes farther. The United States abounds in streams that may be utilized for its use, but legislation will be required before private capital can be employed for the purpose. The public welfare now urgently demands that such legislation be passed.

It will be proper, of course, to guard it with restrictions. There should be no perpetuity and no monopoly established by any grant or franchise for the purpose. The public right should be protected against extortion, but at the same time there should be ample encouragement for the investment of capital in such enterprise. The power will do no one any good while it remains latent. It will do immense good when fully developed. The public is suffering for the need of it now, and the Nation needs it in its preparations for war.

—

[From the Nashville Banner, Dec. 6, 1917.]

WATER-POWER BILL.

The President in his message to Congress strongly urges the enactment of a water-power bill, and what he says is in effect an indorsement of the Shields bill for that purpose that failed in the last Congress because of a disagreement in the conference committee of the House and Senate. The Shields bill had passed the Senate by a large majority, but certain changes made in the House, in which the Senate failed to concur, obstructed its enactment into a law.

It has become quite imperative that some such bill shall be passed, and in accordance with what the President urges, Senator SHIELDS, it is understood, will reintroduce his bill at an early date, or another of the same purport.

The purpose of the bill is to permit the use of rivers for the manufacture of electricity by water power. The scarcity and high price of coal render necessary the utilization of water power. Electricity manufactured by this process could supply the power for many manufacturing and traction plants that now depend exclusively on coal, and release the coal they consume for other purposes. It will not take much argument or elucidation to impress the public with the great need for the development of such enterprise at the present.

All rivers of any consequence are controlled by the United States Government and a Government franchise will have to be granted for their use. It is to regulate this granting of franchises that Congress is asked to act.

No opportunities should be given to the proverbial "greedy corporation" to obtain a "grinding monopoly" or to establish a perpetuity in anything so nearly affecting the public interest, and likely to affect it still more with the passing of time. Still, if there is to be the development of this latent power that the public interest so much demands, there must be some inducement to capital. It can be taken as assured that money will not be invested in such enterprises if there is no prospect of profit, or if the Government regulations are of such an exacting character as to allow the developers little control of the property. All that is needed is guarantee of public rights and safeguards against extortion. This was all amply provided for in the Shields bill.

Hydroelectric power is one of the greatest discoveries of the age and is expected to largely revolutionize the industry of the future. Its use just now is especially appealing, in that it can be made to save coal.

Legislation for this purpose has been regarded with some jealousy and disfavor by the coal interests, but since the point has been reached where the mines are not able to meet the demands made on them, the prospect of this manner of competition should not create alarm. With all possible development of hydroelectric power there will still be abundant use for coal.

The conservation of the coal supplies that the demands of the age are so rapidly diminishing in itself requires the fullest possible use of hydroelectric power.

—

[From the Nashville Banner, Dec. 17, 1917.]

SHIELDS POWER BILL.

The Shields water-power bill passed the Senate Saturday in practically the same form that it passed that body in the previous Congress. It failed at that time because of a disagreement on details in the House and Senate conference committee.

The bill provides, as is generally known, for use of rivers for producing electric power. This power would be a substitute for coal in factories and by traction companies and for electric lighting. A plentiful supply of such power would be worth millions to the country in the present crisis and a great boon to the people in releasing large supplies of coal now used in producing power for heating purposes.

The purposes to which this electricity, produced by water power, can be put are not yet fully developed. Possibly some day it may be made to serve a purpose in heating houses, but it will certainly afford an abundance of power. Heavy railroad trains are run by that power on a railroad for more than a hundred miles in the Northwest.

The power is dormant now in all of the rivers of the country. With the Government's permission to use the rivers for the purpose, it may be developed, and will be immediately, on many rivers.

There should be no delay about the matter. It is a public necessity. The scarcity of coal would alone make the demand imperative if it were not needed to keep pace with an advancing civilization.

It is sincerely to be hoped that the House will act favorably on this measure, and that when it is a law there may be speedy application of its provisions.

The South has abundant water power, and this section should profit greatly by the water-power development that should follow the enactment of the proper legislation by Congress.

—

[From the Knoxville Sentinel, Sept. 4, 1917.]

WASTE OF WATER POWER.

There is no more urgently needed piece of constructive legislation that is hanging fire in Congress now than the enactment of one of the measures before that body intended to make it possible to finance the development of the invaluable water powers of the Nation that are now running to waste because of the lack of inducement to private enterprise to harness these powers and make them do the work of millions, while supplying sustenance and employment to many millions of prosperous and happy people.

There are now three measures before Congress of this nature—the Walsh and the Shields bills in the Senate and the Small bill in the House. The character and merits of the Shields bill are fairly well known to the readers of the Sentinel. While it provides for the unlocking of power opportunities in the navigable streams, the bill fully protects the public interests and at the same time safeguards the investment sufficiently to attract private capital for development purposes. This bill has been unanimously and favorably reported by the Senate Committee on Commerce and is at present on the Senate calendar awaiting the action of the Senate.

It is certain that under the existing Federal laws relating to water powers, as interpreted by the United States Supreme Court, private capital can not be interested in further development of these powers. The practical effect of these laws would seem to be a misapplication of the principle of conservation, the aim of which is to open up and utilize our natural resources for humanity, not to lock them up or to keep them locked up in idleness. It is authoritatively estimated that more than 50,000,000 of horsepower is running to waste in American streams. Four-fifths of the possible electric energy that could be developed from water power in this country, according to the New York Annalist, must be developed on lands belonging to the Federal Government, which are under the jurisdiction of the Secretary of the Interior, or on navigable streams which are controlled by the Secretary of War. The agitation in favor of conservation of natural resources resulted in restrictions so severe that resources were not only conserved but reserved. Present laws permitting the utilization of these sites for hydroelectric plants provide that any permit is revocable at the pleasure of the Federal department concerned, and the possibility of this summary action has tended to scare capital away.

The provisions of the legislation sought from the present Congress are briefly stated by the Annalist as follows:

Permits for the erection of hydroelectric plants may be issued to individuals, corporations, States, or municipalities for 50 years.

These contracts are irrevocable, but may be canceled by legal proceedings if the permittee fails to comply with the provisions of the act or the conditions of the permit.

At the expiration of the term the United States may take over the entire plants or any severable and complete unit at a value determined, which shall not include the value of public lands, rights of way, franchises, good will, or prospective revenues; or it may renew the permit to the original holder; or, in the event that such an arrangement can not be made, may issue the permit to some one else, who shall buy the plant under the same conditions.

Rental shall be paid which may in the discretion of the Secretary be based on the net horsepower, and of this rental one-half shall be paid to the State in which the energy is developed.

Permits must provide for the "diligent, orderly, and reasonable development of the water power, subject to market conditions."

Rates are determined by the public service commission of the State in which the power is generated and used, and, when more than one State is involved, by the Interstate Commerce Commission.

These provisions, it seems to us, should amply protect the property rights of the public in these powers, while offering sufficient inducements and safeguards for the investment of capital in them. Especially at this time should these powers be made available to economize our man power and our coal resources in the interest of the general preparedness and national defense. Why Congress does not act upon the matter passes our comprehension. The general principles and policy of the measures before the lawmakers have been studied and indorsed by competent and representative bodies among the people of the country, and we believe it to be an imperative obligation on Congress to act on the subject matter at the present session.

—

[From the Knoxville Sentinel, Dec. 17, 1917.]

SHIELDS POWER BILL.

It is to be hoped that the Shields water-power bill, which has passed the Senate by a generous majority this early in the session, will receive the sanction of the House at an early date and soon become the law of the land. Conservation of natural resources that keeps them hermetically locked up and sealed against practical utility and from giving service to humanity more than defeats itself. It nullifies the very efforts of heaven itself to bestow its blessings on mankind. Some inducement is necessary to encourage enterprise and capital to venture upon the task of harnessing the unbroken waters that run riotously to waste on a hundred hills and in a thousand streams and to cause them, through the generation of the mystic and potent electric fluid, to take the place of human labor in the rougher spheres—to warm, to illuminate, to comfort, and elevate the millions. But the people's natural and riparian rights in the water powers can be and have been safeguarded, as gauged by all contractual and legal standards, in the Shields bill, and it can not too quickly become the law, as it will do if it reaches President Wilson's hands, for the President is understood to approve the Shields bill, and that alone is a sure guaranty that there is nothing hostile to the people's interests in it that can be guarded against by human care and integrity of purpose.

—

[From the Knoxville Journal and Tribune, Dec. 17, 1917.]

THE SHIELDS WATER BILL.

Senator JOHN K. SHIELDS, senior Senator from Tennessee, some time ago introduced a bill the object of which is to utilize the water power of the country, so much of which has been going to waste. Senator SHIELDS has studied the whole matter deeply, and was able to tell about the immense advantage to come from harnessing and putting to work the streams of the country for running machinery and for purposes that have not before been considered seriously.

The bill was opposed by some men who were unable to understand what it meant and by some men in Congress whose constituencies had less to derive from it than some others. It was also opposed by some wiseacres, who vainly imagine themselves to be an Atlas with the world on their shoulders.

The bill was passed in the Senate last Friday by the decisive majority of 46 to 18, more than a two-thirds majority. In securing the passage of the bill, which it is hoped may soon pass in the House and become a law, Senator SHIELDS has done good service for Tennessee, the South, and the whole country. With such a law, the waterways in the country, many of them, will be producing electricity that will reduce the demand for coal, and that will serve the Nation in many

respects. The hope is expressed that the bill may be taken up in the House and passed this week. If so, the President will give it his approval and it will be a law in a few days.

[From the Knoxville Journal and Tribune, Dec. 21, 1917.]

THE SHIELDS POWER BILL.

The Shields water-power bill passed the Senate Saturday in practically the same form that it passed that body in the previous Congress. It failed at that time because of a disagreement on details in the House and Senate conference committee.

The bill provides, as is generally known, for use of rivers for producing electric power. This power would be a substitute for coal in factories and by traction companies and for electric lighting. A plentiful supply of such power would be worth millions to the country in the present crisis and a great boon to the people in releasing large supplies of coal now used in producing power for heating purposes.

The purposes to which this electricity, produced by water power, can be put are not yet fully developed. Possibly some day it may be made to serve a purpose in heating houses, but it will certainly afford an abundance of power. Heavy railroad trains are run by that power on a railroad for more than a hundred miles in the Northwest.

The power is dormant now in all the rivers of the country. With the Government's permission to use the rivers for the purpose, it may be developed, and will be, immediately on many rivers.

There should be no delay about the matter. It is a public necessity. The scarcity of coal would alone make the demand imperative if it were not needed to keep pace with an advancing civilization.

It is sincerely to be hoped that the House will act favorably on this measure, and that when it is a law there may be speedy application of its provisions.

The South has abundant water power and this section should profit greatly by the water-power development that should follow the enactment of the proper legislation by Congress.

[From the Nashville Banner, July 17, 1917.]

SOUTHERN WATER POWER.

There were some rather odd conclusions in the report made to the War Department concerning water power available for a Government plant to obtain nitrogen from the atmosphere, but aside from that phase of the matter the report made one important revelation; it showed that there is much water power in the South running to waste that could and should be made available for various industrial purposes.

Besides atmospheric nitrogen for the manufacture of munitions, there is a vast need for such a substance for making fertilizers. The water power should be utilized for that purpose and it should also be utilized for the probably more immediate necessity of furnishing hydroelectric power for all manner of manufacturing purposes, for street railways, and electric lighting.

The operation of trolley-car systems over various sections of the South would be a much simpler proposition if plenty of water power could be developed for supplying the necessary electric current.

All of this suggests the necessity for some measure like the Shields bill, that failed in the last Congress, that would make possible the development of water power on southern streams.

There is no way in which the South can better develop its natural resources and forge to the front in manufacturing and industrial enterprise than by water-power development.

[From the Memphis Commercial-Appeal, Jan. 18.]

THE FUEL ORDER.

We can not now tell what will be the result of Mr. Garfield's order. We do not know what another day will bring forth. We are certain about nothing in this world except as to the duration of time and the rising and the setting of the sun.

Never in the history of the United States has such a winter swept the face of the earth. Never was cold weather so generally widespread.

In a time of profound peace the resources of the country would have been taxed to furnish coal to the people.

About one-half of the residences and one-fifth of the steam plants of the country might have used other than coal for fuel.

But coal was cheap and easily handled.

Congress yelled mightily at the order of Garfield yesterday.

Our people in this country for 50 years have been eating wheat bread and expecting to keep on eating wheat bread, but the order of Mr. Garfield yesterday brought us to the bottom of the flour bin and the coal bin.

Congress got excited yesterday. Congress ought to have been excited four years ago, and should have passed Senator SHIELDS'S bill for the utilization of water power.

There is enough water power in Alabama going to waste to run every furnace, every steam plant and every railroad in Alabama, Mississippi, Tennessee, and Georgia.

There is enough escaping water power in Arkansas, if converted into electricity, to run every steam plant in the State and every railroad in the State and supply a surplus to the industries of Missouri.

There is enough escaping water power in the United States to furnish electricity to move more than one-third of the power units in the United States.

Before the Government took over the railroads it should have taken over the coal mines. Then there should have been a tremendous effort to increase the output along lines that would have secured results.

The Government sought to increase the output by advancing wages. The opposite result was secured. One-third of the men, when by working four days earned as much as they formerly had in six days, only worked four.

This paper contains all the information as to Mr. Garfield's order that was available yesterday. We give it to the public for what it is worth. Our readers must analyze it and act according to their best interpretation of it.

[From the Memphis Commercial-Appeal, Dec. 5, 1917.]

SHIELDS BILL GETS HELP FROM MESSAGE—RECOMMENDATION FOR WATER POWER MAKES PASSAGE SURE—BELIEVE THAT COMMENDATION GIVEN BY PRESIDENT WILL RELIEVE MEASURE OF OBSTRUCTIONS WHICH HAVE PREVENTED ITS ENACTMENT.

(By R. M. Gates.)

WASHINGTON, *December 4.*

President Wilson's recommendation of legislation for the development and use of the water power of the country as an imperative necessity under the present conditions makes the enactment of the Shields bill applicable to water powers in the navigable rivers of the United States, and the Walsh bill, applicable to nonnavigable streams upon the public domain, also an absolute certainty during the present session of Congress. This is practically the only recommendation of economic legislation not connected with the war contained in the message, which emphasizes the importance of legislation which will permit this great natural resource to be developed and utilized as is being so successfully done in all other civilized countries of the world, but which present restrictive laws, passed some years ago by the ultra-conservationists, now absolutely prohibit. The Members of the Congress who have been interested in these measures are elated over the prominent commendation given them by the President and feel now that their labors, long blocked by obstructionists, will be successful.

These bills are among the greatest constructive measures that have been before Congress for several years and when written into law will be far-reaching in their effect upon transportation by improving navigable rivers with private capital where Congress has been unable to do so on account of immense appropriations required, and in conserving our coal resources for domestic and manufacturing purposes by the use of hydroelectric power.

The wisdom of this legislation is demonstrated by the present congested condition of transportation and the scarcity of fuel now causing so much distress in the homes of thousands of people and embarrassing our mills and factories in every part of the country. Senator SHIELDS is to be congratulated upon this indorsement by the President of the work he has devoted so much time to since he has been in the Senate, for it is seldom that a Senator during his first term has accomplished so much in constructive legislation of national character.

[From the Memphis News-Scimitar, October, 1917.]

A VITAL QUESTION.

One of the most important matters of legislation to be considered during the next session of Congress, which convenes in December, is that providing for the utilization of water power.

President Wilson will, no doubt, urge upon the Congress, as he has in the past, the necessity for the enactment of just and adequate laws looking to the redemption of this vast and invaluable resource, which for so many years has gone to waste.

The Water Power Trust, which practically controls all of the water-power resources in the West, opposes any further legislation. For one thing, no proposed legislation contemplates any such liberal terms as those at present enjoyed by the western power companies, and in order to equalize the terms those concerns now in operation would be compelled to adjust themselves to the new conditions. Some very ingenious gentlemen, who have been subsidized by the water-power interests, have rendered very effective service in preventing legislation on that subject for several years by claiming that whatever bill is introduced is in the interest of the Power Trust. And many ignorant people have actually been persuaded to believe that this is true.

In a recent speech Senator BANKHEAD, of Alabama, said that when the Government nitrate plant at Muscle Shoals in Alabama is completed the product derived from the use of water power will represent a daily saving of 200 carloads of coal.

It is amazing that the Government has postponed so long the construction of this plant. For a number of years the location of a nitrate plant on the Muscle Shoals has been advocated, not alone for the production of nitrates for Government use, but for the production of fertilizer to be used on the farm lands of the South.

The fertilizer question was never so serious as it is at present. It is so closely allied with food production that the two are identical, but if we are to continue to ignore that feature, certainly we can not evade the fuel issue, which has reached almost the proportions of a crisis.

[From the Memphis News-Scimitar.]

THE COUNTRY DEMANDS WATER-POWER LEGISLATION.

The Government of the United States has assumed an obligation unparalleled in the history of the world.

It must furnish foodstuffs to support the peoples of the allied nations at home.

It must furnish foodstuffs and munitions to the allied armies in the field.

It must finance the allied nations in this titanic struggle to make not only the world safe for democracy, but civilization secure on earth.

The President of the United States made no careless assertion when he said the United States has no special grievance against Germany. He meant that this war is in behalf of humanity against inhumanity, civilization against uncivilization. In this cause the allied countries of Europe are sacrificing every earthly possession—for the preservation of the eternal principles of truth and honor they are laying down their lives.

The full import of the part the United States is to have in this world war is coming gradually to the people of this country. The selective draft brought it very near; the casualty lists, when they begin to come back from Europe will bring it home. There is no need to delude ourselves.

To meet these responsibilities the Government is endeavoring to awaken the people to the necessity for conserving potatoes, meat, and bread.

What the country most needs is an awakening to the necessity for greater production. The country needs to find the means of doubling its output of foodstuffs and at the same time reconciling itself to the loss of a million of its producers, and more should they be required.

A situation of this kind should convince the gentlemen of the Congress that the passage of water-power legislation at this session is important and essential. It should be considered distinctively a war measure.

The Shields water-power bill is the best measure ever devised on this subject. It was passed by the Senate at the last session by a vote of 46 to 22, and held up in the House by small politicians without capacity to appreciate its significance and value. The same measure is pending now on the Senate calendar, having been reported unanimously by the Committee on Commerce with a membership of 19 distinguished gentlemen.

There ought to be some means of overcoming the opposition to water-power development, or if the opposition is simply confined to the Shields bill, and the House, in its superior wisdom, can frame a better bill then some other measure for the development of water power should be introduced and passed.

The development of water power is more closely related to the conservation of the resources of this country than any other project that has been proposed. Other countries, Germany, Italy, France, Norway among them, with lands in a high state of cultivation, years ago adopted their water power to the production of fertilizer from atmospheric nitrogen.

The United States, up to the beginning of the war, was dependent largely upon the Chilean nitrate fields for its supply of fertilizer. Since the beginning of the war the price of Chilean nitrate has advanced in price from $40 to $85 a ton, and even at that price the lack of transports and the hazard make it practically impossible to reach those fields.

There is no place else to turn for this product, and while we are in distress because we are cut off from our former source of supply, above our heads, over every square mile of land are 20,000,000 tons of atmospheric nitrogen, enough to supply the world with fertilizer for 50 years, which can not be fixated because there is no law permitting the use of the 55,000,000 horsepower of water power annually going to waste in the United States.

Only by the utilization of our great water power in the fixation of atmospheric nitrogen can we ever meet European competition in war and commerce. The countries of Europe, on lands that have been in cultivation for a thousand years, use double the amount of fertilizer per acre that is used in this country, where the virgin fertility should not be exhausted. And for double the amount of fertilizer the European farmer pays no more than the American farmer pays for half the amount, and in addition, the yield in Europe is double that of the United States per acre.

Fertilizer in this country will not be cheaper while the war lasts, under present methods, even if it can be obtained at all, and not cheap enough after the war is over for generous use unless it is made by the water power at our doors where the cost of transportation is saved.

The discussion, like the possibility of water power development, has no limitations. Its greatest obstacle is its immensity—the inability of little minds to grasp its possibilities and its import. One other matter, however, should be called to the attention of the country and to Congress, and that is the coal situation.

The latest available statistics show that each individual in the United States consumes 1,100 pounds of coal annually; that the primary power equipment for commercial purposes in the United States is 30,448,246 horsepower, of which 80 per cent is produced by steam. In this connection it should be observed that the minimum horsepower afforded by the streams of the United States is 32,082,000, or more than the power produced by steam, with a maximum horsepower of 61,678,000, exclusive of 200,000,000 more which may be made available by storage.

There are water-power projects in the United States at this time, representing 2,122,000 horsepower, actually delayed and defeated because of lack of water-power legislation. The development of 1,160 miles of waterways for navigation, without cost to the Government, is delayed for the same reason. Two million one hundred and twenty-two thousand horsepower is equivalent to the energy contained in 8,427,000 tons of coal, and 230,000 thirty-five-ton cars are required to move 8,427,000 tons of coal, and the labor of 7,000 men for one year would be required to mine this coal.

The value of the coal consumed in the United States is fixed normally at $1,000,000,000. Last year its value increased $1,000,000. The most accessible and cheapest coal is being mined first. In a year the price has doubled.

The cost of coal, the labor involved in its production, and the expense of transportation and the corresponding waste of water power equivalent to all these are not all.

Urged to their utmost capacity, the railroads can not handle the Nation's traffic. Up to March 1, 1917, there was a shortage of 125,000 cars. The lumbermen alone asked for 50,000 more cars than they could secure.

With the United States at war and its every energy exerted, and with our ships in foreign service commandeered by the Government to act as carriers for troops, war materials, and supplies, there will be an ever-increasing volume of commerce. This emergency must be met, and met at once by proper legislation. It can largely be solved by the development of water power under proper safeguards, and the people ought to demand this legislation.

—

[From the Memphis News-Scimitar, Oct. 9, 1917.]

WATER POWER.

One of the Government's big nitrate plants, to cost approximately $4,000,000, is to be constructed near Sheffield, Ala., and the Government at last is to utilize the enormous waste of water power that has been the curse of this country for years.

It is well that the country is awakening to the value of water power. It is lamentable that it did not awaken earlier. The United States is the only civilized nation that has not already bridled its water power and made it to serve some useful purpose.

We have been willing to dig from the mines the cheap and easily available coal. We have had the cars on which to ship it, and the price has been such that the people could burn as much as they liked and waste as much as they chose.

Now coal has mounted sky-high. It is out of reach of many people, and actual suffering may result this winter on account of the price. The coal miners in various sections of the country are on a strike because the operators shot up the price of their product without increasing their wages. The cars and equipment of the railroads are in the service of the Government and every available piece of rolling stock is being utilized.

A serious coal shortage exists already. In some places the authorities have confiscated the coal passing through en route to other places where it was needed just as badly.

Chilean nitrate for fertilizer is no longer obtainable. At the beginning of the war it was worth something more than $30 a ton. Now it costs $100, when it can be obtained. The crop production will be cut down materially if something is not done to relieve the situation.

A few far-sighted men who have given this subject serious consideration have learned that coal is always going to be relatively high hereafter because of the system of mining; they have learned that fertilizers can not always be secured from Chile, even when there is no war, for the Chilean mines are not inexhaustible.

Their idea is that the vast water power of the United States should be utilized as much as possible, instead of robbing the coal mines of their rapidly diminishing supply. They know that heat, light, and power can be obtained from water power cheaper than from steam power, and that nitrogenous fertilizer can be obtained at the same time by the process of fixation of the atmosphere.

The people need to awaken to this subject and insist upon some legislation during the next session of Congress that will give an opportunity for the development of the water-power resources of this country.

[From the Memphis News-Scimitar, Dec. 6, 1917.]

WATER POWER.

In an editorial discussing the need for immediate development of the water-power resources of this country, the News-Scimitar of November 24 made this prediction:

"President Wilson will no doubt urge upon the Congress, as he has in the past, the necessity for the enactment of just and adequate laws looking to the redemption of this vast resource which for so many years has gone to waste."

Touching upon this subject in the course of his address before the Congress, the President said:

"It is imperatively necessary that the consideration of the full use of the water power of the country, and also the consideration of the systematic and yet economical development of such of the natural resources of the country as are still under the control of the Federal Government, should be immediately resumed and affirmatively and constructively dealt with at the earliest possible moment. The pressing need for such legislation is daily becoming more obvious."

The vital importance of such legislation is made more apparent by the fact that the development of water power was the only recommendation made outside of the measures necessary for the aggressive prosecution of the war.

The President had in mind, of course, the Shields bill, which he has already approved, and which passed the Senate during the last Congress by an overwhelming majority and is now on the House Calendar, recommended by unanimous vote of the committee for passage, and the Myers bill, which has to do with the development of water power on the public domain.

It is the judgment of the country that there is nothing before the Congress, aside from the war measures, calculated to bring greater relief from fuel prices, which will continue to be a vexing problem so long as we neglect the development of our water power.

—

[From the Memphis News-Scimitar, Dec. 15, 1917.]

SHIELDS BILL PASSES.

The passage of the Shields water-power bill by the United States Senate yesterday was a notable achievement, for the reason that it demonstrates how closely and quickly the Congress is following the recommendations of President Wilson. The water-power legislation contemplated in the Shields bill was the only recommendation made by President Wilson outside of measures for the active conduct of the war.

The fact that the President included it in his address delivered before the joint assemblage of both Houses the second day after the Congress convened indicates that he has recognized the bill as closely aligned with measures necessary for the prosecution of the war.

The fuel question is one of vital concern to this country even now, and unless there is some relief there will be more concern within the next few months. The transportation question is another that is claiming the attention of the best experts on railway matters in the United States. The Government will probably require all of the transportation facilities that the railroads can assemble for the handling of its traffic, and the movement of coal for private concerns and for individual consumers may be handicapped to a large extent.

It is surprising that the people of this country have been so long in recognizing the importance of water-power legislation. If a measure such as the Shields bill is can be passed by the House, it will receive the approval of the President. Then private enterprises, State or municipal authorities may begin to arrange for water power with which to furnish lights and power for the conduct of street railways and for the operation of factories and every kind of enterprise in which power is required and which at present are obliged to use coal. The coal problem for home consumption and for smaller businesses would be solved and there would then be no difficulty in securing all of the coal that is needed and at a reasonable price.

It need hardly be set down here, so well is it known throughout the country, that the Pinchot interests, backed by their millions, have met a signal defeat by the passage of the Shields bill in the Senate. Likewise, there is no comfort for the little coterie of newspaper men in Washington who have been paid liberally, it is said, for their distribution of scurrilous matter against Senator SHIELDS and his bill.

The effort to make it appear that the President opposes the Shields bill is ridiculous in the light of its passage in the Senate. It is an established fact that no measure can pass that body except with the hearty approval of the President, notwithstanding an effort that some newspapers are making, on the eve of a political campaign, to make it appear otherwise.

Those newspapers that endeavor to convince the public that the President is opposed to the Shields bill make the Senator out a stronger man that he is when they claim that he was able to secure the passage of his measure in the Senate over the opposition of the President.

—

BUSINESS MEN'S CLUB, MEMPHIS.

Resolution adopted by the Business Men's Club Chamber of Commerce, Memphis, Tenn., at a regular meeting of the board of directors, May 19, 1916.

Resolved, That the Business Men's Club Chamber of Commerce of Memphis, an association representing the commercial and agricultural interests of Memphis and the prosperity and comfort of a population of 200,000, hereby indorses the Shields bill as passed by the Senate, free from impractical provisions that so disastrously have prevented water-power development in recent years, and hereby respectfully urges upon the House of Representatives the immediate passage of this bill; and be it further

Resolved, That a copy of this resolution be mailed by the secretary of this association to every Senator and Congressman from the State of Tennessee, and to every commercial and agricultural association with whom this association is in correspondence or affiliation.

—

[From the Chattanooga News, May 9, 1916.]

The National Conservation Congress indorsed the Shields water-power bill by a vote of 116 to 39. The bill has been much maligned. It is by no means a "grab" measure, and the rights of the public are fully protected. It will develop the waterways. At a time when measures having to do with waterways are classed by the thoughtless as "pork," it is a welcome sign when the Conservation Congress realizes that true conservation means making the best uses of the forests and waterways for the public and not, as many believe, keeping hands off of waterways and forests.

[From the Chattanooga News, Mar. 10, 1916.]

SHIELDS BILL IN THE HOUSE.

The Shields bill, which has passed the Senate and which Senator SHIELDS declares will be followed, if enacted, by early development of water powers aggregating 15,000,000 horsepower, or a volume of electricity equal to that produced by a coal consumption of 100,000,000 tons a year, and meaning the saving of $700,000 a day in coal bills, will have a hard fight in the House.

Under the Shields bill the Government will have strict supervision of development of water power. While capital is encouraged to help develop the water power and the rivers, the Government does not relinquish supervision. The rentals are to be converted into funds for improving the waterways. The development of the water powers will center interest of the people on the waterways and will force the Government to give the waterways at least halfway adequate treatment.

Some of the strong points of the Shields bill show the manner in which its enactment might bring about the development of waterways throughout the country. Under its terms the Secretary of War is authorized to grant permits for dams and power plants where he believes the building of such dams will improve navigability of streams. Dams are to be built without cost to the Government, and the grantees are to provide and operate locks, gates, sluiceways, etc., all without cost to the Government. Permits may be granted to individuals, political subdivisions of States, cities, or other municipal corporations, or to public-utility corporations. Intrastate business and rates of companies operating under the act are to be regulated by the States, and interstate service and rates by the Interstate Commerce Commission.

All plans for dams and works are to be approved by the War Department as being the most adaptable plans for improvement of navigation and fullest development of water-power possibilities. The grantee is to pay a rental for public lands used and a charge for rights and privileges in use of water, these rights and charges to be fixed at the discretion of the Secretary of War, and the money received from same to go into a special fund in the United States Treasury to be used for further improvement of waterways. Actual construction work on any project is to be begun within two years of the granting of the permit, and the works are to be completed within such reasonable time as the Secretary may prescribe. For failure to complete the works as directed, or for violation of the provisions of the act, or noncompliance with regulations or orders of the War Department, the grantee is subject to heavy cash penalties or to revocation of the grant.

Permits are to be granted for 50 years, after which time the Government may either extend the original lease, make a new grant, or upon one year's notice take over the property upon payment of its fair value, this value to be determined by mutual agreement or by the Federal courts, and not to include any allowance for any rights granted by the Government. The bill also provides that no value of rights granted by the Government shall be allowed in fixing rates to consumers. Dams, locks, and other structures used primarily for improving navigation are to be exempt from taxation.

Leading Chattanoogans, through the News, expressed themselves as gratified at the passage of the measure in the Senate. It is believed that the Shields bill will open the way for the full realization of the great Muscle Shoals plan.

—

[From the Chattanooga News, Mar. 9, 1916.]

BILL MEANS MUCH TO CHATTANOOGA—SENATOR SHIELDS CONGRATULATED ON ACHIEVEMENT—LOCAL MANUFACTURERS AND BUSINESS MEN ELATED—$50,000,000 WILL BE EXPENDED IN BACK YARD OF CHATTANOOGA.

Telegrams of congratulations were sent Senator JOHN K. SHIELDS Thursday by President Fred Arn, of the manufacturers' association; President Huston, of the chamber of commerce; Vice President Z. C. Patten, jr., of the same organization, and other citizens, expressing gratification at the passage of his river bill through the Senate Wednesday.

According to local manufacturers and capitalists, there will be $50,000,000 spent in the "back yard of Chattanooga," meaning at Muscle Shoals, as a result of the passage of the bill. They think there is no doubt of its passage through the House, and are regarding the Muscle Shoals development as already a certainty.

Twenty millions will be spent by the Federal Government at the shoals as a result of the bill's passage. Thirty millions of private capital will be added to that. There will be a nitrate plant, and much surplus power delivered to Chattanooga, being an inducement of great pulling power for more great manufacturing plants to locate themselves in Chattanooga, and the consummation of one of Chattanooga's most fervent hopes will be realized—year-around navigation on the Tennessee River.

The expenditure of the Government's $20,000,000 will come about as a result of the adoption of the General Army Staff plans for the building of a nitrate plant. Muscle Shoals is the only available inland site for such a plant, and with the building of the dam and power plant there the Government will have power already furnished ready for use.

Regarding the building of the dam, financiers have been ready for several years to erect it at any time the Government would allow them to do so. They have not only been ready, but anxious, and it is expected that very little time will elapse before tangible developments will be under way.

—

[From the Chattanooga News, Dec. 20, 1917.]

HASTE IS IMPORTANT.

There seems to be a genuine enthusiasm manifesting itself all over the country upon the apparent purpose of Congress to push the water-power bill to early passage. The fuel famine and the shortage of needed power for the operation of the country's industries has brought home to the people the imminent importance of this great conservation measure as nothing else could have done. They are now realizing that action upon it has been too long delayed already. We had hoped that it might be put through before the holidays, but it seems that the House was not quite ready.

As illustrating the magnitude of the possibilities involved in the water-power scheme, the Geological Survey has been compiling some estimates. It is computed that a maximum development of 62,000,000 horsepower could be produced from navigable streams under the provisions of the bill, and this without utilizing the storage, which, it is claimed, would augment the potential horsepower to 200,000,000. Even this huge total does not include the smaller streams not ordinarily considered navigable. Here, it is estimated, 10,000,000 more horsepower could be made available, and long stretches of streams rendered navigable at the same time. The awakening of the people to the immensity of this great natural asset which is going to waste while the country suffers is doubtless responsible for the observable quickening in Congress.

There is an inadequacy of fuel, of operating power, and of man power now prevailing to discharge the responsibilities with which the country is confronted. The situation daily grows more acute and every hour is important. It will necessarily require time for the assembling and installation of plants and processes for the harnessing of the rivers which are now idly and placidly flowing to the sea. Meantime the country suffers and waits. In this connection, however, it is a matter for local congratulation to observe that much relief will be brought to the Chattanooga district through the development of power consequent upon the erection of the nitrate plant at Muscle Shoals. This work has already been decided upon and undertaken.

A disposition to play politics with the water-power bill has been observed in Tennessee, but this should wait until the measure has been enacted. The people are not only much interested in the speedy enactment of the bill into law but they are concerned over its terms. They want it so drawn, if possible, as to make it practicable to utilize the wasting water power and to protect them at the same time from the exactions of merciless combinations practically out of reach of the law.

—

[From the Chattanooga News, Sept. 26, 1917.]

UTILIZE WAR-TIME WATER POWERS—SENATOR SHIELDS URGES SECRETARY OF WAR TO ISSUE PERMITS TO DEVELP RESOURCES.

Senator WEEKS, of Massachusetts, has had read into the RECORD a statement made by Senator JONES, of Washington, regarding the Shields water-power bill. It had previously been published in the Brooklyn Eagle. The article urges that Congress no longer delay action of laws under which our wasting water powers may be developed.

"The statement shows the importance of the immediate passage of such legislation to the State which I have the privilege of representing in part in the United States Senate.

"Of the 9,700,000 water horsepower in the State of Washington requiring Federal consent before it can be utilized, but 96,000 horsepower, or 1 per cent, has been developed, and the remaining 99 per cent, or 9,600,000 horsepower, is going to waste. Meanwhile we are importing coal from Canada; vast areas of silent desert lands, which, given water, would yield great harvests in these days of food shortage, are held back from reclamation through lack of cheap electric energy for operation of pumping plants; three transcontinental railroads are unable to electrify their systems across the State; and industrial plants, the establishment of which would give us the diversity of industry so badly needed to further our progress and prosperity, are prevented from building.

"By provisions in the river and harbor act of 1890 and 1899 Congress has prohibited the placing of dams in navigable streams without the consent of Congress in each case. No executive authority, unless the stream lies wholly within a single State, in which case the State legislature may grant the authority, subject to approval of plans by the Secretary of War.

"The statute passed by Congress in 1910, known as the general dam act, prescribed the terms under which dams may be placed in navigable streams. During the first two years after the passage of the statute Congress granted its consent to the development of 12 water-power projects in navigable streams, of which but two have been developed, and their financing was only made possible because they were adjuncts to existing systems.

"The other 10 could not be financed under the restrictive terms of the permits granted. Not a single water-power project has been developed in a navigable stream during the past five years. During these years water-power projects actually formulated and ready for development, located in 17 Southern and Western States, aggregating 2,122,000 horsepower, have been prevented from development, as no responsible banker, trustee, or business man would invest a dollar upon the security afforded by such permits.

"A bill drawn and introduced by Senator JOHN K. SHIELDS, of Tennessee, was passed by the Senate at the last session. The bill was amended by the House and sent to conference, was not reported, and died with the close of the last Congress.

"Senator SHIELDS reintroduced the bill (No. 1419) at the present session, and it has been reported without amendment to the calendar by the Commerce Committee, and will undoubtedly again be passed by the Senate.

—

[From the Chattanooga News, Oct. 23, 1917.]

WATER POWER AGAIN.

The News has on several occasions stressed the importance of the early enactment of the general water-power bill. This bill while not necessarily an immediately available war measure, is distinctly a vital conservation proposition. And since the war has brought the importance—the necessity even—of conservation into such strong relief, the passage of this bill takes on much of the urgency of a war factor. Just at a time when the manufacturing capacities of the country are being strained to an extreme limit, the coal production is falling short of absolutely needful requirements. A universal famine is imminent. The people are without a necessary supply of fuel. Winter is coming on and, according to the present outlook, it will be a marvel of good fortune if widespread suffering is avoided. And at the very best the factories will be more or less hampered. And still Congress has dawdled over the water-power bill.

As heretofore insisted upon in these columns, the possibilities to be opened by the enactment of the water-power bill are many and great. It is a conservation proposal of far-reaching importance. While the coal supply in the earth may be ample for many generations, its production is not meeting the demands upon it. The output is needed for fuel in the homes of the people without any of it being diverted to the production of power. Unless relief is attained somebody will be in want.

The harnessing of the streams will afford a dependable source of water for our industries at a comparatively stable and uniform cost of production. This last feature is very desirable indeed. And as heretofore pointed out, it will contribute to the solution of the smoke problem in the cities. But it will take time to organize and install the necessary plants to furnish adequate water power, hence the pressing need of prompt legislation. It is to be earnestly hoped that during the coming session Congress will pass this very desirable measure.

An examination of the following extract from a recent article by Dr. Charles P. Steinmetz, an electrical expert, will convince our readers that our vision of the possibilities of water-produced electric power was not at all extravagant:

"When we use nothing but electrical power for heating as well as for other purposes, the supply will come through transmission lines from big central stations of many millions horsepower. These stations will be located wherever power is available, such at at waterfalls, coal mines, and oil and gas wells. This will do away with the wasteful process of hauling coal from the mines to the relatively small power houses scattered all over the country. It may be that at the coal mines, instead of taking out the coal and burning it the way we do now, power will be generated in the mine itself by setting the coal in the veins on fire. No; this is not beyond the dream of possibility. It has already been seriously proposed by an eminent English scientist. Startling will be the changes affected by such a supply of electricity. Electrical power will be used so generally that it is very likely the cost will be on the basis of a tax, like our water tax. For example, so much a plug, as we are now charged so much a faucet. It will be very cheap and it will not pay to install mefers and have them read and keep the accounts in the offices of the electric companies. To-day water is used universally, and no one would think of making a charge to a friend or even a stranger for any amount of it. If you make a call in your electric vehicle, the vehicle will be run into your friend's basement and the batteries will be charged while you are making your call. It won't make any difference whether you get your electric current from your friend's plug or from the plug in your own home—the tax will remain the same."

After contemplating this picture it does not require a very big stretch of the imagination to see electric power sold at the corner grocery to those who may not have home connection with the plant. A container may be taken along and the amount desired be carried home much like a basket of spuds. Why not supply stations for electric power as well as gasoline?

—

[From the Chattanooga Times, Chattanooga, Tenn., Mar. 16, 1916.]

THIS CITY TO GET BENEFIT—RIVER MAY BE IMPROVED AS AN INCIDENT TO PREPAREDNESS—MANY COMPLIMENTS PAID SHIELDS FOR HIS VICTORY—COMMERCIAL AS WELL AS MILITARY IMPORTANCE CONNECTED WITH PROJECT FOR ESTABLISHING NITROGEN PLANT AT MUSCLE SHOALS.

Having just returned from Washington, a local business man and manufacturer gives the following impressions gathered at the National Capital:

One of the members of the brigade post committee made a very interesting report, giving some information gathered at Washington which is welcome news to those interested in the development of this section.

Among other things he commented on the fact that while in Washington last August he found very few Members of Congress who happened to be there and very few citizens throughout the North and East who had much interest in the question of the fixation of nitrates from the air. Only a few who had made a study of this condition abroad and who were familiar with what it had meant to Germany in the past 12 months were talking, only in a general way, about the nitrate needs of this country. Since that time a tremendous volume of literature has been compiled and distributed throughout every State in the Union and placed in the hands of every Member of Congress, until now the entire country is alive to the fact that something must be done to free this country from its dependence on Chile.

Certainly anyone who spends time in Washington will not fail to hear from almost every quarter compliments paid to the fine manner in which Senator SHIELDS conducted the fight for his general dam act. And certainly one less skilled in a parliamentary way than Judge SHIELDS would have been far less successful. This act, having met all the so-called "conservation opposition" that was possible, and coming through with such a tremendous majority, practically insures its passage through the House; but much more difficulty would have been experienced had not the general feeling been so strong for power developments to meet the requirements of the Government, which made everyone feel kindly to any measure that looked to the utilization of this waste energy and the applying of it in some practical way.

URGENT FEATURE OF THE PREPAREDNESS MOVEMENT.

Two significant things happened last week which have been noted in the press, but their significance was especially realized by those who have been in direct touch with the affairs in Washington. One was the meeting in New York of the Naval Advisory Board and the report of Dr. W. R. Whitney, of Schnectady, N. Y., who had been delegated to make a report on the production of nitrogen from the air. His report was unanimously approved, and, among other things, were these significant statements: That the Naval Advisory Board should urge President Wilson to take such steps immediately as might be necessary to create a commission, preferably from the Departments of Agriculture, Interior, War, and Navy, to make effective immediately such plans as might be necessary for the Government production of nitrogen from the air, further stressing the fact that it is not only immediately vital from the standpoint of "preparedness," but equally important from an economic standpoint in making adequate fertilizer for the farmers at a reasonable price. The commission was urged to plan immediately for the utilization of water powers in working out the proposed plant or plants. The next day there appeared from the Government press, Report No. 297, from Mr. HAY, as chairman of the Committee on Military Affairs, together with a report on the hearing before that committee, on ways and means for increasing the efficiency of the Military Establishment of the United States. This report is one of 24 pages, and while it deals with all phases of "preparedness" the following paragraph stands out paramount in the entire report:

"The bill also provides for the authorization of the plan for the manufacture of nitrogen in order to supply the country with powder to make it independent in time of war of every foreign source of nitrogen. This committee considers this question of the first importance in the consideration of preparedness for national security."

Following this, in small type, six pages are devoted to the arguments and data in favor of such a proposed measure. With this report coming from the Military Affairs Committee, backed by the sentiment in the Senate, as evidenced by the Shields bill, also coupled with the report of the Committee on Agriculture, emphasizing the nitrogen interest as of first importance from the agricultural standpoint, it almost seems that the bill authorizing the appropriation for an air-nitrogen plant would be passed quickly and by an overwhelming majority.

BETTER WATERWAY AT CHATTANOOGA IN PROSPECT.

While the proposed measure will not designate Muscle Shoals as the location for this plant, it is a fact that the Government engineers have not made a report on any other adequate location and almost all of the prominent dailies throughout the country have published the statement that when this bill was passed it would mean the immediate designation of Muscle Shoals and immediate work on the large dam at that point. This would then leave but two smaller dams, which would be entirely incidental, and of course they would be provided for at an early date through the Rivers and Harbors Committee of the House and the Commerce Committee of the Senate; in fact, one of the most influential United States Senators made the statement that the very importance of the Tennessee River would not even require another visit from a delegation, as they would be put through as soon as work could begin without any fight.

When it is considered that only a small proportion of the power will be necessary for Government use and a large proportion will be utilized for industrial purposes, all of which or a great part of which can be economically utilized here in Chattanooga, the passage of this measure will mean the biggest development for the South that has ever come our way; and coupled with all, it gives us at least 6 feet in the Tennessee River from Chattanooga to Paducah 12 months in the year.

—

[From the Chattanooga Times.]

THE SHIELDS WATER-POWER BILL.

The Shields water-power bill pending in Congress has been attacked by Mr. Gifford Pinchot and others on the ground that it opens up the way for selfish personal interests to absorb all the water power of the country, thus putting the people in the grip of a merciless trust. In brief, the bill, which gets its name from the author, Senator JOHN K. SHIELDS, of this State, repeals the Federal statute providing that in order to build dams for water power or other structures across or in navigable streams an act of Congress granting the right must be passed. The Shields bill restores the right to grant the privilege to the State wherein the water power sought to be developed is situated and to the riparian owners, a right that prevailed until a few years ago. The provision of the present law can be well illustrated by a reference to the procedure necessary to the building of the Hale Bar Lock and Dam and the Market Street Bridge. The purpose of the Shields bill is to make such enterprises possible without a congressional enactment.

It is stated that the War Department has indorsed the measure and that the public welfare requires it, since under existing laws the development of the water-power resources of the country is practically impossible. The Shields bill authorizes companies and corporations, with preference to municipalities and public-utility companies, to build dams in navigable streams for power-development purposes without resort to Congress, after having first submitted their plans and obtained the approval and permit of the Secretary of War, upon certain conditions that he may impose, including the construction of locks in the dams and other facilities for navigation at the expense of the developing company. The permit will continue for a term of 50 years, unless sooner forfeited for violation of its terms, at which time the property may be taken over by the United States and re-leased under then existing laws.

Other safeguards are included in the measure which, it would seem, ought to satisfy the most sensitive reservationist, since it is made practically impossible for any company or trust to exploit the people or deprive them of their rights, either by exorbitant charges or combination in restraint of the free use of navigable streams for purposes of transportation. It is pointed out by Senator SHIELDS that the passage of this act is necessary to the full development of the wonderful resources of the Tennessee River, and it is suggested that on its passage may depend the erection of an enormous plant near Muscle Shoals for the generation of hydroelectricity for the fixation of atmospheric nitrogen used in the manufacture of fertilizer and high explosives, all of which is now almost exclusively imported from Chile at an annual expenditure of $21,000,000.

If, as seems to be the case from the documents accompanying the copies of the bill sent to this office, the public rights are securely safeguarded and the avenues for the development of the country's resources are thereby opened up without harm to the welfare of the people or the abridgment of the Government's authority over navigable streams, the passage of this measure would at once stimulate development of water-power resources all over the country, and especially along the Tennessee River, the waters of which, it is stated, are susceptible of developing more than a million horsepower of electrical energy. We have not noticed that under the present law anything more than trouble and delay have been occasioned, for Congress has generally granted such rights as have been asked; the Shields bill will, therefore, only facilitate the developments necessary to make the Tennessee potential in the building up of the sections through which it runs.

—

[From the McMinnville (Tenn.) Standard, Feb. 24, 1917.]

THE SHIELDS WATER POWER BILL.

When the water power at Muscle Shoals is utilized electricity can be furnished near-by cities at a nominal cost, providing the Lighting Trust does not take over the water power at that place. Senator SHIELDS'S bill, which passed the Senate, is hung up in the House, and its passage is problematic, for the reason that it is said to open the door for the powerful Lighting Trust to come in and absorb this enormously valuable popular assets. (Memphis News-Scimitar.)

One of the greatest obstacles public men who undertake enterprises for the public welfare encounter in accomplishing their purposes is the inexplicable negligence of the public, and especially the newspapers, supposedly the purveyors of information and the disseminators of truth, to properly acquaint themselves with the facts relating to such enterprises. The News-Scimitar ought to know, for it is very plainly stated in the Shields bill, that the "Lighting Trust" can not, neither can any other combination, get control of the water power of Muscle Shoals when the Shields bill shall become law. On the contrary, it is expressly forbidden, and is so provided that if anything of the sort shall be attempted the Government may interfere and prevent it. It is also provided in this bill that all concessions shall expire at the end of 50 years, if at that time the Government shall decide to operate the plant, or it may be renewed under such terms as the Congress may prescribe. In fact, every precaution is taken in the bill to safeguard the public, so that to say its purpose is to monopolize power against the interests of the people is so grossly unfair as to discredit the intelligence of those charging it. A provision is made likewise limiting the charges at which the product may be sold, so that there can be no such thing as public exploitations under its provisions.

We do not know that even the most radical opponents of the bill make the charge that the "Lighting Trust" may be able under it to exploit the people, their chief objection being that it turns over to private enterprise the energies that ought to be reserved for the uses of the whole people at some future time, their contention being that the 50-year limitation of the law will not be binding as against powerful private or corporate influences.

The real question involved is, Shall this great power remain undeveloped and of no earthly use to the present generation because there is a suspicion that private concerns are trying to get such control that coming generations will be deprived of their natural patrimony? The Government will not develop it for the uses of the people; private enterprises will. Must we, therefore, submit to the policy that means the restraint of immediate development in the idea that to do otherwise might endanger the peace or happiness of future generations? In other words, are we to permit this great power to go to waste until such time as the Government may decide to go into the business of furnishing light and power to the people? If developments of the present will aid and help future generations—and who shall say that past activities in the development of the wealth nature has provided for the races of men have not benefited the present generations—then we should insist either upon the passage of the Shields bill or the decision of the Government to give us the benefits the Shields bill will provide. (Chattanooga Times.)

—

[From the Morristown (Tenn.) Republican, Nov. 29, 1917.]

It is time to mobilize the 50,000,000 undeveloped water horsepower owned by the people of the United States. Resources yet untouched would furnish enough power to operate every train, trolley, factory, mine, and electric plant in the country. This development has been delayed by a little group of water-power magnates and their representatives in Congress. The safety and success of the Nation in the gigantic struggle in which we are engaged demand immediate relief from water-power obstruction.

—

[From the Montgomery (Ala.) Advertiser, Jan. 14, 1918.]

ON GIVING US A PAIN.

Mr. Gilson Gardner, who has been writing progressive politics for several years and saying a great many things which caused us to wonder why he said them, can sit down at his typewriter and jot down offhand the names of the United States Senators the people of the different States ought to reelect, and likewise the names of those the people should leave at home. Mr. Gardner has just begun his latest campaign of proscription and merciful approval.

In his declaration Mr. Gardner is at some pains to inform us that Miss JEANNETTE RANKIN, of Montana, contemplates asking for a United States Senatorship, in succession to THOMAS JEFFERSON WALSH, who is not in good health. Reviewing the Montana lady's record of achievement as a legislator, Mr. Gardner concludes that "altogether Miss RANKIN has qualified for promotion."

We infer also from the article in question that it would please Mr. Gardner if the people of Minnesota would kindly leave Senator KNUTE NELSON at home. But when the writer comes upon the name of Senator JOHN K. SHIELDS, of Tennessee, then it is that his Bolsheviki ire is stirred to a pitch comparable to his enthusiasm for the Hon. JEANNETTE RANKIN, of Montana.

"JOHN K. SHIELDS, of Tennessee, author of the Shields water-power grab," we read, "will have a chance to submit his candidacy to the people of Tennessee next summer, and if they do not like having a Senator who is primarily a representative of the predatory interests they may choose somebody else in his place."

Mr. Gardner is a Gifford Pinchot progressive; that is to say, he is a survivor of a diminishing breed.

If the Shields bill had no better indorsement than the denunciation of a Bolsheviki journalist who seriously believes, or pretends to believe, that a woman—particularly a woman of the quaint point of view of Miss RANKIN—should be sent to the United States Senate by a responsible people, the measure would still be worthy the respect of thoughtful people. But, fortunately, the Shields bill has other merits to commend it and few, if any, defects to discredit it before a commonsense public. The Shields bill permits private capital to develop, under stable governmental conditions, our waterpowers which for a million years and more have washed merrily over the rocks onward to the yawning seas. Pinchot and Gardner would have private capital invest in these power projects, but under conditions which would necessarily frighten away responsible capital.

Pinchot and Gardner as capital baiters are of a piece with the small boy who won't go to bed himself because he's afraid the old "booger" man will catch him.

—

[From the Morristown (Tenn.) Gazette, December, 1917.]

THE SHIELDS POWER BILL.

It is to be hoped that the Shields water-power bill, which has passed the Senate by a generous majority this early in the session, will receive the sanction of the House at an early date and become the law of the land. Conservation of natural resources that keeps them hermetically locked up and sealed against practical utility and from giving service to humanity more than defeats itself. It nullifies the very efforts of heaven itself to bestow its blessings upon mankind. Some inducement is necessary to encourage enterprise and capital to venture upon the task of harnessing the unbroken waters that run riotously on to waste on a hundred hills and in a thousand streams and to cause them, through the generation of the mystic and potent electric fluid, to take the place of human labor in the rougher of the spheres—to warm, to illuminate, to comfort, and elevate the millions. But the people's natural and riparian rights in the water powers can be and have been safeguarded, as gauged by all contractual and legal standards, in the Shields bill, and it can not too quickly become the law, as it will do if it reaches President Wilson's own hands, for the President is understood to appreciate and approve the Shields bill, and that alone is a sure guaranty that there is nothing hostile in the bill to the people's interests that can be guarded against by human care and integrity of purpose.

—

[From the News Banner, Murfreesboro, Tenn., Dec. 21, 1917.]

SHIELDS WATER-POWER BILL PASSES SENATE—IT IS OF VITAL INTEREST TO THE COUNTRY IN THE PROSECUTION OF THE WAR.

Two measures of transcendent interest to the West and vital interest to the whole country in the prosecution of the war by unlocking national resources were started on the road to achievement in Congress last Friday.

The Shields water-power bill for leasing of power sites in navigable streams was passed by the Senate and sent to the House on that day.

This is the bill our distinguished senior Senator fought nobly for, but was lost in a hopeless deadlock in the last session of Congress.

To hasten passage of the bill for leasing oil lands, which is expected to open the way for development of wells to meet the fuel shortage, Senate leaders agreed to abandon all attempts to make the bill apply to the naval reserve lands in California and Wyoming and to preserve these lands intact for naval fuel, having the Government take over existing claims by condemnation proceedings.

This latter decision removes an obstacle which has precipitated a great fight in Congress and held up oil-land development in the West.

Water-power legislation is now being considered by the House Committee on the Public Lands, which is understood to be negotiating an agreement to harmonize differences which caused failure of the legislation a year ago.

Passage of the Shields bill by the Senate—46 to 18—was the first step in disposing of natural-resources-development legislation before the holidays, as recommended by the President in his recent address. Under the measure water-power development on navigable streams would be under control of the War Department.

A system of 50-year permits is provided to encourage private concerns to make expenditures for dams on navigable streams for development purposes.

In announcing that all provisions for the opening of naval-reserve land in California and Wyoming will be excluded from the bill for leasing oil lands, Senator PITTMAN, in charge of the measure, said this decision resulted from opposition to the section by the Navy Department and a number of Senators.

The demands for oil are increasing so rapidly, Senator PITTMAN said, that estimates of the possible shortage, unless additional fields are opened, are beyond imagination. Because of this condition, he added, many Senators have set aside their personal views regarding lands in order to permit enactment of some legislation to relieve the situation.

—

[From the Jackson Sun, Dec. 16, 1917.]

WATER-POWER ACT WILL BE GREAT HELP—SENATOR SHIELDS OF TENNESSEE AUTHOR OF THE MEASURE.

WASHINGTON, *December 15.*

By a vote of 46 to 18 the Senate Friday passed the Shields water-power bill entitled "An act to regulate the construction of dams across navigable waters and to provide for the improvement and development of waterways for the uses of interstate and foreign commerce."

The bill in substantially the same form was adopted by the Senate at the session of the Sixty-fourth Congress by a slightly reduced majority. Senator SHEPPARD of Texas was one of the Senators voting for the bill to-day who opposed it a year ago. Senator SHIELDS of Tennessee, author of the bill, made the leading affirmative argument, which several Senators who desired "additional enlightening information" on the subject admitted afterward removed the lingering vestiges of doubt that had held their decision in abeyance. Senator UNDERWOOD of Alabama also spoke at length in support of the measure. The principle of the Shields bill parallels the cleavage of legislation for water-power development urged by President Wilson, both in messages to Congress and in private interviews.

PROVISIONS OF BILL.

The bill provides primarily for the improvement of navigation in rivers, under the jurisdiction of Congress, with private capital, as distinguished from appropriations by Congress for that purpose, and, secondarily, for the development and utilization of water power of those rivers resulting from such improvement, as well as that created by dams constructed and to be constructed under the authority of Congress. The secondary purpose of the bill is the inducement for the investment of private capital in the improvement of navigable streams and without which it would not be so invested or improvements made.

The provisions for the development of navigation, present and future, of navigable rivers are carefully prepared to accomplish that object, the improvement to be made in all cases in accordance with plans submitted to and approved by the Secretary of War and Chief of Engineers, and constructed under their supervision, all with a view primarily of promoting and protecting navigation facilities. In fact, the improvements are required to be made and maintained according to such plans and in such manner as if they were solely for navigation purposes and to be paid for out of the Treasury of the United States.

The Commerce Committee of the Senate, which reported the bill for passage, said among other things:

"It is believed that the bill provides a way by which many of the navigable rivers of the country can be opened to commercial navigation, which, for the want of available means, can not for years be improved in the ordinary way by appropriations from the Treasury of the United States, provided the provisions covering the secondary object of the bill are broad enough and liberal enough to attract private capital desiring to invest in water-power development, for it is obvious, without great inducement of individual interest and advantage, private capital will not be invested in an improvement for the sole benefit of the general public.

"The committee is also of the opinion that the secondary object of the bill—that is, the development and utilization of the water power of navigable streams—is of equal importance to the primary object, although it is in a sense incidental to it, and it is believed that the provisions of the bill concerning this are ample to accomplish that purpose.

"It is estimated that there is in the navigable rivers of the United States, exclusive of Alaska, and also of what may be developed by feasible storage projects, over 61,000,000 horsepower of water-power energy, not more than one-tenth of which is now improved and utilized. This great natural resource is in all other civilized countries developed practically to its fullest extent, and has, and is now, by furnishing cheap power, contributing greatly to the wealth of those countries and the convenience and happiness of their people.

PRODUCTION OF HYDROELECTRIC ENERGY.

"The economical and industrial advantages to the people of the United States that will result from the development of hydroelectric energy produced by utilization of water power is difficult to overestimate. There are many things which can be accomplished by steam power produced in the consumption of fuel. The value of cheap power for manufacturing, lighting, and transportation purposes is, of course, recognized by everyone. Perhaps the greatest necessity and use for it at this time is in the fixation of atmospheric nitrogen for the manufacture of fertilizers and explosives.

"The committee is of the opinion that the bill is so framed as to protect and maintain the constitutional power and control of the Federal Government over navigable streams, as well as the sovereignty of the States and the rights of riparian proprietors over and in the beds and waters of those streams, and allow the full exercise and enjoyment of the latter, subject to the paramount authority of Congress to regulate the same for navigable purposes.

"It is believed that under the provisions of this bill the water-power resources of the country will be developed and utilized and future waste prevented, which is conservation in its highest and truest sense."

The bill goes to the House, where its passage is predicted. Unquestionably it will take rank with any piece of constructive legislation this Congress will consider, and Senator SHIELDS was congratulated to-day upon the initial success of his bill.

—

[From the Johnson City Staff, Mar. 3, 1916.]

THE SHIELDS BILL.

United States Senator JOHN K. SHIELDS is to be congratulated on putting through the Senate one of the most important pieces of constructive legislation that has come to a vote in many sessions—the bill which enables the Secretary of War to grant 50-year permits for the building of dams and water-power plants on navigable streams.

This is the first vote taken by the Senate on a general water-power development measure in the eight years that the subject of conservation of natural resources has been under consideration in Congress. Two water-power bills passed the House last year and died in the Senate.

Senate leaders and military authorities urged the Shields bill as a vital feature of the preparedness program. It is estimated that there is 60,000,000 horsepower of natural energy in the navigable streams of the United States, of which nine-tenths is flowing to waste. These great water powers have been locked out from us up to now, as a special act of Congress has been necessary for each power plant, and it has been impossible to pass workable acts for the development of large water powers.

Senator SHIELDS announced in the Senate that the passage of this bill would be followed by early development of water powers aggregating 15,000,000 horsepower, or a volume of electricity equal to that produced by a coal consumption of 100,000,000 tons a year. Engineers estimate that development of this amount of water power equals a saving of $700,000 a day in coal bills.

It is known that a number of big electrochemical plants for making saltpeter and nitric acid from the air have been planned by private enterprises, and will be built as soon as the Shields bill becomes a law and makes it possible to finance these undertakings. These chemicals are essential to the manufacture of explosives and agricultural fertilizers, and at present the United States is wholly dependent for its supply upon the nitrate deposits of Chile. The Chilean Government collects a high tax upon every ton of nitrate exported. There is at present not a single atmospheric nitrogen plant in this country, although Europe has 1,200,000 horsepower of hydroelectricity devoted to this use, and Germany is making 600,000 tons of saltpeter a year in such establishments for military and agricultural uses.

A few years ago Congressman SELLS told the Staff that it was his ambition to have located in the first district several of these plants, and it begins to look now like he will realize his ambition, for the passage of the Shields bill opens the door of opportunity.

Under the terms of the Shields bill the Secretary of War is authorized to grant permits for dams and power plants where he believes the building of such dams will improve navigability of streams. Dams are to be built without cost to the Government, and the grantees are to provide and operate locks, gates, sluiceways, etc., all without cost to the Government. Permits may be granted to individuals, political subdivisions of States, cities, or other municipal corporations, or to public-utility corporations. Intrastate business and rates of companies operating under the act are to be regulated by the States, the interstate service and rates by the Interstate Commerce Commission.

All plans for dams and works are to be approved by the War Department, as being the most adaptable plans for improvement of navigation and fullest development of water-power possibilities. The grantee is to pay a rental for public lands used and a charge for rights and privileges in use of water, these rentals and charges to be fixed at the discretion of the Secretary of War, and the money received from same to go into a special fund in the United States Treasury, to be used for further improvement of waterways. Actual construction work on any project is to be begun within two years of the granting of the permit, and the works are to be completed within such reasonable time as the Secretary may prescribe. For failure to complete the works as directed, or for violation of the provisions of the act, or noncompliance with regulations or orders of the War Department, the grantee is subject to heavy cash penalties or to revocation of the grant.

Permits are to be granted for 50 years, after which time the Government may either extend the original lease, make a new grant, or upon one year's notice take over the property upon payment of its fair value, this value to be determined by mutual agreement or by the Federal courts, and not to include any allowance for any rights granted by the Government. The bill also provides that no value of rights granted by the Government shall be allowed in fixing rates to consumers. Dams, locks, and other structures used primarily for improving navigation are to be exempt from taxation.

Municipally owned dams and power plants for irrigation or for supplying power for municipal purposes are to be given preference in making leases for surplus water powers in the streams. The bill does not apply to water power on small streams and creeks used for grist mills, sawmills, etc.

The measure contains a drastic antimonopoly clause, providing that no dam or works constructed under its provisions shall be owned, leased, controlled, or operated "by any device or in any manner so that they form part of or in any way effect any combination in the form of an unlawful monopoly, or form the subject of an unlawful constraint or conspiracy to limit the output of electrical energy or in restraint of trade."

Although the war talk has prevented it from attracting any considerable public attention, the Shields bill has for several weeks been the subject of one of the most interesting debates on conservation of natural resources that has ever been held in the Senate.

Senator SHIELDS has served in the Senate only a brief time, but during that period he has displayed qualities of leadership and constructive statesmanship which have delighted his friends and confounded his enemies. That he should have sponsored such an important piece of legislation so early in his senatorial career, his admirers believe, presages a large career of service to the State and to the Nation.

—

[From the Brooklyn Daily Eagle, Sept. 15, 1917.]

PASSAGE OF THE SHIELDS BILL URGED TO DEVELOP NATION'S WATER POWER.

(By WESLEY L. JONES, United States Senator from Washington.)

It is vitally important to the economic and commercial welfare of this Nation that Congress no longer delay the enactment of laws under which our wasting water powers may be developed. The following brief statement shows the importance of the immediate passage of such legislation to the State which I have the privilege of representing in part in the United States Senate.

Of the 9,700,000 water horsepower in the State of Washington requiring Federal consent before it can be utilized, but 96,000 horsepower, or 1 per cent, has been developed, and the remaining 99 per cent, or 9,600,000 horsepower, is going to waste. Meanwhile, we are importing coal from Canada; vast areas of silent desert lands, which given water would yield great harvests in these days of food shortage, are held back from reclamation through lack of cheap electric energy for operation of pumping plants; three transcontinental railroads are unable to electrify their systems across the State, and industrial plants, the establishment of which would give us the diversity of industry so badly needed to further our progress and prosperity, are prevented from building.

By the provisions in the river and harbor act of 1890 and 1899 Congress has prohibited the placing of dams in navigable streams without the consent of Congress in each case. No executive authority, unless the stream lies wholly within a single State, in which case the State legislature may grant the authority, subject to approval of plans by the Secretary of War. As navigable streams almost invariably touch or traverse more than one State, the exception is unimportant.

An existing statute, passed by Congress in 1910, known as the general dam act, prescribes the terms under which dams may be placed in navigable streams when Congress grants specific consent. This statute, even if made operative by an enabling act, makes requirements which render investment unsafe and effectually prevents development. During the first two years after the passage of this statute Congress granted its consent to the development of 12 water-power projects in navigable streams, of which but two have been developed, and their financing was only made possible because they were adjuncts to existing systems.

The other 10 could not be financed under the restrictive terms of the permits granted. Not a single water power project has been developed in a navigable stream during the past five years. During these years water-power projects actually formulated and ready for development, located in 17 Southern and Western States, aggregating 2,122,000 horsepower, have been prevented from development, as no responsible banker, trustee, or business man would invest a dollar upon the security afforded by such permits. The production of this energy through utilization of water horsepower now wasting would save annually 8,427,000 tons of coal, would allow the labor of 7,000 men to be used for other much needed purposes, and would permit the use of thousands of cars for carrying merchandise instead of coal. Furthermore, by these river improvements 1,160 miles of inland waterways would be opened to navigation without the appropriation of Government money.

The importance of action is realized by Congress, which has had the enactment of a new navigable-stream water power law under consideration for the past four years. A bill drawn and introduced by Senator JOHN K. SHIELDS, of Tennessee, was passed by the Senate at the last session by a vote of 46 to 22 after a discussion covering a period of five weeks, during which time every phase of the question was carefully considered. The bill was amended by the House and sent to conference, was not reported out, and died with the close of the last Congress.

Senator SHIELDS reintroduced the bill (No. 1419) at the present session, and it has been reported without amendment to the calendar by the Commerce Committee, of which I am a member, and will undoubtedly again be passed by the Senate when its consideration is reached. The bill has been criticized by so-called conservationists for reasons which I shall not attempt to controvert, because, to my mind, they are manifestly impracticable and, if adopted, would effectually prevent development.

The bill appeals to me as an orderly, masterly product of high-class statesmanship. It safeguards every public interest, and yet its terms are fair toward those who would engage in the naturally hazardous business of development of water powers. Senator JOHN K. SHIELDS, the author of the bill, is one of the most respected Members of the United States Senate. He was formerly chief justice of the Supreme Court of Tennessee, and the development of its water powers is of greatest importance to his State. I am glad to be able to say that this important national question was not made a party issue in its consideration by the Senate, and I am glad, as a Republican Senator, to be able to line up alongside the great Democratic Senator from Tennessee in approval of his views upon this subject.

The Shields bill authorizes the Secretary of War to issue permits to develop water powers in navigable streams to properly qualified applicants who, in his judgment, are best fitted in the public interest to develop the water resources. The bill sets forth at length general terms and stipulations, and the Secretary of War is made the administrative authority to carry them into effect. The bill provides for a permit period of 50 years, at any time after which the Government may, on 2 years' notice, take over the property for itself or for a subsequent grantee by paying the fair value of the property, not including the rights granted by the Government. The bill provides for protection of the public interests as follows:

(a) Water-power projects for which permits are issued must be such as in the judgment of the Secretary of War shall be best adapted to a comprehensive plan for the improvement of waterways for all uses and produce the highest practicable power development.

(b) The public service commissions of the States in which the water powers are located are given control of rates and service when the business is intrastate, and the same regulatory authority is conferred upon the Interstate Commerce Commission when the business is interstate.

(c) The Secretary of War is given authority to examine the books of the grantee and to require them to submit sworn statements of every detail of their business transactions.

(d) Provision is made for cancelation of the grant in case the grantee fails to comply with the terms.

(e) Unlawful trust or monopoly or restraint of trade is forbidden.

(f) The grantee is required to install, at his own expense, locks, booms, sluices, lights, signals, or other structures in aid of navigation purposes, and furnish, free of cost, power for operation of same.

(g) The grantee must reimburse the United States for the cost of investigation and supervision incidental to the transaction.

(h) The grantee is required to pay reasonable charges to the United States for benefits accruing from headwater improvements established and maintained by the United States and for the use of any Government land used in power development.

The bill provides that work must be begun within two years from the date of the permit and completed within such time as may be specified by the Secretary of War, and provides for diligent, orderly, and reasonable development and continuous operation of the water power, subject to market conditions. The bill provides that contracts extending be-

yond the life of the permit for sale of energy may not be made without permission of the public service commission of the State in which the water power is located.

The Shields bill is distinctly a compromise measure. It is the product of the long conflict of views and of the efforts of the Senate to deal intelligently with the subject. Like all compromise measures, it is probably not completely satisfactory to anyone, but as a whole it concededly does safeguard the public interests and concededly is fair enough to capital to secure investment in water powers. In my judgment, it is not at all subject to the objections which have been most vehemently urged against such proposed legislation in the past. Consequently it can and should be supported both by those who have been chiefly interested in insisting upon public safeguards and also by those whose chief interest has been to secure development of the great resources. It is to be hoped that, in the public interest, this bill may be accepted by both Houses of Congress, be signed by the President, and speedily become a law.

—

[From the Springfield (Ill.) State-Register, Aug. 14, 1917.]

THE SHIELDS WATER-POWER BILL.

Senator JOHN K. SHIELDS has introduced a bill in the United States Senate providing for the financing of water-power development. There has been an almost inexcusable indifference on the part of the Government in making effective the great water-power resources of this country. Water power is a cheap and highly efficient power. If there was ever a time in the history of the Nation when water power should be developed, that time is now.

The great unused stands of pulp-wood timber that are now controlled by the present paper makers are almost without exception in sections of the country where the available water powers lie, either in the public domain or on navigable streams. Power is absolutely essential to the conversion of wood into pulp, and water power is the most logical power.

The Senate of the United States can strike effectively at the heart of the Paper Trust if it passes effective water-power legislation. The people of the country should get actively behind the Shields bill and urge its passage.

The paper combine that has so arrogantly defied the Government in its price manipulation will naturally oppose the Shields bill. This fact should make the people rally to its support.

—

[From the Rochester (N. Y.) Post-Express, Sept. 29, 1917.]

We are earnestly warned of the necessity of conserving our coal supply. One way to save coal would be substituting some other agent to create power for manufactures. We have water power in the country totaling in excess of 60,000,000 horsepower and we are utilizing little more than 5,000,000 horsepower. There are before Congress a number of bills which would make possible at once the development of water powers by private capital. Of three of these—the Shields bill, the Walsh bill, and the Small bill—Secretary Houston is an advocate. He declares that in the print-paper situation alone the release of water powers to utilization would make available to the manufacture of paper waste timber enough to provide wood pulp for many years. There are other manufacturers which would be facilitated in the same way by these and by other bills. Of the bills themselves it is impossible to write until their provisions are known. There may be reasons why they should not be passed; there may be injustices involved which a complete discussion would reveal. The point is that Congress has not considered them at all, and it would seem that they should be given attention even in the crowded legislative program, since fuel, power, and cheapened products are of paramount war importance.

—

[From the Seattle Post-Intelligencer, Sept. 24, 1917.]

WASTED WATER POWER.

Senator WESLEY JONES is performing a service for his State, as well as for the Nation, by calling attention in the Eastern press to the need for the enactment of Federal laws under which the potential water power of the country may be developed. Two such proposed laws have practically deadlocked development for several years. The House has passed the Ferris bill, which meets the approval of many of the students of conservation and is opposed by some of the water-power developers as tending to make leasing so unattractive that capital is not likely to respond to it. The Shields bill, which has passed the Senate, gives more consideration to the lessees of power sites, and offers what is presumed to be sufficient attraction to capital to induce investments.

Senator JONES, in a two-column letter to the Brooklyn Eagle, suggests that the Shields bill will safeguard the interests of both the public and investors and urges its early enactment into law. Washington, possessing more potential and unused water power than any other State in the Union, is vitally interested in the enactment of a reasonable law and will hope that its Senator may succeed in interesting Eastern statesmen in the matter.

There are 9,700,000 water horsepower in this State requiring Federal consent before it can be utilized. Of the total, but 96,000 horsepower has been developed, and about 9,600,000 horsepower is thus going to waste. Coal is scarce and increasing in value, gas promises to be higher, power is needed for irrigation, for industries, and for transportation, and yet millions of horsepower are permitted to go to waste because statesmen can not agree as to the conditions under which it may be used.

The Shields bill is now before the Senate. It has been reported without amendment, and Senator JONES states that it will be again approved by his colleagues.

"The bill appeals to me as an orderly, masterly product of high-class statesmanship," writes Senator JONES. "It safeguards every public interest and yet its terms are fair toward those who would engage in the naturally hazardous business of water-power development."

The bill authorizes the Secretary of War to issue permits to develop water powers in navigable streams to properly qualified applicants who are, in his judgment, best qualified, in the public interest, to develop the resources; the bill provides for a permit period of 50 years, at any time after which the Government may, on two years' notice, take over the property by paying a fair value for the improvements. The bill gives the Government ample authority to conserve its interests and those of the public, and should be enacted into law.

—

[From the Rochester (N. Y.) Union-Advertiser, Sept. 20, 1917.]

DEVELOPMENT OF OUR WATER POWER NEEDED.

Three measures now before Congress that should be passed at the present session in the interest of the country are the Walsh and Shields bills, in the Senate, and the Small bill in the House, all looking toward are not like the Ferris bill, to which great objection was made because it was a proposal to give over to grabbers the great wealth of water power now under the control of the Federal Government, without proper compensation to the people. These measures give the Government control over the water powers thus leased, not given, and allow the Government to regain control at the expiration of the lease. With the interests of the people in the ownership of this water power thus safeguarded, the passage of these measures is almost imperative, in view of the great need of the country.

As to the benefit of the development of the 50,000,000 of horsepower the development of the idle water power of the country. These bills now lying idle in these water rights there is no doubt. We are threatened with a serious shortage of coal, because of the great increase in our own needs and because of the needs of our allies. Our railways are struggling under the greatest load they have ever been called upon to bear. Our crops are insufficient to feed well, unless great economy be used in the distribution and consumption of them, ourselves and the rest of the world, principally our allies. If these powers be developed, the railways will be able to use them for large portions of their systems. In the first place the water-power dam would make many streams navigable for strings of barges, in this way relieving the roads of a part of their loads. In the second place, the electrification of long stretches of railways would be possible, thus doing away with the consumption of coal for hauling and releasing for other service thousands of cars, thus, in turn relieving car shortage. The power developed could be used for many industrial purposes, releasing more cars that are now used for carrying coal for these industries. Cities and towns that now have no municipal utilities or water service would be able to have them at a reasonable rate. Ten million acres of land that can not now be irrigated because they lie above the reach of gravity water can be watered and made to grow all the crops commonly raised in this country, thus increasing our food supply. We could produce all the nitrogen we need for our crops by utilizing about 12,000,000 horsepower generated by this water power, at a cost of $580,000,000, with an increase of $2,000,000,000 in crop production, making ourselves the food growers of the world. The saving of oil by use of these water powers in the industries would be almost as great as the saving of coal.

These are but outlines of the uses to which this water power can be put and of the advantages to the country of the development of them. The Walsh bill proposes that water powers upon nonnavigable streams within the public domain be leased by the Secretary of the Interior, while the Shields bill deals with navigable streams, the rights upon which shall be leased by the Secretary of War. The latter bill is a practically new bill, being the former Shields bill shorn of objectionable features. Provision is made in both measures for the taking over of the lease by the Government at the termination of the leasing period, with compensation for the lessee, or the extension of the lease for a second 50-year period. The Shields measure also provides for the construction of locks, booms, sluices, and other adjuncts to navigation, either at the expense of the lessees or the Government, with reciprocal compensation in either case. The States are safeguarded in their rights as to regulation of rates and taxation. The Small bill is an amendment to an existing statute and empowers the Secretary of War to enter into contracts with persons or corporations, by which the latter shall construct navigation improvements on any river or harbor in return for rights and privileges in developing, producing, and disposing of power on the streams in conformity with State laws. These contracts also run for 50 years, and provision for taking the leases over is made in the amendment. In both the Shields and Small bills the Secretary of War is empowered to sell surplus water or power to municipalities and other public corporations.

It will seem to most of us that these measures should pass at this session because of their great importance to the welfare of the people. Experts say that they will not bring us help in the war, but they will be of immense value in the commercial struggle to come after the war, and we should begin the development of these great powers at the earliest possible moment.

—

[From the Nassau Daily Record, Aug. 25, 1917.]

WATER-POWER LEGISLATION.

A bill is now pending in Congress, introduced a good while back by Senator SHIELDS, which would authorize the development of water powers throughout the West. Its terms appear to be fair. Its effect would be to utilize the vast volume of power which is going to waste every day in many parts of the country's public domain and on navigable streams.

The scarcity of paper at this time emphasizes the need of this development. Most of the unused wood-pulp supplies are close to the available water supplies. The passage of the Shields bill would therefore be a great stimulus to the paper industry and bring down the price of paper products.

That is only one of the many desirable results that would follow. With the price of fuel the highest in the history of manufacturing, the use of water power is becoming imperative; and since we have it in measureless quantities why not use it? The principles of conservation applied to timber do not apply to water powers. When timber is used it is gone. Ages are required for its renewal. But the water that passes to-day is lost forever if it is not utilized, while the use of to-day's supply does not diminish the supply of to-morrow. The only way to conserve water power is to use it.

—

[From Leslie's Weekly, Sept. 29, 1917.]

HARNESS THE STREAMS.

Of the 60,700,000 horsepower of water power in the United States all but 5,300,000 horsepower is running to waste. The water is at present locked up against utilization by the laws governing the forest reserves, the general public domain, and the navigable streams. Congressmen have not hesitated to advocate higher rates on mail matter of the second class, but have not found time to open up these water powers, so that print paper can be made cheaper for the publishers. It has been estimated by Secretary of Agriculture Houston that there is enough timber going to waste in the forest reserves and on cut-over lands to supply wood pulp indefinitely if the question of its manufacture by water power could be solved. Three bills now pending in Congress—the Shields bill, the Walsh bill, and the Small bill—are designed to release the water power to private development in the three fields mentioned. Apparently, however, it is easier to pass billion-dollar appropriations, issue bonds, and impose direct taxes on "war profits" than to harness the waters to useful purpose.

[From the Detroit (Mich.) News-Tribune, Sept. 26, 1917.]

WASTING WATER POWERS.

At a time when conservation has been promoted to such an important place in the public mind that it has become the prime necessity for victory in the war, it is logical that the thoughts of many men should turn to the power that is going to waste every day in hundreds of streams in various parts of the country. The great obstacle in the way of harnessing these streams and forcing them to generate electricity is the fact that so many of them are under Government control, and no way has been found for permitting the Government to release them to private parties.

Coal is our chief dependence for power, and coal is now hard to get. Moreover, it is uneconomical. Water powers are permanent and need only to be controlled to furnish a great quantity of cheap electricity. It is estimated that 50,000,000 horsepower is going to waste because the law does not permit of its development. Meanwhile we worry about coal.

The Walsh bill in the Senate providing for the use of water powers included within the public domain, and the Shields bill in the Senate and the Small bill in the House relating to power development on navigable streams, have been neglected because other matters have been more pressing. Yet these bills, if too late for the war, at least relate to important steps that must be taken after the war. Without indorsing them in their entirety, the News believes that they ought to be taken up by Congress at the earliest possible moment and that the waste of potential power should be ended.

[From the Chicago News, Oct. 3, 1917.]

HARNESS THE STREAMS—MUCH POWER IS LOST BY FAILURE TO UTILIZE RUNNING WATERS.

Of the 60,700,000 horsepower of water power in the United States, all but 5,300,000 horsepower is running to waste, Thomas F. Logan writes in Leslie's. The water is at present locked up against utilization by the laws governing the forest reserves, the general public domain, and the navigable streams. Congressmen have not hesitated to advocate higher rates on mail matter of the second class, but have not found time to open up these water powers so that print paper can be made cheaper for the publishers. It has been estimated by Secretary of Agriculture Houston that there is enough timber going to waste in the forest reserves and on cut-over lands to supply wood pulp indefinitely if the question of its manufacture by water power could be solved. Three bills now pending in Congress, the Shields bill, the Walsh bill, and the Small bill, are designed to release the water power to private development in the three fields mentioned.

[From the San Francisco Chronicle, Aug. 2, 1917.]

WATER-POWER DEVELOPMENT—CONGRESS STOPPED IT AND THUS FAR REFUSES TO LET IT GO ON.

A year ago, more or less, the Director of the Geological Survey estimated the potential available power which can be developed from the streams of the country at 55,000,000 horsepower. Of this but about 5,000,000 horsepower has been developed. The greater part of this power would be developed either on navigable, or alleged navigable, streams on the public domain and require the sanction of national law.

There is a law for such development, but on such terms that money can not be got for the work. The Forest Service sometimes points with pride to the number of "permits" issued, but can not point with any pride whatever to the work actually done under those permits. Such permits are usually obtained by promoters, but when they try to interest capital they fail.

There has for a long time been before Congress a bill whose provisions seem harsh enough, but which are mild compared with existing law. It is said by its promoters that under its provisions private capital can be got to develop at least the most promising projects. In what position this bill is in the present Congress we are not informed. We assume that it has been reintroduced and is somewhere on its journey to the President. Some law of this kind has been urged upon Congress by the President and the heads of the departments concerned, but Congress does nothing.

The crazy faction of those who call themselves conservationists insists that to enact any law which will make private development possible is to give away "millions" to presumably wicked and designing men.

The truth is that it is merely giving them a chance to risk their money in enterprises whose entire risks they must assume, but whose charges will be fixed by public authority.

To build the dams and install the plants is easy if you have the money. To market the current at remunerative prices is by far the greater work.

And great conserving plants will not be erected where there is danger of interruption of the power. The capital to build can not be got, or the plants to consume be erected except upon definite legal requirements for adequate terms, and not subject to modification during their tenures, for the sources of the developed power.

When legal requirements are definite they can be accepted or rejected. But if they are indefinite, investors will not even consider them.

And meanwhile potential power in huge volumes is running to waste, and we are howling because we can not get fuel.

[From the Evansville Courier, Dec. 4, 1917.]

PASS THE SHIELDS BILL.

While coal can not be secured to run factories, nature is supplying an enormous water power that is going to waste.

As a war measure Congress should promptly take up the Shields bill and pass it. This bill safeguards the public interest, while at the same time it makes available the unused forces of nature.

Opposition comes to it from two sources, neither of them large but both exceedingly tenacious.

On the one side are those who would exploit for their own purposes the common heritage of all. On the other are the I. W. W. conservationists of the Gifford Pinchot brand, whose radical ideas amount to practical disuse of the national resources.

The Shields bill is a conservative measure. It neither gives away the national ownership in the streams nor locks them up away from public use. In this need of utilizing all our resources, certainly the forces of nature should be put to work. The Shields bill will do this if it can be enacted into law.

[From the Pittsburgh Leader, Oct. 8, 1917.]

SHIELDS WATER-POWER BILL.

Senator John K. Shields has introduced a bill in the United States Senate providing for the financing of water-power development. There has been an almost inexcusable indifference on the part of the Government in making effective the great water-power resources of this country. Water power is a cheap and highly efficient power. If there was ever a time in the history of the Nation when water power should be developed, that time is now.

The great unused stands of pulp-wood timber that are now controlled by the present paper makers are almost without exception in sections of the country where the available water powers lie, either in the public domain or on navigable streams. Power is absolutely essential to the conversion of wood into pulp and water power is the most logical power.

The Senate of the United States can strike effectively at the heart of the Paper Trust if it passes effective water-power legislation. The people of the country should get actively behind the Shields bill and urge its passage.

The paper combine that has so arrogantly defied the Government in its price manipulation will naturally oppose the Shields bill. This fact should make the people rally to its support.

WATER-POWER LEGISLATION.

There are two classes of water powers requiring Federal authority for development. One class is located in the public domain, and only temporary or revocable authority for development can be granted by the Departments of the Interior and of Agriculture; the other class is located in the navigable streams, and no statutory authority exists for granting permits for development, Congress thus far having reserved to itself alone the right to grant such permits.

PUBLIC-DOMAIN LEGISLATION.

Federal control of water-power development and its electrical transmission where public lands are involved is based upon the constitutional right of Congress to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States. The Federal Government holds its lands both as sovereign and proprietor. As proprietor the United States has all the privileges of the private owner, all the benefits arising from State laws, all the appurtenances which the lands of any other owner may have, and yet as sovereign its lands are not subject to State taxation or condemnation. Federal control of water-power development on nonnavigable streams rests solely on its ownership of such public lands as are required for emplacement of power houses, flumes, conduits, and transmission lines, or which would be overflowed as a result of construction of dams. Thus Congress may prevent the development of water powers in the public domain either by withdrawing the dam sites from entry or withholding the right to use them altogether, or by enactment of restrictive laws under which capital can not safely invest. The Supreme Court has recently held that the act of February 15, 1901, relating to the use of public lands for electrical and other purposes, is exclusively controlling in respect to hydroelectric development in the public domain. Capital can not be obtained for important developments under this act, which authorizes a revocable permit only, and all unite in the opinion that it should be amended or replaced by a new act dealing with the subject.

The Public Lands Committees of the Senate and of the House of Representatives have been considering the question for the past four years, and have had hearings at which the subject has been exhaustively considered from every standpoint. Bills have been introduced, one of which passed the House but failed to pass the Senate. A skeleton basis has been arrived at satisfactory to a majority of Congress, and it only remains to agree upon some of the details.

Senate bill 2399, introduced by Senator WALSH June 5, 1917, provides a workable measure, fair alike to the public interest and to the investor, and which, if passed in its present form, would immediately result in the development of many of the water powers contained in the public domain.

SUMMARY OF THE WALSH BILL.

This bill is now before the Senate Public Lands Committee. It authorizes the Secretary of the Interior to issue 50-year permits to States, municipalities, corporations, or individuals, for the use of public lands necessary to power development. It requires "the diligent, orderly, and reasonable development and continuous operation of the water power, subject to market conditions." It provides for the regulation of rates and service by State authorities where the business is intrastate and by the Interstate Commerce Commission where the business is interstate. It gives the United States the right to take over the property, including contracts entered into with the approval of public authorities, for itself or for a new permittee, at any time after 50 years upon three years' notice upon paying the amount fixed by the public authorities as the value of the property for rate-making purposes and upon assuming the contracts, the amount to be paid not to include "any public lands, rights of way, franchises, or other property occupied or granted under this act by the United States, or by the good will or prospective revenues." It provides for forfeiture of the permit for noncompliance with its terms and authorizes the Secretary of the Interior "to make such general rules and regulations as may be necessary for the purpose of carrying the provisions of the act into full force and effect." The Secretary is authorized to examine the books and accounts of permittees and to require them to submit statements regarding every detail of their business. The Secretary is also authorized to "specify in the permit and to collect charges for all land occupied," and of the proceeds one-half is to be paid to the State within which the power plant is located and the remaining one-half into the national reclamation fund. The bill provides that no charge shall be made for the use of public lands for power purposes to States or municipalities, or where the power is to be used in connection with the utilization of the timber resources of the national forests, or where the power development does not exceed 25 horsepower.

NAVIGABLE-STREAM LEGISLATION.

By provisions in the river and harbor acts of 1890 and 1899 Congress has prohibited the placing of dams in navigable streams without the consent of Congress in each case. No executive officer or department has power to grant the necessary authority, unless the stream lies wholly within a single State, in which case the State legislature may grant the authority, subject to approval of plans by the Secretary of War. As navigable streams almost invariably touch or traverse more than one State the exception is unimportant.

For more than 10 years Congress has refused to grant authority for hydroelectric development in navigable streams except in compliance with a general statute, known as the general dam act, enacted

in 1906 and amended in 1910. This act provides such restrictive terms and conditions that with but two small exceptions no power developments and river improvements have been made by private capital upon navigable streams since 1912, and developments are prevented and held back aggregating 2,000,000 horsepower, and which would open 1,160 miles of additional inland waterways to navigation through investment of private capital and without taxation or appropriation of public moneys.

Among the conditions imposed by this general act with which it is unsafe and impossible for capital to comply is the requirement that the Secretary of War may "at any time" during the life of the permit require the installation of locks, which would make the amount to be invested always uncertain.

It also provides that the permit shall "fix such charge or charges for the privilege granted as may be sufficient to restore conditions with respect to navigability as existing at the time such privilege be granted or reimburse the United States for doing same"; thus the permittee would have to pay charges impossible of determination in advance and perhaps even would be compelled to furnish the money necessary to destroy his own plant. The act also specifically provides that "the United States shall incur no liability for the alteration, amendment, or repeal thereof to the owner or owners or any other persons interested in any dam which shall have been constructed in accordance with its provisions." Of course the United States should incur no liability in connection with the possible amendment or repeal of this act, but property created under the act should be protected from impairment through such amendment or repeal, and this the present law fails to do. The act also provides "that the authority granted under or in pursuance of the provisions of this act shall terminate at the end of a period not to exceed 50 years from the date of the original approval of the project under this act, unless sooner revoked as herein provided." This would leave the permittee with the property on his hands at the end of 50 years, with no authority to operate it, and his status would be that of a trespasser.

No responsible banker, trustee, or business man would invest a dollar upon the security afforded by such a permit.

During the last Congress the Senate, after five weeks of careful consideration, by a vote of 46 to 22, passed what was known as "the Shields general dam bill," which corrected the defects of the general law and authorized the Secretary of War to issue permits when river improvements could be secured thereby. This bill was referred to the House Committee on Interstate and Foreign Commerce, which amended it, and with still further amendments by the House it was passed and sent to conference in June, 1916. It remained in conference eight months and died there when the Sixty-fourth Congress adjourned March 4, 1917.

The Shields general dam bill has been reintroduced in the Senate by Senator SHIELDS as S. 14[illegible] and is before the Committee. A bill (H. R. 4504) providing for the extension of inland waterways and the incidental development of water power by private capital has been introduced in the House by Mr. SMALL and is now pending before the Committee on Interstate and Foreign Commerce.

It should not be difficult for Congress to agree upon a workable general dam act of a nature under which permits could be issued by proper executive authority and under which development capital could be obtained. A bill which would provide, as does the Walsh public-domain water-power bill, above referred to, for a permit tenure of 50 years with the right to the Government to purchase the property at the end of the permit period, or at any time thereafter, upon paying just compensation therefor, based upon the value of the property as fixed by the public authorities for rate-making purposes, would be fair and workable. Service and rates should be under the supervision of the public authorities. The permits should also provide for the installation of locks by the permittee if required by the Secretary of War in the original permit at a specified time; for reimbursement to the United States for expense of investigation and supervision; fishways and signals to be installed by the permittee, and power for operation of locks to be furnished by him free of cost. The permit should also contain a cancellation clause in case of noncompliance with its terms and such other reasonable rules and regulations as might be necessary to safeguard the public interests.

In case facilities are not adequately utilized by the permittee other persons may be allowed to develop them, with due regard to his interests.

State laws regarding distribution of water are to be observed in all permits, and there is provision for the determining by Federal courts of what particular rights, if any, the States of Colorado and New Mexico have in the Rio Grande.

The Shields and Myers bills, which sought to bring about this result last year, were vigorously opposed by Gifford Pinchot and his school of conservationists. Perhaps the one of their many arguments which attracted most attention was that the grant would in practice be perpetual. Advocates of the bill, however, maintained that there was nothing in it which forbade the Government to condemn a plant and take it over, paying just compensation in case there were valid reasons for doing so; and contended that the fear that it would never be possible to get the case out of the courts involved fundamental distrust of the Federal judicial system.

The bills were not brought to fruition last year for many reasons, chief of which, apparently, was the pressure of other legislation necessitated by the preparedness program and the military operations on the Mexican border. And the detail in which the development of water power most acutely touched the question of preparedness was settled by the passage of the law appropriating $20,000,000 for a Federal nitrate plant.

The development of the industry of extracting nitrogen from the air by powerful electric motors has gone furthest in Germany, where the serious results of dependence on foreign nitrates for essential components of high explosives was realized long before the war. The world's greatest and in fact almost sole supply of natural nitrates have come from the great deposits in the Chilean Provinces conquered from Bolivia and Peru in the war of 1879. To the Germans, faced with the possibility of war with a superior naval power, it became evident that this supply probably would be cut off at once, and that it would be necessary to provide a substitute for the nitrogen which was essential in the manufacture of munitions.

Scandinavian processes providing for the fixing of the loose nitrogen in the air had been developed, but had not been found of great commercial value in competition with the Chilean product. The Germans set up huge electric generators run by water power and used these processes to lay in a supply of nitrates which averaged a commercial value of 60 per cent, as against 12 per cent of valuable matter in the Chilean mineral.

Meanwhile the shortage of shipping, the possibility of the exhaustion of the Chilean fields, and the necessity in any case of a long voyage up the western coast of the American continent made American officials realize the necessity of providing in this country some substitute for the Chilean mineral, and the discussion of this brought out the great value of water power in establishing suitable plants for the fixing of nitrogen. But this is only one of the many ways in which the enormous waste of water power is reducing the efficiency of the United States.

Nitrates are essential in fertilizer no less than in ammunition making. The low acreage of American crops in most districts is attributed very largely by agricultural experts to the lack of fertilizer, or rather to the American habit of using insufficient fertilizer. In 1911 this country, according to a bulletin issued recently by the American Newspaper Publishers' Association, used 28 pounds of fertilizer per acre of improved land; Great Britain used 152; Germany, 214; and Belgium, 448.

The report of the German department of agriculture for 1913, according to the same authority, showed that 2,000,000 tons of fertilizer had resulted in increasing crops by 63,000,000 tons. "The German farmer," says the pamphlet, "practically used his land as an agent for transforming fertilizer into product, while the American farmer tries to get products out of his starving land without feeding it sufficient plant food."

Phosphates are numerous enough in America, and with the cutting off of the German supplies of potash chemical invention has made large potash deposits in America and Canada workable for the first time. But nitrogen must come either from Chile or the air, and with extensive water-power electric plants many people believe it can be obtained more cheaply, as well as more certainly, from the air.

The Chicago, Milwaukee & St. Paul is driving its transcontinental trains across the Rockies under electric power obtained from hydro-electric plants. For 450 miles, from Harlowton, Mont., to Avery, Idaho, the main line has been electrified, and the process is being extended to Seattle, 500 miles farther west. John D. Ryan, president of the Montana Power Co., has said that the price of electric power is less than one-third of the cost of the coal for operation over the same line, and that, in addition, one-third of the road's freight cars, used in hauling coal from its own mines for its own uses, had been freed. The Butte, Anaconda & Pacific has also electrified 80 miles of its line, again at a saving of two-thirds of the cost of coal.

The States where most of the water power of the country can be developed are also the ones where there is most lumber available for the manufacture of wood pulp. If the water power is unlocked, electric plants for the manufacture of paper can be built close to the lumber supply and paper provided far more cheaply than is now possible. At present great quantities of pulp are being imported from Canada, and were imported from Norway and Sweden until recently, these being countries which allow more development, both of forests and of water power, than the United States. Indeed, one of the most ominous results of the present policy of forbidding the development of water power in this country has been the building of plants in Norway and Canada by American power companies, which were unable to extend their facilities at home.

A valuable by-product of the development of water power on streams now classed, in the somewhat optimistic terminology of the Government, as "navigable," but which require constant appropriations for a long time before much effect is visible, is expected to be the rendering of stretches of them actually navigable by the construction of dams for the gathering of water. It has been estimated that long stretches of inland waterways which would otherwise need much expenditure of Government money before they would float vessels of any importance can be opened up by this incidental effect of private enterprise.

And this touches upon perhaps the most important phase of water-power development—the conservation of fuel.

Since the Shields and Myers bills were discussed in Congress the United States has entered upon a great war, a war which will probably be won or lost by the success of America and her allies in solving the problem of transportation. Ships are the first essential, but adequate handling of commerce in the United States is of very great importance. Many of the supplies which we are shipping to Europe have to be carried a great distance across the country. This causes a big strain on the railroads, an almost constant shortage of freight cars, and resultant difficulty in handling shipments of goods which disarranges internal trade and leads to prolonged delays and difficulties.

The development of internal waterways suggested above would take at least some of the burden of freight transportation off the railroads. The utilization of water power in the production of energy would save enormous quantities of coal which could be used to meet the needs of France and Italy and to supply the new ships which all the allied countries are building. And the electrification of railroads would not only save coal but would release the large numbers of coal cars now required to carry fuel not only for the roads themselves but for industries which could be operated by water power as well. In a struggle which necessitates intensive development of the Nation which is to win, this country can not afford to let an enormous source of energy go to waste.

—

RESOLUTIONS ON DEVELOPMENT OF WATER POWERS.

AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION.

At the convention of the American Newspaper Publishers' Association, held in Washington, D. C., June 21, 1917, the following resolutions urging the passage of water-power bills were adopted, and copies thereof have been delivered to the President and other officials of the Government:

"Whereas the paper committee, in its efforts to secure relief from the constantly increasing tension of the news-print situation, has ascertained from Government and other reliable sources that there are no undeveloped water powers of satisfactory size and location remaining in the United States which do not lie partially or wholly within the public domain or upon navigable streams; and

"Whereas under the existing laws relating to the development and use of water powers in the public domain, as interpreted by the United States Supreme Court in its decision rendered in the Utah Power case, it has been found impossible to interest capital in further water-power developments, and as a result no new developments are being made; and

"Whereas under existing conditions the paper committee has not found it possible to develop sufficient new tonnage within the United States adequately to increase the supply of news-print paper until these water powers can be developed; and

"Whereas it is imperative that action be taken in this matter at this session of Congress if the present and increasingly acute situation is to be relieved; and

"Whereas it appears to be in the interest of general preparedness and the national defense that the water powers of the United States should be made available in order that they may be utilized, thus conserving man power and coal resources and making possible the quicker and more complete development of our natural resources; and

"Whereas Senate bill No. 2399 has been introduced in the United States Senate by Senator WALSH, and House bill No. 4504 has been introduced in the House by Representative SMALL, and these bills as introduced provide the remedies necessary to afford the desired relief and give adequate protection to the public: Now, therefore, be it

"*Resolved*, That it is the sense of the members of the American Newspaper Publishers' Association in convention assembled, at Washington, D. C., June 21, 1917, that this legislation be, and hereby is, indorsed, and its prompt passage is strongly advocated as emergency measures, and, further, that all members of the association and other publishers be urged to support and indorse the aforesaid bills and urge their passage at the present session of Congress: And be it further

"*Resolved*, That copies of this resolution be sent to the President of the United States and other officials of the Government and to all members of this association."

SOUTHERN NEWSPAPER PUBLISHERS' ASSOCIATION.

The necessity of immediate development of water powers was discussed at the fifteenth annual convention of the Southern Newspaper Publishers' Association, held at Asheville, N. C., July 9, 10, and 11, 1917, and the following resolutions passed:

"*Resolved*, That the Southern Newspaper Publishers' Association, representing 105 leading daily newspapers of the South, in convention assembled, unanimously indorses and urges the adoption of the plans for the release and development of the water power of our country as proposed in the Walsh bill in the Senate and the Small bill in the House. We believe that the adoption of such measures insures the development of our country along industrial lines, and especially do they promise relief to the newspapers of the country from the oppressive condition brought about by the news-print manufacturers' trust."

SHIELDS BILL UNANIMOUSLY REPORTED.

Since the above resolutions were adopted Senator SHIELDS, of Tennessee, has introduced Senate bill 1419, which provides for the unlocking of water-power opportunities in navigable streams. The bill fully protects the public interests and at the same time safeguards the investment sufficiently to attract private capital for development purposes. The bill has been unanimously and favorably reported by the Senate Committee on Commerce and is at present on the Senate Calendar awaiting the action of the Senate.

[From the San Francisco Journal of Commerce, Aug. 16, 1917.]

50,000,000 OF HORSEPOWER RUNNING TO WASTE.

Once again a movement is gathering force to utilize the more than 50,000,000 of horsepower that is running to waste in American streams. Four-fifths of the possible electric energy that could be developed from water power in this country must be developed on lands belonging to the Federal Government, which are under the jurisdiction of the Secretary of the Interior, or on navigable streams, which are controlled by the Secretary of War. The agitation in favor of conservation of natural resources resulted in restrictions so severe that resources were not only conserved but reserved. Present laws permitting the utilization of these sites for hydroelectric plants provide that any permit is revocable at the pleasure of the Federal department concerned, and the possibility of this summary action has tended to scare capital away.

Last year a determined movement was made to pass laws which should offer opportunities to capital to develop this water power under Federal control. The Shields bill, which passed the Senate, and the Myers bill, which passed the House, established practically identical regulations respectively for navigable streams and for public lands, but neither was enacted into law. Last month Senator THOMAS F. WALSH, of Montana, introduced a bill into the Senate which embodies most of last year's Myers bill, and legislation to cover the navigable streams is to be introduced into the House.

The Shields and Myers bills were vigorously opposed by Gifford Pinchot and his school of conservationists. Perhaps the one of their many arguments which attracted most attention was that the grant would in practice be perpetual. Advocates of the bill, however, maintained that there was nothing in it which forbade the Government to condemn a plant and take it over, paying just compensation in case there was valid reason for doing so, and contended that the fear that it would never be possible to get the case out of the courts involved fundamental distrust of the Federal judicial system.

The bills were not brought to fruition last year for many reasons, chief of which, apparently, was the pressure of other legislation necessitated by the preparedness program and the military operations on the Mexican border.

—

[From the Kennebec Journal, Augusta, Me., Dec. 7, 1917.]

WATER-POWER DEVELOPMENT.

In his address to Congress on Tuesday President Wilson said: "It is imperatively necessary that the consideration of the full use of the water power of the country and also the consideration of the systematic and yet economical development of such of the national resources of the country as are still under control of the Federal Government should be resumed and affirmatively and constructively dealt with at the earliest possible moment. The pressing need of such legislation is daily becoming more obvious."

It is clear that if the water powers of the country are to be developed legislation must be passed under which financing will be possible. There are now pending in the United States Senate the so-called Shields bill, and favorably reported by the Committee on Commerce to the Senate, and also the Walsh bill before the Public Lands Committee in the Senate. Similar bills have also been introduced in the Senate by MYERS and in the House by Congressman SMALL. The Shields bill authorizes the Secretary of War, under certain conditions, to grant permits for water-power development in navigable streams; while the Walsh bill authorizes the issuance of Government permits for water-power development at sites on the public domain. Both these bills have many friends among legislators and among investors, who stand ready to develop the water power if given such permits.

The thing that has held up water-power development for a long time, as we understand it, is the more or less imaginary difference between the ultraconservationists and more practical men of affairs, who believe that the first thing to do in developing water powers is to go ahead and develop them. The party of the first part, standing as the high defender of the people's rights, fears any movement toward development will result in somebody making a profit out of the venture. On the other hand, the party of the second part insists with good logic, and thus far have the passing of events to prove, that unless investment is made profitable under Government control it will not invest, and that if the people themselves are waited for to develop the vast water powers now lying undeveloped by planning and authorizing a system of public expenditure and development the thing will be a long time coming.

The American Newspaper Publishers' Association has been dealing largely with this subject for months, and has distributed volumes of information bearing upon all branches of the subject. In a recent special bulletin a chapter is devoted to showing that Mr. Gifford Pinchot's claimed differences with the bills now pending in Congress are all reconcilable with the bills themselves, and that actually no difference exists, except in the wording between the demands for development "of public water powers on terms fair to the public" and the Shields bill, which retains Federal control over the dam sites, which are to be "held in public hands," their use only being permitted for a limited term of years by private parties.

Perhaps the President's recommendation, with the knowledge that has been attained by Congress in recent months, will start the ball to rolling toward actual development of the country's immense, wondrously valuable and available water powers. Perhaps the Shields or the Walsh bill may be so amended as to meet all the requirements insisted upon by Mr. Pinchot or others who constitute themselves as knights in armor for the public welfare.

—

[From the Washington Post, Dec. 16, 1917.]

UTILIZING WATER POWER.

Within the short time that it has been in session the Senate already has enacted one very important piece of legislation. This is the water-power development bill, which authorizes the construction of dams in navigable streams by private parties for the development of power. It is estimated by the United States Geological Survey that under this bill, if developed to the practicable maximum without resorting to storage, nearly 62,000,000 potential horsepower can be generated. If the storage system is used, it is believed that this amount can be increased to 200,000,000 horsepower.

Experienced Senators frankly admit that Congress is very tardy in making this reasonable provision for the development of natural resources, but they are ready now to go ahead in an endeavor to make amends for the delay. Not only can this immense horsepower be produced, but it is stated that if this bill is enacted into law over 10,000,000 horsepower could be produced from dams installed in connection with the improvement of inland waterways. By the installation of locks in the power dams, over 4,000 miles of the upper reaches of these rivers would be opened to navigation.

Under the provisions of the bill the Secretary of War is authorized to issue grants to private parties for the construction of power dams in navigable rivers under terms and regulations which will safeguard the public interests and the capital invested. Rates and service are to be regulated by State authorities, or by Federal authorities if the grantee does an interstate business.

During the debate on the measure it was pointed out that not only would the power thus produced be of great benefit to the manufacturing interests of the country, but it would result in the conservation of coal and oil, and that other advantages would accrue. That the legislation is beneficent, if belated, can not be doubted. It is not strange that the public should wonder why this great source of power should have been neglected all these years. But the important thing is that Congress has awakened to the situation, no doubt because of the trouble and hardship the country is experiencing with a shortage of fuel. It is to be hoped that within a brief time the rivers will be put to work for the good of the people.

—

[From the Electrical World, Sept. 29, 1917.]

THE PENALTY OF SLOTH.

Over and over again we have dinned into the ears of the public the almost criminal negligence of permitting the water powers of the country to remain unutilized in face of the crying needs of industry and the certainty that the Nation's supply of fuel must be conserved. And yet, despite the absolute certainty that unused water represents an irremediable loss of energy, in spite of steadily rising costs of fuel and of everything in which fuel prices figure, the legislative authorities have dawdled along, pulled one way and another by contrary currents of politics, beset by the pleadings of general interests, of special interests, and no interests at all until the time has come when the penalty of delay is enforced by fate against the unready. It is difficult to speak with patience of the many attempts which have been made to obtain opportunity to develop water powers on a fair and permanent basis; and now the country needs the power, the mines are short of labor, the railroads are gorged with traffic, the coastwise shipping has been drafted into trans-Atlantic service, and industrial plants already are beginning to shut down for lack of fuel.

The full development of the country's hydraulic resources can not supersede in any full sense the use of fuel, but it can prevent the shortage of fuel being disastrously felt even in time of stress like this. The long and short of the matter is that war conditions have forced upon us a fuel situation which normally might not have been reached for a couple of centuries, and absolutely nothing is being done as yet to put an end to the water-power deadlock. This deadlock is largely due to timid Congressmen, whose socialistically inclined constituents are terrified by the bogy man of monopoly shaken in their faces by demagogues. There is no such thing possible as monopoly of water power under the powers of regulation possessed by our Government. There has been plenty of capital all along ready to go into any transmission enterprise that promised reasonable profit, asking only that some tenure of life should be granted to its efforts, and that it should not at the end of a few years be robbed of the results of its endeavor. All these things ought to be sufficiently self-evident to those who have watched the progress of the attempts at water-power legislation. Everything has been held up by unreasonable and indefensible projects of regulation so drastic in their nature as to frighten off any sane investor. Millions upon millions of horsepower therefore stay unutilized. The time has come when the country wants them.

The next year will probably see these United States transformed into a prodigious munitions plant, and every branch of industry which can lend to successful carrying on of the war now in hand must be pushed to its utmost capacity. At such a crisis it is not pleasant to find the Niagara power tied up, largely for sentimental reasons, by needless restrictions and to realize that at any time Canada, also busy with war industries, may stop the exportation of its Niagara power. If inaction continues much longer, the natural result will be to drive the large power-consuming industries, particularly the electrochemical ones, into Canadian territory, where they may by chance find a kinder welcome than has been extended to them on the American side of the falls. The grimmest thing about the whole situation is that it has developed so swiftly as to give no time even for the most willing efforts to furnish prompt relief. It is no quick or easy job to bring a hydroelectric plant of 100,000 horsepower or so into productive activity, and time is the one thing which money can not buy. There is chatter in newspapers about the conservation of coal and oil. No single stroke would have gone so far toward bringing this about as a proper hydroelectric law enacted two years or more ago. It is already far too late to reap in time for the exigencies of war industries the full advantage which the country has in its water powers. The most that can be hoped for now is that if Congress gives relief swiftly some substantial portion of the work may be accomplished let us say within the next year, in time for the succeeding campaigns. Of the other millions of available horsepower, some are beyond hope of quick redemption and others can be brought into action in two or three years. Rapid and complete development of everything capable of it is the first and immediate step to be taken, leaving the fuller working up of the situation for later efforts. Another six months will show with terrible force the foolishness of delays in the past. Let us have no more of them.

—

[From the Electrical Review, Sept. 1, 1917.]

WATER-POWER BILLS AND THEIR RELATION TO EACH OTHER.

Relative to pending water-power legislation there is constant need of keeping before the public certain basic facts in clear outline. If the way is to be opened for developing the Nation's water-power resources it must be through the enactment of laws, such as are proposed in bills now before Congress or others of similar import. The provisions in the bills referred to and their relations to each other should be clearly understood. If they have any serious defects or are fundamentally wrong in any respect from the standpoint of either the investor or the public, necessary changes should be made. If no such defects or unfair provisions exist, an effort should be made to concentrate all proper influences in their support.

The provisions of the Walsh bill have been previously explained in these columns. This is a Senate measure, now before Congress, which provides for the leasing of water-power sites on streams within the public domain, under authority of the Secretary of the Interior. The control of proposed projects under such leases is applicable only to nonnavigable streams. Senate bill No. 1419, changed as to certain features and reintroduced last April by Senator SHIELDS, provides in a quite similar manner for power development on navigable waters, but under authority of the Secretary of War, because the control of navigation channels comes within the scope of his department. The Shields bill proposes amendments to an act approved June 23, 1910, which relates to the construction of dams across navigable waters. A fact which should be kept clearly in mind is that the Walsh bill and Shields bill pertain to different departments of the Government, and that both are essential to the inauguration of a broad national policy of water-power development. Each measure would be workable independently of the other, but viewed in the light of nation-wide demands they may be considered supplementary to each other. The need of the hour is for a policy that will remove the obstructions and restrictions, so that our water-power resources may be available as soon as possible. Both bills seem to safeguard public interest and should be enacted into laws primarily as industrial measures, incidentally as war measures.

The Shields bill provisions with respect to terms of lease and regulations concerning the disposition of the project at the end of the 50-year period are nearly similar to those in the Walsh bill. In either case the Federal Government may take over the project, after properly remunerating the lessee, or may grant him a permit for a second term, or may recognize the transfer of the project to a third party. But under the terms of the Shields bill the Secretary of War may stipulate a number of other conditions in the 50-year permit. One of these is to require the permittee to construct locks, booms, sluices, and other structures for navigation purposes, without cost to the Government, and to supply power free of charge for operating locks and accessory equipment. Another stipulation may be that if navigation improvements are not made a part of the lease the Government may construct locks and other facilities, and grantee shall furnish free power and right of way required, and shall pay the Government reasonable charges for benefits accruing on account of headwater and storage-reservoir improvements. Throughout, the Shields bill recognizes the rights and authority of the State government to regulate rates of service for power produced and distributed by the party to whom the permit is granted; but in the case of an interstate service, in which State authorities do not agree, the Interstate Commerce Commission may assume jurisdiction, and all property embraced in the project of permittee is made subject to taxation by the State in which the service is rendered. In case of any dam built or taken over by the Federal Government, the Secretary of War may lease surplus water to municipalities or other public corporations for power purposes or water service.

House bill No. 4504, introduced in May, 1917, by Representative SMALL, is in the hands of the Committee on Interstate and Foreign Commerce. This bill is amendatory of a section of the rivers and harbors act approved March 3, 1899. The Small amendment simply extends the scope of an existing statute by authorizing the Secretary of War to enter into a contract with any person or corporation who shall undertake to construct navigation improvements on any river or harbor in return for rights and privileges in developing, producing, and disposing of power on said streams in conformity with the laws of the State in which the project is situated. The terms of such proposed contracts are to run 50 years, at the termination of which the Government may elect to take over the improvement and projects, on the repayment to the contractor the amount of his investment. This bill further so amends the act as to authorize the Secretary of War to lease surplus water at dams constructed by the Government in the interest of navigation to parties who propose to generate power, preference being given to municipalities or other public corporations.

[From the Hannibal (Mo.) Post, Apr. 3, 1917.]

FOOD AND WATER POWER.

The close association between food supply and water power was carefully defined by Herbert Myrick before the Southern Commercial Congress, which met in 1916 at Norfolk. The fact, apparent to-day, that the coming winter is going to see a scarcity of food such as has not been known in recent history makes Mr. Myrick's conclusions all the more important. He said:

"The food problem will not be wholly solved and the fullest agricultural and industrial development will not come to the American people until the Mississippi River is harnessed so that the millions of acres in that valley now overflowed or subject to inundation are made safe to the plow and profitable to the farmer.

"This can be done only by means of the spillway project supplementing the levee system. This will transform the Mississippi into a series of lakes, each with uniform height of water the year around. The river then may be straightened by canalizing across its bends. Navigation will be unimpeded.

"The dams by which the water is stepped down the total fall of 350 feet from above Cairo to below New Orleans may generate 5,000,000 horsepower at mean low water. Transformed into hydroelectricity, it will furnish cheap heat, light, and power for 800 miles either side of the river. A deep waterway from St. Louis to Chicago, with the improvement of the river from St. Louis to St. Paul, will open the interior States to the cheapest transportation. The spillway carries off the flood waters, provides drainage, and furnishes irrigation where and as needed. The project as a whole is the grandest of engineering conceptions, yet can be carried out in such a way as to more than pay for itself.

"Cheaper money and cheaper fertilizers must accompany more knowledge of agricultural science, more economy in agricultural practice, more energy among farmers, more patriotic devotion to ideals of service to State and Nation."

—

[From the Springfield (Ill.) State-Register, Aug. 14, 1917.]

THE SHIELDS WATER-POWER BILL.

Senator JOHN K. SHIELDS has introduced a bill in the United States Senate providing for the financing of water-power development. There has been an almost inexcusable indifference on the part of the Government in making effective the great water-power resources of this country. Water power is a cheap and highly efficient power. If there was ever a time in the history of the Nation when water power should be developed that time is now.

The great unused stands of pulp-wood timber that are now controlled by the present paper makers are almost without exception in sections of the country where the available water powers lie, either in the public domain or on navigable streams. Power is absolutely essential to the conversion of wood into pulp and water power is the most logical power.

The Senate of the United States can strike effectively at the heart of the Paper Trust if it passes effective water-power legislation. The people of the country should get actively behind the Shields bill and urge its passage.

The paper combine that has so arrogantly defied the Government in its price manipulation will naturally oppose the Shields bill. This fact should make the people rally to its support.

—

[From the Seattle (Wash.) Post-Intelligencer, Aug. 24, 1917.]

WATER-POWER BILLS INDORSED BY CHAMBER.

Support of pending legislation for the development of water-power sites was urged in telegrams forwarded yesterday to the members of the Washington delegation in Congress by President Albert J. Rhodes, of the Seattle Chamber of Commerce and Commercial Club.

The telegram of President Rhodes, who recently called a special meeting of the trustees to urge immediate development of water-power sites as a war necessity, follows:

"The Seattle Chamber of Commerce and Commercial Club indorses Shields Senate bill, No. 1419; Small House bill, No. 4504, providing for development of water power on navigable streams; and Walsh Senate bill, No. 2393, providing for development of water power in public domains, and earnestly urges you to give your active support to each of these measures, as they are vitally important as emergency war legislation and equally important to the people of this State, and should, in the opinion of this chamber, be passed at this session of Congress without fail."

—

[From the Decatur (Ill.) Review, Aug. 18, 1917.]

A MUCH-NEEDED LAW.

Senator JOHN K. SHIELDS, of Tennessee, has recently introduced a bill in the United States Senate relating to water power on navigable streams, which is one of the wisest, most needed, and valuable pieces of legislation which has been brought before that body for consideration at the present session. It is a bill which is not only in the interest of the general public, but also interests specially every newspaper publisher and user of paper made from wood pulp in the United States.

There are few well-informed persons who do not know of the extortions put upon newspapers and paper users during the last two years by paper manufacturers through illegal combinations, for which seven of their prominent officials are now under indictment. They have been able to do this through their control of pulp-wood timber, which they have obtained wherever they could make it available. The great unused stands of pulp-wood timber that are not controlled by the present paper makers are almost without exception in sections of the country where the available water power lies either in the public domain or in navigable streams. As power is absolutely essential in the conversion of wood into pulp, it is obvious that laws should be passed which will permit financing water-power developments and making them available for the manufacture of paper.

It is this which the bill of Senator SHIELDS seeks to do, and its provisions are amply justified by the necessities of the Nation. There is urgent need that this measure should be passed at the present session of Congress and there appears to be no good reason why its passage should not be hastened and it should not receive the unanimous support of both branches of Congress. The measure is not sectional or partisan, is in no way objectionable, and is in the public interest.

Unless this measure and others looking in the same direction are now passed no one can predict the limit to which the extortion of paper manufacturers may not go.

[From the New York Evening Post, Sept. 15, 1917.]

LAWS ARE URGED TO OPEN UP WATER POWER—HYDROELECTRIC DEVELOPMENT MIGHT RELEASE 740,000 MEN—35,000,000 WATER HORSEPOWER WASTED ANNUALLY IN THE UNITED STATES—LEGISLATION BEFORE CONGRESS.

Legislation to open water-power development to private capital and investment is being urged at this session of Congress. What amounts to a Nation-wide protest is being made by industrial enterprises on behalf of the 35,000,000 water horsepower estimated by the Secretary of the Interior, Franklin K. Lane, as annually wasted in the United States. It is believed by many that the laws governing public domain and navigable rivers are responsible for this condition.

Reform measures have already been drafted. There is a bill before the Senate Public Lands Committee, introduced by Senator WALSH on June 5 of this year, designed to offer to enterprise on Government land a secure and definite tenure of lease such as is required in any line of business development. Another bill introduced by Mr. SMALL and pending before the Committee on Interstate and Foreign Commerce, provides for the development of water power in navigable rivers by private capital. In view of the demands made upon this country by the war it is felt that measures aiming to release the vast productive power latent in hydroelectric power should be promptly adopted.

Under existing statutes capital has not interested itself in development of water power on Government domain for the reason that the only permit issued for the location of power plants is revocable at the will of the Secretary of State, and no sure provision is made for just compensation when the permit is revoked. As for the 2,000,000 horsepower represented by the navigable rivers of the country, the general dam act of 1906 is so uncertain in the clause reserving the right to demand restoration of "navigability" that business men, according to the report of a prominent bond-selling house in this city, have considered it as an unsound security for the investment of funds.

Figures taken from the Geological Survey show that 77 per cent of the total potential water horsepower of the United States is so located as to require Federal permits. The significance of this fact is seen from the following statistics: Of the 46,913,200 water horsepower in the country requiring Federal permits, 3.9 per cent is developed, while of the 13,880,000 not requiring Federal permits, 25.2 per cent is developed.

Business men familiar with European affairs say that the policy of our Government toward the development of its water horsepower resources is far behind the attitude of Norway, Sweden, Germany, and Canada. American power companies, unable to extend their facilities at home, have been driven abroad. Products which exist in greater quantities here than in European countries, but which depend upon the extension of hydroelectric power for their manufacture—wood pulp, for instance—have been imported from across the ocean. In particular, the manufacture of nitrogen for fertilizer, obtainable by a recent process from the atmosphere by means of the electric arc, is claiming a million hydroelectric horsepower abroad and not many in the United States.

The war has called public attention to many needs. Since America became the supply market for world consumption the demand upon her productive power has been enormously increased. In addition, she is pressing to put many soldiers in the field, and the impairment of her industrial man power is regarded as being serious and a menace to future development.

Figures for the last four years show that the total immigration for 1915, 1916, and 1917 has been only 920,929, or 292,551 less than for the single year ending June 30, 1914. For the past 25 years there has been an annual addition to our population of nearly 1,000,000 foreigners. It has been predicted that the warring nations, whose manhood has been decimated, will keep their labor at home after the war by the passing of stringent legislation. In view of this condition, it is felt that if America is to remain a manufacturing and exporting Nation, her man power must be put on an efficient basis.

In an article in the Electrical World for June 23, 1917, entitled "Why hydroelectric development lags," Hugh L. Cooper has treated statistically the release in man power, coal tonnage, railway facilities, and capital that would result from the utilization of the water horsepower wasted in the United States. He estimates that 740,000 men would be released for other industries or for agriculture if 35,000,000 horsepower for one year were developed hydroelectrically instead of by the equivalent process of coal combustion. Every 50 horsepower developed hydroelectrically releases one man. The change would further effect a saving of 280,000,000 tons of coal and 600,000 freight cars necessary to haul the coal—or four times the number needed to supply the freight-car shortage of March, 1917. It is as roundabout, he declares, to haul millions of tons of coal unnecessarily as it would be to evaporate salt water shipped to the interior instead of using the inland salt deposits.

Summing up the financial equivalent of the saving in labor, railway stock, and coal, Mr. Cooper arrives at the following conclusion: "We are following a program that is absolutely wrong, relating to $1,241,600,000 annually of our business life." He adds that the increase of our food supply through the furnishing to our farmers of fertilizers made in this country would represent a further vast saving by the reduction of the cost of food. In a paper read in Seattle, Wash., in May, 1917, H. J. Pierce declared that the doubling of our crops would result from an increase of fertilizer per acre from 28 pounds (America's average for improved lands) to 100 pounds. (England averages 152 pounds and Germany 214.) The additional 18,000,000 tons, he estimated, would entail a production of hydrogen requiring 12,000,000 hydroelectric horsepower. The present water-power development in the country aggregates 5,321,700 horsepower.

Hydroelectric energy, Mr. Pierce pointed out, conditions the manufacture of many electrochemicals, explosives, and metals. It is used in the production of calcium carbide, caustic soda, abrasives, electrodes, acetone, and atmospheric nitric acid, used in making powder and explosives.

Among those who see in hydroelectric development an advance in America's industrial preparedness and a remedy for the strain of her resources caused by the war are to be counted the publishers throughout the country. In seeking relief for the situation regarding newsprint prices the American Newspaper Publishers' Association made an investigation of the potential wood-pulp resources of the country. The committee on paper found that the tapping of fresh timber stands and the development of new mills was possible in a large way only in those western and Pacific regions where the use of hydroelectric power was essential to the enterprise. It was further learned that almost all the available water power was located on the public domain or in navigable streams.

With a view to increasing the paper tonnage produced in the United States the American Newspaper Publishers' Association voted at its convention in Washington, D. C., on June 21, 1917, a resolution favoring the passage of legislation by Congress which would remove the obstacles placed by obsolete laws in the way of water-power development. Copies of the resolution were sent to President Wilson, to other officials of the Government, and to all members of the association.

The growth of water-power restriction has been a gradual process, the result of which was made plain in April of this year when the United States Supreme Court handed down a decision in the Utah power case. It was decided that no official of the Government could bind the Government by contract in issuing permits for the development of water power on public domain, and that any permit issued or to be issued was revocable at any time without compensation.

The provisions of the legislation sought from the present Congress are summed up as follows in an article in the New York Annalist for August 8, 1917:

"Permits for the erection of hydroelectric plants may be issued to individuals, corporations, States, or municipalities for 50 years.

"These contracts are irrevocable, but may be canceled by legal proceedings if the permittee fails to comply with the provisions of the act or the conditions of the permit.

"At the expiration of the term the United States may take over the entire plant or any severable and complete unit at a value determined, which shall not include the value of public lands, rights of way, franchises, good will, or prospective revenues; or it may renew the permit to the original holder; or, in the event that such an arrangement can not be made, may issue the permit to some one else, who shall buy the plant under the same conditions.

"Rental shall be paid which may, in the discretion of the Secretary, be based on the net horsepower, and of this rental one-half shall be paid to the State in which the energy is developed.

"Permits must provide for 'the diligent, orderly, and reasonable development of the water power, subject to market conditions.'

"Rates are determined by the public-service commission of the State in which the power is generated and used; and, when more than one State is involved, by the Interstate Commerce Commission."

The Walsh bill, the Small bill, and the Shields general dam bill—a correction of the provisions of the general dam act of 1906—provide these conditions.

—

[From the Anaconda (Mont.) Standard, Nov. 22.]

NEGLECTED WATER-POWER QUESTION LOOMS UP AGAIN.

After contributing much to the defeat of water-power legislation during the past 10 years, Gifford Pinchot has awakened to the fact that war's demands require the immediate and extensive development of water power within the United States. He is out with an early appeal to Congress, and confesses that we need to use our natural resources, "coal, oil, and water power to win the war." But with this announcement Mr. Pinchot clings to his old contention that Congress must legislate along lines which he long ago laid down, and he goes to the extent of again telling Congress the kind of water-power legislation it must enact.

While Mr. Pinchot is the first to come forward this fall with a demand for water-power legislation, others have been giving the question serious thought. They recall the announcement of the War Department, made only a few months ago, that the United States then had in reserve enough Chilean nitrate to carry it along for a year—nitrates for the manufacture of explosives. Since that announcement was made, the price of Chilean nitrate has risen to fabulous heights; shipping between the United States and Chile has been greatly reduced by the withdrawal of vessels for trans-Atlantic service, and now come press dispatches from Valparaiso announcing the formation of a nitrate trust in Chile, under Government sanction.

The United States to-day is manufacturing no atmospheric nitrogen; its nitrates, both for fertilizer and for explosives, comes mainly from Chile. Yet the United States under proper laws could become independent of Chile, and produce within its own borders not alone the nitrates needed for home consumption but a surplus for export, and in the process would deplete no natural resource but would draw upon the circumambient atmosphere for the all-essential nitrogen. But atmospheric nitrogen can only be produced commercially where water power is developed in large volume and where it can be developed cheaply. All the ideal sites for power plants adapted to this particular industry are now locked up in Federal withdrawals or are on navigable rivers controlled by the Federal Government.

Where is the Government going to get its nitrate supply of the future when the Chilean stocks run low and can not be replenished as fast as needed or at prices at all reasonable? That question is going to loom big in Congress this winter for it is a basic question. With the exhaustion of the American ammunition supply, the American Army in Europe and much of the allied forces will become powerless longer to combat the Huns. Nitrates, quite as much as food and men and ships, are necessary to the winning of the war.

Well established as this fact is, the Government itself has done nothing constructive toward solving the nitrate problem. Congress appropriated $20,000,000 for the establishment of a Government nitrate factory. Instead of spending that money for the purpose for which it was appropriated, a nitrate commission, headed by the Secretary of War, set aside $4,000,000 "for investigations into processes of manufacturing nitrates," in face of the fact that several successful processes already have been developed and are being used in Germany, Norway, France, and Italy, and, on this continent, in Canada. The remaining $16,000,000 lies idle in the Treasury at a time when the American stock of nitrates is being gradually exhausted and the need for commercial nitrates is growing hourly.

Mr. Pinchot is as well aware of the nitrate crisis as any man in the United States; he knows in great detail how and where water power can be developed and applied to the production of this all-essential commodity; he is awake to the crying need for extensive water-power development in order that we may have nitrate before it is too late. "We need it," he frankly says, "to win the war." Yet, admitting that, he lays down the same old demands of the conservationists and seeks to place upon the shoulders of the mythical "Water Power Trust" responsibility for defeating water-power legislation in the past.

In the last Congress water-power bills passed Senate and House, but differences arose on both the Ferris and the Shields bills, and the two Houses deadlocked. In consequence, all water-power legislation failed. That being true, Mr. Pinchot can not consistently charge that the "Water Power Trust" killed the legislation, for the deadlock was between the faction representing the Pinchot ideas and the faction demanding water-power legislation. And the fact that the deadlock persisted was evidence enough that the factions were about evenly divided, otherwise the weaker side would have given in. It would seem

from this that the Pinchot conservationists were just as much responsible as the other faction for the defeat of the water-power bills last considered in Congress.

Moreover, Mr. Pinchot now asserts that the United States to-day owns "some 50,000,000 undeveloped horsepower, enough to run every train, trolley, factory, mill, mine, and electrical plant that we have." That the United States holds, or, rather, withholds, this vast quantity of potential power from development is not an indictment of any power trust; it is an indictment of the Government, for Mr. Pinchot is correct in his estimate, and only emphasizes the fact that the Government, with all this power in its possession, not only declines to allow private capital to develop it, but fails to develop this power itself. As against the Government holding, Mr. Pinchot charges that private interests "own and are holding millions of water horsepower undeveloped and out of use," but he gives no figures, and he neglects to state that the larger power sites, the ones best adapted to the production of atmospheric nitrogen, are all under Government control.

As to whether Mr. Pinchot or more practical men should dictate the terms of Federal water-power legislation, it may be cited that the law now on the statute books, the "revocable-permit law," which has proven utterly unworkable, was the product of Mr. Pinchot's brain; it brought on an era of stagnation. And it was such men as Mr. Pinchot who "conserved" the Government coal fields of the West and of Alaska, until to-day, when the United States finds itself short 50,000,000 tons of coal to meet immediate needs, this Government coal is contributing nothing; American industries dependent on coal are hampered; American homes are cold and going to be colder, and the allies, calling vainly for American coal, are unable to have their wants filled. This coal was "conserved" because Mr. Pinchot thought some Americans might make money out of it if allowed to get title to the coal lands. Now the American capitalists are without their profit, but the American public and American industry find themselves without fuel, and without prospect fo getting enough to meet their needs.

—

WATER-POWER FIGHT BEGINS.

[From the Editor and Publisher, New York City, Dec. 1, 1917.]

Legislation beneficial to publishers, such as development of water power and the amending or repeal of the recently enacted law increasing second-class mail rates, is likely of early consideration at the coming session of Congress, which opens Monday.

A great drive for water-power legislation will be made by various interests for laws under which the unused water powers of the country can be developed. An effort will be made to pass the Shields bill, or one similar to it.

Capital is insisting that the Government allow 50-year leases for water power. This conservationists of the Pinchot type oppose strenuously. They will do their utmost to block the plans of the men who are trying to force through laws permitting development of water power on a great scale on terms which do not fully conform to their own ideas.

The American Newspaper Publishers' Association is one of the organizations favoring the developing of water power through liberal legislation. The association wishes to see paper made from pulp wood on the public domain and does not regard this practical without adequate water power.

The Shields water-power bill is now on the Senate Calendar, having been reported at the last session. Its early passage is probable.

—

[From the Atlanta Constitution, Dec. 6.]

USE WATER; SAVE COAL.

As soon as Congress gets settled down to its tasks, let us hope it will delay no longer than necessary favorable action upon pending legislation that is intended to harness the streams of the country and free the American people, at least partially, from the bondage of coal.

It is gratifying that the President himself shares in this hope so fervently that in his message to Congress he recommends action of this sort "at the earliest possible moment"; and his singularly great document contains no more timely nor wiser advice.

Necessarily the bulk of the legislation to come out of this session of Congress will be of an emergency character, directed to the "stern business" of winning the war, and therefore in effectiveness limited to the duration of the war. But anything that is done to promote the conversion of our falling water into electric energy for heat, lighting, and power uses will serve a dual purpose of helping to win the war and adding to the country's wealth and happiness throughout the long period of peace to follow. It will help to meet an immediate martial necessity and at the same time promote the country's economic welfare and enjoyment of peace.

President Wilson well said that—

"It is imperatively necessary that the consideration of the full use of the water power of the country * * * should be immediately resumed and affirmatively and constructively dealt with at the earliest possible moment. The pressing need of such legislation is daily becoming more obvious."

Indeed, it becomes more obvious with every unanswered cry for fuel; with every boost in the price of coal. It becomes more obvious every time a locomotive passes, straining at its drawbars and pouring out upon the air black clouds of unused potential energy in its wasteful work that could be done a thousandfold more easily and cheaper and expeditiously by a modicum of our wasted gravity power—power that our profligate economic system permits to run wild through our mountain gorges and on to the sea and to waste.

The steam engines of the country, stationary as well as locomotive, consume something like 10 tons of coal in the application of the energy that is contained in one. But even if this were different, and we had engines that would make full use of the power that coal contains, it would be an economic extravagance to use fuel for purposes that gravity can fill, because, once harnessed, gravity is as inexpensive a source of energy as is the wind.

The manner in which the United States has neglected—in fact, made almost prohibitory—the development of its tremendous resources in water power constitutes an economic crime.

It is a crime for which the public to-day is paying dear tribute—paying in suffering from the cold; in exorbitant and increasing prices of commodities in the manufacture or production of which coal plays a part.

And Congress at this time, late as is the day, can do no greater service to America and the world than in making speedy reparation, so far as is possible, for its past omission in this regard.

[From the Baltimore Manufacturers' Record.]

WATER-POWER DEVELOPMENT A NECESSITY.

The announcement made last week that after wasting priceless time the Government proposes to spend $20,000,000 upon the construction of nitrate-producing activities at Muscle Shoals, Ala., may be taken as one of the hopeful signs that this Government is coming to a realization of the seriousness of this war. It can be truthfully said, without unfair criticism, that in many of the tremendous issues of this momentous hour our Government has halted, hesitated, back stepped, side stepped, and done most everything else except to step straight forward and march on without a backward movement.

A country boy living 2 miles from school was very late one sleety day, and when called to task by the teacher claimed that the ground was so slippery that every time he made one step forward he slipped back two. The teacher, thinking that he had caught him at last, said: "How did you ever get here?" And the quick reply was: "I turned around and tried to walk home and slipped to school."

Our program has been by slipping backward instead of by straight moving forward. Harsh as the statement may seem to some, it is nevertheless true. In some respects we have made superb progress, due to the tremendous energy and power of the American people as they awaken to the task; but through nearly three years of the greatest of all human tragedies we constantly failed to move forward because we were unwilling to step straight. We saw the inadequate development of our coal industry to meet what all well-informed men knew was an inevitable call of the noncoal-producing countries for all of the coal which they needed. We saw that England's supply of coal to the world must of necessity be shut off, and yet the Government took no broad steps to study the situation or to prepare to meet it. All that was done was by the individual activities of coal people.

We saw railroad transportation breaking down and the inevitable collapse of the railroads; but the Government piled still further burdens upon the railroads, and after practically enchaining them and dooming them to destruction called upon them to go forward. They steadily slipped backward and could not turn around and go forward by moving the other way.

We saw, or we should have seen if our eyes had been open to the careful study of the matter, that for years our food supply was gradually decreasing in proportion to population, and this of absolute necessity, because of the heavy increase in city population as compared with country population. It was as plain as the noonday sun, that with the rapid growth of the consuming population in the cities and the relative decrease of producing population in the country there was inevitably only one end. But we refused to meet the issue, and therefore made no broad plans looking to the increase of our food supply to meet the conditions developed by Europe's war.

We saw that we were wholly dependent upon Chile for nitrates and that this supply was liable to be cut off at any moment, and yet we made no serious move for the development of the water powers necessary for the production of nitrates from the atmosphere. Only to-day are we beginning to do the work looking to the production of nitrates which we should have done years ago. The Nation saw its magnificent water-power potentialities unutilized except to a limited extent. It saw millions and millions of water-power potentialities going to waste as the rivers ran their course idly to the sea, when if harnessed for electricity vast enrichment would have followed and conservation of coal would have been a reality instead of a visionary dream of the visionary theorists of a few years ago. We tied up water-power development. We listened to visionary cranks, to whom we should have given just about as much attention as we should now give to the talk of the pacifists. But the Nation was determined, or the Government was, that nothing should be done in water-power development. Taft blundered, and the present administration has not yet changed these conditions.

A few years ago hundreds of millions of dollars could have been found for the utilization of almost every available power, and to-day millions of horsepower, in addition to what we have, might be operating our factories, our electric lines, and perchance some of our railroads to the great saving of coal. But nothing was done.

It is to be hoped that the movement toward developing the great power possibilities of Muscle Shoals, where more than 600,000 horsepower can be created, and building at that point a nitrate plant, indicates that the theorists and the cranks are to be set aside and the Nation is to go forward in real, substantial work, doing the things which are necessary to the winning of the war and making possible the conservation of energies now wasted, and the fullest possible production of all resources in food and manufactures, in transportation by rail and by motor truck and by water of which the country is capable.

—

[From the Scranton (Pa.) Republican, Dec. 6, 1917.]

UTILIZE THE NATION'S WATER POWER.

At a time when the liberation of the country's dormant energies is one of the prime requisites of the Nation in putting forth its strength to meet the tremendous responsibilities of the world war it should need no special argument to convince Congress of the great importance of developing the water power of the United States.

In his message to Congress this week President Wilson said:

"It is imperatively necessary that the consideration of the full use of the water power of the country and the consideration of the systematic and yet economical development of such of the natural resources of the country as are still under the control of the Federal Government should be resumed and affirmatively and constructively dealt with at the earliest possible moment."

The vast importance of the Nation's undeveloped water power has been frequently urged by Gifford Pinchot, who has made a special study of the subject and who is probably better informed regarding its potential possibilities than any other man in the United States. In a recently published statement Mr. Pinchot earnestly advocates congressional action on this question and points out the great value of adding the Nation's water power to its wealth-producing activities.

In numerous ways the gigantic forces that are going to waste along the country's great water courses might be profitably employed to serve the interests of the American people in actuating mills and factories and the multitudinous activities to which power could be furnished economically from this source.

Power is one of the great elements of the Nation's strength. Never has its value or its need been more apparent than at present. The United States has been bountifully enriched by nature with an illimitable supply of undeveloped power, and in no form is it cheaper or more easily accessible than in water power, which can be speedily transformed into electrical energy.

This is a question which calls for early attention on the part of Congress. The Walsh bill and the Shields bill, now pending in the Senate, should receive prompt consideration. This is right in line with one of the subjects now uppermost, namely, the quickening of fuel production for power, and can properly supplement that enterprise without interfering with its industrial aspects.

It is a patriotic duty to add to the country's strength wherever possible in this strenuous period, and such a mighty factor for service as the Nation's water power should not be permitted to remain undeveloped when it can and should be utilized for the public good.

—

[From the New York Evening Post, Dec. 6, 1917.]

NEW CONGRESS DRIVE FOR WATER-POWER LEGISLATION—SIGNS THAT WAR NEEDS WILL HASTEN ACTION.

There is a strong prospect that Congress will at last meet the need for a safe and sane development of water power, which has been delayed through the failure of session after session to enact the necessary legislation. Coupled with the need of water-power development for mere domestic purposes comes the overwhelming demand for it in connection with war industries. There can be no doubt but that, as a result of President Wilson's demand for such legislation in his message to Congress, this session will see a determined effort to get bills through both Houses for the development of water power on the public lands and on the navigable streams.

Noteworthy in connection with the determination to bring about legislation, if possible, is the spirit of conciliation developing between the radical conservationists, headed by Gifford Pinchot, and the radical anticonservationists, who have tried to keep Federal hands off water-power development in the far West. While it would be too much to expect Mr. Pinchot to violate the conservation principles for which he stands, and equally too much to expect the opponents of his program to surrender to him, the fact remains that the "get-together" spirit with which the country is doing business nowadays as a result of the war has helped convince both sides that the present stalemate on legislation in Congress is not the patriotic situation which either can afford to sponsor in the future.

On the whole, there has not been the same objection in the past on the part of the radical conservationists to the water-power bill for the public domain as there has been to the water-power bill covering navigable streams. In fact, it has been the opinion of those who have watched the progress of both measures that if the proponents of the anticonservation navigable streams bill would compromise their differences with the opposition on that measure both could be passed without much trouble. It has hardly been a secret that one measure has been played against the other to the extent that there has been no action possible on either. The time has now come, in the opinion of high officials and Members of Congress, to make a mighty drive for both bills, and once that drive is made the truth will come out, if it has to come out.

For some time past the American Newspaper Publishers' Association has been trying to weigh the relative merits of the opposing sides in the water-power controversy understandingly. It has taken a recent letter written by Mr. Pinchot, which he concluded with a quotation from the President—"the supreme test of the Nation has come; we must all speak, act, and serve together"—as a hopeful sign that implacable warfare over water-power legislation is at an end and the spirit of conciliation and coordination and cooperation is at hand. In his letter Mr. Pinchot makes the following seven points in his platform for water-power legislation:

(1) The thing to do with water power is to develop it. Whatever retards or restricts the development of public water powers on terms fair to the public is against public policy and hostile to the general welfare.

(2) Water power belongs to the people. The sites where it is produced should always be held in public hands, for only so can effective control in the general interest be secured.

(3) Where public development is not desired the right to use water-power sites should be leased for periods long enough to permit sound, attractive, and profitable investment, but never longer than 50 years. At the end of each lease all rights should return to the people who gave them.

(4) In order to protect the consumer against extortion, rates and service should be regulated by Federal authority when State or local authorities fail to do so.

(5) Reasonably prompt and complete development and continuous operation, subject to market conditions, should be required. Already millions of water horsepower are held out of use to further monopoly by private corporations.

(6) Corporations or individuals who make money out of rights granted by the people should share their profits with the people.

(7) The public has a right to complete information about every business based on the use of public property.

Taking the Shields bill, covering water-power development on navigable streams, now pending in the Senate, and the Walsh bill, covering water power on navigable streams, now pending in the Senate Committee on Public Lands, as a basis of argument, the American Newspaper Publishers' Association finds that, in its opinion, the contentions of Mr. Pinchot are contained in these bills in substance as to every point except the third. Even in that case the association states that "unless Mr. Pinchot's statement means more than appears on the surface, it is an exact description of the leasing system proposed in the Walsh and Shields bills."

Continuing, however, the association goes directly to the hub of the argument between Pinchot and the proponents of these bills when it says:

"Both bills limit the term of the lease to 50 years by providing that at the end of that time the Government may retake the rights and either use them itself or grant them to other parties. That is not, however, all there is to the matter. Mr. Pinchot desires that at the end of each lease 'all rights should return to the people who gave them,' but Mr. Pinchot would not claim that at the end of the lease the situation existing at the beginning could be actually reconstructed.

"It is impossible to ignore the fact that development has taken place in the interim; that a dam has been constructed; a power house erected, power equipment installed, transmission lines set up, and a power supply offered and taken by consumers, including cities, industries, and a vast number of individuals who have become dependent upon it. If the right to utilize the dam site were returned at the end of the lease, without any provision being made for the power business developed, vast injustice would be done, not only chiefly to the investor but to the general public itself.

"Obviously this is a situation which is to be dealt with, and, except for dealing with it in a manner which at the same time aims to safeguard in the highest degree the principle of recapture, which Mr. Pinchot speaks for, there is no conflict between the Walsh and Shields bills and the ideas expressed in the third point made by Mr. Pinchot."

Obviously, the association is not quite clear in its own mind whether Mr. Pinchot will subscribe to its entire judgment as to the meaning of his letter and the actual contents of the Walsh and Shields bills, but it invites and it would welcome his assistance, which, it admits, would be "of great importance." The association rejects the idea that Federal development of water power will solve the situation on the ground that State regulations would interfere, that the properties could not be taxed, and that neither rates nor the nature of the service could then be determined by local authorities. The prediction is made that to switch the issue to one of Federal development at this time would be certain to revive the old controversy in all its glory. Congress would be sure to approach such a new angle gingerly, while legislation is now necessary from every point of view. The President said on this point:

"It is imperatively necessary that the consideration of the full use of the water power of the country and also the consideration of the systematic and yet economical development of such of the natural resources of the country as are yet under the control of the Federal Government should be immediately resumed and affirmatively and constructively dealt with at the earliest possible moment. The pressing need of such legislation is daily becoming more obvious."

After this clarion call to action the country will be interested in watching developments to see which side to the old water-power controversy, if any, interposes the first insurmountable objection to early legislation. The reason for such objection will have to be definite and understandable, in view of the need of the country for laws under which to move forward in water-power development.

—

[From the Springfield (Mass.) Union, July 30, 1917.]

HARNESS THE WATER POWERS AND SAVE COAL.

In this time of industrial difficulties, when the supply of coal is far behind the requirements and the railroads are choked with freight, the interest of commercial leaders turn as never before to the project of progressive waterways development. Secretary Redfield recently issued a statement on this subject, in which he called attention to the views of prominent railway officials that our existing transportation lines, even when operated at 100 per cent of their capacity, can not handle the full volume of traffic thrown upon them. What will the conditions be in the near future, he asks, when, in addition to the present flow of munitions and other manufactures and supplies, the concentration of troops is undertaken and the new crops begin to move toward the ports and market centers? Railroads are canceling passenger trains and ordering additional cars and locomotives to relieve the difficulty, but other means of relief must be invoked. Steps should be taken, he says, to encourage water transit and to extemporize, if need be, means for bringing it quickly into service.

While the Secretary's appeal looks primarily to the adoption of emergency measures to bridge existing difficulties, the effect of the situation is to direct attention as never before to the broad bearings of our waterway problems. At this juncture the Shields bill, providing for Federal regulation of the construction of dams and the operation of power plants on navigable waterways, comes to the front as a measure calculated to augment the means of transportation, expand our industrial facilities, and conserve our stores of coal. This measure, which failed of passage in the last Congress, has recently been reported anew by the Senate Committee on Commerce. On its own merits and in its bearing on the national-defense situation it is worthy of being made a subject for prompt legislation.

By the terms of this bill Congress would give its outright consent to the erection of dams, diversion structures, and accessory features for water-power plants whenever the Secretary of War, with the approval of the Chief of Engineers, issues a permit to that effect. Such a permit may be given in case it is found that the plans submitted are best adapted for the comprehensive development of a waterway for navigation, full development of its water power and utilization of the water resources of the region, with the understanding that the recipient of such permit shall pay the Government reasonable charges for benefits accruing from the institution of headwater improvements. The revenue thus derived would be set aside as a headwater improvement fund. Among contesting applicants the one is to be chosen who has first secured the diversion rights and otherwise qualified under the laws of the State, or where there are no State laws to be considered preference is to be given to the first applicant. The duration of such permits would be 50 years, and thereafter until termination by 2 years' notice in writing and the taking over at a fair value by the United States of all property dependent for its usefulness upon the rights given in the bill. Rates charged for service by the holders of such permits would have to be reasonable according to the laws of the State, or, if there be no State authority, the Interstate Commerce Commission.

It is highly desirable that this subject should be taken up for consideration by Congress at the earliest practicable moment, with a view to definite action. A difference of opinion exists as to what conditions it is desirable to impose in the interest and protection of the public relative to the length of terms covered by permits, the condition of their revocation, and so on. But it is not well that our vast water-power facilities should remain locked because different schools of legislature are unable to agree as to what is feasible and advisable.

—

[From the Scranton (Pa.) Republican, Aug. 10, 1917.]

THE NATION'S WATER POWER.

If civilization were as prompt in voting great sums of money for peaceful development as it is in appropriating colossal amounts for the destructive purposes of war, the advance of modern progress would be much more rapid than it is. The world would then behold a condition in which many of the forces that are now slumbering in unproductive idleness, or going to waste, would be ministering to the needs of mankind.

We have particularly in mind the vast possibilities of water power in the United States, and its potentialities for actuating industry in many directions, as well as the scientific uses it would serve in stimulating the agricultural, manufacturing, and transportation facilities of this country.

Senator JOHN K. SHIELDS, of Tennessee, speaking on this subject recently in the Senate, cited some interesting facts and figures in support of his illuminated argument favoring the development of water power in the navigable rivers of the United States. He said: "There is no country in the world that has greater natural waterways than

this, and with proper improvement they can be made to contribute as much to its commercial and industrial wealth as any of its other great natural resources."

Quoting from the report of the Bureau of Statistics, Senator SHIELDS said it shows that the primary power equipment in the United States in commercial and municipal central stations, street and railway stations, and manufacturing plants in 1912 was 30,448,246 horsepower, of which 80 per cent was steam power, and more than one-half of this was found in the States of Pennsylvania, New York, Massachusetts, California, and Michigan. He pointed out that the annual consumption of coal in this country is 480,000,000 tons, valued at about $1,000,000,000, and claimed that while the coal fields will supply the country's needs for a century or more, they are not inexhaustible; neither is the supply of oil or gas.

The future of water power, converted into hydroelectrical energy is, therefore, of proximate interest. It has been well said that "water power is unlike most natural resources in that it is not diminished by use, nor is it conserved by nonuse." In this respect it differs from coal, which, if not used to-day, remains to be used later. A strong argument for water power is that its utilization results in the saving of coal for future use.

Among the many uses to be served by the development of the country's great wealth of dormant water power, Senator SHIELDS pointed out that of producing atmospheric nitrogen at low cost to enable the farmers to fertilize their fields and increase their crops.

The immediate results of liberating, for industrial purposes, the Nation's wealth of unused water power is the effect it would have in lessening the cost of production in many ways, and distributing its advantages to every city in the land. The undeveloped water power of the United States is one of its greatest assets, and its early utilization should receive the attention of Congress.

[From the New York Journal of Commerce and Finance, Jan. 2, 1918.]

PROBLEM OF WATER-POWER DEVELOPMENT—PROPOSED GOVERNMENT REGULATIONS DETER CAPITAL.

(By G. H. Walbridge, vice president of Bonbright & Co.)

The existing acute shortage of coal, the use of a large number of cars for coal transportation when cars are urgently needed for other purposes, and the fact that the Shields bill has again been passed by the Senate, bring prominently to the front once more the question of development of water powers on land controlled by the Government.

It is proposed in the Shields bill, as in other bills relating to the same subject, that the Government, in granting rights for development of water powers located partly or wholly on Government land, shall restrict the grant in three ways: First, the grant shall not be permanent, but the Government shall have the right of recapture; that is, it may purchase the entire hydro development on payment of a price after the lapse of a certain number of years; second, that the Government shall tax the development; third, that the Government shall retain the right to supervise accounts and regulate rates. It is not generally understood that, except for navigation purposes on navigable streams, the Government has no title to nor interest in the water. The right to regulate is based solely on the Government's control of such lands as may be needed for dams, power houses, or similar structures.

No one seems to question the desirability of immediate development of water powers, although it should be borne in mind that they can not be constructed overnight, since the work is necessarily dependent on the seasons of the year and machinery and other requisites are subject to the same delays as are materials for other kinds of work. The probabilities are that any water-power developments begun as a result of favorable congressional action can not be completed before the end of the war, unless the war lasts more than two years longer.

The whole question of regulation of water powers on Federal-controlled lands has been the subject of much emotional, not to say hysterical, oratory. The so-called conservationists appear to feel that a water power is equivalent to a gold mine and therefore must be controlled for the benefit of the people. The fact that drouth and flood, overruns in cost, and disappointments in markets put hydroelectrics on the same plane as the average business enterprise is obvious to anyone who will spend a few hours studying the troubled financial history of many of the existing hydroelectric companies. Hence, to bolster up their case the conservationists invented a fantastic myth about a menacing "water-power trust," which as a matter of easily established fact never existed and never will. All this has resulted in much discussion in Congress and elsewhere and a consequent delay of years which might have been occupied in building plants.

As a matter of common sense, the Government should take its hands off, since no regulation or restriction by the Government is necessary or desirable, with this exception, which applies to everything that follows, namely, that the Government should throw such restrictions around the grant of rights as will prevent any individual or group from securing rights and holding them indefinitely without development.

Every State in the Union has the inherent right, and most of them exercise, through commissions, the right to regulate rates charged by all public utilities, including hydroelectrics. These commissions have generally ruled that utilities are entitled to earn a "fair return" on the fair value of property used and useful in serving the public. This "fair return" is frequently fixed as 8 per cent annually upon such value and seldom, if ever, is fixed as high as 10 per cent. Let us assume the usual figure of 8 per cent and see what it means. It is that part of the total earnings remaining after deducting actual operating expenses plus a reasonable allowance for depreciation, and is what is left to pay interest on the invested money, provide a contingent fund against calamities, physical or industrial, and pay a "profit" to the organizers and managers of the enterprise. It will be noted the usual argument about "overcapitalization," "paying dividends on watered stock," etc., falls of its own weight, since the percentage of return is based on a value established principally by physical inventory and the amount of securities issued is disregarded. Incidentally the prospect of being able to earn 8 per cent is not sufficient to tempt a shrewd investor to undertake the manifold risks of hydroelectric construction, especially in view of the fact that seasoned securities can be purchased in the open market to yield nearly as much. Assuming, however, for argument that this is a fair rate, we have this condition: If the State exercises its power of regulation—and most of them do—the hydroelectric plant can not earn more than 8 per cent on its investment. If the hydroelectric can earn only 8 per cent, what further regulation is needed? The public does not need it. The public pays only the cost of operation plus 8 per cent on the value of the plant.

Further, why should the Federal Government tax the hydroelectric, since under equitable regulation the taxes must be passed along to the consumer, who is thus taxed for the benefit of the country at large? Why should the Government reserve the right to take the plant away at the end of 50 years on the payment of a price, presumably equitable, but subject to all the uncertainties of such a procedure? The customer does not require this protection and the prospect discourages capital. The Government can condemn any plant needed for governmental purposes at any time, but unless the country wishes to embark in Federal ownership of local utilities there is no reason why the Government should take over hydro plants now or 50 years hence.

To recapitulate, if under existing laws and procedure the utility can earn only 8 per cent, what need is there for any regulation or recapture by the Federal Government, and what is in the minds of the people who advocate such regulation and recapture? Most of them are too sensible and too honest to desire it merely for the purposes of building up a special Federal bureau. They must, therefore, be actuated by a mistaken idea of their duty to the people, who are, however, fully protected under existing conditions, and who are, through this exercise of undue care on the part of the Federal Government, being deprived of the benefits from water powers that would otherwise have been in operation long ago. The proposed regulations deter capital, discourage development, and are unnecessary for the protection of the public. What useful function will they perform?

[From the New Bedford (Mass.) Mercury, Dec. 27, 1917.]

A most important piece of legislation is being rushed through Congress which deserves more attention than it is receiving. The reference is to the bill providing for the development of water power, which passed the Senate shortly before the holidays, and which will come up for consideration in the House, where it is said it will pass with ease. The President referred to the need for such legislation in his address to the joint Houses this month, and the Senate has been prompt to respond. The legislation has heretofore been hotly contested, being fought over every inch of the way by those seeking to effect legislation to encourage capital to interest itself in water-power development and by the conservationists, with Gifford Pinchot at the head, who have been of the opinion that water-power development should be so bound in chains that the people may ever be in control of these water rights, getting a good deal for nothing. With this dog-in-the-manger policy the conservation movement has been able to obstruct all attempts to develop water power. Capital was not going to risk millions for the sake of a paltry dividend and the likelihood of endless trouble through Government regulation and the probability that at the termination of the leasing proposed the value of their equities would be reduced to nothing.

In consequence of the conflict of opinion nothing has been done at all in this direction. The country possesses enormous water power which could be used to high advantage in many of the industrial communities of the land and at the saving of many tons of coal, for which there is now the greatest need imaginable. This very fact has sufficed to knock the props from under the conservationists, who have come to their senses and have withdrawn obstructive tactics, so that when the bill mentioned came up for consideration in the Senate, instead of fighting it desperately they simply stated in brief why they would vote against it. The last-ditch fighting hardly lasted more than an hour and only 18 votes were cast against the bill, whereas 46 votes were cast for it. It remains to be seen how loudly Mr. Roosevelt will shriek. He has been one of the archconservationists. With much ado, self-righteous, indeed, he vetoed the earlier bills to permit water-power development, in particular the Snake River Dam bill, a veto for which Gifford Pinchot was credited. The bill passed by the Senate recently in effect provides for the improvement of rivers by dams for hydroelectric purposes without cost to the Government. Grants will be issued by the Secretary of War to private parties for the construction and maintenance of them, the grants being leases to extend 50 years at least, or until the property necessary for the development is taken over and just payment made either by the Government or a duly authorized new grantee. Regulation of rates and service will be made by the public authorities, either the Interstate Commerce Commission, if the business is interstate, or by the State authorities if the business is wholly intrastate.

Other features in the bill protect the people to be served fully, and yet the terms are not made onerous and prohibitive to capital. Seemingly there can be no monopoly, in so far as the phraseology of the bill is concerned, but this has been the cry of the Pinchot people, although it has seemed to sane people that there never could be a monopoly in water power in the country, since water-power sites were virtually innumerable. The only water-power monopoly that has been in existence has been the group of conservationists, who have exerted a power heretofore absolutely preventing anybody from making use of a great natural resource. It has been a monopoly of the worst type. At last it seems to have been put out of business.

It is claimed by the Geological Survey of the Government that the available potential horsepower of the country is 61,678,000, of which 4,910,000 is in the North Atlantic States. It is also estimated that with practical maximum storage the total available water horsepower that could be produced in the United States would be 200,000,000. The present actual water power used in the country is about 6,000,000, showing how little the land has made use of a source of vast power in its domains. It is said that the 61,000,000 horsepower mentioned is the equivalent of the annual use of 340,000,000 tons of coal—60 per cent of the total amount used in the United States a year, which at $2 a ton means an annual value of $680,000,000. Delay in the water-power legislation has thus meant this much enormous loss annually to the people and they suffering to-day as a consequence. Where the conservationists have sought to save, they have really wasted in immense figures.

The enterprises so far have not, of course, attained the high figures quoted, but through the delay in water-power legislation the development of 2,122,000 horsepower, covering the improvement of 1,160 miles of waterway, has been stalled—30,000 horsepower in the Connecticut River. It is said that these figures represent the equivalent in energy of 7,214,000 tons of coal, which would require the labor of 7,000 men at the mines to produce and 200,000 35-ton cars to move. In these days when the shortage of coal pinches and when there is so much distress and incommoding, these figures burn. It is astonishing that the people should have allowed themselves to be so long obstructed by theorists and visionaries.

[From the Little Rock (Ark.) Gazette, Dec. 17, 1917.]

TO HARNESS THE WATER POWERS.

The bill of Senator SHIELDS, of Tennessee, for development of water powers on navigable streams, which failed in a conference deadlock in the last Congress, has been again passed by the Senate and now goes to the House.

Under this measure water power development on navigable streams would be under the control of the War Department, which would have authority to grant 50-year permits for development projects.

Present circumstances have made more urgent the need for utilizing the country's water power. There is now a nation-wide fuel shortage, and for lack of sufficient supplies of coal many electric plants are having difficulty in continuing in operation. Yet, if streams that could be harnessed were harnessed many communities could be supplied with light and power from hydroelectric plants. The cutting off of German chemical supplies has started America to manufacturing dyes and other articles that were formerly imported. But nothing would put forward our chemical industry more than hydroelectric power. The bauxite of Arkansas is taken to Niagara Falls and to a plant in east Tennessee to be made into aluminum with electric current generated by water power. And there are in Arkansas and other States many resources that with the aid of electric power could be converted into useful commodities.

—

[From the New York Herald, Jan. 7, 1918.]

OUR WASTED WATER POWER.

"Better late than never." After wasting in discussion and wranglings many years that could have been devoted to building water-power plants on lands controlled by the Government, it seems that at last Congress will do something practical.

President Wilson has submitted a report signed by the heads of the War, Interior, and Agricultural Departments and the draft of a bill designed to reconcile divergent views and obtain legislation to save the 35,000,000 horsepower that now is wasted every year.

It is the pressure of war that is bringing this matter to a head. As Mr. Wilson stated at a conference with the leaders of the House, the early development of a considerable portion of our water-power resources would not only save fuel but lessen the present demand on transportation facilities caused by the moving of coal and other heavy fuels.

As a result of the conference, a special committee of the House is projected to take jurisdiction of all water-power problems that are in the hands of the various committees, pass the President's bill, and send it to the Senate with the support of the administration. This is a businesslike suggestion and promises results. That there will be much discussion, in which the alleged "Water Power Trust" will again figure, goes without saying, and this means further delay.

After the needed legislation is obtained, it is going to take a year or two to construct plants sufficient to afford perceptible relief. We repeat, "Better late than never"; but, in view of all the time that has been lost, there is call at this tardy date for immediate action. The Shields bill, which has again passed the Senate, has many provisions designed to protect the interest of the people—retention by Government of the right to buy back the plants after a fixed period, to tax developments, supervise accounts, and regulate rates.

Every State has the right—which most of them exercise through commissions—to regulate the rates of all public-utility companies, including hydroelectric plants. In the opinion of some thoroughly informed persons, the Government should confine itself to preventing rights from being obtained and held without development and leave all other restrictions and regulations to the several States.

—

[From St. Louis Globe Democrat, Mar. 10, 1916.]

SHIELDS WATER-POWER BILL.

The decisive vote of the Senate in favor of the Shields water-power bill was a victory for the school of conservation which believes that the water should be used for power as soon as possible, so as to conserve coal and petroleum. The resolutions committee of the Fifth National Conservation Congress estimated that the country could save $200,000,000 a year on fuel by prompt development of hydroelectric power. There is another and smaller school of conservation, of which Mr. Pinchot is the most prominent personality, which is chiefly interested in keeping the water power sites out of private hands. This school has gloried in the defeat of previous bills, but has done nothing toward utilizing water power. It has saved waterfalls from use, but has let the country pay its excessive annual toll for steam power.

The long debate in the Senate revealed that the principal question is whether the Government or State shall be permitted to take over a plant at the end of 50 years at the actual value then, determined by agreement or condemnation proceedings, or whether it shall pay only what the plant has actually cost. There is no agreement to take it over at all. The investor is asked to make the venture. If he loses money, it is hopelessly lost. If he builds up a valuable property he must sell out, if the Government wishes to buy, for what the site costs now, with his actual expenditures added. It is a "heads I win and tails you lose" proposition. Nobody favors Government or State ownership now. The Government merely asks an option, which can be exercised if the experiment is successful.

The bill provides for control of charges by State and Federal authorities. Every reasonable safeguard is provided to prevent abuse. The sites must be acquired at actual value, under the various State laws. There is no bonus or grant, such as Congress voted the railways for the development of the great West. A slight monopolistic feature is almost unavoidable, but the bill prohibits improper practices as well as discriminatory charges. The critics of the bill offer no constructive alternative. They would merely load the bill down with such amendments that capital would not take the risk. If they have their way, they should entitle their act "An academic theory as to how water power might be developed if capital could be induced to invest in the experiment."

—

[Editorial from the Evening Post, New York, Friday, May 5, 1916.]

That the National Conservation Congress should have indorsed the Shields bill by a vote of 116 to 39 is a severe blow to Pinchot, Garfield, and other extreme conservationists. There was no division upon principles, but merely upon the interpretation of the Shields measure. The majority of the Conservation Congress plainly thought that its provisions could be accepted literally and in good faith. It meant what it said in giving the Government the right to take over private water-power plants on navigable streams at the end of 50 years at actual valuation. But ex-Secretary of the Interior Garfield was certain that the bill "turns over to private monopoly public power in perpetuity. The 50-years' limitation as proposed is nothing more than a mere fiction." The minority resolutions held that power sites should not be disposed of in perpetuity, but retained in Federal control. The majority made much of the fact that the Senate, after careful debate, had not seen in the bill the "mere fiction" of which Garfield spoke, and an even weightier consideration is that Secretary Lane has not done so. Upon details of the measure there may be disagreement, but its guaranty of a 50-years' tenure seems necessary to invite capital into a risky field.

REPORTS OF COMMITTEES.

Mr. McNARY, from the Committee on Public Lands, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 2784) to authorize the purchase by the city of McMinnville, Oreg., of certain lands formerly embraced in the grant to the Oregon & California Railroad Co. and revested in the United States by the act approved June 9, 1916 (Rept. No. 228); and

A bill (S. 3225) to reserve as a part of the Oregon National Forest certain lands that were revested in the United States pursuant to the decision of the Supreme Court of the United States in the case of the Oregon & California Railroad Co. against the United States (Rept. No. 229).

Mr. SHAFROTH, from the Committee on Public Lands, to which was referred the bill (S. 2315) to extend the time within which final proof is required to be submitted upon any lawful pending desert-land entry made prior to July 1, 1915, such extension not to exceed three years from the date of allowance thereof, reported it with an amendment and submitted a report (No. 225) thereon.

Mr. SMOOT, from the Committee on Public Lands, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

A bill (S. 101) to authorize the consolidation of Government lands and of privately owned lands, and for other purposes (Rept. No. 226); and

A bill (S. 972) to authorize an exchange of lands with Henry Blackburn (Rept. No. 227).

He also, from the same committee, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (S. 2931) for the relief of Thomas Sevy (Rept. No. 230);

A bill (S. 100) to authorize the Secretary of the Interior to issue patent for certain lands in the State of Utah to Cyrena E. Young (Rept. No. 231);

A bill (S. 97) authorizing the exchange of certain lands in the State of Utah for the protection of the water supply of Salt Lake City (Rept. No. 232);

A bill (S. 94) to amend section 3 of an act entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1902, and for other purposes," approved March 3, 1901 (31 Stat. L., p. 1133) (Rept. No. 233); and

A bill (S. 92) to authorize the Secretary of the Interior to issue patent for certain lands in the State of Utah to E. D. Partridge (Rept. No. 234).

Mr. TILLMAN, from the Committee on Naval Affairs, to which was referred the bill (S. 3128) to authorize additional pay for enlisted men of the Navy and Marine Corps detained beyond the expiration of their terms of enlistment, reported it with amendments and submitted a report (No. 224) thereon.

FOX RIVER BRIDGE.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (S. 3448) granting the consent of Congress to the village of East Dundee and the village of West Dundee to construct a bridge across the Fox River, and I submit a report (No. 235) thereon. I ask for the immediate consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

FRIEZE IN THE ROTUNDA OF THE CAPITOL.

Mr. GALLINGER. I report from the Committee on the Library favorably without amendment the joint resolution (S. J. Res. 125) authorizing the Joint Committee on the Library to provide for the restoration and completion of the historical frieze in the rotunda of the Capitol, and I submit a report (No. 236) thereon. I think there can be no objection to the joint resolution and I ask for its present consideration.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

Mr. OVERMAN. Let it be read.

The VICE PRESIDENT. It will be read.

The Secretary read the joint resolution, as follows:

Resolved, etc., That the Joint Committee on the Library be, and it is hereby, authorized to provide for the restoration and completion of the historical frieze in the Rotunda of the Capitol. For that purpose the

said joint committee is empowered to select an appropriate design for the completion of the frieze and to employ such artists in the work of completion and restoration as may demonstrate to the satisfaction of said joint committee their ability to perform the work in a proper manner.

SEC. 2. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $20,000, or so much thereof as may be necessary, for the purposes of this resolution.

There being no objection, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

CLAIMS AGAINST THE GOVERNMENT.

Mr. SMITH of Georgia. I report from the Committee on the Judiciary favorably, with amendments, the bill (S. 1795) to relieve Congress from the adjudication of private claims against the Government.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. SMITH of Georgia. I wish to add that Senate bill 832, to amend an act approved March 4, 1915, abolishing the jurisdiction of the Court of Claims in certain cases involving claims against the United States for property destroyed or appropriated by the Federal Army during the Civil War, and Senate bill 2488, to relieve Congress from the adjudication of private claims against the Government, have reference to the same subject. The bill which I have reported, with amendments, is intended as a substitute for these two bills, and I report them adversely and ask that they be postponed indefinitely.

The VICE PRESIDENT. The Chair understands that the Senator from Georgia desires the indefinite postponement of Senate bill 2488 and Senate bill 832?

Mr. SMITH of Georgia. I move that the bills be indefinitely postponed.

The motion was agreed to.

FUNERAL EXPENSES OF THE LATE SENATOR NEWLANDS.

Mr. THOMPSON, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred S. Res. 177, submitted by Mr. Pittman on the 9th instant, reported it favorably without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the Secretary of the Senate be and he hereby is, authorized and directed to pay, from the miscellaneous items of the contingent fund of the Senate, the actual and necessary expenses incurred by the committee appointed by the Vice President in arranging for and attending the funeral of the Hon. Francis G. Newlands, late a Senator from the State of Nevada, upon vouchers to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

EMPLOYMENT OF ADDITIONAL CLERK.

Mr. THOMPSON. From the Committee to Audit and Control the Contingent Expenses of the Senate, I report back favorably with an amendment Senate resolution 158, authorizing the Committee on Privileges and Elections to employ an additional clerk, and I ask unanimous consent for its present consideration.

The Senate, by unanimous consent, proceeded to consider the resolution.

The amendment was in line 5, after the word "Senate," to strike out "from December 3, 1917," and insert "for a period lasting until."

The amendment was agreed to.

The resolution, as amended, was agreed to, as follows:

Resolved, That the Committee on Privileges and Elections of the United States Senate be, and it is hereby, authorized to employ an additional clerk at the rate of $100 per month, to be paid out of the miscellaneous items of the contingent fund of the Senate, for a period lasting until the end of the present session of the Congress.

YUMA PROJECT, ARIZONA.

Mr. SMITH of Arizona. I ask unanimous consent to make a report from the Committee on Irrigation and Reclamation of Arid Lands on a bill designed to carry out the purposes of the act providing for what is known as the Yuma project, in my State, and which provides merely for the transfer of certain funds. It has been recommended by the Secretary of the Interior; it has passed the House without a dissenting vote; and it is in the nature of a local matter designed to extend the Yuma project under the original act. I report the bill (H. R. 3135) to amend section 4 of the act entitled "An act to provide for an auxiliary reclamation project in connection with the Yuma project, Arizona, and I submit a report (No. 237) thereon.

In order to meet an exigency that exists in connection with that project, I ask unanimous consent for the immediate consideration of the bill.

The VICE PRESIDENT. The bill will first be read.

The Secretary read the bill, as follows:

Be it enacted, etc., That the first sentence of section 4 of the act entitled "An act to provide for an auxiliary reclamation project in connection with the Yuma project, Arizona," approved January 25, 1917, be amended so as to read as follows:

"That the money in said auxiliary reclamation fund of the Yuma project, Arizona, shall be available for the construction or completion of irrigation works of the said auxiliary project or unit."

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

Mr. GALLINGER. Mr. President, as I caught the reading of the bill, there is no further appropriation asked for.

Mr. SMITH of Arizona. None in the world; it merely provides for a transfer of the fund so as to carry out the project.

Mr. GALLINGER. That is all?

Mr. SMITH of Arizona. Yes; there is not appropriated from the Public Treasury an additional dollar.

Mr. JONES of Washington. Mr. President, I understood the Senator to say that the bill was reported from the Committee on Irrigation and Reclamation of Arid Lands?

Mr. SMITH of Arizona. Yes; it has been reported from that committee. I have taken it up with several members of the committee, and regret that I was not also able to see the Senator from Washington and ask his views in regard to the measure.

Mr. JONES of Washington. The Senator polled the committee?

Mr. SMITH of Arizona. The committee was polled—the Senator knows the difficulty of having the committee meet—and the measure was explained to each member who was seen, and no one of them objected to it. I would have seen the Senator from Washington if I had had an opportunity.

Mr. JONES of Washington. That is all right.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BORAH:

A bill (S. 3631) to convey certain lands to the city of Boise, State of Idaho, for a municipal park (with accompanying papers); to the Committee on Public Lands.

By Mr. SMITH of South Carolina:

A bill (S. 3632) to provide for the operation of transportation systems while under Federal control, for the just compensation of their owners, and for other purposes; to the Committee on Interstate Commerce.

By Mr. SHEPPARD:

A bill (S. 3633) to authorize the construction of a dam or dams, a lock or locks, and other works in and across Sabine Lake in order to protect certain rice lands from salt water; to the Committee on Commerce.

By Mr. THOMPSON:

A bill (S. 3634) granting an increase of pension to Frederick H. Barker (with accompanying papers); and

A bill (S. 3635) granting an increase of pension to John W. Keffer (with accompanying papers); to the Committee on Pensions.

By Mr. SHAFROTH:

A bill (S. 3636) granting to the States in which national forests are situate lands to aid in the construction of public roads in such national forests; to the Committee on Public Lands.

A bill (S. 3637) granting a pension to Charles S. Abbott;

A bill (S. 3638) granting an increase of pension to John Cook, jr.;

A bill (S. 3639) granting an increase of pension to George W. Hamilton;

A bill (S. 3640) granting an increase of pension to Jacob Jewell;

A bill (S. 3641) granting an increase of pension to Lawrence O. Loughlin;

A bill (S. 3642) granting an increase of pension to Albert N. Raymond;

A bill (S. 3643) granting an increase of pension to Logan Russell;

A bill (S. 3644) granting a pension to Elizabeth Webster; and

A bill (S. 3645) to amend an act entitled "An act to pension the survivors of certain Indian wars from January 1, 1859, to January, 1891, inclusive, and for other purposes"; to the Committee on Pensions.

By Mr. PHELAN:
A bill (S. 3646) to grant rights of way over Government lands for reservoir purposes for the conservation and storage of water to be used by the city of San Diego, Cal., and adjacent communities (with accompanying papers); to the Committee on Public Lands.

By Mr. HOLLIS:
A bill (S. 3647) granting a pension to Joseph H. Chapman (with accompanying papers); to the Committee on Pensions.

A bill (S. 3648) for the retirement of public-school teachers in the District of Columbia (with accompanying papers); to the Committee on the District of Columbia.

By Mr. BANKHEAD:
A bill (S. 3649) to amend the act approved June 25, 1910, establishing postal-savings depositories, and acts amendatory thereof, and for other purposes; to the Committee on Post Offices and Post Roads.

By Mr. LA FOLLETTE:
A bill (S. 3650) granting a pension to Mary Herman (with accompanying paper); and

A bill (S. 3651) granting a pension to Clara Stillman (with accompanying papers); to the Committee on Pensions.

By Mr. JONES of Washington:
A bill (S. 3652) authorizing the leasing of the lands embraced within the Hoh Indian Reservation in the State of Washington; to the Committee on Indian Affairs.

By Mr. KELLOGG:
A bill (S. 3653) for the relief of Ben. L. Fairbanks and others; and

A bill (S. 3654) conferring jurisdiction on the Court of Claims to hear, determine, and render final judgment in the matter of claims of the Chippewa Indians and the several bands or tribes thereof in the State of Minnesota against the United States, and for other purposes (with accompanying paper); to the Committee on Indian Affairs.

By Mr. GALLINGER:
A bill (S. 3655) granting an increase of pension to Charles Dwight Hanscom (with accompanying papers); and

A bill (S. 3656) granting an increase of pension to Daniel L. Thompson (with accompanying papers); to the Committee on Pensions.

By Mr. TILLMAN:
A bill (S. 3657) to provide promotion for retired officers performing active duty in time of war;

A bill (S. 3658) to authorize the Secretary of the Navy to increase facilities of naval torpedo station, Newport, R. I.; and

A bill (S. 3659) to increase temporarily the enlisted strength of the Navy, and for other purposes (with accompanying papers); to the Committee on Naval Affairs.

By Mr. McLEAN:
A bill (S. 3660) granting a pension to Walter J. Hawthorne (with accompanying papers); to the Committee on Pensions.

AMENDMENT TO INDIAN APPROPRIATION BILL.

Mr. SMOOT submitted an amendment proposing to appropriate $12,690 for payment to the Uinta and Duchesne County school districts to assist said districts in educating children of white lessees of Indian lands, intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

WHEAT SUPPLY.

Mr. FRANCE. I offer a resolution and ask that it be read and referred to the Committee on Agriculture and Forestry. In this connection I wish to say that when the proper opportunity presents itself I desire to address the Senate very briefly for about 12 minutes upon this most important subject.

The VICE PRESIDENT. The Secretary will read the resolution.

The resolution (S. Res. 190) was read and referred to the Committee on Agriculture and Forestry, as follows:

Resolved, That in view of the serious shortage in the Nation's supply of wheat, the necessity for large exports of wheat, and the alarming report of the Department of Agriculture on December 19, 1917, upon the condition of the winter-wheat crop, that the Secretary of Agriculture and the Food Administrator be, and they are hereby, requested and directed to assemble and transmit to the Senate information as to the methods which are being employed for the conservation of an adequate supply of seed wheat for the sowing of the spring-wheat acreage and what methods are being used or are in contemplation to insure the sowing of such an extraordinarily increased acreage as is imperatively needed to meet the present grave emergency.

CRIPPLED SOLDIERS AND SAILORS.

Mr. SMITH of Georgia. I submit a resolution and ask for its present consideration.

The VICE PRESIDENT. The Secretary will read the resolution.

The resolution (S. Res. 189) was read, as follows:

Resolved, That the Federal Board for Vocational Education be directed to furnish to the Senate such information as it may have or can readily obtain on the rehabilitation and vocational reeducation of crippled soldiers and sailors.

Mr. SMITH of Georgia. Mr. President, we are quite anxious to have the information as speedily as possible for the use and study of the Committee on Education and Labor. I therefore ask unanimous consent for the immediate consideration of the resolution.

There being no objection, the resolution was considered by unanimous consent and agreed to.

AMENDMENT OF THE RULES.

Mr. JONES of Washington. On the 21st instant I gave notice of an amendment to the standing rules of the Senate relative to the appointment of the committees. I now offer the following resolution, and ask that it be referred to the Committee on Rules.

The resolution (S. Res. 191) was referred to the Committee on Rules, as follows:

Resolved, That beginning with the Sixty-sixth Congress, Rule XXV of the standing rules of the Senate be amended to read as follows:

"Rule XXV. The following standing committees shall be appointed at the commencement of each Congress, with leave to report by bill or otherwise:

"A Committee on Appropriations.
"A Committee on Commerce.
"A Committee on Finance.
"A Committee on Foreign Relations.
"A Committee on Interstate Commerce.
"A Committee on the Judiciary.
"A Committee on Banking and Currency.
"A Committee on Public Lands.
"A Committee on Agriculture and Forestry.
"A Committee on the District of Columbia.
"A Committee on Rules.
"A Committee on the Census.
"A Committee on Civil Service and Retrenchment.
"A Committee on Claims.
"A Committee on Education and Labor.
"A Committee on Insular Affairs.
"A Committee on Indian Affairs.
"A Committee on Immigration.
"A Committee on Military Affairs.
"A Committee on Naval Affairs.
"A Committee on Pensions.
"A Committee on Post Offices and Post Roads.
"A Committee on Printing, which shall have power to act jointly with the same committee of the House of Representatives.

"A Committee on Enrolled Bills, which shall have power to act jointly with a similar committee of the House of Representatives, and which, or some member of which, shall examine all bills or joint resolutions which shall have passed the Senate or both Houses to see that the same are correctly engrossed or enrolled, and, when signed by the Speaker of the House and the President of the Senate, shall present the same forthwith, when they shall have originated in the Senate, to the President of the United States in person and report the fact and date of such presentation to the Senate.

"A Committee on Public Buildings and Grounds, which shall have power to act jointly with a similar committee of the House of Representatives.

"A Committee to Audit and Control the Contingent Expenses of the Senate, to which shall be referred all resolutions directing the payment of money out of the contingent fund of the Senate or creating a charge upon the same."

The foregoing committees shall consist of not to exceed 15 members.

"SEC. 2. That the aforesaid committees shall continue and have the power to act until their successors are appointed."

AMENDMENT OF THE FEDERAL RESERVE ACT.

Mr. OWEN. I ask that the bill (S. 1796) to amend the act approved December 23, 1913, known as the Federal reserve act, as amended by the acts of August 4, 1914, August 15, 1914, March 3, 1915, and September 7, 1916, being Order of Business No. 12, be taken from the calendar and indefinitely postponed. The legislation therein contained has been enacted in another form.

The VICE PRESIDENT. The bill will be postponed indefinitely.

COL. E. M. HOUSE.

Mr. SHEPPARD. Mr. President, I desire to read to the Senate a letter from my colleague, the senior Senator from Texas [Mr. CULBERSON]:

UNITED STATES SENATE,
COMMITTEE ON THE JUDICIARY,
Washington, D. C., January 28, 1918.

Hon. MORRIS SHEPPARD,
United States Senate.

DEAR SENATOR: As you are aware, in the debate in the Senate last Monday Senator PENROSE, of Pennsylvania, referred to Col. E. M. House, of Texas, as a lobbyist. Whatever may have been the purpose of such characterization, I am sure you will agree with me that it does Col. House a great injustice, which ought to be corrected by us, for it carries with it more or less opprobrium. As I do not yet feel justified in taking part in debates, I send you this letter to be used by you in such statement as you may see proper to make to the Senate on the subject.

I first became acquainted with Col. House in 1891, when James S. Hogg, to whom he was devotedly attached, was governor of Texas, and have known him intimately since then. During all this time, while he has taken an active part in the public affairs of our State, his conduct has been that of a patriotic citizen, and nothing has occurred to justify in the slightest degree the thought that he has ever been privately interested in legislation, which the term "lobbyist" would imply.

Very sincerely, yours,

C. A. CULBERSON.

Mr. President, the Senator from Pennsylvania [Mr. PENROSE] referred to Col. House on the occasion mentioned by my colleague as a politician. If to take a deep and intelligent interest in men and measures from the standpoint of the people's welfare, without a thought of self-advancement, makes one a politician, then Col. House is a politician, and may his kind increase. He has never sought office and has never held office.

The Senator from Pennsylvania referred to Col. House as a "lobbyist." This is an error of the most unqualified sort. Nothing in Col. House's life affords the slightest foundation for such a charge. He represents the highest type of the thoughtful, unobtrusive, patriotic, and public-spirited private citizen, a type that constitutes one of the glories of this Republic.

It is to the honor and the credit of Woodrow Wilson that he selected a plain, untitled, private citizen to represent this citizen-controlled Republic at the council table of world democracy.

REPORT OF THE EIGHT-HOUR COMMISSION (H. DOC. NO. 690).

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read, ordered to be printed, and, with the accompanying paper, referred to the Committee on Interstate Commerce:

To the Senate and House of Representatives:

In compliance with the provision of section 2 of the act of Congress approved September 3 and September 5, 1916, to establish an eight-hour day for employees of carriers engaged in interstate and foreign commerce, and for other purposes, I transmit herewith the report of the commission appointed to observe the operation and effects of the institution of the eight-hour standard workday for railroad employees.

WOODROW WILSON.

THE WHITE HOUSE, *28 January, 1918.*

THE CALENDAR.

The VICE PRESIDENT. Morning business is closed. The calendar, under Rule VIII, is in order. The Secretary will state the first bill on the calendar.

The SECRETARY. A bill (S. 1786) to amend certain sections of the act entitled "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916, and for other purposes.

Mr. OVERMAN and Mr. GALLINGER. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 39) to appropriate $3,000,000 to enable the Secretary of Agriculture to prosecute the work of eradicating the southern cattle tick was announced as next in order.

Mr. OVERMAN and Mr. GALLINGER. Let that go over.

The VICE PRESIDENT. The joint resolution will be passed over.

The joint resolution (S. J. Res. 53) authorizing the President to appoint two additional Assistant Secretaries of Agriculture, and for other purposes, was announced as next in order.

Mr. SMOOT. Let that go over.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 2180) to approve mutual cessions of territory by the States of Wisconsin and Minnesota and the consequent changes in the boundary line between said States was announced as next in order.

Mr. SMOOT. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2116) to increase the salary of the United States district attorney for the district of Rhode Island, was announced as next in order.

Mr. GALLINGER. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The concurrent resolution (H. Con. Res. 9) authorizing the printing in one document the act to increase temporarily the Military Establishment, the registration regulations, and the proclamations of the President fixing June 5, 1917, as date of registration, was announced as next in order.

Mr. JAMES. Let that resolution go over.

The VICE PRESIDENT. The resolution will be passed over.

ADJOURNMENT TO WEDNESDAY.

Mr. MARTIN. I move that the Senate adjourn until 12 o'clock meridian on Wednesday.

The motion was agreed to; and (at 12 o'clock and 40 minutes p. m.) the Senate adjourned until Wednesday, January 29, 1918, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

MONDAY, *January 28, 1918.*

The House met at 12 o'clock noon.

The chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We approach Thee, Almighty God, our Heavenly Father, with bowed heads and heavy hearts.

The responsibility thrust upon us is more than we can bear without divine aid, strength, courage to uphold and sustain us. The magnitude of the war which confronts us, the difficulties which must be overcome, are appalling; hence we pray most earnestly that a basis of peace may be reached upon which all the leading nations of the world can agree. Yet we realize that permanent peace can never come without a victory of principles which shall secure liberty and justice for all the peoples of all the world. Hear us, O Lord, and help us in this hour of distress, in the name of the Prince of Peace. Amen.

The Journal of the proceedings of Saturday, January 26, 1918, was read and approved.

RESIGNATIONS FROM COMMITTEES.

The SPEAKER. The Chair lays before the House the following resignations from committees, which the Clerk will read.

The Clerk read as follows:

WASHINGTON, *January 26, 1918.*

Hon. CHAMP CLARK, Speaker,
House of Representatives, Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as a member of the following committees: Claims, Education, Expenditures in the Department of Commerce, and Pensions.

Sincerely, yours,

DANIEL C. OLIVER

WASHINGTON, *January 25, 1918.*

Hon. CHAMP CLARK, Speaker,
House of Representatives, Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as a member of the following committees: Accounts; Expenditures in the Department of Labor; Election of President, Vice President, and Representatives in Congress; and the Merchant Marine and Fisheries.

Sincerely, yours,

CLARENCE F. LEA.

The SPEAKER. Without objection, the resignations are accepted.

There was no objection.

FILLING VACANCIES ON COMMITTEES.

Mr. KITCHIN. Mr. Speaker, I move the election of the following members of committees.

The SPEAKER. The gentleman from North Carolina moves the following nominations to committees. The Clerk will report them.

The Clerk read as follows:

COMMITTEE NOMINATIONS.

BENJAMIN G. HUMPHREYS, of Mississippi, to be a member of the Committee on the Merchant Marine and Fisheries.

CLARENCE F. LEA, of California, to be a member of the Committee on Rivers and Harbors.

DANIEL C. OLIVER, of New York, to be a member of the Committee on the Post Office and Post Roads.

WILLIAM C. WRIGHT, of Georgia, to be a member of the Committee on Election of President, Vice President, and Representatives in Congress, the Committee on Irrigation of Arid Lands, and the Committee on the Merchant Marine and Fisheries.

The SPEAKER. Are there any other nominations? If not, the names appended to the paper just read will be appointed to the committees to which they are assigned.

The nominations were agreed to.

EXTENSION OF REMARKS.

Mr. LINTHICUM. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an article from a Baltimore paper announcing the death of the Hon. John Gill, jr., my predecessor, from the fourth congressional district of Maryland.

The SPEAKER. Without objection, it will be so ordered.

There was no objection.

CARE OF BLIND SOLDIERS.

Mr. EMERSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a statement made by Francis V. Brady, of Cleveland, Ohio, on how to care for the blind soldier.

The SPEAKER. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Following is the statement referred to:

WHAT THE Y. M. C. A. CAN DO FOR THE BLIND SOLDIER AFTER THE WAR.

(By Francis V. Brady.)

To rehabilitate the blind soldier is a problem which should receive the careful consideration of every thinking man. His habits are already formed, his sphere in life has been attained, and his status is fixed, and then suddenly there comes a great change. From a world where he depends upon vision for what he wears, for what he eats, for the things of pleasure, for his livelihood, for everything, in fact, he is plunged into a world of darkness. His whole life must undergo a change to meet this new condition. His spirit is gone; his ambition has left him. He is utterly hopeless, and one asks the question: "What can be done for such a man?"

To outline briefly some phases of work which the association might profitably follow is the purpose of these notes.

I. WHAT CAN BE DONE IN THE HOSPITALS.

(a) To interview a man either at the hospital overseas, or at the hospital to which he has returned here in this country, just as soon as it is practical in order that his mind may be taken from the loss of his eyes and that he may be encouraged to think of the future not as a world of darkness and hopelessness, but as a world of sunshine where there is plenty of opportunity still waiting for the blind man who has the will and ambition to forge ahead.

(b) As quickly as possible teach him the fundamentals of raised print, especially the dot system used to mark playing cards and other games, so that he may learn to play games and thus occupy his time by touch.

(c) To provide readers who will read the best light literature.

(d) To see that friends who visit him do not discourage him; that they talk of the future only as a bright future; that, instead of sympathizing with the man, they cheer him up.

(e) To attempt to secure business men and others to discuss business problems and life problems, with the men always taking care to emphasize the ways in which a man who does not see can be useful.

II. WHAT CAN BE DONE IN THE HOME.

(a) If possible to visit the home before the arrival of the sightless soldier and prepare his parents or others for his coming, to try to leave the impression with them that he can be of much use in the world in spite of the fact that he is blind if they will do their share in maintaining his spirit and his grit.

(b) When the soldier has arrived, or before, if possible, to go to his associates and his neighbors and ask them to try, as far as possible, to treat him just as they did before he lost his sight, to associate with him just as freely, and to make him feel that he is just the same even though he has met a tremendous loss.

(c) To have his parents teach him to be as useful as possible in doing things about the home—for example, in the matter of eating, to teach him to cut his meat and wait on himself largely. When a man is a farmer or from a rural community, to teach him to care for the chickens, the pigs, or the cows, or to do the ordinary chores around the house.

(d) It is the duty of those at home to see that the man goes out as much as possible to lectures, theaters, church socials, clubs, and, in fact, everything which will keep him in touch with the outside world. It is because of the fact that many blind people are kept in the house and lose their contact with the outside world that much of the help that otherwise might be given them is lost.

III. WHAT THE CHURCH CAN DO.

(a) The minister or priest, as the case may be, should make it a point to visit the man and invite him to come to church, and in case he has no one to take him to provide a guide.

(b) To interest the members of the church in the man in order that they may make him feel that he is still one of them.

(c) To secure the active cooperation of the man in the Epworth League, the Christian Endeavor, the Young Men's Club, or whatever organization may be affiliated with the church.

IV. PHYSICAL EDUCATION.

(a) One of the things most needed by the blind soldiers is physical education. When one loses his sight, the tendency is to relax his muscles and allow many of them to become entirely useless. This can be avoided by proper physical training. Some of the institutions already have gymnasiums where instruction in calisthenics is given. But the Young Men's Christian Association can do much by opening its association buildings and establishing special classes where the blind may be taught gymnastics, swimming, skating, and various other athletic sports which will tend to give them much needed exercise and bring their unused muscles into play.

V. WHAT OCCUPATIONS CAN BLIND MEN FOLLOW SUCCESSFULLY?

This is one of the largest problems confronting those who are interested in the work for the blind soldiers. So far very little progress has been made in the last 30 or 40 years, in getting new occupations which blind people can follow successfully by those connected with institutions, but in individual cases blind men have demonstrated that there are few things they can not do if they have the will and the ambition to tackle the job. As near as possible, the blind soldier should be trained to do the thing he did before going into the Army. This may seem like a broad statement to ask a man to do the thing without his eyes that he did when he had full vision, but examination of psychological principles will demonstrate that a man who is proficient in one thing with the use of his eyes will readily acquire methods of doing the same thing by touch. This fact is illustrated by the man who lost his eyesight but continued to do a great deal of writing. He is able to write after some practice, probably not as well, but yet with some precision, simply by the use of his memory and his touch, so that it seems to me that if a blind soldier were a shoe clerk, for example, when he could see, he could easily adapt himself to conditions and become a successful shoe clerk even though he had lost his eyesight. If he were a machine operator when he could see, he could be taught to operate perhaps a simpler machine under present conditions.

With the idea in mind of having a blinded soldier follow as nearly as possible the occupation he followed when he had normal vision, we are passing to some of the occupations taught in blind institutions, and to some in which individual blind men have made a very marked success.

For your information I am giving, first, the occupations taught in institutions; and, second, those in which blind men, individually, have made a marked success.

(a) The following are the chief occupations taught in institutions: Broom making, weaving, chair caning, basket making, knitting and crocheting for women, mattress making, some manual training, and piano tuning.

With the exception of the last named, these occupations are done by hand, and must compete with similar products made by machinery, so that it is impossible for a blind man to make more than $6 or $8 a week, which in these days of high prices means a mere existence. For this reason a number of the States have enacted laws providing for commissions and pensions for the blind. Piano tuning is a different sphere. For the man who can do good work it provides an excellent opportunity for making a good living. The successful piano tuner can make from $25 to $40 a week if he works for a store or factory. With the advent of the player piano, however, the piano-repair work becomes more difficult, and it is only those blind men who have a mechanical bent who are able to master the intricacies of the various player pianos. These few men are very successful.

Many blind women and a few men become successful music teachers and musicians, but it is only after years of training, and in my mind it is hardly practical for those who become blind in adult years, for the reasons that their habits are formed, their fingers are stiff, and they do not acquire music as readily as younger boys and girls would. Typewriting and telephone operating have also been taught some in institutions, but practically no effort has been made to produce successful blind typists and telephone operators. For this reason I mention them in the second group of occupations rather than in the first.

2. (a) Occupations in which individual blind men have made a marked success:

A number of very successful lawyers have been blind. Some of these men have lost their sight in later life and have turned to the profession of law after losing their sight. In order to do this several qualities are necessary—first, a good education; second, an excellent memory; third, a clear, logical mind.

There have been a number of instances where blind men have made successful physicians. One of the most successful tuberculosis sanitariums in the country is conducted by a blind man at Monrovia, Cal. And still others have made a success as chiropractitioners and osteopaths. These two branches of the medical profession are especially adapted to blind men because they rely almost wholly upon touch for their results.

Another fruitful field of endeavor for blind people is that of insurance. If a man has known the insurance business before losing his sight, or if he has a pleasing personality and the ability to remember figures and forms of policies, there is no legitimate reason why the loss of one's eyes should be an insurmountable handicap to becoming a very successful writer of insurance. Many of the large companies already have employed blind people, and they have shown that they are very capable of producing results, which are what all commercial concerns are after.

Salesmanship: This is a field in which adult blind men have taken hold and have made wonderful success. I have in mind two men of my acquaintance who lost their eyesight by accident when they were up in years, one of whom operates a large furniture house, and the other is the most successful salesman for a large paint and varnish concern in the city of Cleveland. These men were both blinded in middle life and had to readapt themselves to their new conditions. This is a very productive field for blind men.

Typewriting: I have known of several cases where both blind men and women have made a marked success in the operation of the typewriter. With the use of the dictaphone so common, I see no reason why this should not be done more.

Telephone operating: I have known of a number of men and women who have successfully mastered a switchboard, and with the use of the buzzer system this should be very easily taught.

Telegraphy: I have known of two telegraph operators, but they did nothing but receive. It would be difficult for blind men to send and receive, because of the reading involved; but I see no reason why they should not be taught the Morse code and the wireless code and become successful receiving operators with the aid of a typewriter.

Machine operators: I know of five blind men in various parts of the country who are working in factories operating lathes, drilling presses, milling machines, armature winders, and other machines. With the modern safety appliances now in use in factories and with the introduction of almost fool-proof automatic machines I see no reason why blind men should not operate successfully many machines in factories, especially where they were used to such work before entering the Army.

Executives: I know of many large business institutions which are managed by blind men. One of the largest factories in Chicago has for its owner a blind man who lost his sight when he was 30 years old. A large undertaking concern in Cleveland has for its manager a blind man who lost his sight when he was about 22. A bank and a department store of which I know have for their owners and managers blind men. Senator GORE and Congressmen SCHALL and Fitzpatrick have demonstrated what blind men who lose their sight in their youth can do as executives and leaders.

This is but a partial list of occupations, but it is sufficient to illustrate the variety of callings in which blind men have made a marked success. There is no valid reason why any or all of these occupations should not be made use of in training the boys who come home without their sight from the battle field of Europe.

VI. WHAT CAN THE PUBLIC DO?

(a) The big thing is to treat the blind soldier with the same consideration you treated him before he went to war. I have known of many men and women who are in social work who are very courteous and very nice to blind men and women when they are in that work, but when they are outside of their work they seem to shun them. They seem to feel that there is somehow a difference because of the fact that the man or woman has lost his or her eyesight. The big thing to try to impress upon the public is that when a man loses his sight it does not change his ways of life; he should not change his attitude of mind, and it should not change the attitude of the public toward him. The blind man has the same passions, the same ideas, the same ambition, and the same aspirations as the people who see him, and the public should recognize this fact and accord him the same courtesy, the same consideration, and the same respect as they would a seeing brother. Fraternal organizations and clubs who have blind soldiers among their membership should see to it that these men are on committees; that they are called upon to talk; that they are given offices, and given the same things that they received before they went to France.

The attitude of the public to-day is one of pity. This is so because of long years of education along that line. The Bible refers to blind men as beggars. Shakespeare treats the blind man as a hopeless being, incapable of doing a man's work in a community. Modern literature likewise sympathizes and pities the blind. It is for this reason that it is so hard for one who has lost his sight, who can really do things, to get an opportunity to show just what he can do. It is for this reason that blind men and women are looked upon as beings from another world, and it is this attitude of the public which the Young Men's Christian Association can do much to change in its dealings with blind soldiers.

LINCOLN'S BIRTHDAY, FEBRUARY 12.

Mr. GILLETT. Mr. Speaker, I ask unanimous consent that on Lincoln's birthday, the 12th of February, the gentleman from Illinois [Mr. GRAHAM] be allowed to address the House for 30 minutes on the life of President Lincoln.

Mr. RUSSELL. Mr. Speaker, reserving the right to object—I am not going to object, of course—for four or five years past I have on that day, with the permission of the House, read Lincoln's Gettysburg address, and I ask that I be permitted to read that address first and then let the gentleman from Illinois follow.

Mr. GILLETT. I am quite willing to accept that as an amendment.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent that on Lincoln's birthday, February 12, after the reading of the Journal and the clearing up of business on the Speaker's table, the gentleman from Missouri [Mr. RUSSELL] read Lincoln's Gettysburg speech, and that the gentleman from Illinois [Mr. GRAHAM] be then permitted to address the House not to exceed 30 minutes; of course, not to interfere with conference reports and privileged business. Is there objection?

There was no objection.

AGRICULTURAL APPROPRIATIONS.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill.

The SPEAKER. The gentleman from South Carolina moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the Agricultural bill. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER. The gentleman from Georgia [Mr. CRISP] will take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 9054) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1919, with Mr. CRISP in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 9054. When the committee rose at its last sitting there was pending an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MCLAUGHLIN of Michigan: Page 13, line 19, strike out the figures "$250,000" and insert in lieu thereof "$500,000."

The CHAIRMAN. Under agreement of the committee, debate on this paragraph and all amendments thereto was limited to two hours, the gentleman from Michigan [Mr. MCLAUGHLIN] to control one hour of that time and the gentleman from South Carolina [Mr. LEVER] the other hour. The Chair recognizes the gentleman from Michigan.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I expect now to occupy only five minutes. The amendment I have offered, if adopted, would increase the amount of money available to the Bureau of Animal Industry for the work of eradicating tuberculosis in live stock. Several speeches, all good, were delivered a few days ago in general debate, showing the general prevalence of tuberculosis in live stock, how it is growing and spreading, the extent of the loss and damage, and the danger also to human life.

I think, Mr. Chairman, that as my time is so limited I should confine myself to a statement as to how this matter arose and the status of it as it comes before the House. Some gentlemen, particularly interested in the subject, had interviewed the Chief of the Bureau of Animal Industry, Dr. Mohler, as to whether or not the disease of tuberculosis in live stock could be eradicated. He replied, stating without qualification, that it could be eradicated. He was asked further how much money his bureau could properly and economically expend during the coming year in carrying on that work, and he said he could use $1,000,000.

The fact was called to his attention that many veterinarians would be required and that many of them are now being employed by the Government of the United States, enlisted in the military service, and he was asked if, in view of that situation, he would be able to obtain the veterinarians needed. He said: "Yes; I can obtain the veterinarians. I can get the men if the money suggested is appropriated for the purpose."

Later the Secretary of Agriculture recommended the appropriation of only $250,000, and stated that that is all the money that can be profitably and properly used during the coming year. I have great respect for the Secretary of Agriculture. I esteem him as one of the great men in this administration, and I hesitate to differ from him.

In fact, I think I do not differ from him, believing that he has made this statement having in view the necessity of other large appropriations and the need of economy, and believing, too, that he would prefer that this matter should be put up to, considered, and settled by Congress, rather than that he alone should determine the amount of money that should be appropriated. And if I may be permitted to choose between the eminent Secretary of Agriculture and the chief of his bureau as to the amount of money that can be properly used, I may be pardoned if I choose to follow the chief of the bureau, who knows the work, has been engaged in it, and knows the kind of work that he will carry on. Under him will be the employment of the men and the use of the entire sum. He says, without qualification, that $1,000,000 can be used. Mr. Chairman, he made that statement to two of the Members of this House before the matter was taken up by the Secretary of Agriculture, and in justice to him it should be said that he holds to his original statement in spite of the statement made by the Secretary.

Mr. YOUNG of Texas. Will the gentleman yield?

Mr. McLAUGHLIN of Michigan. I prefer not to yield now. My time is so limited. In that condition the matter came up before the Committee on Agriculture, and a recommendation was made that only $250,000 should be appropriated for this work. I believe, Mr. Chairman, that my amendment, which would carry $500,000, ought to be adopted. Tuberculosis in cattle has increased in the last 10 years from 0.58 per cent to 3.35 per cent, and in the slaughterhouses where swine are slaughtered the percentage of animals found to be affected with tuberculosis during the year 1916 runs from 3 per cent to 24 per cent. A large part of the cattle slaughtered in these houses come from the ranges, and the large areas of the country, where the disease has not been so prevalent as in other parts and where conditions are not such as to encourage and permit its spread. Think, then, of the condition that must exist among the dairy herds that are largely confined and kept under conditions which encourage the development of tuberculosis.

The chief of the bureau says:

Tuberculosis can be eradicated from all the cattle and all the swine in this Union; otherwise the Department of Agriculture would not have embarked upon such a tempestuous campaign. To support such a broad assertion there is abundant evidence obtained from the school of experience covering a period of several years.

He goes on to give the names of the States in which the work has been successfully carried on and in which tuberculosis has been practically, if not altogether, eradicated. He says—

Furthermore, wherever and whenever an effort was made to eradicate the plague and the earnest cooperation of the live-stock owners and officials has thus been obtained, success has never failed to crown the enterprise.

Herds of cattle which have at the inception of the campaign contained 75 per cent of diseased animals have been freed of the malady and have remained as free herds.

Herds which on the first test were found free of disease have, by the prudent care of their owners, been kept free of tuberculosis.

The experience the department has had, as outlined here, has been enjoyed by the veterinary officials of some States. The preponderance of successful experiments, if we may call them such, is convincing proof that when conditions are favorable tuberculosis may be eradicated.

He says also:

The American people can eradicate tuberculosis, or prevent its eradication, or increase its presence.

In 1907, the bureau first undertook systematic investigations in regard to the eradication of bovine tuberculosis, and the results which have been obtained through 10 years of study indicate that the eradication of tuberculosis of cattle and swine is probably the largest and most difficult problem which the bureau has undertaken to solve for the benefit of the live-stock industry and the general public, which benefits from the advancement of that industry.

And he goes on to say that it is a demonstration and not a theory, not an experiment, that the disease can be eradicated, and under proper care when once eradicated it does not again appear.

Mr. Chairman, the interest of the membership of the House in this subject of tuberculosis in live stock has been revived

and greatly aroused by facts brought to their attention by the gentleman from Nebraska [Mr. SLOAN], who has, in his usual intelligent and thorough manner, elicited facts and figures showing the prevalence and rapid spread of that plague, and that it can be eradicated. He seems to have been able also to attract the attention and arouse the interest of the Bureau of Animal Industry, and the chief of that bureau, adopting the suggestion made to him by Mr. SLOAN that an appropriation of $1,000,000 ought to be made, promises, and I am sure will inaugurate and carry on a vigorous campaign for the eradication of tuberculosis. Everyone who knows existing conditions will welcome that campaign, and State authorities will give prompt and effective assistance in carrying it on.

Let the work begin at once and let there be abundance of money available to enable officials of the department to carry it on properly and to a successful end. I trust my amendment increasing the appropriation by $250,000 will be agreed to.

I reserve the remainder of my time.

The CHAIRMAN. The gentleman consumed nine minutes.

Mr. LEVER. Mr. Chairman, I yield five minutes to the gentleman from Mississippi [Mr. CANDLER].

Mr. CANDLER of Mississippi. Mr. Chairman, this item in the bill is a new item. It carries an appropriation of $250,000. The committee gave to this matter full and thorough investigation, had a hearing upon this specific proposition, and gave full consideration to everything that was suggested in reference to it.

Nobody denies that this condition exists throughout the country, and that it ought to be remedied. We are anxious to do what can be done in that direction; but we all recognize the fact, or at least ought to recognize the fact, that you can not accomplish everything in a day; that it takes some time to accomplish anything, no matter what you may undertake and to make proper preparation to begin the work. We sought the very best information that could possibly be obtained in reference to the facts as to conditions throughout the country, and what could be done to reach an effective remedy in the most efficient manner in the shortest possible time. Wanting information upon this subject, and desiring it from the source which we believed could give us the best information to be obtained, we went to the Secretary of Agriculture himself, and he recommended the sum carried in this bill, $250,000. The Secretary of Agriculture advised the committee that in his opinion the department could effectively use $250,000 during the next fiscal year. Now, the gentleman from Michigan [Mr. MCLAUGHLIN] says that the chief of the bureau says that he can use $1,000,000. Well, we all know that the chiefs of these bureaus are anxious at all times to enlarge their activities, and that they advise us sometimes that they can use a great deal more than the Secretaries of these executive departments oftentimes believe they can use advantageously or ought to be permitted to use. The gentleman from Michigan [Mr. MCLAUGHLIN] says that as between the Secretary of Agriculture and the chief of this bureau in this instance he would take the advice of the chief of the bureau. I prefer, and I believe it is wise, to take the advice of the Secretary of Agriculture, the head of this department, as to what can be done and as to the most effective way in which it can be done.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. CANDLER of Mississippi. I have only a very little time remaining.

Mr. MOORE of Pennsylvania. Will the gentleman tell us to what extent the States cover this question of tuberculous cattle? What do the States themselves do?

Mr. CANDLER of Mississippi. The States themselves at present are doing practically nothing along this line of work. They depend upon the Government, like they often do in reference to other matters, to do the whole work.

Mr. MOORE of Pennsylvania. My information is that many of the States are exercising a great deal of care and spending a great deal of money for this purpose.

Mr. CANDLER of Mississippi. Yes; in quarantine work. They are supposed to exercise all the activities they can along that line, but when it comes to expending money outside for the purpose of eradicating the disease and going to the root of it, they are not doing anything along that line.

Mr. SLOAN. Will the gentleman yield?

Mr. CANDLER of Mississippi. I regret I can not. I have but five minutes. Now, as I understand the amendment, it seems to me that we ought to take the advice of the Secretary himself, and while the work is a good work and I want it distinctly understood I favor it, and it ought to be done and will be done, nevertheless, we should go about it in a businesslike way of utilizing what the Secretary of Agriculture says can be utilized effectively in order to bring about the best results. If we attempt to go beyond that we stand a chance of not utilizing the money effectively and of wasting the money in an effort which can not be directed in the proper course because the machinery to secure best results is not available at present. Therefore I believe that the amendment of the gentleman from Michigan increasing the appropriation ought not to be adopted, and that you should stand by the best judgment of the committee which brought in this report unanimously, and by the judgment of the Secretary of Agriculture, and that you should stand by the amount specified in the bill. [Applause.]

Mr. MCLAUGHLIN of Michigan. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. MCKINLEY].

Mr. MCKINLEY. Mr. Chairman, I come from an agricultural district. The farmers of my district have the highest appreciation of the work of the Department of Agriculture. I find the department always willing to help for the benefit of the people of central Illinois. Therefore, I want to uphold their hands in every way. It is hard when we juggle the great figures of to-day, the immense appropriations, to appreciate the vast amount of funds going to different departments of the Government, and it is only by comparison that we can judge of the proportion that each department gets. For instance, the Department of Agriculture this year will receive in this bill about $27,000,000. We appropriate for one battle cruiser upward of $30,000,000, more than the Department of Agriculture will get for agriculture in all the United States. We know that one battle cruiser can not go across the ocean unless food is furnished. All over the United States we have appropriated hundreds of millions of dollars to be expended for temporary cantonments on rented lands. We pay eight or ten million dollars for one camp, while we are only appropriating $27,000,000 for the whole Department of Agriculture.

Mr. Chairman, I was very much impressed when the statement was made before our committee that 15 per cent of all the hogs slaughtered in Chicago were affected by tuberculosis; that 24 per cent of all the hogs slaughtered at Milwaukee were affected by tuberculosis. The information was given to us that tuberculosis originates in cattle and then spreads to the hogs in the country. We were informed that if it was eliminated from the cattle it would be eliminated from the hogs.

Again, comparisons are what we must judge by. We are told that there are 20,000,000 head of cattle in the United States subject to the cattle tick. The department will receive this year in this appropriation bill some $630,000 for the elimination of the cattle tick. I know that they will use it properly, and it has been of great benefit to the country. There are 20,000,000 cattle subject to the cattle tick and 130,000,000 cattle and hogs subject to tuberculosis. If the same proportion of appropriation was made there would be provided in the bill some $4,000,000 in the elimination of tuberculosis from the cattle and hogs instead of the $250,000 provided in the bill, or the $500,000 asked for in the amendment offered by the gentleman from Michigan.

Taking into consideration, gentlemen, the fact, which I will repeat again, that 15 per cent of the hogs slaughtered in Chicago, the greatest packing district in the United States, and 24 per cent of those slaughtered in Milwaukee are affected with tuberculosis, it certainly seems to me very important indeed that we should give to the Department of Agriculture a liberal sum for the elimination of tuberculosis, and I hope that this committee will support the amendment offered by the gentleman from Michigan increasing the appropriation—not to $4,000,000, which would be the proportion that they ought to have, but to $500,000. [Applause.]

Mr. LEVER. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. YOUNG].

Mr. YOUNG of Texas. Mr. Chairman and gentlemen of the committee, I heartily agree with the gentleman from Illinois, who has spoken with reference to the importance of this Government undertaking to deal with the disease of tuberculosis among cattle. The gentleman from Illinois and the gentleman from Nebraska and the gentleman from Michigan will find no quarrel with me as to the great importance of the subject matter involved, because I have the honor to represent in part a State which produces eight times as many cattle as any other State in the Union, and when this question is broached it touches my State, with its 8,000,000 head of cattle. While I recognize the importance of the item, I also recognize the fundamental principle that ought to underlie every appropriation that this Congress makes, and that is the business principle, "Don't give any money unless you know that you have the appropriate machinery to spend that money effectively." [Applause] We have not got that machinery, and we must depend upon the Department of Agriculture to furnish that machinery in due time. They tell us now that they can not get veterinarians, because

the war has made a great demand upon these professional people, and that they are not to be had. When the question is asked them for their best judgment on every dollar that they can legitimately use in the next fiscal year, they respond that $250,000 is every single cent that can be used.

Mr. MONDELL rose.

Mr. YOUNG of Texas. Not now; I have not the time. They are the people who are going to spend the money. That question has been asked more than once. It is said in an indirect way that the chief of the bureau tells us that they can use $1,000,000. He made no such statement before the Committee on Agriculture, on which committee action must be had, and that statement was never made in that committee. If you enter the field of destroying cattle and hogs that are afflicted with this disease, and undertake to pay for destroying the cattle, $10,000,000 can easily be expended. But what are we, as the Committee on Agriculture, called on to do? Here is a great problem which is now being attacked. The gentleman from Illinois [Mr. MCKINLEY] refers to the cattle-tick item. I believe it was in 1906 that less than $100,000 was the first appropriation on that item. If you had then made an appropriation of a million dollars to attack that problem, which was a serious one, that million dollars would have been wasted, and we would not have been advanced any further than we are at this time. It takes time to educate people and to organize and to get these matters before the country, and you have got to have the cooperation of the people and of the legislatures of the respective States.

We did not make any headway in the cattle-tick item until an educational campaign was carried on, and when that campaign was had and we woke the people up to the problem that confronted them, the legislatures of the several States enacted laws compelling the dipping of their cattle, and by 1921 we hope the entire South will be free from this evil. But we went about it in a systematic way. We used a small appropriation at first. We enlarged this as demands and organization came, and we have obtained results by that enlargement. It was just the same with this tuberculosis item. I am ready to enlarge it when we get the organization; I am ready to spend every dollar that can be legitimately expended just as fast as the subject matter can be brought to the attention of the people of the country; and I am as intensely interested in stamping out this disease from among our cattle and hogs as any gentleman on the floor of this House. But we must do it in a businesslike, systematic way.

Mr. SLAYDEN. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Texas. Yes.

Mr. SLAYDEN. May I ask my colleague if any other method for the treatment of tuberculosis in cattle has been discovered or is resorted to than the slaughtering of the afflicted herds?

Mr. YOUNG of Texas. That is the only way that has been found by which you can destroy it, and I have but to call the attention of the gentlemen of the House to this fact: This same disease is in the human family, and millions of dollars have been expended all over the country endeavoring to eradicate it, but we have not been able to do it.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. MCLAUGHLIN of Michigan. Mr. Chairman, I yield seven minutes to the gentleman from Minnesota [Mr. ANDERSON].

Mr. ANDERSON. Mr. Chairman, I want to direct what I have to say to the proposition that the States are doing something toward the eradication of tuberculosis, and that it is possible, by the use of proper administrative measures and by proper legislation, to eradicate the disease. But the States can not do it by themselves. This is not a State problem; it is a national problem. No State can keep itself clean from tuberculosis, no matter how efficiently its laws may be enforced, unless similar legislation, similar administration, is enforced in the States which surround it.

Mr. SLAYDEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. I have only a minute, but I yield for a question.

Mr. SLAYDEN. I could not do it in a minute.

Mr. ANDERSON. I can not give the gentleman more time.

Mr. SLAYDEN. I only wanted to ask a question.

Mr. ANDERSON. Oh, I yield to the gentleman for a question.

Mr. SLAYDEN. The gentleman says that by proper legislation tuberculosis in cattle can be eliminated.

Mr. ANDERSON. And by enforcement of the law.

Mr. SLAYDEN. I would like to know how. Have the scientists discovered any method of treating it effectively except to destroy the herds?

Mr. ANDERSON. And by segregation.

Mr. SLAYDEN. The gentleman means letting the climate cure them?

Mr. ANDERSON. No. Minnesota was one of the first States to undertake the eradication of tuberculosis. I think more efficient work has been done there than in any other State. We have been in this work since 1904, and I desire to present some figures as to what has been accomplished in that State with a view of demonstrating that it is possible to eradicate tuberculosis. In 1911 in the State of Minnesota 4,405 cattle were tested. Three thousand five hundred and three of these cattle had been previously tested and the reactors segregated or destroyed, and of the number previously tested only nine-tenths of 1 per cent were found to be affected. As to those upon whom the first test was applied, 16 per cent were found to be affected. In 1916, of 4,700 cattle previously tested, only eight one-hundredths of 1 per cent of the cattle were found to be affected. Of those upon whom the first test was made, 9.5 per cent were found to be affected. In 1917, of 7,279 cattle previously tested, there was not found a single reactor. Of 2,193, which were then tested for the first time, 10 per cent were found to be affected with tuberculosis. But the singular thing and the impressive thing in connection with this test is this, that as to the 2,193 cattle that were tested for the first time, of which 10 per cent were found to be reactors, it was found that of this 10 per cent 60 per cent were imported into the State.

In three months of 1917–18, 3,225 cattle were retested. Of this number four one-hundredths of 1 per cent were found to be reactors, while of 329 tested the first time 15 per cent reacted, and of those 50 per cent came from other States. From 1902 to 1910, 122,978 cattle were tested, of which 7.8 per cent reacted. From 1910 to 1917, 248,586 cattle were tested, and of this number 3.7 per cent reacted. In other words, these figures show a progressive decrease in the number of cattle affected with tuberculosis in the State of Minnesota, and they show that the cattle that reacted from the test were very largely imported from other States. The logical conclusion of these statistics is that no State can effectively cope with this problem unless it is made a national problem and unless every State undertakes to eradicate tuberculosis. It is not a State problem. Just now it is more peculiarly a northern problem, but the South is about going into the cattle business. Much of its pure-bred stock will have to come from the North, and the South is therefore just as much interested in seeing that tuberculosis is eradicated in the northern herds as the northern people themselves, because their problem will be greatly increased in difficulty if infected cattle from the North are imported into the South for breeding purposes. Now, the gentleman from Texas [Mr. YOUNG] suggests no difficulty in finding men to carry on the work of eradicating the pink bollworm, for which we propose to spend $500,000. He found no difficulty last year in finding men to accept the pay under the item for the eradication of the southern cattle tick, and many of those men are veterinarians. Why should he insist that men can not be found to carry on this work? Twenty States, to-day, by law, require tests of cattle and the destruction of those which are found to be absolute reactors. In 15 of these States compensation is paid by the State up as high as, I think, to three-fourths of the value. In other States, while it does not specifically provide for compensation, of course compensation could be obtained. No effective work can be done anywhere unless provision is made for compensation for cattle slaughtered.

The CHAIRMAN. The time of the gentleman has expired.

MESSAGE FROM THE PRESIDENT.

The committee informally rose; and Mr. FOSTER having taken the chair as Speaker pro tempore, a message, in writing, from the President of the United States, by Mr. Sharkey, one of his secretaries, informed the House of Representatives that the President had on January 26, 1918, approved and signed bills of the following titles:

H. R. 6176. An act extending the time for the construction of a bridge across the Monongahela River at or near the city of Fairmont, W. Va.; and

H. R. 7697. An act to authorize the calling into the service of the United States militia and other locally created armed forces in the Philippine Islands, and for other purposes.

AGRICULTURAL APPROPRIATION BILL.

The committee resumed its session.

Mr. LEVER. Let me inquire of the gentleman from Michigan how many speeches he has?

Mr. MCLAUGHLIN of Michigan. I have several more applications than I can accommodate.

Mr. LEVER. I suggest that the gentleman take one more speech now.

Mr. McLAUGHLIN of Michigan. I yield five minutes to the gentleman from Maryland [Mr. LINTHICUM].

Mr. LINTHICUM. Mr. Chairman and gentlemen of the committee, it is not my intention to take very much time of the committee this morning, but I want to call particular attention to the subject of tuberculosis in cattle as strong as it is possible for me in language to do. You know I have been studying this question for the past two years, and I am thoroughly convinced that if there is one thing that Congress ought to do and do quickly it is to eradicate tuberculosis in cattle in this great country of ours. Why should we be appropriating to eliminate all kinds of pests and diseases, worthy as those appropriations are, and neglecting to appropriate for the eradication of tuberculosis, when scientists all tell us that a large part of the tuberculosis in the human race is caused by impure milk from tubercular cattle? Why should we stand idly by and see 6,000 children a year die of bovine tuberculosis while we appropriate some $600,000 for the boll weevil and hundreds of thousands of dollars for hog cholera and thousands of dollars for the eradication of cattle tick and all these other things, though, as I say, they each and every one are worthy and are necessary? Yet we stand by talking and parleying over the appropriation of a little more money which means life for the children of this country, more largely perhaps than for grown people, although it means the life of grown people as well. We all know that milk and milk products go to the stomachs of the children of this Nation in their raw state. There is no cooked process about them. We have granted a meat inspection—a very wise and worthy law—but you know that the meat that goes into the human stomach goes in there in a cooked state, and yet here is milk, butter, and cheese, carrying tuberculosis germs from 2,000,000 cattle, going into the stomachs of children and grown people of this country in a raw state; and we stand here and talk as if we could not appropriate more than $250,000 because some one says that some man in the Agricultural Department says——

Mr. COX. Will the gentleman yield?

Mr. LINTHICUM. I have only five minutes. If you will give me additional time, I will.

Mr. COX. I want to know how many cattle have tuberculosis?

Mr. LINTHICUM. Two million cattle of this country have tuberculosis.

Mr. COX. Does that mean milch cows?

Mr. LINTHICUM. The milch cows of this country. We have 22,000,000 of cattle in this country, and that means about 1 to every 10 of the cows of this country are spreading the disease germs of tuberculosis. We stand here and say we can not give $500,000 to carry on this work. I had a talk with Dr. Mohler, and he said if you will give $1,000,000 he can put men at work eradicating this disease in the next few years, but if you only give $250,000 he can only go about it in the present slow process; that if he had $1,000,000 he could send men to stir up the States, that he could employ persons to go before the people and let them know that this thing ought to be eradicated, and that he could use $1,000,000 with great efficiency. In the long run it will not cost the United States any more, because you merely hold it down with $250,000, whereas you can proceed to eliminate it with $1,000,000.

Now, I do not wish to go into the vast details of this matter, as I have not the time; but you have read my remarks, and you know that there are some hundreds of labor clubs of this country, some hundred women's organizations in this country, and numerous other clubs, aggregating several hundred, which have indorsed this proposition, and those indorsements have been filed in Congress.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LINTHICUM. I ask for two minutes more.

Mr. McLAUGHLIN of Michigan. I yield to the gentleman two minutes more.

Mr. LINTHICUM. There are some hundreds of clubs which have passed resolutions asking Congress to eradicate tuberculosis. Now, gentlemen, I sincerely hope this committee will vote to give us certainly the $500,000; but we ought to have $1,000,000 in order that we may get to work to eradicate the trouble. What is the use of being compelled to pasteurize milk and to cure the disease germs when you can go to the root of the evil and eradicate tuberculosis and have the milk pure? Instead of that, we go along with impure milk and go to work pasteurizing it, just as in cities that had impure and muddy water—we would boil the water. What did we do then? We put in great plants to purify the water before it went into the homes. Let us appropriate enough money to purify this milk and eradicate tuberculosis and save 6,000 babies in this country every year. I tell you, as I told you on Friday, that we talk about conservation of food and fuel, and this, that, and the other; but one thing above all others ought to be conserved, and that is the human white race on this earth—with this great war going on and killing off thousands of white people every day and every month, while the other races are propagating. Instead of conserving our race we allow bovine tuberculosis to kill 6,000 babies each year. What I want to say is that you should eradicate tuberculosis, and thereby conserve the human race, so that these children will not be killed off by bovine tuberculosis. Now is the time to do it by voting for this amendment and telling the Bureau of Animal Industry to get busy and eradicate the evil.

Mr. LEVER. Mr. Chairman, I yield five minutes to the gentleman from Kansas [Mr. DOOLITTLE].

Mr. DOOLITTLE. Mr. Chairman, there is nobody of the mind to disagree about what the gentleman has said as to the eradication of tuberculosis in live stock. The question is, How are we to get at that eradication? The Committee on Agriculture is as anxious to eradicate tuberculosis in milk and in live stock as any other group of men on the globe, but we must be guided by what the Department of Agriculture, which has to spend this money, has to say about what they can do with the money that we give them. We have already provided in this bill $50,000 more for the eradication of tuberculosis than the department estimated for. We have provided in the bill, in giving $250,000 for eradication of tuberculosis, the maximum amount that any witness appearing before our committee testified they could reasonably spend during the next fiscal year. An effort was made by leading questions to get witnesses from the department who know how the money is going to be spent to say that they could use $500,000 or $1,000,000, and not one would say that they could use over $250,000. Therefore the committee can not take the people's money and throw it to the winds. If the department can not spend this money in a legitimate way and in an effective way, why should we give them money which they do not want and which they can not use? The Committee on Agriculture is liberal. It wants the department to have every cent it can use, but when they can not use it why appropriate it?

Mr. LOBECK. Does not the gentleman think that they were very moderate in their demands, considering the largeness of the proposition?

Mr. DOOLITTLE. I think they were moderate; yes. I hoped they would say they could use $1,000,000.

Mr. LOBECK. Do not the departments usually ask for more than they want?

Mr. DOOLITTLE. Sometimes they do. And the estimates in this case seem to be moderate. But witnesses appeared before our committee, and the maximum that any man would state was that they could use but $250,000.

Now, there were reasons for that. One of the reasons is that there is a great shortage of veterinarians, as my friend from Nebraska knows.

Mr. LOBECK. That is true.

Mr. DOOLITTLE. The Government at this minute wants 2,000 veterinarians and is unable to get them.

Mr. LOBECK. If they were willing to pay them a fair salary, they could get them, could they not?

Mr. DOOLITTLE. I think not, because you can not make a veterinarian overnight. They have to go through several years in training.

The department is not opposed to the proposition. It wants to make the eradication of tuberculosis complete, but it can not do it with money alone. The department can not turn the money loose unless they have some way to spend it, and they do not want to spend it in a useless procedure by giving it to some men or giving it to clerks down here in the department. They might bring in a bunch of clerks and let them warm the seats and pay them good salaries, but that would not be an eradication of tuberculosis.

Mr. LOBECK. The reason they do not get the good men to-day in the Bureau of Animal Industry is because those men get more pay in other lines.

Mr. DOOLITTLE. That is not the question here.

Mr. LOBECK. You are in favor of a large appropriation?

Mr. DOOLITTLE. I am in favor of as large an appropriation as the department can spend to good advantage.

Mr. LINTHICUM. Was not Dr. Mohler absent on that day the gentleman refers to? Was he not absent in the West?

Mr. LEVER. Dr. Mohler made a statement on the subject. But on the day referred to he was not there.

Mr. LINTHICUM. So far as the veterinarians are concerned, I had a veterinarian of 10 years' practice, and asked them to take him, but they said they had more applications than they needed and could not take him on.

Mr. DOOLITTLE. Appointments are made under the civil-service regulations.

The gentleman is mistaken about the scarcity of veterinarians in the department.

Mr. LINTHICUM. I do not know. That is what they told me. That is all I know.

The CHAIRMAN. The time of the gentleman from Kansas has expired. The gentleman from Michigan is recognized.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield five minutes to the gentleman from Kansas [Mr. LITTLE].

The CHAIRMAN. The gentleman from Kansas is recognized for five minutes.

Mr. LITTLE. Mr. Chairman, the gentleman from Texas [Mr. YOUNG] a few moments ago, I notice, conceded the magnitude of the evil of tuberculosis and the necessity for the remedy, but, as I gathered from what he said and from what has just been said by the gentleman from Kansas [Mr. DOOLITTLE], the trouble is they have not the people who would go ahead and do this work. Well, if the evil is so acknowledged and the necessity so great, when we have appropriated the money we shall have done our duty, and then it is up to them. If half a million dollars is not enough, then let us make it $2,000,000. If they can not hire veterinarians to do this work with what they have now, let us give them some more. Here is one of the greatest evils that threatens this country, one of the greatest dangers that has menaced it, and 20 States are working at it now.

I have seen this House spend $600,000,000 in two hours' time without batting an eye and without ever getting an answer to a question as to what it was for, except the general proposition; and yet when a man comes in here and wants you to grant $500,000 to fight tuberculosis you say you can not get the men necessary to do the work. Why, this $500,000 would only employ 300 men. By giving the money you can have them go out and get the men. You can not find 300 veterinarians!

This bill appropriates $620,000 for the eradication of the southern cattle tick; for promoting standards and investigating the ginning, baling, compressing, and tare of cotton, $45,000; for farmers' cooperative demonstration and for the demonstration of the best methods of meeting the ravages of the cotton boll weevil, $650,000; to keep the Mexican pink bollworm of cotton in Mexico out of the United States and survey him on his native heath in Mexico, $100,000; to make the aforesaid pink Mexican bollworm an outlaw on all lands and seas, to be killed at sight, $400,000. Here is $1,815,000 to be expended in the cotton belt, including the area of the Texas cattle tick. Evidently there is ample supply of men for this business. Then I find that you have appropriated $250,000 to stamp out tuberculosis in cattle; and when the gentleman from Michigan modestly asks you for $500,000 we are gravely told that there are not men enough in the United States to be had on whom could be expended half a million dollars to fight against the ravages of a disease which not only assails dumb brutes and cotton patches, but is a standing menace to every home in the United States. If everybody in the cotton belt in civil life is going to put in his time running down the Mexican bollworm and the Mexican cattle tick, we will have no gentlemen from that territory to fight the tuberculosis.

But will this not open the way for the employment in civil life of somebody north of the Ohio River? Have not the gentlemen so confined their employment of civilians to the cotton belt that they wholly overlook the fact that in the cow country and the wheat country and the corn country there are many good men of both political parties who could be persuaded for a consideration to enlist under the Government flag in helping the Agricultural Department? The terrific menace which tuberculosis is has of itself forced a demand for and a supply of veterinarians such as was never before known, and every man in Congress knows that the statement we can not secure enough veterinarians to draw salaries amounting to $500,000 for investigating the dairy cattle of this country is absolutely without any foundation whatever. I can state without fear of successful challenge that if every dollar of the $1,815,000 appropriated for the cotton-belt ticks and worms were turned over to the fight against tuberculosis it would improve this bill 100 per cent. The people of South Carolina do not milk enough cows to have any serious appreciation of what it means to a dairy country to fight tuberculosis.

Last year Swift & Co. sold $875,000,000 worth of meat products. The Armours sold in this country $575,000,000 worth of meat products. Last year Swifts cleared $32,000,000 and Armours in the United States $21,000,000 selling meats. Armour made 2.21 per cent, Swift 3.7 per cent on every dollar of sales. The Armours cleared 21 per cent on their capital stock and, they state, 14½ per cent on their net capital. Besides their foreign holdings Armours had at the close of last year a capital stock of $100,000,000 and a surplus of $56,000,000. Their bills and accounts payable had risen from $41,000,000 to $101,000,000 in that year. Their balance sheet showed as resources $314,000,000 in the meat-packing business. From those figures you can begin to get an idea of the immensity of the cattle trade and its evils that attack us and the broad spread it makes among the people. Those facts in themselves should be enough to induce the House to be liberal in such a thing as this.

Within the last half century I have myself seen this great industry spring from nothing under my eyes. When I went to the district which I now have the honor to represent here, Kansas was a cattle country, a buffalo-cattle country. The frontier village in which I resided, far from a railroad, had in every other home a buffalo robe and every season buffalo meat for sale in the butcher shops. A neighbor kept a buffalo calf in his yard. In a spirit of scientific research once, at the mature age of 12, I hurried along a bunch of buffalo with a stick, just to see what could be done, and older men have hurried them all away as carelessly. That such a change could come in a lifetime seems almost incredible. What will it be hereafter?

As they disappeared the longhorns came across the Indian Territory from Texas. Infested with the Spanish fever and the Mexican tick, they were not allowed to be driven into Arkansas and Missouri. Accumulating in vast numbers at the close of the Civil War, after the Confederate Army market terminated, one year, in the late seventies, Capt. King and the other big cattlemen started hundreds of thousands of them across the prairie headed for the Kansas Pacific Railroad, just built toward Denver. A shrewd man, Joe McCoy, secured a contract with the Kansas Pacific, built stockyards at Abilene, where I long lived, staked out a line of travel from the Arkansas River crossings toward his stockyards, erected signs, and the whole Texas trade landed at Abilene as seamen find a safe harbor. For several years that little village was the greatest cattle mart in the world, while Wild Bill reigned as marshal and monarch. Then the longhorn passed away in the wake of the buffalo, and they brought in the little round cows from the East and England, and tuberculosis and dairy farms and creameries, and established where I now reside a packing house whose firm this year put out almost a billion dollars of packed meats to go into millions of homes. Do not quibble about getting a few men. This is a big proposition, gentlemen, and I hope you can think of it in a big way. Will you permit the great future of this trade to be undermined by this dread enemy unchallenged while you run down the pink bollworm and the boll weevil that are only injurious to crops, not life?

The second Kansas district supplies more foodstuffs to the world than any other district in the United States. We are second in packing-house industries, and second in flour milling industries, and we have eight large agricultural counties besides. You have just shown your thoughtfulness for the wheat farmers out there by cutting off 20 per cent or so of the price of the farmer's wheat. But he does not grumble. You did not cut it off of cotton. You did not reduce the price of arms or ammunition, nor of any great product but wheat. When you have attempted to remedy the evils that attack cotton we did not quibble. I hope you will stop a moment and think about the people from whom you have taken 20 per cent from the price of wheat. You did not do that in the case of the cotton farmer, but you might just as well have done it with the one as with the other. The price of cotton was comparatively higher than that of wheat. You hear very little in the way of complaint from the wheat farmers.

These men settled on raw prairie and after years of mortgages and droughts finally reached to a place where the world was coming their way and they were getting the best end of the market. This Congress, that does not "cotton" to wheat, found it necessary to take 20 or 25 per cent from the value of the wheat that the farmers were holding for the advantages of the market, that have come to every factory and wholesale house in the Republic, and have covered every cotton field deep with yellow gold. Why should you take 20 per cent from the wheat farmer? If you had said to every man with over a million dollars, "turn into the Government, sacrifice to the war measures, 20 per cent of your accumulated holdings, it would have caused not one-fourth of the distress, but a thousand times the outcry that the wheat farmers made. Oh, the wheat farmer can place his savings by the side of his son as he goes into battle, but nobody dreamed of saying that to the millionaire and his capital. Now, when you are spending a million and a half on the cotton fields, when you put $600,000 to running down the cattle tick, half extinguished now, you rise in astonishment that we ask a paltry half million to give the country sanitary milk, butter, and meat, sound stock in the pasture by the wheat field. It ought to be $10,000,000!

The western agriculturalist is a diversified industrialist. He scarcely said a thing when he was told that it was for the interests of his country that he sacrifice. Is there no balm in Gilead? Now, comes the farmer and leads the old cow up to the rack, and says, "Here, she has got tuberculosis; take a crack at that while you spend $600,000 on the cattle tick."

All you need to do is to take Mohler's word. The gentleman from Michigan [Mr. McLAUGHLIN] and the gentleman from Maryland [Mr. LINTHICUM] both have had the same experience with Dr. Mohler. He tells us through them that he can eventually cut out tuberculosis in live stock for a million dollars if given now to begin a system. If a man asks for a billion here, he is trusted at sight. If he only asks for a million, you view him with suspicion. You have taken the word of everybody that came here without any hesitation when they were asking for hundreds of millions of dollars, and when Dr. Mohler comes up and says, by the mouths of the gentleman from Maryland and the gentleman from Michigan, that if you give him a million dollars he will begin a policy that will eradicate tuberculosis, why quibble about a matter like that? He is either right or wrong. You could not spend your money to better purpose. Why not try it?

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. LITTLE. Yes.

Mr. LEVER. If either the gentleman from Michigan or the gentleman from Maryland says that Dr. Mohler stated to them positively that he would agree to eradicate tuberculosis in live stock for a million dollars, I will agree to it.

Mr. LINTHICUM. I do not think he said he would agree to eradicate it for a million dollars, but he said he could begin to eradicate it for a million dollars.

Mr. LITTLE. Well, I will stand on the record of what the gentleman from Maryland says. If he can begin to eradicate it, that is sufficient for me. Your bill, this bill, provides $620,000 for the "eradication of the southern cattle tick." You mean to work toward the eradication, and will want more money next year. Mohler, of course, meant to inaugurate a policy that will finally drive out tuberculosis. You might as well trifle with cholera. You have been spending hundreds of millions of dollars on less of a promise than that. [Applause.]

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Iowa [Mr. HAUGEN].

The CHAIRMAN. The gentleman from Iowa is recognized for 10 minutes.

Mr. HAUGEN. Mr. Chairman, I have no quarrel with the gentleman from Kansas [Mr. LITTLE] or anyone else as to the importance of this appropriation. I agree that the eradication of tuberculosis is one of the most important problems that Congress has to deal with. But, gentlemen, the Department of Agriculture and the Committee on Agriculture have a number of important measures and problems to deal with. It has been the policy and the endeavor of the committee to deal with every problem that is called to its attention and to give to each problem due consideration. And, gentlemen, if you will compare the liberal appropriations made for this purpose with those made for other lines of work you will all agree, I believe, that the committee has been most liberal.

I have been interested in this work for more than a quarter of a century. Ten years ago we succeeded in making a small appropriation. This work has been conducted by the department. Last year $132,000 was expended. The department this year estimates an increase of $66,000, bringing the total up to $198,000. The committee held special hearings, and the committee increased the appropriation to $250,000, an increase of nearly 100 per cent over the appropriation made last year. When Dr. Kiernan was asked about the amount of money that might be expended to advantage we were told that $250,000, not a dollar more, could be used.

He was asked this question several times. He appeared before the committee as the representative of the department. He represented Dr. Mohler. He spoke for Dr. Mohler, and Dr. Mohler says through Mr. Kiernan that $250,000 is every dollar that can be spent to advantage in the department for this purpose.

Now, as I have said, we have other problems to deal with. We are trying to be practical. Gentlemen, are we going to take care of the small problems and overlook the larger problems? Take the appropriation made, for instance, for the study and control of the black rust. We are told that the loss resulting from tuberculosis amounts to $25,000,000 per annum. Let us look into the wheat problem. Anybody who knows anything about the destruction by the black rust will, I am sure, admit that the yield of wheat can be increased 50 per cent by eradication of the black rust. The wheat estimate for this year is 668,000,000 bushels. The average for five years was 802,000,000 bushels. Increase that 50 per cent—no, increase it only 25 per cent—and you have an increase of 200,000,000 bushels, which at the present price, about $2 a bushel, would make $400,000,000. That, my friends, is sixteen times $25,000,000. Are you as business men, are you as Representatives of these wheat-growing States going to say to the people, "We propose to give $500,000 for the investigation of tuberculosis," when you can increase the production of wheat by 200,000,000 bushels, or $400,000,000, by making more liberal appropriation for the eradication of black rust?

Mr. McLAUGHLIN of Michigan. Will the gentleman yield to me?

Mr. HAUGEN. Yes, indeed.

Mr. McLAUGHLIN of Michigan. Does the gentleman think it is a good argument, because he was not able to get the amount of money available for wheat diseases increased, to refuse to permit the increase of this appropriation for tuberculosis?

Mr. HAUGEN. The gentleman is a member of the committee, and he knows that we did increase that appropriation.

Mr. McLAUGHLIN of Michigan. How much?

Mr. HAUGEN. Thirty thousand dollars. We expended $20,000 last year for the investigation of the black rust, and at the suggestion of the gentleman from North Dakota [Mr. YOUNG] and myself the appropriation was increased to $50,000.

Mr. McLAUGHLIN of Michigan. Was it increased by as much as you asked?

Mr. HAUGEN. Yes; every dollar, which is more than double the amount estimated for by the department.

Mr. McLAUGHLIN of Michigan. Did not the gentleman from Iowa make practically the same speech before the committee that he is making now, complaining of the small amount of money appropriated for wheat diseases and of the large amount of money appropriated for the pink boll weevil? The department asked $800,000 for the new disease.

Mr. HAUGEN. We got an increase of 150 per cent and cut the $800,000 appropriation down to $500,000. The appropriation for the study of the black rust last year was $20,000, and we increased it 150 per cent, or up to $50,000. Now, gentlemen, here we have an appropriation of $50,000 for the investigation of black rust, which, if successful, may increase the production of wheat to the extent of at least 200,000,000 bushels, or $400,000,000. As the gentleman will remember, the distinguished gentleman from Illinois [Mr. McKINLEY] asked for an increase in the appropriation for the investigation of the production of corn. An increase of $25,000 was granted, making an appropriation, all told, of $65,000. So we have one appropriation of $50,000 and another of $65,000, or $115,000, for the investigation and study of the black rust and diseases affecting the production of corn and wheat.

Mr. SLOAN. Did Mr. McKINLEY and yourself get all that was asked for for these two purposes?

Mr. HAUGEN. Yes; the gentleman from Illinois got all the increase he asked for—an increase of about 60 per cent. We have increased these two appropriations about 100 per cent and a decrease of nearly one-half of the $800,000, so there is no discrimination in that respect.

Mr. LOBECK. Will the gentleman yield?

Mr. HAUGEN. I should like to yield, but my time is limited.

Mr. SLOAN. One other question——

Mr. LOBECK. I simply wish to ask if anybody is complaining because they got this extra? We were all in favor of it.

Mr. HAUGEN. I am pointing out the injustice of increasing this appropriation when we are appropriating only $115,000 for the eradication of black rust and for the improvement and increase of our corn crop. I am pointing out the discrimination against wheat and corn, the injustice of asking for $500,000 for the eradication of tuberculosis. We have in this country about 63,600,000 head of cattle, valued at $2,824,221,000. Our wheat crop alone is estimated at 668,000,000 bushels, worth at present prices about $1,250,000,000. Our corn crop is estimated at three and a quarter billion bushels; it is worth $1.50 a bushel; if so, we have about $4,500,000,000 for corn. The value of the wheat crop and the corn crop is more than double the value of all our live stock. Here we appropriate $250,000 for the study and eradication of tuberculosis. This bill carries $26,943,000. Much of that amount is available for the eradication of tuberculosis. We appropriate large amounts of money for the eradication of hog cholera. We have an appropriation for the foot-and-mouth disease, and various appropriations; and if you will go through the bill you will find that we have dollars available for the eradication of diseases in animals where there are cents available for the more important work of the eradication of diseases of wheat, corn, and other cereals. My friends, as I

started out to say, the committee tries to give due consideration to every problem, to every item, that is submitted to it. We want to do the practical thing. We want to deal with the larger things and not overlook the smaller ones. We all agree as to the importance of this item. As I have said, I have been interested in this work for 25 years. When I served in our State legislature I tried to secure legislation and appropriations for this purpose. I think I had as much to do as anybody with having this item put in the bill here 10 years ago. It has been in the bill all these years, and during all that time the department has given it consideration. As I said, $132,000 was expended last year. Some 8,000 or 9,000 cattle are being tested every month.

Mr. MOORE of Pennsylvania. Mr. Chairman, if the gentleman will yield, I want to get at the real facts in the matter. The gentleman states that the department does not want this extra appropriation of $250,000.

Mr. HAUGEN. The subcommittee had before them Dr. Kiernan and other representatives of the department. Dr. Kiernan was asked as to the amount of money that should be appropriated, and he said $250,000. He was asked two or three times if it would not be possible for him to use more money; the answer was "No." The gentleman has spoken about veterinarians. He says if you pay the price you can get them. As the gentleman knows, thousands of veterinarians have joined the Army.

Not only from the Department of Agriculture, but they come from every community in this land. The question is this: Are you going to draw on the department for that service? The department says it requires skilled and trained veterinarians to conduct the work. Are you going to draw on the department force to do this work at the risk of neglecting other work, such as meat inspection, and take veterinarians from other communities who are now needed to do veterinary work there; are you going to say to the community, "Let us take the services of these men away from you and deprive you of their services, much needed"?

Mr. MOORE of Pennsylvania. Has any plan been submitted at all for the expenditure of this additional $250,000?

Mr. HAUGEN. No definite plan. When the gentleman from Nebraska and others asked me what I thought of increasing the appropriation I answered, "If you are going to increase the appropriation, you ought to submit some definite plan of operation." I said, "If large appropriations of money are to be made, the dumping of it by the millions will do no good unless you have a definite plan to work by."

Mr. Chairman, just one word as to the suggestion of reimbursing the owner of the stock. According to the estimates furnished by the department, the value of our live stock is $2,824,000,000. The statement has been made on this floor that 1[illegible] per cent of the cattle are infected with tuberculosis.

If so, it would require about $282,000,000 to pay the losses resulting from tuberculosis. As usual, many tears have been shed for the poor farmer. Oh, it is always the dear farmer that we are legislating for. Now, anyone who knows anything about this proposition knows that the loss is borne by the packers. The packers have been doing fairly well. I find, according to reports, that Swift & Co. increased its profits from $9,000,000 i[illegible] 1915 to $20,465,000 in 1916. Armour & Co. increased its profits from $6,000,000 in 1915 to $20,100,000 in 1916. So, my friends, they are doing fairly well. I believe we can appropriate money to better advantage than to appropriate an additional $250,000 to reimburse the packers at this time. Suggestions have been made that we should increase meat production. No one will seriously contend that an additional appropriation of $250,000, or even $1,000,000, can increase the production of meat within a short time. That can not be done in one session of Congress.

As before stated, we are expected to furnish 800,000,000 bushels of gra'n for our allies and soldiers abroad. We had a short crop; the supply is not in sight; food is as important as powder and guns, and it is our solemn duty to supply those who have taken their lives in their hands, who are willing to lay them upon their country's altar as a sacrifice in the defense of their country. Our word and our resources have been pledged; our honor is at stake as well as our country; we are all of one mind, and that is to do everything in our power to successfully prosecute this war and to bring about a speedy and triumphant termination of this terrible conflict in which the world is engaged. With that in view, it is up to us to do the practical things, for us to appropriate money for the purposes that will bring the best results.

In view of the meager appropriation of $115,000 for the eradication of black rust and stripe rust, for the study of corn improvement, methods of corn production, and of corn-root and stalk diseases, affecting the yield of our wheat, corn, and other cereals, aggregating upward of 6,000,000,000 bushels, which in point of value is more than twice the value of all our live stock, including hogs, can we as practical men representing our constituency do what is proposed to do, increase the proposed appropriation of $250,000, which is an increase of $50,000 in excess of the department's estimates and nearly 100 per cent in excess of the amount appropriated and expended in the current fiscal year, to $500,000? Besides the $250,000, this bill carries more than $500,000 for inspection and quarantine work and the study of existence of contagious diseases of animals; $620,420 for the eradication of the southern cattle tick; $364,390 for the investigation and experiment in dairy industry; $308,680 for investigation and experiments in animal husbandry; $124,560 for scientific investigation in diseases of animals at Bethesda, Md.; $446,960 for investigation in the disease of hog cholera; in all, a total appropriation of $2,743,098 for the bureau, in addition to that the permanent annual appropriation of $3,000,000 and $477,200 carried in this bill for meat inspection. Gentlemen, it seems to me that if our aim is to increase production by making liberal appropriations, we should, rather than to double the proposed appropriation, increase the appropriations proposed for the larger and, I believe, the more important products of the farm.

Another question is whether we are going to take the advice of men who have made an exhaustive study of the matter, men of ability, backed by enthusiasm, who say that not more than $250,000 can be effectively used. I take it that it can be said without reflecting upon anyone that the department that has this work in charge has more thorough knowledge of the amount of money and activity that can be devoted to this line of work than Members of Congress. True, in local matters, Members have more knowledge, but when it comes to the dealing with all problems of this great department, affecting every section of our country and the policy of the department, I believe its conclusions and recommendations are worthy of the highest consideration. We should at least give the representatives of these bureaus of the department credit of knowing what they are talking about. And if we do, then it is up to us to act in accordance with their recommendation. That has been the policy of the committee. [Applause.] Mr. Chairman, I yield back the balance of my time.

Mr. LEVER. Mr. Chairman, I will say to the gentleman that we have only two additional speeches on this side, and I will ask the gentleman from Michigan to use some of his time.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield five minutes to the gentleman from New Hampshire [Mr. WASON].

Mr. WASON. Mr. Chairman, I am a little surprised at the attitude of some Members of this House in approaching the discussion of this proposed amendment to the bill. As we all know and realize, our country is at war. Our Government is urging everybody to do his part. Our Government is urging everybody to conserve our national resources. Our Government is urging everybody to produce from the soil and in the industries the most that can be produced, in order that we may bring about an early, just, and lasting peace for the warring nations of the world. And yet here, when we are dealing with the subject of agriculture, which is the basis, the foundation, the strength, and sinew behind our Army and Navy, we find men differing on the importance of conserving our live stock, which furnishes meat for our people at home, our soldiers at the front, as well as our allies.

I said that agriculture was the basis and strength of our people in this war. From the soil comes the wheat, the corn, the barley, the rye. From the soil comes the mineral and the ore that we need. From the soil comes the cotton and the cane. From the soil comes the oil and other products. The soil furnishes the food to raise our cattle and our swine and our horses. From the soil comes the lumber that furnishes the material for our homes, the cantonments, and the structures for our industries.

We must assist and conserve and encourage these great agencies which are effective in the prosecution of this war. The Department of Agriculture estimates that $25,000,000 is wasted every year in live stock with that dread disease that was first discovered in 1882 by Prof. Koch, a German scientist. Twenty-five million dollars annually lost in live-stock production from this disease, and yet men quibble here over raising the appropriation to half a million dollars that we may reduce the disease and have more meat, more pork, more fats for our people, our allies, and our soldiers, more hides for shoes, and so on through the list of necessaries.

We appropriate money right and left for anything we believe will help us to successfully prosecute and win this war.

I say to you that I believe we can appropriate half a million dollars, and the Department of Agriculture can collect the force of men necessary in a very short time who will start out on an active and effective campaign that will soon result in great reduction of the $25,000,000 loss among the great herds of this country.

My colleague [Mr. YOUNG of North Dakota] asks if we need veterinarians for this work. I presume that officials of the Department of Agriculture would say that we did, but you and I know that we do not. All that is needed is the instrument and proper tuberculin, and the eyesight of the average farmer is good enough to do the rest and make successful tests.

Mr. HAUGEN. Will the gentleman yield?

Mr. WASON. Yes.

Mr. HAUGEN. If that is so, what is the use of appropriating money? If the farmer can do it himself, why should we appropriate this large sum? The department says it requires skilled and trained veterinarians.

Mr. WASON. In answer to my distinguished friend I will say that if there is anything the department does except to make scientific researches, that the average farmer can not do if equipped with proper instruments and appliances, I would like my friend from Iowa to state it.

Mr. HAUGEN. I will answer by saying that $8,000 was appropriated last year for research work.

Mr. WASON. After hearing Dr. Mohler's statement of the Department of Agriculture relating to the wide area in which tuberculosis is found in live stock it seems reasonable to believe that Congress would be willing to adopt this amendment and appropriate $500,000 for a campaign of eradication.

Again, by comparison, as provided in the terms of this very bill, it would seem fair and just that $500,000 should be appropriated for this particular menace to our live stock. We appropriate $620,420 for expenses for the eradication of the southern cattle ticks, $500,000 to conduct surveys and inspections in Texas or any other State and Mexico to stamp out and exterminate the pink bollworm of cotton, and $650,140 for farmers' cooperative demonstrations for study and demonstration of the best methods for meeting the ravages of the cotton-boll weevil. Thus it will be noticed we appropriate $1,150,140 for the control and eradication of the boll weevil and the pink bollworm, which are a menace to the cotton crop. Is it not fair that a half million, or a sum equal to that appropriated for the eradication of the cattle tick, be appropriated for the control and eradication of tuberculosis?

Again, this bill carries an appropriation of $250,000 for investigation, eradication, and control of the disease of citrus trees known as citrus canker.

Are either of these menaces carrying the same amount of money or more of greater menace to production than is tuberculosis?

J. R. Mohler, Acting Chief of the Bureau of Animal Industry, makes the following pertinent suggestions of the department's policy relating to tuberculosis eradication:

The department's policy in tuberculosis eradication is a cooperative one. For every Federal employee furnished the State is expected to provide at least one veterinarian. The campaign against tuberculosis will be divided into three projects, as follows:

1. Tuberculosis Eradication among Pure-Bred Herds.
2. Tuberculosis Eradication among Swine.
3. Tuberculosis Eradication in Circumscribed Areas.

Pure-bred herds which have been tuberculin tested and found to be free from tuberculosis will be classed as accredited herds; that is, herds which the State or Federal authorities may certify to as being free from the disease. This certification will be a tremendous stimulation to the trade among cattle known to be healthy. The prospective purchaser will be willing to part with his money when he invests in cows which are not blighted by disease. The person who is upbuilding his herd will find security when he purchases registered sires and dams to introduce into his bovine family. The known healthy animal will be in great demand, whereas the unknown quantity will be on the bargain counter. The accredited herds will have entrée into any society, while the unknown will be eligible only for use in localities where there is a premium on inefficient live stock.

The movement to establish accredited herds is purely a voluntary one. No laws or regulations will be necessary to assure the success of this plan. Its success will depend upon the judgment and decision of the live-stock owners. It is a practical proposition for the practical live-stock owner. It is a plan of fair dealing without the speculative chance which attends the purchasing of cattle which are members of a herd known to contain, or to have recently contained, animals which are affected with tuberculosis, or which at least are under suspicion.

Tuberculosis of swine exists to an alarming degree. Each year the carcasses of thousands of swine are condemned as unfit for human consumption at abattoirs where Federal inspection is maintained.

The remedy for this evil is the pasteurization of dairy by-products which are fed to swine, and, of course, the elimination of the existing cause—the tuberculous animals which are the distributors of the tubercle bacilli.

The extermination of the disease from circumscribed areas is the greatest task to be undertaken. An area that has been freed of tuberculosis must be kept clean by quarantine regulations which will prevent the introduction into it of animals affected with the disease. Such areas should be established in every State. It may be an area representing 500 square miles or any multiple of that up to the entire area of the State. In such an area all herds should be subjected to the tuberculin test. The reactors should be immediately separated from the healthy animals and disposed of in accordance with State regulations. If the reactors are to remain alive, they should be kept segregated and under strict surveillance. They should be so marked that their condition can not ever be misrepresented. Their progeny should be taken away from them immediately after calving and placed with healthy foster mothers, or fed on pasteurized milk. Retesting shall be practiced semiannually to begin with, and then for a number of years to assure of the entire eradication of the disease. Except from accredited herds, no cattle shall be introduced into any free or circumscribed area in which tuberculosis eradication is being conducted for dairy or breeding purposes unless they are held in quarantine for a period of 60 days, at the expiration of which time they will be tuberculin tested.

From this statement you will notice that the department intends to free our livestock from this menace by disposing by slaughter or segregation infected animals. It seems the department would do well to conduct scientific researches for some method of preventing animals from becoming infected with tuberculosis. Prof. Koch in his researches discovered the germ, classified it as bacillus tuberculosis, which affects persons as well as live stock. He later produced in his laboratory the substance known as tuberculin.

The substance known as tuberculin is an attenuated solution of some substance or medium in which tubercle bacilli have been grown or propagated and from which the bacilli themselves have been carefully removed. Beef bouillion, for instance, is a substance in which the germs can be multiplied rapidly at the proper temperature, and when the actual germs have been carefully separated from it after having been produced to a certain point and a percentage of glycerine has been added for the purpose of dilution the result is the tuberculin of commerce, which is used by veterinarians for the testing of cattle.

The value of tuberculin in determining the extent of tuberculosis in living cattle is an accepted fact. While it is not an infallible test of the presence of the disease, its use has been confirmed in a very large percentage of the cases where the animals have been condemned and destroyed and it has been of invaluable assistance in carrying out the Bang method of treating tuberculosis as practiced in Denmark and the Ostertag method, which is in use in various parts of Europe.

Some 17 years ago a discovery was made by Dr. E. von Behring, of Marburg—

which promises to be as important and far-reaching in its preventive efficacy toward bovine tuberculosis as was Jenner's smallpox vaccine toward the dreaded scourge of smallpox. Dr. von Behring produced a substance in his laboratory at Marburg called "Bovovaccine," which appears to possess the property of immunizing cattle treated with it while they are quite young against tubercular infection during their entire lives. A sufficient time has now elapsed, so that results of carefully conducted experiments in its use have become of great value in determining the fact that all cattle may be immunized against danger of infection from any source, and they hold out the hope that the time may not be far distant when the "cattle on a thousand hills" may every one be free from disease and no longer a menace to human life.

Bovovaccine consists of a mitigated culture of live human tubercle bacilli, which is injected directly into the circulatory system of young calves, and which seems to possess the power of rendering them immune to tubercular infection during their life. Of course, this last proposition has not yet been absolutely proven, since a sufficient number of years has not elapsed to cover the average meat animal.

Experiments abroad and in this country have been very extensively carried on for years with the most gratifying results; and in some of the cattle-raising districts of central Europe bovovaccination has become a regular part of the system of live-stock raising. The immunizing system of Dr. von Behring has been extensively practiced on the estates of his royal highness, Prince Louis of Bavaria, at Savar, Hungary, where the most careful records have been kept. The results are astonishing. In many cases the most persistent efforts to infect animals which had been bovovaccinated, both by contact with diseased animals in stables which were known to be infected and by the injection of virus from diseased animals directly into the system, have failed.

This process of vaccination by the use of bovovaccine has been tried in Maine, New Hampshire, Vermont, Massachusetts, New York, New Jersey, Ohio, and Maryland. Those farmers who have used it most extensively feel that it does not injure the animal, and that the animal is immune from tuberculosis thereafter. I want to call your attention to a testimonial of the State of Maine Cattle Commission in 1910:

During the past four years our experience with bovovaccine has been considerable, and I wish to assure you that the results have been exceedingly satisfactory. The work of immunization has been carried on in some of our worst infected herds, and I feel that it has been given a severe test. The results have been such that it seemed a valuable adjunct in our work of eradicating tuberculosis; consequently at the last session of the legislature a law was passed providing bovovaccine free of charge to the breeders of this State. Many breeders are availing themselves of this opportunity to build up immune herds, and I trust the number will increase.

J. M. DEERING.

If animals can be made immune from tuberculosis by this use of bovovaccine, it seems to me that is the quickest and surest and the most complete method of control and eradication of tuberculosis in the herds of this country. I sincerely hope the Department of Agriculture will conduct such research work along these lines as will demonstrate fully and completely the worth of this proposed prevention or the fallacy of Prof. von Behring's discovery.

The CHAIRMAN. The time of the gentleman from New Hampshire has expired.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield five minutes to the gentleman from Indiana [Mr. FAIRFIELD].

Mr. FAIRFIELD. Mr. Chairman, my attention was especially called to this question a few years ago, when a whole herd was condemned and killed in my own district when it was found that it was tubercular. All of us agree here to-day that this work of stamping out the disease is needed, badly needed. The only problem seems to be with the department. We have a department, a bureau, that can use only a definite amount, we are told, in the solution of a problem of this character, and we are further told that if we appropriate $500,000 their plans are not elastic enough to take care of that amount of money. I understand, too, that the head of the bureau, who knows more about it than perhaps any other member of the department, said unqualifiedly that he could use $1,000,000 and use it effectively. When the matter was before the committee one of the assistants of the bureau spoke before the committee, so I am informed. Later, I am informed, the head of the bureau still insists that he can use that effectively.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. FAIRFIELD. Yes.

Mr. HAUGEN. In order that it may be clearly understood, Dr. Mohler was out of the city, but he sent Dr. Kiernan there to represent him. He came there as Dr. Mohler's representative, and he positively stated and restated two or three times that $250,000 was every dollar that they could use.

Mr. McLAUGHLIN of Michigan. But is it not true that when Dr. Mohler had himself returned to the city and he was asked if he had changed his mind, he said no, that he stood by what he said originally and that he could use $1,000,000.

Mr. HAUGEN. He did not state that to the committee.

Mr. FAIRFIELD. It would be very strange if the plans for the expenditure of $250,000 could not be enlarged with a proper personnel to spend $500,000. We all know that on problems of this kind it is largely a question of propaganda. We all know that the farmer will resent a local man coming into his herd and condemning it. We all know that throughout the length and breadth of this country much of the $250,000 could be easily expended in a propaganda in making people understand.

Mr. DOOLITTLE. Mr. Chairman, will the gentleman yield?

Mr. FAIRFIELD. Yes.

Mr. DOOLITTLE. How much would the gentleman spend in propaganda on this question?

Mr. FAIRFIELD. I could not say offhand how much, but if the gentleman would tell me how much was spent in propaganda for the study of food conservation, how much we have spent in propaganda for the sale of liberty bonds, and how much in propaganda for everything else, I would say that the same relative percentage might be expended wisely in the propaganda on this question.

Mr. DOOLITTLE. Does the gentleman care to know the exact words of Dr. Kiernan, the representative of the Department of Agriculture, when he testified that the maximum amount he could use was $250,000?

Mr. FAIRFIELD. I think I have quoted them correctly; but let me repeat, he was there while the head of the department was out of the city, and when the head of the department was questioned in regard to the matter he still insisted that he could expend $500,000. I may be wrongly informed.

Mr. RUBEY. The gentleman is entirely misinformed on that proposition, as I expect to show in a few minutes.

Mr. FAIRFIELD. Then the matter is a question of veracity as between the members of the committee.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. McLAUGHLIN. Mr. Chairman, I yield five minutes to the gentleman from Nebraska [Mr. SHALLENBERGER].

Mr. SHALLENBERGER. Mr. Chairman, this item is a new item for the purpose of attempting in a small way, at any rate, to do away with tuberculosis among our domestic animals. There are two diseases which are most prevalent and fatal to our domestic animals, hog cholera and tuberculosis. Hog cholera is fatal only to swine, but tuberculosis attacks every one of our domestic animals, including chickens, sheep, hogs, cattle, and is also the most fatal of all diseases to the human race. Therefore, anything that we can do to alleviate some of the terrible ravages of this disease I think is a good thing for the American Congress to spend money for. I find in the public press of yesterday a statement by Mr. Hoover that we are required to furnish 70,000,000 pounds a month of beef to Europe. This is an increase of 7,000 per cent over what we furnished them before the war. The average then was about 1,000,000 pounds a month. We are to furnish 150,000,000 pounds per months of pork, which is an increase of 300 per cent above what we furnished before the war. We might as well face the fact that we are not going to increase our production of hogs and cattle during this war. We can only strive to save the herds we have and prevent waste by useless losses. There are more losses of live stock in cattle and hogs from these two disease I have mentioned than all other diseases combined. Tuberculosis is a disease which is very easily located by the use of the tuberculin test. There is only one way to eradicate it, and that is by quarantine and slaughter of the animals that are infected. We attacked the foot-and-mouth disease in this country a short time ago, which is not nearly so dangerous or widespread as tuberculosis. There is not a single State in the country whose domestic animals are not infected with tuberculosis. I think the chairman informed the House that something like $2,500,000 were appropriated by the last Congress to stamp out the foot-and-mouth disease. The work was successfully done, and, as I understand it, we have not a single case of foot-and-mouth disease in America to-day. In my judgment, if Congress would appropriate the proper amount, tuberculosis among our cattle herds could be eradicated in a very short time by slaughter and quarantine and proper sanitation.

Tuberculosis is not an inherited disease, as some think, but is a disease which must come from a preexisting cause or contagion; so, necessarily, if we eradicate tuberculosis from our cattle and properly disinfect the buildings and grounds we can eradicate this disease entirely, unless——

Mr. DOOLITTLE. Will the gentleman yield for a question?

Mr. SHALLENBERGER. Yes.

Mr. DOOLITTLE. Now, I grant what the gentleman says is so, but our committee tried to find some way whereby the department might expend more money even than we gave them. Now, can the gentleman tell how he would spend this additional sum over and above the amount stated which the Agricultural Department says they can expend in all good faith.

Mr. SHALLENBERGER. Now, I do not think that the Agricultural Department, perhaps, has given a correct statement of the amount of money that might be expended in the attempt to eradicate tuberculosis. I do not know where they expect to use it——

Mr. DOOLITTLE. I know the gentleman is an expert on tuberculosis, but are not there experts in the department equally as efficient on this subject?

Mr. SHALLENBERGER. Sometimes I have been forced to this conclusion: That an agricultural expert is a man who finds out something that has been known by other people for a long time and then talks about it in language that nobody can understand, and is then designated as an expert. [Laughter and applause.]

Mr. DOOLITTLE. Of course, the gentleman would not include Dr. Mohler and Mr. Kiernan in that class of experts?

Mr. SHALLENBERGER. I am sure Dr. Mohler would agree that if this Congress would appropriate a sufficient sum to do the thing I have stated—that is, test these cattle and slaughter those found infected and reimburse the owners, as you did in your eradication of the foot-and-mouth disease, by fair amount, whatever the amount would be—you would stamp out tuberculosis. Moreover, I think the sum of money asked or even the $250,000 is entirely insufficient and that the $500,000 asked for is also insufficient, but it would be very much better than the amount which you are granting.

Mr. HAUGEN. Will the gentleman yield?

Mr. SHALLENBERGER. I will.

Mr. HAUGEN. Does the gentleman suggest a reimbursement to the owners?

Mr. SHALLENBERGER. Yes.

Mr. HAUGEN. That would take about $28,000,000.

Mr. SHALLENBERGER. I think while we are spending billions and multiplied billions for other purposes we might spend $28,000,000 in this way, if that is what it will cost.

Mr. HAUGEN. And this calls for half a million.

Mr. SHALLENBERGER. They did not ask for enough, that is all.

The gentleman from Missouri [Mr. RUBEY] has told us that his State by law provides that grade cattle slaughtered because they reacted as tubercular shall be compensated for at a fair figure and pure breds at a higher price. If the Nation would take example from Missouri and make similar provision this great scourge to animal life, and mankind alike, could be soon stamped out. The fact that tuberculosis is not inherited, but must be contracted after birth from contagion from an already existing case has been established beyond doubt. Once eradicated from our country it can be kept out forever. The dairy cattle of England, France, and Germany are full of it, but there has never been a case of it on the Channel Islands of Jersey, because importation of cattle is prohibited there. We permit this scourge to carry certain death to animals and men because we will not appropriate the money necessary to stamp out the plague. We spend a billion without batting an eye for instru-

ments of death with which to kill men, but gentlemen lift their voices in protest at the proposition of spending a few millions for the certain benefit of humanity.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield five minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, I appreciate the attitude of the members of the committee with reference to this matter. The head of the department thinks that $250,000 is all that can be used. There is a difference of opinion among members of the department, but the Chief of the Bureau of Animal Industry says that $1,000,000 can be advantageously expended for the extirpation of tuberculosis in animals. Now, gentlemen, I want to call the attention of this committee to the fact that nearly every increase that has been made in this appropriation bill throughout the years that have passed has been made because of an increase over estimates made by the department. The chairman of the committee well knows, from his experience both before and since he has been chairman, that more of the increases made have been made by the House over the estimates made by the department itself. The department acts conservatively. It understands that $26,000,000 is an immense sum. It feels that it ought not to increase it any more than it can within the realm of reason, and it also feels the necessity of coordinating these appropriations and making them reasonable. As my colleague, the gentleman from Iowa, said, the increase asked for is large, compared with some other appropriations contained in the bill. It is also small as compared with some others. I want to say to my colleague from Iowa what he knows very much better than I do, that there never has been an agricultural appropriation bill passed that has not had the same objection existing in it, and that is the case because the agricultural resources of the United States of America are so tremendous in extent, they are so diversified in character, that a proper relation is impossible to be maintained. Conditions arise from time to time that could not have been anticipated. We are required very largely to pass on each individual proposition as if it stood alone. So that comparisons, I think, ought not to weigh very much with the members of the committee in voting for this appropriation.

Now, gentlemen, we are confronted with this situation. We are confronted, as the gentleman from Nebraska [Mr. SHALLENBERGER] says, with the most extraordinary demand that has ever been made upon this country, a demand which we must answer, whether we wish or not. It must be taken from our sources of supplies. We must furnish our allies across the seas with 70,000,000 pounds of meat each month during the succeeding months of the year. That will diminish our supply, necessarily. If we do not take extraordinary measures, if we do not use extraordinary means for increasing the meat production in the United States, we will not be doing our duty in this emergency. Seventeen years after the census of 1900 was taken we have 4,000,000 head of cattle less than we had at that time. The reduction, notwithstanding the tremendous increase in our population, was from about 67,000,000 in 1900 to 63,000,000 now—is that correct?

Mr. HAUGEN. Sixty-three million six hundred thousand.

Mr. TOWNER. I think it was about 67,000,000 in 1900, and it is now reduced to 63,000,000 in round numbers. That is the reduction in the number of cattle in the United States—more than 4,000,000—notwithstanding the tremendous increase in population, notwithstanding the tremendous, the extraordinary demand that is now made upon us. If we know that this legislation will increase the meat supply in the United States, can we, if we would do our full duty, neglect to do everything that is possible in order to increase the meat supply? Now, I call attention——

The CHAIRMAN. The time of the gentleman has expired.

Mr. TOWNER. May I have just one minute more; I want to say just one more sentence.

Mr. HAUGEN. I yield the gentleman one minute.

Mr. TOWNER. I want to call the attention of Members here to the fact that not a cattle association in the United States, not a dairy association in the United States, but what has favored or does favor this legislation. All the information that comes from the people immediately interested says, "Give all the help that you can in order that we may stamp out this disease."

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Missouri [Mr. RUBEY].

Mr. McLAUGHLIN of Michigan. Is this the closing speech?

Mr. LEVER. I have two on this side. I yield 10 minutes to the gentleman from Missouri [Mr. RUBEY].

Mr. RUBEY. Mr. Chairman and gentlemen of the committee, this is a friendly contest. The members of the Committee on Agriculture, all of them, are anxious to do what they think is right and what they think is for the best interests of the country. They have shown that disposition from the very beginning in the consideration of this bill, both in the committee and on the floor. And so to-day we are here in a friendly spirit making this contest.

I come from a State that is the fifth State in the Union in the production last year of agricultural products. I come from a State that has a great many dairy cattle and other kinds of cattle. I am sure that I am just as anxious as are the gentlemen who have spoken on that side to do everything that we possibly can do to stamp out tuberculosis. But I am not willing to go further or do more than those in charge of the Department of Agriculture say they can do.

Now, I want to talk to you for a moment, and I want to talk to you plainly. The other day, when we were discussing this matter on the floor of the House, some gentlemen stated that Dr. Mohler, the Chief of the Bureau of Animal Industry, had said that he could use $1,000,000. I knew that before the committee Mr. Kiernan had said that they could not use more than $250,000. I also knew that the Secretary of Agriculture had said that they could not use more than $250,000. And so I called up Dr. Mohler and I told him of the statements that were being made on the floor of the House in the general debate, to the effect that he had said that he could use $1,000,000. In reply this is, in substance, the statement that Dr. Mohler made to me:

> Two hundred and fifty thousand dollars is all we can use economically and effectively unless the Congress of the United States gives us authority to reimburse the owners for the slaughtering of their cattle. If they give us authority to reimburse for the slaughtering of cattle, we can use $1,000,000; we can use all the money that the Congress may give to us.

Now, this is the situation: Not a single dollar of this appropriation of $250,000 that is carried in this bill can be used to reimburse owners for the slaughtering of their cattle, not a cent of it, and it can not be done unless this Congress legislates and gives specific authority to do that sort of thing.

Mr. LITTLE. Is the gentleman opposed to the policy of reimbursement?

Mr. RUBEY. Let me discuss that question just for a moment. The gentleman from Maryland [Mr. LINTHICUM] a moment ago made a statement on the floor of this House. He said there were 22,000,000 dairy cattle in this country afflicted with tuberculosis.

Mr. LINTHICUM. Twenty-two million dairy cattle in this country, of which 2,000,000 were afflicted with tuberculosis.

Mr. RUBEY. I misunderstood the gentleman. But I want to say this, that if you will figure up the number of cattle in this country and their value and the number afflicted with tuberculosis and their value, and then estimate how much money it will take for the Government to reimburse the owners for cattle slaughtered, you will find that it will take a very large sum of money. This will be true even if the Government reimbursed to the amount of one-fourth the value and leave the States to reimburse to the amount of one-fourth, leaving the owners to bear one-half the burden. When we come to that question, we ought to stop and study for a moment and find out, if we can, where we are going to get the money.

Mr. LITTLE. Are not the States already reimbursing?

Mr. RUBEY. They are to some extent.

Mr. LITTLE. Do you not believe we ought to help them?

Mr. RUBEY. When Congress determines to reimburse we will do as much as they do. The gentleman will find, if he will examine into it, that they are not reimbursing in every State of the Union, not by any means. A great many of them do not reimburse a single cent.

Mr. TOWNER. Will the gentleman yield?

Mr. RUBEY. I will.

Mr. TOWNER. I am informed, and I would like to know if the gentleman confirms the statement, that there are 15 States in the Union that make absolute reimbursement for the slaughter of cattle, and that 5 other States make compulsory extermination of those affected——

Mr. RUBEY. I have before me a full and complete statement showing exactly what every State of the Union does in the way of reimbursement. And yet the statement is misleading, because, for instance, they say that in Missouri they reimburse to the amount of $40 for the common stock and $200 for the thoroughbreds. And yet it depends upon the amount of money that the legislature appropriates. And the legislature does not appropriate enough money to do that, except in a very limited way, and what is true in my State is also true in pretty nearly every other State. If every State of the Union would appropriate enough money to pay one-fourth of the value of the

cattle slaughtered they would appropriate many millions of dollars. But they do not do it.

Mr. SHALLENBERGER. Will the gentleman yield?

Mr. RUBEY. I yield.

Mr. SHALLENBERGER. The gentleman is aware that a great majority of these cattle that are slaughtered are not a loss at all; that the cattle are slaughtered and the disease is eradicated, but the carcass itself is valuable for beef. So that the amount of actual loss to be recompensed would be infinitesimal.

Mr. RUBEY. I recognize that what the gentleman says is true in part. The whole animal is not always destroyed.

Mr. SHALLENBERGER. I have had a number of animals slaughtered, but I never had one that did not sell for beef; did not have one where there was a loss of the carcass.

Mr. LINTHICUM. Will the gentleman yield for a question?

Mr. RUBEY. Not until I get through.

Mr. LINTHICUM. You made certain statements as to what I said, and then do not yield?

Mr. RUBEY. I yield to the gentleman. I do not want to incorrectly quote him.

Mr. LINTHICUM. Did you read where it said that the segregation of these animals would effect great results and it was not necessary to slaughter them?

Mr. RUBEY. I read that, and I do not desire to misquote him. The point I want to make is this; that we have this appropriation here of $250,000, not a cent of which can be used to reimburse the owners for the slaughter of their cattle. Unless you are going to give the authority to reimburse, then Dr. Mohler, the chief of the bureau, himself says that this is all the money he can use. If you are going to give more money, you should also give him additional authority, in order that he may pay for the reimbursement for the cattle which are slaughtered. You can not put that provision in this bill. Any man on the floor of the House could stop it by a point of order, because it is new legislation. The committee, in the framing of this bill, tried to bring in a bill that was clean, a bill that did not call for additional legislation, and in very few instances have we inserted provisions against which a point of order will hold.

Now, the committee studied this subject very carefully. A subcommittee was appointed; we had a subcommittee of five, and we called before us Dr. Kiernan, of the Department of Agriculture. We had his statement. We framed this legislation. I wrote the language myself. The subcommittee and the whole committee agreed that we ought to take this proposition out, segregate it, and put it into an item by itself, so that the House itself would know just what we were doing and know along what lines we were legislating, and in order that the whole country might know it. Not only that, but if my recollection serves me correctly—and I think it does—the only question upon which the subcommittee was divided was the question of reimbursement.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. RUBEY. I would like to have five minutes more.

Mr. LEVER. Mr. Chairman, I yield to the gentleman five additional minutes.

The CHAIRMAN. The gentleman from Missouri is recognized for five minutes more.

Mr. RUBEY. The only question, I say, upon which the subcommittee was divided was the question of reimbursement. Some members of the committee wanted to reimburse, but the entire subcommittee reported in favor of the $250,000 for carrying on this work.

Now, Mr. Chairman, I do not think that we ought to go beyond that which the department has asked for. The department has been working along this line since last July. The first appropriation for the work of eradicating tuberculosis went into the last appropriation bill, and the department took up the work last July.

They have just organized the work; they have not been able to do much, have not had it organized more than two or three months. The Bureau of Animal Industry will have charge of this work. Those in charge have prepared comprehensive plans embracing the entire country. They have explained to the committee in reports and in the hearings just exactly how they are going to use this money. This appropriation will be available on the 1st of next July. Let those in charge of the bureau go right on carrying out the plans they have matured with the money they now have, and when July comes let them increase the work, and if they find that they can get more competent and capable men to do the work, and if they find that they need more money and can use it economically and efficiently, when this Congress meets again next December we can give them more money. They can report to the committee the conditions as they then exist and we can bring in an additional appropriation, make it immediately available, and give them whatever they may need.

I would rather do that than to go ahead and give the Department of Agriculture twice as much money as it is asking for.

Gentlemen talk here about preserving health. We want to preserve the health of the people. Of course we do. We regret that children are dying from tuberculosis, which is sometimes contracted through the drinking of milk. Everybody regrets that sort of thing. The appropriation of an additional $250,000 will not lessen that evil very much. If we want to do something to improve good health among the children of this country we could appropriate a million dollars to increase the supply of pure water, because the drinking of impure water causes more sickness than any other one thing in this great country of ours. If you are seeking only to conserve the health of the country, there are many things we might do.

It is said that $25,000,000 is lost every year on account of the cattle that are slaughtered because of tuberculosis. That is true, and we all regret it. If you want to more greatly conserve the food supply of the country, I could suggest another line of work. I saw only yesterday in the papers a statement that a billion dollars' worth of property, principally foodstuff, was destroyed every year by rats. We might get busy along that line, appropriate a million dollars, and kill the rats, if we want to conserve the food products of the country.

I want to say to you gentlemen now that you should study this matter carefully. I am for the eradication of tuberculosis. I want to see it done just as rapidly as possible. Our committee has given to it its careful and candid consideration, and we are here to-day to give the department what it wants and nothing more. We are giving them $50,000 more than they asked for when they submitted their estimates. We have given them $250,000, and this House ought to give them what they ask, and it ought not to give them a cent more than they ask, or a cent more than they can use economically and without wasting it. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. RUBEY. I want to make just one more statement, and call it to your attention and consideration.

Mr. CANDLER of Mississippi. In behalf of the committee I desire to yield one minute more to the gentleman.

The CHAIRMAN. The gentleman from Missouri is recognized for one minute more.

Mr. RUBEY. The question was asked on the floor a moment ago, "Is there any other way of getting rid of this disease except by destroying the cattle?" I read the other day a statement by a veterinarian of my State, Dr. D. F. Luckey, who has been State veterinarian for many years, and a very eminent one—a statement to the effect that he had discovered a serum which if applied to the calf would make it immune against tuberculosis. If the serum discovered by Dr. Luckey is as effective in preventing tuberculosis as the hog-cholera serum is in preventing hog cholera, then, indeed, will Dr. Luckey be hailed as a benefactor. The hog-cholera serum was discovered by a Missourian. May it not be possible that another eminent Missourian has made a discovery equally as valuable to the live-stock industry? We are making this appropriation in order that the department may investigate all lines. It may be that by the time we meet here again the department may have discovered something along this line whereby we may be able to get rid of tuberculosis without destroying the cattle.

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. SHALLENBERGER. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. LITTLE. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. CANDLER of Mississippi. Mr. Chairman, I yield two minutes to the gentleman from Iowa, and then the chairman of the committee [Mr. LEVER] will close the debate on this side.

Mr. McLAUGHLIN of Michigan. Which side has the closing of this debate?

The CHAIRMAN. Under the usual practice of the House the chairman of the committee generally has the close. I do not think there is any special rule about it, but that is the practice of the House. The gentleman from Michigan [Mr.

McLAUGHLIN] has eight minutes remaining and the gentleman from South Carolina [Mr. LEVER] 14 minutes remaining.

Mr. McLAUGHLIN of Michigan. I yield the remainder of my time to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman, I desire to answer pointedly the statement of the gentleman from Iowa [Mr. HAUGEN], who has just taken his seat. He suggests that the packers might profit by this amendment. If tuberculosis were a matter that stood between the people and the packers and the packers were to obtain one penny of advantage, there probably would be nobody here advocating it. It is in the hearings, not contradicted by any witness, that every penny lost at the packing plants by reason of tuberculosis found in any animal is charged to overhead expenses. That means that the consumer who buys the meat and the producer who sells jointly have to stand it. Everybody who understands the packing proposition knows that to be the fact. I do not see why the gentleman should have attempted to becloud or unwarrantably prejudice so important a proposition in that way.

Mr. HAUGEN. Will the gentleman yield?

Mr. SLOAN. For a brief question.

Mr. HAUGEN. The gentleman is familiar with the testimony. He was present at the time, and he knows that of the cattle and hogs slaughtered in some packing houses 20 per cent are infected with tuberculosis, and in others only a small percentage. And with the price uniform among the packers, how can that loss be adjusted?

Mr. SLOAN. It was testified that that was charged as an overhead expense, and that statement was not contradicted by any witness, and it is well understood generally. I think the packers have little difficulty in passing it on to the day's purchasers and the morrow's sellers.

Now, Mr. Chairman, there is some question raised about what Dr. Mohler has said. After all, there is not much difference. On July 17 Dr. Mohler recommended what the United States ought to do. Whether the statement of the gentleman from Missouri [Mr. RUBEY] be more accurate than the statement of the gentleman from Maryland [Mr. LINTHICUM] or not, to say nothing about what I have stated on the floor, matters not. Here is what Dr. Mohler said in writing on July 17, 1918. If this committee did not respond to that and wants to put itself in a position of hurling tons of money into a new proposition, such as the pink bollworm, and to neglect this, let the responsibility rest where it should. This is what Dr. Mohler said (see the hearings before the Committee on Agriculture, held on Jan. 14, 1918):

> Tuberculosis can not be wished away; neither can it be talked out of existence. The State must pay to exterminate it, since it has tolerated its existence these many years. The United States Congress and the legislatures of the various States will appropriate funds for the maintenance of fighting forces to cope with the situation. The live-stock owners have duties no less important than the aforementioned forces. Teamwork among all the forces will produce results which will be worth striving for and which will mean another glory for live-stock sanitation.

Moreover, Dr. Mohler said in the same statement as follows:

> THE ERADICATION OF TUBERCULOSIS FROM LIVE STOCK.
>
> Tuberculosis can be eradicated from all the cattle and all the swine in this Union; otherwise the Department of Agriculture would not have embarked upon such a tempestuous campaign.
>
> To support such a broad assertion, there is an abundance of evidence obtained through the school of experience, covering a period of several years.
>
> Tuberculosis has been eradicated from hundreds of herds in the District of Columbia, Virginia, Maryland, and other States. It has been practically exterminated from comparatively large circumscribed areas. Furthermore, wherever and whenever an effort was made to eradicate the plague and the earnest cooperation of the live-stock owners and officials has been obtained, success has never failed to crown the enterprise.
>
> Herds of cattle, which have at the inception of the campaign contained 75 per cent of diseased animals, have been freed of the malady and have remained as free herds.
>
> Herds which on the first test were found free of disease have, by the prudent care of their owners, been kept free of tuberculosis.
>
> The experience the department has had, as outlined here, has been enjoyed by the veterinary officials of some States. The preponderance of successful experiments, if we may call them such, is convincing proof that when conditions are favorable tuberculosis may be eradicated.
>
> What constitutes favorable conditions? The same state of mind of the people that obtained in the early nineties when pleuropneumonia was eradicated; in 1902, 1908, 1914, and 1915 when outbreaks of foot-and-mouth disease were eradicated; the spirit that pervaded the Western States during the cattle and sheep scabies eradication campaign; the spirit that is aiding in the eradication of hog cholera; the same state of mind, the same earnest, hearty, wholesome and substantial cooperation that has made Texas fever eradication the marvel of live stock sanitary achievements.
>
> The American people can eradicate tuberculosis, or prevent its eradication, or increase its presence.
>
> In 1907 the bureau first undertook systematic investigations in regard to the eradication of bovine tuberculosis and the results which have been obtained through 10 years of study indicate that the eradication of tuberculosis of cattle and swine is probably the largest and most difficult problem which the bureau has undertaken to solve for the benefit of the live-stock industry and the general public, which benefits from the advancement of that industry.
>
> It has been clearly demonstrated that tuberculosis can be eradicated from herds which are heavily infected with the disease and that tuberculosis herds can be freed from tuberculosis and maintained in a healthy condition through a period of years. In the demonstration work which has been conducted in the State of Virginia the past fiscal year showed 127 herds of cattle to be without the infection of tuberculosis at the time bureau cooperation was established. In the same State 138 infected herds have been made free from tuberculosis, and in accordance with the knowledge of the bureau this was accomplished in 126 cases without reinfections occurring. A large proportion of the herds were made free as the result of a single carefully applied tuberculosis test followed by the removal of reactors and the disinfection of the buildings. A second retest showed the eradication to have been completed in about 25 per cent of the herds.
>
> The eradication of tuberculosis from cattle within a restricted area is a reasonable proposition as demonstrated in the District of Columbia where, in 1909, a compulsory tuberculin test became effective, and it was found that 18.87 per cent of the District cattle were tuberculous. This percentage was reduced as shown by the first retest to 3.2 per cent, and during the fiscal year terminating June 30, 1917, only 0.84 per cent of the District cattle reacted to the tuberculin test.
>
> It may also be of interest to note that reactions to tuberculin tests applied by inspectors of this bureau are confirmed by post-mortem examinations, exhibiting lesions of tuberculosis in between 98 and 99 per cent of the reactors which are slaughtered under Federal supervision.
>
> The years during which these investigations have been in progress have seen the live-stock owners and the live-stock sanitary authorities awaken to a realization of the necessity and importance of combatting the spread of tuberculosis which has already made inroads in practically every section of the United States. This is especially true of the sections where intensive live-stock breeding and dairying have been practiced. In the South where this industry has been maintained in its infancy largely on account of the prevalence of the Texas fever, cattle ticks, and the lack of diversified farming interests, the rapid eradication of these ticks and the progress of the propaganda for diversified farming is making a new and large field for the development of both the beef and dairy cattle industries. The cattle in these sections are now but slightly infected with tuberculosis, and it would seem to be of special importance that these sections be given protection from the introduction of tuberculous cattle from the infected localities.
>
> Forty-seven of the States require the tuberculin test as a qualification for the entry of dairy or breeding cattle, but the owners of valuable herds have realized that a greater health insurance is obtained in the purchase of cattle from herds which are officially known to be free from tuberculosis.
>
> This has led to the establishment by this bureau and by some of the States of what are known as accredited tuberculin-tested herds. This plan is meeting with great favor, especially among the breeders of pure-bred and registered cattle who recognize in it a medium for increasing the volume of their business and for protecting their own valuable herds when pure bred cattle of other blood lines are introduced for improving the strains.

So that the proposition presented by Dr. Mohler in writing stands uncontradicted to-day. That being the statement of the man most conversant with that proposition of any mortal on earth, does this committee want it understood as a fact that it has had so little effect upon the Department of Agriculture that, knowing that the annual loss from tuberculosis is from $25,000,000 to $75,000,000; that we and our allies need the meat; that we know the eradication can be accomplished; that the Department of Agriculture has been sending appeals to the live-stock producers of this country to speed up the production of meat because we need it more than we need ordnance and munitions of war—knowing all these facts, will you bring this indictment against the Department of Agriculture, will you charge it with knowing these facts, and yet that it has not put itself in a position where it can use more than $250,000 to protect 130,000,000 food-producing animals, cattle and hogs? Will you say that, and yet that it finds a place to use $620,000 that can possibly apply to only 20,000,000 food-producing animals? If the gentlemen who are standing here defending the position of the committee desire to put the Secretary of Agriculture before the country in such a position as that, let it be so. Will you prevent the Secretary saying to the country, "Speed up, breed to the greatest capacity," when the meat producers of the United States, who are endeavoring to put the last possible pound upon every brute, are losing millions of dollars every day, and that he can use only $250,000 in the fight against the tuberculosis which causes a large measure of this loss, let it be between them and the Secretary. So far as I am concerned, I would rather believe that the Secretary does not desire to assume full responsibility for that "tempestuous campaign," but desires Congress to take its full share of the responsibility, which it would do if this amendment carries.

Let me explain to you why tuberculosis is so effective in losses. It is because it does not strike the animals so that the public will know anything about it until they are advanced in age. Therefore there is an inducement for every man who suspects that there will be a loss in his herd from tuberculosis to send his swine or his cattle to the market long before they are mature.

That is one of the large causes that is to-day driving cattle and hogs daily to the market before maturity. Yet the Department of Agriculture appeals to the people of this country to make every animal that is shipped carry as much meat as possible. Yet knowing that the greatest source of loss is tuberculosis, and knowing that it can be eradicated, does the gentleman

charge that the department refuses to put itself in a position to remove that large source of loss?

Mr. GRAHAM of Illinois. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Just for a question.

Mr. GRAHAM of Illinois. I want to ask the gentleman what would have happened in this country when the foot-and-mouth disease broke out if Congress had appropriated only $250,000 to cope with that disease? It would have been all over the country, would it not?

Mr. SLOAN. All over the country; yes.

Mr. GRAHAM of Illinois. Is it not true that in Germany, where both foot-and-mouth disease and tuberculosis are comparatively unchecked, the losses from tuberculosis are greater than those from the foot-and-mouth disease?

Mr. SLOAN. That is an important fact. In the State of Minnesota the average loss resulting from hopeless reaction is 37. On the market of those that react 80 per cent are not condemned even in part, only 20 per cent. Of those that react and are condemned in part 50 per cent of the apparent value is saved. This bill will allow the Government to go to each State and in cooperation pay whatever a fair share of the loss may be. How do I know that? Dr. Kiernan, who has been frequently quoted, states that is the way the Government did in driving tuberculosis out of the District of Columbia, and under a law practically like this, so that this is within the law and within the bill. The terms of this bill would permit any reasonable arrangement among owners, States, and the Federal Government in strict line with the method outlined by Dr. Mohler. Let us not forget that this may be a long war, and what we do should be speedily done. [Applause.]

Mr. LEVER Mr. Chairman, the gentleman from Nebraska [Mr. SLOAN] has severely arraigned the Department of Agriculture because that department has not made arrangement for the expenditure of half a million dollars to control tuberculosis in food-producing animals. In fairness to the Department of Agriculture and the great man who presides over it, I desire to call the attention of the committee to the fact that the first appropriation ever recommended by any department of this Government for the control of tuberculosis in live stock was recommended by the present Secretary of Agriculture in his annual report of last year. [Applause.] He said:

> There remains, however, the problem of eliminating the disease from farm animals in order to prevent losses estimated at $25,000,000 a year in the United States. This is the greatest problem confronting the live-stock industry of the country.

That is what the Secretary of Agriculture said last year, and this is the first recommendation ever made in this country, either for the eradication of tuberculosis or for its control.

Mr. GRAHAM of Illinois. Will the gentleman yield?

Mr. LEVER. I can not. Another thing, the Secretary of Agriculture, in his report, outlines to Congress three methods by which the problem can be approached: First, the eradication from pure-bred herds; second, the eradication in hogs; and, third, the eradication from restricted areas.

The Department of Agriculture has not been remiss in its duty in this matter; on the contrary, it has been progressive, up to date, and has laid the facts before Congress. Let me say also that the current Agricultural appropriation act is the first appropriation act ever passed by this Congress which carries an appropriation for the purpose of attacking the problem of tuberculosis in food-producing animals.

Acting on the suggestion of the Secretary of Agriculture last year, this committee, which has fallen so far in the estimation of the gentleman from Nebraska, who is always interesting, entertaining, and active, appropriated $75,000 that the department might have the funds with which to work out a plan that would be effective against the spread of tuberculosis in live stock.

What are the facts? The department estimated for an appropriation of $187,000 for this purpose. Dr. Mohler, the chief of this bureau, was before this committee. The committee had an opportunity to cross-examine him, and it did cross-examine him. I defy any gentleman on the proponent's side of this proposition to show that Dr. Mohler, in his testimony, said that he could use a single dollar more than was asked for in the estimates, namely, $187,000.

Mr. LITTLE. Will the gentleman yield?

Mr. LEVER. I can not yield just now.

Mr. LITTLE. Very well; I yielded to the gentleman.

Mr. LEVER. Very well, I yield for a question.

Mr. LITTLE. Is it not a fact that the States appropriated money to eradicate tuberculosis long before the Department of Agriculture suggested it?

Mr. LEVER. What has that to do with this matter? It does not contradict me. I said the Federal Government never made any appropriation.

Mr. McLAUGHLIN of Michigan. Was not there an appropriation made in the District of Columbia in 1909?

Mr. LEVER. Oh, a little territory 10 miles square. What is that compared with the area of the United States, stretching from Canada to the Gulf and from the Atlantic Ocean to the Pacific Ocean. Yes; there was an appropriation, but it was not carried in this bill. They did eradicate it in this area down to 1 per cent. Does the gentleman think that we could sanely act on that kind of information or that kind of a result?

Mr. McLAUGHLIN of Michigan. The work extended into Virginia and Maryland.

Mr. LEVER. The statement has been made that tuberculosis could be eradicated. I desire to say to you that the testimony of Dr. A. D. Melvin, former chief of this bureau, who has since passed beyond the river, before the Committee on Agriculture last year, said that there was not a nation in the world that undertook successfully to eradicate tuberculosis. He said that there were one or two little islands that were doing it—the island of Guernsey is attempting to do it and the island of Jersey is attempting to do it. Germany undertook to do it and failed utterly. Germany now is doing what we are undertaking to do, namely, to control the disease. Germany has not made much success of that, for the testimony shows that from 60 to 80 per cent of its cattle are affected by this disease. That is the testimony of Dr. Melvin.

Mr. SLOAN. Will the gentleman yield?

Mr. LEVER. I can not yield.

Mr. SLOAN. For a brief question.

Mr. LEVER. Very well, I will yield to the gentleman.

Mr. SLOAN. Mr. Chairman, I would like to read one sentence:

> Tuberculosis can be eradicated from all the cattle and all the swine in this Union, otherwise the Department of Agriculture would not have embarked on such a tempestuous campaign.

Mr. LEVER. That is Dr. Mohler.

Mr. SLOAN. Yes.

Mr. LEVER. Dr. Melvin says it has never been eradicated wherever attempted in the civilized world, except in a very restricted area.

Mr. LINTHICUM. Does not the testimony show that it has been practically eliminated in the District of Columbia?

Mr. LEVER. Oh, if the gentleman had listened to my statement, he would not take up my time by asking such a question. I have already stated that.

Mr. LINTHICUM. I have been here all of the time, and I never have heard the gentleman admit it.

Mr. LEVER. The gentleman from South Carolina was the first chairman of this committee which ever advocated it, the gentleman to the contrary notwithstanding. The gentleman from South Carolina, if he may say it himself, has been in the front rank of progressive workers in agriculture in this country. [Applause.]

Mr. LINTHICUM. I admit all that; but I want to say to the gentleman that last year I got an amendment in the bill for this, and when the bill came back from the conference committee the amendment was stricken out.

Mr. LEVER. I do not remember it. Let me say this: We want to approach this subject sanely and calmly. The committee, looking over the amendments, hearing the testimony, not only gave the Department of Agriculture every cent that it asked—$187,000—but we increased the amount to $250,000 upon our own initiative, and we did it because we recognized the gravity of the problem, because we recognized it is one of the big problems of this country; but we did not make the sum $500,000 or a million dollars because we were assured by the men testifying before the committee that $250,000 would be the maximum amount which they could expend wisely and economically in this work. If this committee had come in here with a million-dollar appropriation for this work, without an estimate, in the face of this uncontradicted testimony, half a dozen men would have been criticizing the committee for acting in such an extravagant way with the people's money.

Reference has been made to the item carrying the cattle-tick appropriation. There is absolutely no comparison between these items, and for this reason: The cattle-tick work was started in this country in 1906 under Secretary James Wilson. It was started with an appropriation of $82,500, and it was held at that sum for several years—certainly below $200,000 for several years—and it was held at this low figure in order that the public might be educated to know what the situation was and to take advantage of the work. When the cattle-tick work first

began in the South many communities absolutely refused to touch it with a 40-foot pole. The district of my colleague from Mississippi [Mr. CANDLER] voted it down some years ago, but after propaganda, after education, and the people knew the situation, they voted it up, and they are doing work down there. Let me say another thing: The testimony before this committee is that neither the States nor the communities are prepared for this work at this time. I make that statement, and I challenge the contradiction of it—except in a very limited way.

What this committee is doing is to furnish the department with the machinery to approach this subject in the spirit of educating the people, both in the manner of segregating the diseased cattle from the well ones and in the manner of furnishing certificates to pure-bred cattle that are being used for breeding purposes throughout the United States. There is no proposition here to compensate owners for slaughtering cattle, and it seems to me that an appropriation of $250,000 is sufficient to give all of the propaganda work necessary in this matter and at the same time furnish all the tuberculin-test work that the department can properly and profitably do during the next fiscal year. When the time comes that the public has reached a position to utilize this money, I say to you that this committee will stand ready to give the department every dollar that it asks for. I remember in my own cross-examination of a witness last year I said I recognized the tremendous importance of this problem and that we would not quibble over dollars and cents, and if the department could show us it had the machinery with which to use the money wisely in the great work which it has initiated through the help of this committee and this Congress I would gladly advocate the expenditure. Some gentlemen have the idea that you can handle the tuberculosis situation as you would the hog-cholera situation. You can not do it. We have a serum with which we can prevent hog cholera in large measure. We have discovered no serum with which we can prevent tuberculosis in hogs or cattle. It is true we have discovered a tuberculin by which we can ascertain if the animal is infected or not, but beyond that we have no remedy except the absolute slaughter of the animal or its segregation from the herds that may be infected. I trust this amendment will be voted down.

The CHAIRMAN. The time of the gentleman from South Carolina has expired. All time has expired. The Chair will direct the Clerk to again report the amendment offered by the gentleman from Michigan [Mr. MCLAUGHLIN].

The Clerk again reported the amendment offered by Mr. MCLAUGHLIN of Michigan.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken; and on a division (demanded by Mr. MCLAUGHLIN of Michigan) there were—ayes 47, noes 64.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I demand tellers.

Tellers were ordered; and the Chair appointed Mr. LEVER and Mr. MCLAUGHLIN of Michigan to act as tellers.

The committee again divided; and the tellers reported—ayes 62, noes 77.

So the amendment was rejected.

Mr. ANDERSON. Mr. Chairman, I desire to offer an amendment to the paragraph.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 15, line 19, strike out "$250,000" and insert in lieu thereof "$400,000."

The question was taken, and the Chair announced the noes appeared to have it.

On a division (demanded by Mr. ANDERSON) there were—ayes 37, noes 55.

So the amendment was rejected.

The Clerk read as follows:

For all necessary expenses for the eradication of southern cattle ticks, $620,420, of which sum $50,000 may be used for live stock and dairy demonstration work, in cooperation with the States Relations Service, and of this amount no part shall be used in the purchase of animals: *Provided, however*, That no part of this appropriation shall be used in the purchase of materials for or in the construction of dipping vats upon land not owned solely by the United States, except at fairs or expositions where the Department of Agriculture makes exhibits or demonstrations; nor shall any part of this appropriation be used in the purchase of materials or mixtures for use in dipping vats except in experimental or demonstration work carried on by the officials or agents of the Bureau of Animal Industry;

For all necessary expenses for investigations and experiments in dairy industry, cooperative investigations of the dairy industry in the various States, inspection of renovated-butter factories and markets, $364,390.

Mr. SLOAN. Mr. Chairman, I desire to move an amendment to the paragraph just read.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 13, line 21, strike out "$620,420" and insert "$250,000."

Mr. LEVER. Mr. Chairman, I make a point of order that the amendment is not germane to the section of the bill which is under discussion. That paragraph has already been read and the paragraph preceding it.

The CHAIRMAN. The Chair will state to the gentleman from South Carolina that while it is true the paragraph has been read and the Clerk had read the preceding one, the gentleman from Nebraska rose when the Clerk was in the midst of reading the first paragraph and the Chair told him he had not concluded the reading, therefore he did not recognize him at the time.

Mr. LEVER. Then, I withdraw my objection.

Mr. SLOAN. Mr. Chairman, I submit this amendment following the policy that has just been stated in the preceding paragraph, a policy to be applied, I hope will be governed, by neither latitude nor longitude. I take it that one of the largest propositions that we have before the country at this time is the production of food. It is just as important as the production of ordnance or the production of munitions for the purpose of winning the great war. The cry for food from "over there" is louder than the appeal for munitions or men. The meat food of this country is largely confined to the 130,000,000 cattle and hogs, all subject to tuberculosis. The $620,420, which I move to reduce to $250,000, designed to protect only 20,000,000 cattle from cattle tick, is evidently intended for the purpose of increasing the food production of this country. It can possibly affect only 11 or 12 States. The proposition to increase the tuberculosis item from $250,000 to $500,000 has just been beaten by a vote coming largely from the cattle-tick States. The tuberculosis amendment that has been before the House affects 48 States. That proposition should be a pace maker for economy of food production. It affects 48 States and 130,000,000 food animals. This item can possibly affect only 20,000,000 animals, all cattle, with an average value about the same as the hogs and cattle, numbering 130,000,000.

Now, then, it seems to me that if an appropriation of $250,000 is a sufficient response to the "tempestuous campaign" the Department of Agriculture has inaugurated—I use the language of the head of the Bureau of Animal Industry—affecting 130,000,000 food animals, for one that can affect only 20,000,000 animals $250,000 would be the height of liberality and generosity. More than that I understand it is claimed that 51 per cent of the possible area of the activity of the cattle tick has been cleared, which would reduce the number to be exposed to 10,000,000 head. Then it would be for 10,000,000 exposed there is protection of $620,000; while 130,000,000 food animals exposed to tuberculosis there is protection of only $250,000; I think in fairness to the tax-paying people of this country, as well as to the food producers, that if they are going to hold the tuberculosis appropriation down to $250,000, $250,000 would be a lavish sum to give for the eradication of the cattle tick. That $620,000 for 10,000,000 animals exposed to cattle tick means 6¼ cents for every head. Which $250,000 for tuberculosis for 130,000,000 animals is one-fifth of 1 cent per animal as protection against tuberculosis. A ratio of 31 to 1. In other words, Sir Bovis, the royal tick bearer, is given thirty-one times the consideration that his more humble fellow who bears, or might bear, the wasting tubercles.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Nebraska.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

For all necessary expenses for investigations and experiments in animal husbandry; for experiments in animal feeding and breeding, including cooperation with the State agricultural experiment stations, including repairs and additions to and erection of buildings absolutely necessary to carry on the experiments, including the employment of labor in the city of Washington and elsewhere, rent outside of the District of Columbia, and all other necessary expenses, $308,680: *Provided*, That of the sum thus appropriated $37,840 may be used for experiments in the breeding and maintenance of horses for military purposes: *Provided further*, That of the sum thus appropriated $61,040 may be used for experiments in poultry feeding and breeding: *Provided further*, That of the sum thus appropriated $8,000 may be used for the equipment of the United States Sheep Experiment Station in Fremont County, Idaho, including repairs and additions to and the erection of necessary buildings to furnish facilities for the investigation of problems pertaining to the sheep and wool industry on the farms and ranges of the Western States.

Mr. COX. Mr. Chairman, I move to strike out the last word. I want some information on this item. My recollection is this is the first time that this appropriation was carried, except that last year the amount was $12,280.

Mr. LEVER. What item?

Mr. COX. This sheep farm in Fremont County, Idaho. How was that money expended, and what has been the result?

Mr. LEVER. The item of $8,000 carried here is a continuance of the work that was done some years ago in the State of Wyoming when we introduced into that State some Corriedale sheep from Australia with a view of trying to improve not only

the wool production but the meat production of our sheep. Last year the proposition came to transfer this work into the State of Idaho. That proposition was, I think, submitted here on the floor, but did not receive favorable consideration by the House. It was put into the bill in the Senate. The Senate conferees insisted and the House conferees finally gave in, so that the herd of sheep that was being used for experimental purposes in the State of Wyoming has been transferred to the State of Idaho. I think they have there about 28,000 acres of land on which they are experimenting along the lines of grazing, feeding, breeding, and so forth.

Mr. COX. Is that on Government land?

Mr. LEVER. That is on Government land; yes. Now, this appropriation was used largely in building fences, corrals, and little houses for the protection of the sheep in lambing time.

Mr. COX. Last year the appropriation was carried in the amount of $12,280 and this year it is reduced to $8,000?

Mr. LEVER. Yes.

Mr. COX. Does the department feel like they could get along with $8,000?

Mr. LEVER. Yes; so we gave the department all they asked for.

Mr. COX. How are these sheep finally disposed of?

Mr. LEVER. Some are sold and the wool is sold also.

Mr. COX. Are they sold at public auction or by private sales?

Mr. LEVER. I am not sure of that, but I think the general rule is to sell products of the Department of Agriculture at public auction; but I am not sure about this.

Mr. COX. Are we only dealing with these Corriedale sheep that the Agricultural Department bought a few years ago?

Mr. LEVER. No; they have other sheep there.

Mr. COX. How many head of sheep are there now?

Mr. LEVER. There are between 4,000 and 5,000 head of sheep.

Mr. COX. And 28,000 acres of land?

Mr. LEVER. Yes. But this money is to be used only in building corrals and housing.

Mr. COX. And experimenting with the feeding and the growing of sheep generally?

Mr. LEVER. Yes.

Mr. WALSH. Mr. Chairman, I move to strike out the last two words.

Can the chairman of the committee inform me as to where and how extensively these experiments in the breeding and maintenance of horses for military purposes are being carried on?

Mr. LEVER. We have three stations, one at Front Royal, Va.; the Morgan farm up in Vermont; and a farm in Kentucky; but just in what part of Kentucky I am not able to say.

Mr. WALSH. Is the purpose to furnish horses for the military service or just to experiment and find out what particular breed of animal is best adapted?

Mr. LEVER. This appropriation was put into this bill over the protest of the chairman several years ago. The prime purpose of this is to undertake at Front Royal and in Kentucky to develop a better military horse. The work in Vermont, at Middlebury, is for the purpose, if possible, of preserving the Morgan horse and giving it a wider use in this country. Then, we also had a station out in Colorado, where we undertook to develop a carriage horse. That work is being conducted somewhat but not very extensively.

Mr. WALSH. Does the gentleman know whether the Military Establishment have received any of these horses from these stations during the past year?

Mr. LEVER. I could not tell the gentleman that. I would hardly think so, because this work at Front Royal and down in Kentucky has been going on only a very few years.

Mr. WALSH. Does the gentleman know how many animals they have?

Mr. LEVER. They have 39 stallions there now.

Mr. FESS. Mr. Chairman, I move to strike out the last word. I would like to have some information from the chairman as to whether there is any activity in any of the departments of the Government looking to increasing the production of sheep as a general proposition—no particular class, but as a general proposition?

Mr. LEVER. There is. Last year, largely at the suggestion of the department and the gentleman from Pennsylvania [Mr. MOORE], there was inserted in the Agricultural appropriation bill, I think, the sum of about $25,000 for carrying on sheep demonstration in this country, particularly along the Atlantic coast belt. This year we have increased the appropriation about $14,000.

Mr. FESS. That would indicate, then, that the work started last year is promising.

Mr. LEVER. The work started last year, according to my information, is very promising. The gentleman recognizes the tremendous necessity for that kind of work.

Mr. FESS. I will say to my friend that in years gone by almost every farm had a bunch of sheep. That seems to have been discontinued, and the product as a meat product seems to be very essential, and a bunch of sheep is rather of value to a farm than a detriment, and I wondered whether we would ultimately come to a position of producing no sheep.

Mr. LEVER. I would say to the gentleman from Ohio that I was very greatly surprised, in talking to a large sheep grower in the West, to learn that out of the total consumption of wool in this country of 600,000,000 pounds we produced only about 200,000,000 pounds. And I think there is no subject more worthy of consideration than the matter of increasing the sheep production in this country.

Mr. MONDELL. Mr. Chairman, I have on previous occasions when this bill has been under consideration expressed my opinion of the item for experiments in the breeding and maintenance of horses for military purposes, and I did not intend to say anything about it at this time, but it has been brought up by the gentleman from Massachusetts [Mr. WALSH], and I desire again to express the opinion that it is one of the few items of this bill which might very properly go out. I believe that expenditure is wasteful and does not result in accomplishing any good purpose. If it were wise and proper that the Government should go into the business of experimenting in the breeding of horses necessary and useful for military purposes, it should be done in a large way. It is not necessary to do it at all. The way we have been doing it is simply the frittering away of public money to the benefit and advantage of a few people in three localities.

But I did not rise for the purpose of discussing that particular part of the paragraph. Reference has been made to the portion of the paragraph relating to the sheep farm in Idaho. On this farm experiments are to be made with the Corriedale band of sheep bred from a band imported some years ago on an appropriation which I was somewhat instrumental in securing. These sheep were kept for several years in Wyoming, but the people who had charge of them there, and who cared for them very well and very successfully, concluded they did not care to continue their cooperation with the Government along those lines, and believed it would be wise to transfer those sheep and others, and the experimental work that was being carried on, to Idaho, where a considerable acreage of public land could be secured for the purpose of carrying on sheep experiments along various lines. Our people who were interested and informed generally held this view. I think the Idaho farm has not been running long enough to produce any very definite results, but I believe there are many experiments that can be carried on there that will be valuable.

The Corriedale sheep imported from Australia and New Zealand are proving a valuable addition to the wool and mutton producing flocks of the range States. The breed is gradually being utilized by a great many growers very much to their advantage. The Corriedale, carrying the characteristics of the merino, useful for all purposes for which the merino, either of the pure or mixed blood, is valuable, is a larger sheep with a heavier fleece.

It is a very valuable sheep for very considerable portions of the country, and the experiments that have and will be made with these and other classes and grades and breeds of sheep on the Idaho farm I believe will be very useful.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. WALSH. Will the gentleman state whether or not these investigations that have been carried on in Fremont County, Idaho, will prove of any value or benefit in determining the extent to which sheep might be raised in other sections of the country, or whether it simply shows how successfully they may be raised in Idaho?

Mr. MONDELL. I do not know that they would cast much light on the question as to the wisdom and advisability of raising sheep on eastern farms, but they will cast a great deal of light on questions of breeding and feeding, of weight, of wool and mutton production, and quality; determinations of questions that, once made and decided in Idaho, will be useful everywhere that sheep are grown.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the debate on this paragraph and all amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto close in 10 minutes. Is there objection?

There was no objection.

Mr. GREENE of Vermont. Mr. Chairman, I have been particularly interested in the argument of the gentleman from Wyoming [Mr. MONDELL], because the illustration he gives of the apparent practicality and success of the experiment in sheep raising in Idaho, which was originally introduced into Wyoming, is based exactly upon the argument which supports the horse-breeding station in Middlebury, Vt. It further has a rather interesting history, inasmuch as the sheep which are now being imported into this country for experimental breeding purposes may be offspring of sheep that were developed in Vermont originally and sent to South Africa and Australia and those other regions. And this, as men interested in the sheep-breeding business know, became the so-called American merino, an adaptation of the Spanish merino made by Vermonters nearly a hundred years ago, and, until the Civil War put an end to the sheep industry in that State, Vermont was the chief furnishing State for the higher specialized type of the so-called Vermont merino. That development came from such kinds of experimentation in Vermont as the gentleman now claims would, in Idaho and Wyoming, with respect to sheep, be a good thing for the country.

Now, Vermont, again, true to type, is undertaking to breed from her famous Vermont Morgan horses a horse adapted to military purposes, so that if you will give us time enough at Middlebury we will have it so that all who are now on foot may ride horseback. [Laughter.] Even beggars may then ride on horseback. [Laughter.]

Mr. MONDELL. How long ago was that established?

Mr. GREENE of Vermont. Some years back, so far as its history is concerned.

Mr. MONDELL. Was it not about 20 years ago? The gentleman is not quite accurate about the Corriedale sheep. They were brought from Australia, not from Vermont.

Mr. GREENE of Vermont. I did not say they were brought from Vermont.

Mr. MONDELL. They were, if I am not mistaken, developed not from Vermont merinos but from Rambouillet merinos from southern France, so that the reference made by the gentleman from Vermont in regard to the merino sheep does not cover the Corriedale proposition.

Mr. GREENE of Vermont. All right; you can go as far into the herald's college for the pedigree of your sheep as you want to, but I am depending upon some facts that are well known in Vermont whether they are known in Wyoming or not. [Laughter.]

Mr. MONDELL. They also apply to the Wyoming merino.

Mr. GREENE of Vermont. I did not say that this particular sheep was the result of any experimentation in Vermont. You compare the virtue of that sheep with the so-called merino sheep for certain stable qualities. That particular sheep was developed in Vermont, and he was the type of a development which I was citing to you as an illustration. Then I said that probably we will get similarly successful results from horse breeding in Vermont after we have developed things. But coming back to the point, I want to use the gentleman's argument for sheep to defeat his own argument against the horse. [Applause.]

Mr. COX. Mr. Chairman, I know of nothing in the way of the live-stock industry that needs development more than the sheep industry of this country. If the American people do not wake up along those lines and do something, I do not know what is going to occur. Wool is an absolute necessity to our lives, to our health, and to our happiness, particularly to those living in northern climates, and yet the sheep is actually disappearing not only from our country, but practically from all the sheep-growing countries of the earth.

At the last general revision of the tariff the facts developed showed that we produced in this country annually about 280,000,000 pounds of wool and we imported about 320,000,000 pounds. Recognizing the necessity of cheap wool and cheap woolen goods, the duty was taken entirely off of wool, and wool was placed upon the free list, with the hope that it would do one or two or possibly more things—that it would give us cheap clothing, or possibly it would stimulate the production of sheep. It has done neither.

Now, what are we going to do? We have got to have wool. It has got to be grown. It has got to be produced somewhere. The sheep ranges of the West are practically broken up. They are now grazing the foothills of the Sierra Nevada and the Rocky Mountains. There is no place where sheep can be grown except upon the farm, and I know of no organization able to deal with the matter other than those living on the farms throughout the country.

Some years ago the people of Pennsylvania took up this question through their banking and agricultural organizations. I have kept up with that question by keeping in touch with the bankers' organizations in Pennsylvania and in touch with the agricultural organizations, and as a result of the money which the bankers of Pennsylvania actually put into the sheep industry in distributing the sheep among the farmers I am reliably informed that in the last five or six years they have actually increased their flocks and herds 100 per cent, and they have added to the taxable value of their property approximately $4,000,000.

But they soon encountered the archenemy of the sheep, and that is the dog. I had some correspondence with the secretary of agriculture of Pennsylvania about that this summer. The bankers' organizations and the Farmers' Alliance of Pennsylvania forced and compelled an unwilling and reluctant legislature to pass a law which practically legislated the dog out of existence, and I think the State of Pennsylvania, in a manner, has controlled that situation. Now, as to my own State, I undertake to say that there are more dogs in the State of Indiana than there are sheep.

I undertake to say that that is practically the rule in every State of this Union. There are as many dogs upon the farms as there are sheep. Something has got to be done. The Agricultural Department can do a tremendous amount of work, and a lot can be done by local organizations and institutions.

Mr. FESS. Will the gentleman yield for a question?

Mr. COX. Yes.

Mr. FESS. I had the same matter presented to me during the holiday week. My uncertainty was whether Congress could go into that field and whether the States would not have to be depended upon? What is the gentleman's opinion about that?

Mr. COX. I think we have got ultimately to depend upon the States, but I do think Congress can do a lot of research work along the plan laid down in this item here.

Mr. MONDELL. Will the gentleman yield?

Mr. COX. Yes.

Mr. MONDELL. I have in preparation a bill which proposes a Federal tax on the predatory sheep-killing dogs, which I propose to introduce later.

Mr. COX. If the gentleman will put the tax high enough, I will gladly support it.

Now, Mr. Chairman, when this war is over we shall be faced with a debt that will stagger humanity. Every penny of it has got to be paid. Not a dollar of it can be repudiated. We have got to begin the growing of raw material to enable the manufacturers of this country to keep their wheels moving after peace has come to us.

In 1910 there were 57,216,000 sheep in the United States. In 1917 the number had decreased to 48,483,000, a loss of 8,733,000 head from 1910 to 1917.

In 1890 the number of sheep in the United States was 44,336,072. In 1917 the number had increased to 48,483,000, or in 27 years the number of sheep increased 4,147,000, while the population increased during the same period of time upward of 25,000,000.

There is no place where sheep can be grown to-day in this country except on small farms by the man with 80 or 160 acres. Here must be the future home of the sheep. Every encouragement should be given the American farmer to induce him to go into the sheep industry.

The CHAIRMAN. All debate is closed on the paragraph. Without objection the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Meat inspection, Bureau of Animal Industry: For additional expenses in carrying out the provisions of the meat-inspection act of June 30, 1906 (34 Stat. L., 674), there is hereby appropriated for the fiscal year ending June 30, 1919, the sum of $477,200.

Mr. MONDELL. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Wyoming offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. MONDELL: Page 16, line 23, strike out the figures "$477,200" and insert in lieu of the same "$577,200, of which sum $100,000, or as much thereof as may be necessary, may be used to defray the expenses of the inspection of horses slaughtered for export and the meat products from the same."

Mr. LEVER. I reserve a point of order on that, Mr. Chairman.

Mr. MONDELL. Mr. Chairman, there never was a time in the history of the world when the meat shortage was felt so widely and so acutely as it is at this time. Among the populations of Europe, particularly of Italy, of France, and of the German States, the use of horse meat has been common and general for a great many years. In view of the meat shortage and the use of horse meat by foreign peoples, some of the horse growers of our western country took up with me and with the

Food Administration the question of the utilization of such of our horses as are not useful or valuable for military or ordinary work or pleasure purposes, with a view of having them utilized to relieve the meat shortage across the water. I took the matter up with the United States Food Administration, and have a letter signed by Mr. E. M. Hilton, which is as follows:

WASHINGTON, D. C., *December 31, 1917.*

Hon. W. F. MONDELL,
House of Representatives, Washington, D. C.

MY DEAR MR. MONDELL: Your letter of December 19 addressed to the Food Administration has been handed to me for reply.

The Food Administration also has received many letters with reference to the use of horse meat in place of beef and has placed before the allies' representatives the possibility of securing large supplies of horse meat in this country and is now awaiting their advices. It is quite possible that they may be glad to buy such meat, but until negotiations are further advanced there is, so far as I know, no available market, since the people of this country have not yet learned to eat horse meat.

I thank you for bringing this matter to our attention and can assure you that it has more than once been brought before the representatives of the foreign Governments.

Yours, very truly,

UNITED STATES FOOD ADMINISTRATION.
By E. M. HILTON.

There are horses available for slaughter all over the country. That is particularly true of the range country. The number of horses unavailable for ordinary use has been increasing as the variety of uses and the general use of horses have decreased, until there are a very large number of horses undersized and otherwise unfitted for ordinary purposes, although perfectly sound, healthy, and usable for meat. I do not believe that our people are likely to use horse meat to any considerable extent. My amendment does not contemplate inspection for such purposes but for export only. Horse meat is, however, being used in many of the large cities, slaughtered and inspected locally, and sold locally within State lines. At one time I think there was some inspection of horse meat under the Agricultural Department. There has been none for a number of years. I am proposing an increase of $100,000 in this appropriation to be used for the purpose of horse and horse-meat inspection for export.

I noticed in one of the newspapers of this city yesterday under a New York date the following:

SEEK $100,000 FUND TO BOOM HORSES AS FOOD—VETERINARY SURGEONS URGE REESTABLISHMENT OF INSPECTION AS MEAT-CONSERVATION MOVE.

NEW YORK, *January 26.*

A resolution requesting Congress "to appropriate immediately $100,000 to reestablish the inspection of horse meat," so it may be made salable, was adopted by veterinary surgeons from New York, New Jersey, Massachusetts, and Connecticut at a conference here to-day. The sale of horse meat, the conferees determined, will be of invaluable aid in preventing a food shortage and reducing the high cost of living.

"The inspection of horse meat was abandoned in 1914," Dr. W. Horace Hoskins, dean of the New York State Veterinary College and one of the leaders in the movement, said in a statement. "If it is restored," he continued, "thousands of horses from the western ranges, unsuited for draft work because of their light weight can be placed on the dinner table.

"There are thousands of these ponies," he said, "which have been refused by the allies and this country, but they are as fat as moles and would be a splendid substitute for our vanishing beefsteaks and mutton chops.

"By turning these horses upon the market as meat we can bring the price of meat down to 15 cents a pound. They are offered for sale at from $15 to $25 a head on the hoof. I have received telegrams offering as many as 6,000 in one consignment."

I have had some correspondence with the Secretary of Agriculture on the subject and he evidences his interest and explains the situation in a letter, as follows:

DEPARTMENT OF AGRICULTURE,
Washington, January 11, 1918.

Hon. F. W. MONDELL,
House of Representatives.

DEAR MR. MONDELL: Pressure of work has prevented me from replying earlier to your letter of December 18, inclosing a copy of a communication from Mr. David Davis, of Badwater, Wyo., relative to the utilization of range horses for meat.

As I wrote you on July 8, the department understands that some horses are being slaughtered for food in this country in local abbatoirs. The inspection of these animals is conducted under the supervision of the city boards of health, and the meat is sold for local consumption. The department, therefore, has no definite information concerning the matter and has no means of knowing whether there would be any additional local demand for meat of this kind.

There is no specific law governing the inspection and slaughter of horses, and there is nothing to prevent the interstate shipment or exportation of horse meat, provided it is correctly labeled. All articles of food, however, must comply with the provisions of the food and drugs act of June 30, 1916, if shipped in interstate commerce.

Very truly, yours,

D. F. HOUSTON, *Secretary.*

Mr. COX. Why was Government inspection of horse meat for export stopped? Does the gentleman know?

Mr. MONDELL. I do not know. Possibly it was because few horses were utilized for that purpose, although at one time there was quite a considerable industry in the Pacific northwest in the slaughter of horses and the canning of horse meat for export purposes.

Mr. COX. Can not the department use the fund that is now used for the inspection of other kinds of meat to pay such inspectors?

Mr. MONDELL. I doubt it, because our inspection law applies to the inspection of the animals named in the law, and horses are not included.

Mr. COX. Does the law name the animals?

Mr. MONDELL. It does.

Mr. COX. Or the regulations?

Mr. MONDELL. The law itself. Cattle, sheep, hogs, and goats are the animals named in the law. This item is subject to a point of order, but I do believe that it is a matter of such importance that the appropriation should be made, because if our Secretary of State makes arrangements with foreign countries for the use of meat of this kind, a very large market will be secured, and there will be a very great relief from the present drain upon other classes of meat. As a nation we stand pledged to see that our allies receive a certain amount of meat from our supplies. The food administrator is urging for the curtailment of our use of meat in order that we may supply our allies. In this situation we should, if possible, utilize abroad our available supply of a kind of meat which the civilian populations of certain of our allies have used for years.

Mr. WALSH. Would not the appropriation of this sum lead to an increase in the slaughter of horses of light draft, for which there is now a very great demand for the Military Establishment?

Mr. MONDELL. It certainly would lead to the slaughtering of a great many horses, provided a market could be secured for such horse meat.

Mr. WALSH. Does not the gentleman think we had better conserve our horses for the Army rather than encourage their slaughter?

Mr. MONDELL. I will say to my friend that the horses which it is proposed to slaughter are horses that are too light or otherwise unfit for military purposes, and horses that for other reasons beside their size are not fitted for military use.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MONDELL. I ask unanimous consent that I may proceed for five minutes.

The CHAIRMAN. Unanimous consent is asked that the time of the gentleman from Wyoming be extended five minutes. Is there objection?

There was no objection.

Mr. MONDELL. No one has any thought of encouraging the slaughter of horses fit for military purposes. There is no possibility of that being done because of the fact that the horse fit for military purposes brings a price at which the use of his meat for food would be entirely prohibitive. Horses suitable for military purposes bring more per pound than the best beef animal in the country. So animals of that sort would not be utilized for meat. It would afford a market for the very large number of horses all over the country and a still larger number in the range country. These are horses that for various reasons are not available or useful for ordinary purposes, but are perfectly sound, would add very largely to the worlds meat supply, and could be utilized by those people abroad who for years have been eating horse meat.

Mr. WALSH. My question was prompted by the statement the gentleman read in the clipping to the effect that horses would be used that were not suitable for draft purposes, and I thought that there might be some distinction between horses suitable for draft work and horses suitable for military purposes.

Mr. MONDELL. Perhaps the gentleman did not hear the whole article. That question was discussed, and it was suggested that the horses available for this purpose were horses that could not be used for draft purposes or driving or military purposes. I have here a letter from a constituent who knows and states the situation in regard to horses in the range country.

TO RELIEVE THE MEAT SHORTAGE.

BADWATER, WYO., *December 10, 1917.*

Hon. FRANK MONDELL,
Washington, D. C.

DEAR SIR: Can you not draw the attention of Congress to the thousands of horses that are running on the range and elsewhere which are unfit for artillery, cavalry work, or saddle, but would make tons of nutritious meat for the people who are accustomed to eating horse. There are hundreds and hundreds which are too small for work animals and too awkward for saddlers. There is now no market for these animals, and if they could be sold for beef it would leave the feed they are now eating for the desirable ones.

Trusting the Nation will see this unused meat supply, I am,

DAVID DAVIS.

These perfectly healthy animals are now eating grass that ought to be utilized by other animals. Their use would make a market for the stock and greatly relieve the food situation among the civilian population among those of our allies accustomed to such meat.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto be closed in six minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on the paragraph and amendments thereto close in six minutes. Is there objection?

There was no objection.

Mr. NORTON. Mr. Chairman, this is an item that I believe should be favorably considered by the committee. The question of supplying a sufficient amount of meat to the people of this country and for our allies during the period of the war is a very important one. There are in the country to-day, it is estimated, about four or five millions of horses available for slaughter.

Mr. COX. Did the gentleman say 5,000,000 horses available for slaughter?

Mr. NORTON. Available for slaughter, which can be used without injury to the horse and without in any way endangering the supply of horses that are needed to be used for work on the farms of the country, in our cities, and for military purposes.

Mr. COX. How many horses are there in the United States?

Mr. NORTON. There are about 22,000,000.

Mr. WALSH. Will the gentleman state who made the estimate that there are 5,000,000 horses available for slaughter? Was it made by some department of the Government?

Mr. NORTON. No; that is an estimate that has been given out, I believe, by well-known horsemen in North Dakota and Montana who are well acquainted with the condition of the horse industry of the country. I will say to the gentleman that this is a question to which has been given considerable thought and study. It has been taken up with the Food Administration of this country and with the food administrations of England, France, and Italy. The slaughter of horses in this country for meat for export trade is considered a very practical matter.

I shall not be surprised at all if within a very short time the Congress provides for the establishment in the country of a plant for the slaughtering of horses and for the export of horse meat. Horse meat is just as wholesome and just as nourishing as is the meat of cattle. It has been used quite generally for many years in European countries.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. NORTON. Certainly.

Mr. MOORE of Pennsylvania. I do not want to rob the gentleman of his time, but this is a new proposition and I would like to know whether any department of the Government has suggested that we begin to use horse meat for food in the United States.

Mr. NORTON. I do not know that any department has yet recommended the use of horse meat in the United States, but I know the Department of Agriculture and the Food Administration has already considered this proposition and expressed the view that it was practicable and that the time has arrived when serious consideration should be given to this source of meat supply. I took this matter up with the Food Administration and the Department of Agriculture a year ago, and they then expressed much interest in it. I think it would be a somewhat difficult matter to educate our people in this country for some little time yet to the use of horse meat for food.

Mr. MONDELL. The gentleman knows that my amendment applies only to the inspection of horse meat for export.

Mr. MOORE of Pennsylvania. I notice the administration is suggesting that we reduce food consumption in this country in order to send meat and wheat to our friends across the water. I would like to know if we are going to be reduced to horse meat in the United States while we are sending our beef and wheat abroad? It does not seem to me that that is quite an American proposition.

Mr. NORTON. If the gentleman will give his powerful influence to the passage of this amendment, as I trust he will, it will help to avoid that very condition which he seems greatly to fear. It will help to supply our allies with wholesome and nourishing meat and enable us to keep a great deal of our beef for home consumption.

Mr. MOORE of Pennsylvania. It will probably get to our own soldiers if we export it, and I am not quite ready to accept horse meat for a diet either for our soldiers or the people in the United States. I want to know if any department of the Government has approved of the proposition contained in the amendment of the gentleman from Wyoming?

Mr. MONDELL. Will the gentleman yield for me to answer?

Mr. NORTON. No; I have not the time.

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. LEVER. Mr. Chairman, this amendment is clearly subject to a point of order; but inasmuch as the gentleman from Wyoming called my attention to it this morning as we were coming into the Hall, I am going to ask unanimous consent that the item may be passed over without prejudice, the point of order being reserved until I can consult certain gentlemen in the department about it.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the paragraph and amendment with the point of order pending against it may be passed over until he calls it up later.

Mr. MOORE of Pennsylvania. Does that mean that there will be an opportunity for discussion, since the gentleman has had the debate limited?

Mr. LEVER. If the point of order is withdrawn, I will agree that there shall be proper discussion.

Mr. MOORE of Pennsylvania. And the gentleman will permit debate on it if the proposition comes up again?

Mr. LEVER. I shall if I take the point of order off.

Mr. MOORE of Pennsylvania. I think it is such a radical proposition that we should come down to a horse-meat basis in the United States, or even abroad, so far as soldiers are concerned, that we ought to have a little discussion of it on the floor.

Mr. LEVER. So do I.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Clerk read as follows:

BUREAU OF PLANT INDUSTRY.

Salaries, Bureau of Plant Industry: One physiologist and pathologist, who shall be chief of bureau, $5,000; 1 assistant to the chief, $3,000; 1 executive assistant in seed distribution, $2,500; 1 officer in charge of publications, $2,250; 1 landscape gardener, $1,800; 1 officer in charge of records, $2,250; 1 executive clerk, $2,000; 2 executive clerks, at $1,980 each; 1 seed inspector, $1,000; 1 seed warehouseman, $1,400; 1 seed warehouseman, $1,000; 1 seed warehouseman, $840; 7 clerks, class 4; 12 clerks, class 3; 3 clerks, at $1,500 each; 23 clerks, class 2; 58 clerks, class 1; 1 clerk or draftsman, $1,200; 1 clerk, $1,080; 7 clerks, at $1,020 each; 25 clerks, at $1,000 each; 44 clerks, at $900 each; 1 clerk or draftsman, $900; 11 clerks, at $840 each; 1 laborer, $780; 41 messengers or laborers, at $720 each; 11 messengers, messenger boys, or laborers, at $660 each; 30 messengers, messenger boys, or laborers, at $600 each; 1 artist, $1,620; 1 clerk or artist, $1,400; 2 clerks or artists, at $1,200 each; 1 photographer, $1,200; 1 photographer, $840; 2 laboratory aids, at $1,440 each; 1 laboratory aid, $1,380; 4 laboratory aids or clerks, at $1,200 each; 1 laboratory aid, clerk, or skilled laborer, $1,080; 3 laboratory aids, clerks, or skilled laborers, at $1,020 each; 2 laboratory aids, at $960 each; 1 laboratory aid, $900; 4 laboratory aids, at $840 each; 7 laboratory aids, at $720 each; 1 laboratory apprentice, $720; 1 map tracer, $600; 2 gardeners, at $1,440 each; 4 gardeners, at $1,200 each; 8 gardeners, at $1,100 each; 15 gardeners, at $900 each; 19 gardeners, at $780 each; 1 skilled laborer, $960; 2 skilled laborers, at $900 each; 3 skilled laborers, at $840 each; 1 assistant in technology, $1,400; 1 assistant in technology, $1,380; 1 mechanician, $1,080; 1 mechanical assistant, $1,200; 1 blacksmith, $900; 1 carpenter, $900; 1 painter, $900; 1 teamster, $840; 1 teamster, $600; 21 laborers, at $540 each; 35 laborers, messengers, or messenger boys, at $480 each; 4 laborers or charwomen, at $480 each; 5 laborers or messenger boys, at $420 each; 20 charwomen, at $240 each; 16 messenger boys, at $360 each; in all, $440,020.

Mr. LEVER. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 18, line 1, after the word "laborers," insert a comma.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WALSH. Mr. Chairman, I move to strike out the last word. In line 7, on page 17, I notice a provision for one executive clerk. Is not that a change in the title?

Mr. LEVER. This one executive clerk was carried on the statutory roll heretofore as one superintendent of seed weighing and mailing. The department recommended a change in the title of that clerk in order to give a little more elasticity in appointment.

Mr. WALSH. Does the gentleman know whether that was by way of hint or intimation that perhaps the congressional seed distribution should be dispensed with——

Mr. LEVER. No.

Mr. WALSH. And hence there would be no need for a superintendent?

Mr. LEVER. No; I am afraid not.

The Clerk read as follows:

For conducting such investigations of the nature and means of communication of the disease of citrus trees, known as citrus canker, and by applying such methods of eradication or control of the disease as in the judgment of the Secretary of Agriculture may be necessary, including the payment of such expenses and the employment of such persons and means, in the city of Washington and elsewhere, and cooperation with such authorities of the States concerned, organizations of growers, or individuals, as he may deem necessary to accomplish such purposes, $250,000, and, in the discretion of the Secretary of Agriculture, no expenditures shall be made for these purposes until a sum or sums at least equal to such expenditures shall have been appropriated, subscribed, or contributed by State, county, or local authorities, or by individuals or organizations for the accomplishment of such purposes: *Provided*, That no part of the money herein appropriated shall be used to pay the cost or value of trees or other property injured or destroyed.

Mr. WALSH. Mr. Chairman, I move to strike out the last word. Will the chairman of the committee state what kind of plants or tree growth this money is applied to for the eradication of citrus canker?

Mr. LEVER. The citrus canker is a fungus disease which attacks citrus trees, orange, grapefruit, and lemon, and any of the citrus family. We had an outbreak of it first in Florida a couple of years ago. We appropriated quite a considerable sum of money at that time. This year we think we have recommended a sufficient sum. We have practically cleaned up the State of Florida, the testimony shows, and there is only knowledge of one infection in the State. The State of Florida at the meeting of its last legislature appropriated $300,000 for cooperation with the Federal Government to cover a period of two years. There is, however, danger of the spread of the disease in Louisiana, Alabama, Texas, Mississippi, and the purpose of this appropriation is to insure a complete eradication from the United States of the disease, because it is tremendously infectious and destructive.

Mr. COX. How is that infection carried?

Mr. LEVER. By birds and on the clothing of men. These men who fight this disease clothe themselves in rubber. It is carried by any movable thing.

Mr. WALSH. Can the gentleman state under what item in this bill, if there is an appropriation for the purpose, is carried the provision for destroying currant bushes and other similar shrubs because of their being afflicted with some kind of a fungus growth or disease?

Mr. LEVER. That is carried in the next item, I think. It is the white-pine blister rust that the gentleman has in mind, is it not?

Mr. WALSH. It is some kind of a growth similar to that.

The Clerk read as follows:

For applying such methods of eradication or control of the white-pine blister rust as in the judgment of the Secretary of Agriculture may be necessary, including the payment of such expenses and the employment of such persons and means in the city of Washington and elsewhere, in cooperation with such authorities of the States concerned, organizations, or individuals as he may deem necessary to accomplish such purposes, $230,448, and in the discretion of the Secretary of Agriculture no expenditures shall be made for these purposes until a sum or sums at least equal to such expenditures shall have been appropriated, subscribed, or contributed by State, county, or local authorities or by individuals or organizations for the accomplishment of such purposes: *Provided*, That no part of the money herein appropriated shall be used to pay the cost or value of trees or other property injured or destroyed.

Mr. WALSH. Mr. Chairman, I move to strike out the last word. As I understand the phraseology of this paragraph, no part of the money appropriated can be used to pay the cost or value of trees or other property injured or destroyed. Is the discretion vested in the Secretary of Agriculture under this paragraph such that it goes to the extent where he may limit the use to which the money contributed by local authorities is put, so that no part of that money can be used for the payment of property destroyed?

Mr. LEVER. I should not think so. I should not think the Secretary of Agriculture would have any control over funds other than those appropriated by Congress itself.

Mr. WALSH. But he can restrict the use of the Federal appropriation until the money is appropriated by the States.

Mr. LEVER. Undoubtedly.

Mr. WALSH. I understand that in many localities where this disease has broken out the Federal authorities have either directly, or, acting through the department, pulled up and destroyed large numbers of afflicted shrubs, and that the people who own them have not been able to receive any compensation therefor.

Mr. LEVER. The same principle applies in this item as applies in the citrus-canker item which we discussed a moment ago.

Mr. WALSH. That is what I wanted to ask, whether the citrus-canker sufferers, the owners of property who had trees afflicted, have been able to receive compensation from the State or local authorities for their trees which have been destroyed?

Mr. LEVER. I do not think so. I know they have not received any compensation from the Federal Government. The gentleman from Florida [Mr. DRANE] can give that information, I think.

Mr. DRANE. If the gentleman will allow me, I will give him the information. The citrus canker grows in the State of Florida. When they find the citrus canker has attacked a tree they give that tree up as lost. They generally, on their own volition, destroy it and they make no claim.

Mr. WALSH. And the same reasoning follows as to this item?

Mr. LEVER. Exactly.

Mr. WALSH. If any of the stock has been attacked, it is of benefit to the community to have that property destroyed and the disease stamped out in that way?

Mr. LEVER. That is the idea, exactly.

Mr. FESS. Mr. Chairman, I rise in opposition to the pro forma amendment. I would state to the chairman and the committee that I think this policy that has been inaugurated in regard to cooperation with the Federal Government by the local authorities is wise, and ought, in so far as it is possible, to become the policy of all the gratuities of the Federal Government, because there is a feeling that here and there somebody will come in and ask the Federal Government for assistance without any regard as to how much of the burden should be borne by themselves, and I believe that complaint has some foundation.

Mr. LEVER. If the gentleman will permit, I will say to him I thoroughly agree with him, and I think one of the most interesting legislative developments in recent years has been the adoption of this policy to which the gentleman refers; for instance, the agricultural extension act, the Federal road act, the citrus canker, the white-pine blister rust, and other items in this bill.

Mr. FESS. Is there any hope that that may become the fixed policy of Government gratuities in the future?

Mr. LEVER. It seems to me we are tending rapidly in that direction.

Mr. FESS. I think it is a very wise position for the Government to take.

Mr. LEVER. I think so myself.

The CHAIRMAN. The Clerk will read.

Mr. LEVER. Mr. Chairman, I offer the following amendment to correct a typographical error.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 21, line 3, after the word "authorities," to insert a comma.

The amendment was agreed to.

Mr. LEVER. Mr. Chairman, I ask unanimous consent to return to the item on page 19, line 19.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent to return to the page and line indicated. Is there objection?

Mr. STAFFORD. Mr. Chairman, reserving the right to object, let the amendment be reported.

Mr. LEVER. Just to correct a typographical error.

Mr. STAFFORD. I have no objection.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 19, line 19, after the word "and" strike out the word "by" and insert in lieu thereof the word "for."

Mr. LEVER. It is the item of last year's act.

The amendment was agreed to.

The Clerk read as follows:

For acclimatization and adaptation investigations of cotton, corn, and other crops introduced from tropical regions, and for the improvement of cotton and other fiber plants by cultural methods, breeding, and selection, and for determining the feasibility of increasing the production of hard fibers outside of the continental United States, $85,510: *Provided*, That not less than $7,500 of this sum shall be used for experiments in cottonseed interbreeding: *Provided further*, That of this amount $3,000 may be used for experiments in the production of New Zealand flax in the United States and for its utilization in the manufacture of binder twine.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the item just read. I wish to inquire what is contemplated by this new phraseology as to experimentation in the production of New Zealand flax in the United States?

Mr. LEVER. I will ask the gentleman from North Dakota [Mr. YOUNG] to give the gentleman the information.

Mr. YOUNG of North Dakota. Mr. Chairman, it is claimed that New Zealand flax will produce a very much cheaper binder twine. The binder-twine problem has become more and more serious every year. New Zealand flax grows in southern California now as an ornamental plant, and also in Florida, and I presume will grow in different places throughout the South.

It was introduced there because it is a beautiful plant, growing about 8 feet tall. That is how it happens to be in the United States at this time in very limited quantities. In New Zealand they have made more or less binder twine from it and they export some to Australia. It is claimed that they have now in California a new process by which this plant can be manufactured into twine very cheaply and secure a much cheaper product than can now be obtained. As the gentleman knows, we are now dependent upon other countries for the supply of binder twine. That is not a good condition, especially in this time of war, when we ought not to be dependent upon other countries for the twine to bind our grain. The product comes from Mexico and the Philippines. We do not know how long the latter may be a part of the United States.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. STAFFORD. I yield to the gentleman to ask a question of the gentleman from North Dakota.

Mr. GREEN of Iowa. What is the character of the product? Is it a firm, strong twine?

Mr. YOUNG of North Dakota. Yes; I will say to the gentleman it must have been, or the International Harvester Co. would not have already placed a big order with the people in California if they can produce it.

Mr. STAFFORD. Will the gentleman permit?

Mr. YOUNG of North Dakota. Certainly.

Mr. STAFFORD. In the item on page 23 we find an appropriation of $240,000, $50,000 more than carried in last year's bill, providing, among other things, for the investigation of the cultivation and breeding of flax for seed purposes, including a study of flax diseases. I wish to inquire whether that last phraseology would not permit the utilization of this large amount of a quarter of a million dollars for the very purpose of which the gentleman now speaks.

Mr. YOUNG of North Dakota. I would say not, for this reason: While this is called flax, I do not know any reason on earth why we should call it that. It does not belong to the flax family. That is to say, it has no seed which can be sold to make anything. They utilize only the stalk. It is a sisal, that is what it is, pure and simple.

Mr. STAFFORD. If my memory is not at fault, there was carried in times past an item for some agricultural experimentation in North Dakota or near by for flax development, and I take it that amount was provided out of this general appropriation.

Mr. YOUNG of North Dakota. I think that is a different character of experiment.

Mr. STAFFORD. The gentleman coming from that region and being acquainted with flax culture, both animal and vegetable, I wish to inquire how much has been expended along those lines of experimentation in the gentleman's State?

Mr. YOUNG of North Dakota. I think that was in respect to utilizing the flax straw. Of course we raise flax in North Dakota. It is the greatest flax State in the Union. We raise it for the seed. We usually do not count the straw as being worth anything, or at least it has not been utilized up to this time. There have been small sums with which to experiment with the flax straw, to see if it could be utilized for binder twine. Up to this time we have not found a method to prepare it so it makes a serviceable binder twine.

Mr. STAFFORD. How much has been expended for that purpose out of the National Treasury?

Mr. YOUNG of North Dakota. I think about $10,000 a year.

Mr. STAFFORD. And the experiments are still going on?

Mr. YOUNG of North Dakota. They are.

Mr. STAFFORD. Once a thing is started under national auspices it never stops, unless objection is raised to it and it is singled out so that a point of order can be raised against it. In this bill there is no opportunity for any Member to spot it; otherwise it might receive a knock-out blow. Now, I am inquiring what better results may be expected if we launch upon this new variety of flax development with this New Zealand variety? Do you think we will have 10 years of experimentation, at an annual expenditure of $10,000, and come no nearer than we are to-day in the other flax development?

Mr. YOUNG of North Dakota. I think we will have to trust in this case to the department. It may be that money is spent that ought not to be spent, but we can not in this House vote the money and then ourselves spend it. We have got to trust to an executive to spend the money after we vote it.

Mr. STAFFORD. But we can all rely on the Members who come from those States where those expenditures were originally instituted, when they realize the experiment is a failure, to strike it out.

Mr. YOUNG of North Dakota. I will say that while we asked for this appropriation of $3,000 to experiment with New Zealand flax it will not grow in North Dakota or in any of the Northern States. It does grow in southern California and some other portions of the South.

Mr. STAFFORD. Can the gentleman give the assurance to this extent, that the amount appropriated herein, if it is allowed now, will not grow in amount?

Mr. YOUNG of North Dakota. I am satisfied there is no need for it to ever grow in amount.

Mr. STAFFORD. Mr. Chairman, upon that assurance I withdraw the reservation of the point of order.

Mr. TOWNER. Mr. Chairman——

Mr. LEVER. Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto close in 12 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the debate on this paragraph and all amendments thereto close in 12 minutes. Is there objection?

There was no objection.

Mr. TOWNER. Mr. Chairman, I only desire at this time to call the attention of the committee to the immense importance of the development, if we possibly can, in the United States or in our possessions, of some sort of a fiber plant that will supply our farmers with the necessary material to make our own binding twine. The condition now is most unfortunate. Practically all of the supply that is required for the making of binding twine in the United States comes from Mexico. Now, we are paying because of the fact that it is controlled by a Government monopoly, or our farmers are required to pay, three or four times the price which under normal conditions and under competition, and as conditions existed before, was required to be paid. We are in the clutches of a Mexican monopoly, and it is a serious proposition, because, without binding twine, it is impossible for the farmers of the United States to gather their grain crops.

Mr. WALSH. Will the gentleman yield?

Mr. TOWNER. I will.

Mr. WALSH. Is not the increased cost of binding twine carried on to the price which the farmer receives for his grain?

Mr. TOWNER. I think not. I think that that is comparatively inconsiderable. In fact, the farmer does not receive the price for his grain at any time based upon the cost of the production of grain. The gentleman could easily ascertain that fact if he would make a study of prices. The matters that determine the price of grain are entirely extraneous as far as the cost of production is concerned. The cost of production for one year must be just as great as for another year, and yet the price may be twice as much in one year as it is in another year.

Now, we are conducting in the Philippine Islands experiments, aided partially by our own Department of Agriculture, but not to the extent I would like to see it done, in the development there of the fiber plant which can produce, it is thought, a quality of sisal that will be almost, if not quite, equal to that which is produced in Mexico for binding-twine purposes. It may be that we will be able to develop, and I hope we may, in the Philippine Islands a plant that will take the place of the Mexican sisal. I hope, but hardly expect, that we will be able in our climate, in a temperate zone, to produce the necessary plant growth that will give us the fiber necessary for the production of the best sort of binding twine. However, I think that these experiments ought to be carried on, not only for binding-twine purposes but for the many purposes for which these fiber plants may be used. We are using fiber plants in the production of bagging for grain and for vegetables. We are using fiber plants in a hundred different methods and manners, and all of this can be utilized. Certainly the Department of Agriculture is acting wisely in doing all that it can for this development. I hope the appropriations that are to be given in aid of the experiments carried on in Dakota will be granted ungrudgingly. I hope that wherever it is possible for us, recognizing the almost supreme importance and necessity of furnishing to the farmers of the United States who are growing our grain this absolutely essential requisite for the harvesting of their crops, Congress will do all it possibly can to encourage this growth and development. [Applause.]

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. TOWNER. Yes.

Mr. WALSH. Does the gentleman understand that these experiments are to be carried on in North Dakota?

Mr. TOWNER. Not all of them.

Mr. FESS. Mr. Chairman, I want to ask the gentleman from North Dakota one or two questions for information.

Mr. YOUNG of North Dakota. Very well.

Mr. FESS. What proportion of the binding twine that we use do we import? Can the gentleman make a general statement?

Mr. YOUNG of North Dakota. My colleague from Iowa says 90 per cent. I think that is a fair estimate. It is practically all brought in either from Mexico or the Philippine Islands. Mexico is now a foreign country, and the Philippines may be if the majority in Congress has its way.

Mr. FESS. We have in the district that I have the honor to represent a very large binding-twine manufactory, and they seem to be wholly dependent upon the product that comes from Mexico and Central America, especially Central America.

Mr. YOUNG of North Dakota. And so are the farmers. It would be a greater calamity for the farmers to have that supply cut off in time of war than it would be for your manufacturing plants.

Mr. FESS. The manufacturing plant, of course, produces it for the farmer. The raw material coming from that section—I have had a good deal of correspondence as to priority shipments in the past few months, stating that that market was pretty nearly closed. I was wondering whether there was any hope of developing a substitute for the sisal that we receive from South and Central America and Mexico. Do you hope to do that through the New Zealand flax?

Mr. YOUNG of North Dakota. That is the hope, because this plant grows very profusely and will produce ten times as much per acre as any other sisal.

Mr. FESS. One reason why I arose was the emphasis placed upon this article as a necessity at this time—that it might be regarded as an essential article rather than a nonessential article. I should think it would be, because it is absolutely necessary for the harvesting of our crops.

Mr. YOUNG of North Dakota. They have never found anything satisfactory to use in harvesters except twine such as they have now. If you take wire, it gets into the thrashing machine and tears it to pieces.

Mr. FESS. They want to avoid that?

Mr. YOUNG of North Dakota. You have got to have a strong twine, but one which can be easily cut.

Mr. FESS. Where will these experiments be made?

Mr. YOUNG of North Dakota. Naturally, where the plants are growing now—in the Imperial Valley of southern California.

Mr. NORTON. Mr. Chairman, as the gentleman from Iowa [Mr. TOWNER] said, it is of the highest importance to develop in this country a plant to take the place of the sisal that we are now importing for use in the manufacture of binding twine for the wheat-growing sections of the country. By this appropriation it is proposed that experiments are to be made with this New Zealand flax, to ascertain whether it can be used as a substitute for sisal. The officials of the Department of Agriculture, as will appear in the hearings under the Bureau of Plant Industry items on page 39, are not very sanguine about the prospects of being able to use the fiber of this plant as a substitute for sisal or for other fiber now used in the manufacture of binding twine. This plant, phormium tenax, or the so-called New Zealand flax, is not like the ordinary flax plant at all. In fact, it does not belong to the same family. It belongs to the lily family, and in general appearance and manner of growth it resembles the iris, or blue flag, except that the leaves are much longer, attaining a length of 5 to 8 feet. It grows wild in New Zealand. Extensive experiments have been made in its use there. The fiber from this plant is now being used in this country and in New Zealand to a small extent in the manufacture of inferior grades of rope and twine. The method of cleaning and preparing phormium fiber is very laborious and expensive. There has been a standing offer of $60,000 in New Zealand for 20 years for the discovery or invention of improved methods for preparing this fiber, but no one has claimed the offer.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. NORTON. Yes; I yield.

Mr. WALSH. The gentleman has covered the point I was going to ask, as to what experiments were made in New Zealand. Were they for the purpose of ascertaining the methods and machinery necessary to be used in converting it into twine?

Mr. NORTON. Yes; I should expect that that would be about the only thing that this appropriation could be used for, to determine the best method of preparing this fiber and to determine the uses which may be made of the fiber in this country, I do not think there is any question about its growth. It will grow in any warm, moist climate.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield?

Mr. NORTON. Yes; I shall be pleased to yield to the gentleman.

Mr. GREENE of Vermont. Did the experiments made in New Zealand tend to show whether it would be adapted to the same uses that it is used for here? Do you know whether it is used as we would want to use it on the harvesters here?

Mr. NORTON. According to the statement of the department here, it is not suitable to be used alone for the manufacture of binder twine. It can be used to fill in with a stronger fiber.

Mr. YOUNG of North Dakota. Mr. Chairman, will the gentleman yield?

Mr. NORTON. I yield to my colleague.

Mr. YOUNG of North Dakota. I will say that the department expects, if this item is allowed, to bring in some seed. The roots were brought in last year, quite a quantity of them—or at least they were headed this way, but on account of the fact that insects were working in the growths they deemed it proper, under the quarantine regulations, to prevent the material coming in. Now it is proposed to bring in the tops with the seed, so as to get a supply to start growing it in southern California.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield?

Mr. NORTON. Yes.

Mr. GREEN of Iowa. I understand the Department is not enthusiastic about this proposition. Does not the gentleman think that in view of the fact that our farmers are now compelled to pay an extortionate price by reason of this Government monopoly we could afford to take some chances, even if we were grasping at more straws than one?

Mr. NORTON. Yes. I quite agree with the gentleman. I believe it is highly important that some substitute be found for Yucatan henequen, which has now become so expensive for use in the manufacture of binding twine, owing to the monopoly under which it is sold.

The CHAIRMAN. The time of the gentleman has expired. The Clerk will read.

The Clerk read as follows:

For the investigation and improvement of cereals and methods of cereal production, and the study of cereal diseases, and for the investigation of the cultivation and breeding of flax for seed purposes, including a study of flax diseases, and for the investigation and improvement of broom corn and methods of broom-corn production, $241,505: *Provided*, That $40,000 shall be set aside for the study of corn improvement and methods of corn production: *Provided also*, That $50,000 shall be set aside for the investigation of the diseases of wheat, oats, and barley known as black rust and stripe rust: *Provided also*, That $25,000 shall be set aside for the investigation of corn root and stalk diseases and for the inauguration of such control measures as may be found necessary.

Mr. YOUNG of North Dakota. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from North Dakota offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. YOUNG of North Dakota: Page 23, line 14, after the word "investigation," insert "and control."

Mr. YOUNG of North Dakota. Mr. Chairman, the appropriation carried for this purpose in the past has been for investigations, and those who have been conducting these investigations have now reached the conclusion that the cause of black rust is the barberry bush; and they have at last reached the conclusion that the money devoted to this purpose should be used chiefly to eradicate or destroy the barberry bush, rather than to investigate this matter any further. So I think it is necessary now to add the words "and control" after the word "investigation." Otherwise the department might be hampered somewhat in spending the money. The exportable surplus of wheat for the allies must come from North Dakota, South Dakota, Minnesota, and Montana. With the winter wheat reported in bad condition, worse than at any time since crop records were kept, it is the part of prudence to see to it that so far as it is humanly possible nothing shall happen to our wheat crop to be seeded next spring. It would be possible in the four States just mentioned for black rust to destroy enough wheat so that we could not export a single bushel without the people going hungry in the United States. There is no guessing about this. We found out in 1916 what a terrible scourge black rust could be, and the enemy has been found. The barberry bush stands indicted by the scientists of this and several other countries.

Mr. COX. Will the gentleman yield?

Mr. YOUNG of North Dakota. Certainly.

Mr. COX. I am very much interested in this item. If it is doing any good, I would like to see it doubled, trebled, and quadrupled, because of all things that our farmers have had to deal with this black rust is the most destructive. It wipes us off the map every year or two and cleans us out. Has the department located the primary and proximate cause of this rust; and if so, what has it finally settled upon?

Mr. YOUNG of North Dakota. There were 37 plant experts who met in Madison last year, and they were unanimous in their finding that the barberry bush, which is an ornamental shrub growing chiefly in the towns and villages, is the cause of black rust.

Mr. COX. Is there more than one variety of that bush?

Mr. YOUNG of North Dakota. There are quite a number of varieties, and all except the Japanese barberry bush are hosts for the parasites that are driven by the wind to the wheat fields and cause black rust.

Mr. COX. How does the gentleman account for the fact that you will find this black rust away out in the country, clear away from any shrubbery at all?

Mr. YOUNG of North Dakota. The reason is this: When the parasite breaks away from the barberry bush it is in the form of a very fine powder, lighter than air, and when it is taken up by the winds it is carried hundreds of miles. These particles are so fine that one bush thrown out into the wind will scatter them over an immense area of territory, surprisingly large.

Mr. COX. Then, the only remedy to get rid of the black rust is, first, to get rid of the barberry bush. Is that correct?

Mr. YOUNG of North Dakota. Yes.

Mr. COX. What kind of a racket are we going to get into with our people in the towns and cities when we undertake to destroy their fine shrubbery?

Mr. YOUNG of North Dakota. It seems to me in this time of war, when some of the people in the cities are glorying over the fact that they have plowed up their tennis courts and planted them to potatoes, we can get enough patriotic people in the United States to understand that one of the best ways to win this war is to dig up these barberry bushes.

Mr. COX. I quite agree with the gentleman; but I want to know what these scientists have further found out.

Mr. YOUNG of North Dakota. In the hard-wheat States, Minnesota, North Dakota, and South Dakota, alone, we lost 180,000,000 bushels of wheat in 1916 from the black rust.

Mr. COX. There is no doubt on earth about that.

Mr. YOUNG of North Dakota. That was more than will be saved by this entire wheat-saving campaign being conducted by Mr. Hoover, and you will understand that I do not want to minimize the great conservation work which he is performing.

Mr. COX. The 1915 crop of Indiana was almost wiped off the map, and fields of 20 or 40 acres that looked to be fine wheat one day were not worth a cent the next. Have these scientists discovered anything else, other than this barberry bush, that is responsible for this?

Mr. YOUNG of North Dakota. No; they have not in the Northern States.

Mr. COX. They place the whole responsibility there, and there alone?

Mr. YOUNG of North Dakota. Yes; and they point out that they eradicated the barberry bush from Denmark in 1903 and have not had black rust there since.

Mr. COX. That means that you have got to dig up these bushes and burn them?

Mr. YOUNG of North Dakota. Dig them up.

Mr. COX. Destroy them in some way?

Mr. YOUNG of North Dakota. Yes.

Mr. TILSON. Will the gentleman say how far this black rust will carry?

Mr. YOUNG of North Dakota. They have found in India that it will carry as far as 300 miles.

Mr. TILSON. I was wondering if it would carry from Connecticut to North Dakota? If so, I had better dig up some that I recently had planted in my yard.

Mr. YOUNG of North Dakota. It will undoubtedly carry from the gentleman's State over into Ohio, where they raise quite a lot of wheat. How much wheat do they raise in Connecticut?

Mr. TILSON. Very little.

Mr. YOUNG of North Dakota. It is up to the people in the States where they do not grow wheat, as well as in the States where they do, to dig up the barberry bush as a matter of patriotism.

Mr. TILSON. If it will destroy wheat, we surely will dig it up.

Mr. YOUNG of North Dakota. Thank you; you are a patriot.

Mr. Chairman, I have had a number of important letters upon this subject. C. G. Selvig, superintendent of the agricultural school and station at Crookston, writes to strongly urge a campaign to exterminate the barberry bushes. G. H. Coons, plant pathologist of the Michigan Agricultural College, has written a letter to Representative P. H. KELLEY, of Michigan. He says:

It is difficult for one not familiar with the possibilities of wind transference of fungus spores and not fully aware of the enormous powers of multiplication which these spores possess to realize that this common ornamental shrub which has been planted here and there in the yards and parks is such an enemy to our most important food crop.

Already the farmers of Denmark have met this situation and have eradicated the barberry, with the result that no epidemics of stem rust have occurred in the 10 years since the eradication was accomplished. The farmers in North Dakota have recently passed a law declaring the barberry an outlaw.

Representative YOUNG of North Dakota is attempting to get into the agricultural bill a $50,000 appropriation to get the bush located, to arouse public sentiment, and to insure that the bush will come out before it can endanger our next year's wheat crop.

May I ask that you confer with Mr. YOUNG and assist him in this worthy conservation measure?

We might think, perhaps, that this was a matter of concern only to the great western wheat States, but in our own Clinton County this last summer rust caused a loss of 15 per cent of the wheat crop.

On one hand is a worthless bush, readily replaced in any landscape gardening scheme—the small Japanese barberry (Berberis thunbergii) is not concerned in this—and on the other hand is a valuable crop, which the bush damages.

The facts of the relation of wheat rust to barberry are taught in every high-school botany. Now is the time to make use of our common knowledge.

Prof. H. L. Bolley, of the North Dakota Agricultural College, has given more study to plant diseases than any pathologist in the United States. It was he who discovered a preventive for wheat smut. He is very strong in the conviction that the barberries must all be destroyed; and if eradicated, that black rust will disappear. He writes me as follows:

AGRICULTURAL COLLEGE, NORTH DAKOTA,
January 21, 1918.

Hon. GEORGE M. YOUNG,
House of Representatives, Washington, D. C.:

DEAR MR. YOUNG: President Ladd called me into consultation relative to your telegram, and, of course, you know my interest in this work. I want to aid you in every way I can in this effort which you are making.

No doubt you have already talked with Representative JOHN M. BAER, who is quite familiar with our work here and who aided me greatly in the propaganda work previous to the introduction of our State law. I am sure he will aid you there.

I am sending you a card with some barberry leaves showing some of the rust postules and will confine this note to statements of conditions.

(1) In my telegram you will note that I suggested that you have the law call for an order for the eradication of the barberry as an emergency measure. I hope you will make it clear to everyone that an appropriation of $50,000 at this time for "further studies as to methods of eradication of wheat rust" would essentially be a waste of public moneys and man power or energy. The thing to do now is to do the thing that all cereal pathologists who have studied the disease in the fields want done, namely, kill the barberry bushes and prevent a further planting of such bushes which bear and start wheat rust. This, all are agreed, will give results and clear the way for further work, if then needed.

There are a good many conservative people in the world and there are a good many fine parks in which this shrub has been used for decorative purposes, and there will be people, and plant pathologists, perhaps, who will advise that there should be further time for survey, further time for study, and further time for the putting on of an "educational campaign," etc. Some of these men are perfectly honest—but, as indicated, the pathologists who have studied cereal crops and who have been in the field are all agreed—see resolution of 37 cereal pathologists assembled at Madison, Wis., in July, 1917, in which they asked President Wilson for action in this matter. The reason that the resolution did not then ask President Wilson to immediately proceed to destroy the bushes as a war emergency measure was not because the pathologists believed it should not be done then but because they wanted to give the Department of Agriculture time to finish the survey that was then being made, and they thought perhaps the President was extremely busy and would like some time before having such an order made. That the people of the wheat States agree in this matter of eradication—see resolution of the Tri-State Grain Growers' Convention in January, 1917, asking for the survey which the department has now made. See also the resolution at the meeting of the Red River Valley Stock and Development Association at Crookston, Minn., and which appointed a committee of three to visit Washington to ask for immediate action in the matter of barberry eradication. This association represents 10 leading wheat counties of Minnesota. See also the resolution by the present Tri-State Grain Growers' Association in which they appointed a committee to go with the Minnesota committee. See also the fact that the Canadian Governments have ordered the eradication of the bush throughout the Canadian Provinces. See also telegrams by Grisdale. I have learned by letters from the chief pathologist of the Michigan Agricultural College that in all probability there will be a delegation from that State which represents mills, bankers, growers, etc.

Showing the Canadian interest in the matter, I have in my possession maps and figures of the agricultural agent of the Canadian Pacific Railway, showing that in 1916 in the Provinces of Manitoba and Saskatchewan alone there was a loss of over $100,000,000 from this black-rust scourge.

(2) While North Dakota has eradicated her barberry bushes by law, those who have asked that this be done have asked it as a lesson to other States. They know that the eradication of the bushes in North Dakota alone will not save the wheat crop of North Dakota from barberry bushes that grow in Minnesota and other States south and eastward, for the "wind bloweth where it listeth." Our farmers and public have done this work as a sanitary measure, and ask that the citizens, consumers, and public eastward take an interest in such matters and cause the same to be done there. You will be interested to know that it costs us almost nothing to do the work—the women's clubs, children, and citizens in general digging up the bushes as soon as notified of their presence. They did it freely and gladly when they learned that their hedge was destructive and when they understood that the law acted

equally on all citizens, understanding that a sanitary measure does not get full recognition until there is a law which puts all citizens on an equal basis.

(3) You will note that in my telegram of yesterday I advocated "nation-wide action." You will wonder why the growers' conventions and the plant pathologists have not indicated this nation-wide action, particularly as I and others who advocate the general destruction of the bushes have usually been present. I can only answer that in framing resolutions we try to be sure that the wording will be such that the organization will pass it—understand it. One does not always get the wording he knows to be right.

I have had commendatory letters on this eradication work in North Dakota from far and wide—Canada, New York, Virginia, etc. It has given encouragement to many of our State plant pathologists. They are calling for like work in their State. You will perhaps be told that bushes in Indiana, Tennessee, and other more Southern States and in large eastern cities are not materially effective in spreading this rust. The men in the Department of Agriculture Survey this year did not find southern bushes materially infected south of Iowa at the time they were surveying. True, one may often go in big cities and have difficulty in finding rust on the bushes. These bushes can not have rust on them unless the conditions are right or unless some black-rust spores fall. Some of these bushes are not close to the wheat fields and wild grasses which bear the black-rust spores; some of them are even surrounded by bluegrass lawns. This does not, however, prove that when the proper conditions of infection are present that they will not do the work regardless of what State or what city they are in. Last year I picked an abundance of barberry leaves in large cities of Wisconsin and Minnesota, even in the center of Minneapolis, the leaves of which were infected. I have no doubt but had I visited Detroit, Cleveland, Buffalo, or Rochester I should have found plenty of affected barberry, enough to have destroyed the crops of Michigan and Ontario if the weather conditions were suitable. My own experience in Indiana in 1887 and 1888 records as destructive attacks on barberry bushes at Lafayette, Ind., as I have ever seen in the Northwest—the failure to see birds fly over does not mean that summer has not gone by.

(4) Again let me call your attention to the fact that there is a material difference between a law for the eradication of rust and a law for the eradication of barberry bushes. May we not hope that the wording will be such that the President, the Food Administration Board, or other war board may at once order and call for the eradication of the one criminal rust producer which we all know, namely, the common barberry bush and all its kinds and varieties which bear the rust, and that the wording may be such that it will apply to barberry bushes wherever found? Let the funds provided be used for the proper propaganda and survey to locate the bushes for the people, and they will dig them out whenever asked to do so.

(5) Remember that this eradication measure to be effective in the increase of the crop of 1918 should commence at once, before the leaves of the barberry are formed in the spring. Spores begin to form on the bushes as soon as the first leaves are fairly well formed; at least, as early as May 10 to 20 in latitudes of Chicago and southward; June 1 to July northward.

Yours, respectfully, H. L. BOLLEY.

Mr. LEVER. I ask unanimous consent that debate on this paragraph and all amendments thereto close in 15 minutes.

Mr. MOORE of Pennsylvania. Will the gentleman yield me three minutes?

Mr. HAUGEN. I would like five minutes.

Mr. LEVER. The gentleman from Pennsylvania desires three minutes and my colleague on the committee, the ranking member on that side, Mr. HAUGEN, desires five minutes. So, Mr. Chairman, I will make it 23 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that debate on this paragraph and all amendments thereto close in 23 minutes. Is there objection?

There was no objection.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, if the addition of the words "and control," as suggested by the gentleman from North Dakota, means that the department is to use this money for the purpose of removing these bushes that they are talking about, I think the amendment ought not to be adopted. I have no objection to the use of money by the department for making investigations or for learning the best methods of control, but before the department goes into the business of controlling it by hiring a large number of men to do nothing but cut these barberry bushes, I am opposed to it.

Mr. YOUNG of North Dakota. There are a great many ways in which the department can use this money, and I think the gentleman will understand from what we were told in the committee that it would be used chiefly in an educational campaign. That was the statement made to us by Dr. Kellerman. I will say also that they propose to control the matter through the control of interstate shipments under the quarantine law. That is one of the kinds of control they ought to exercise now.

Mr. McLAUGHLIN of Michigan. We found some years ago, when several hundred thousand dollars were appropriated for the purpose of combatting the ravages of the gypsy and brown-tail moth, that the scientific Bureau of Entomology, a highly scientific bureau, was at times employing as high as 500 men to do nothing but cut brush. There is a pink boll cotton worm which has made its appearance in Texas, and this Bureau of Entomology says that they have imported into that region as high as 2,000 men to cut and pull up cotton. It seems to me that this is altogether out of place in the Bureau of Entomology or any department of the Government. I would favor any kind of an appropriation to make investigation to discover the source or cause of diseases affecting agricultural crops and to learn methods of applying the remedies, but when immense sums of money are used for the employment of the physical labor to put into operation the plan that the department has worked out, I think the department is going too far.

Now, if the insertion of this word "control" means that the department is going to employ a lot of men to go through the country to cut down barberry bushes wherever they are found, I think that is an improper use of money. This amendment, if that is the meaning of it, ought not to be adopted.

In many of the activities of this department we find that, where it is authorized by Congress, money is furnished for the purpose of studying diseases, finding remedies, and the best way of applying them, it has gone on and employed a large number of men to do the physical work. I think this Government has gone far enough in making investigation, learning the cause of the trouble, the manner of preventing its return, and the method of control. I cite these instances of the use of money in the employment of 500 men to cut brush in Massachusetts to prevent the spread of the gypsy and brown-tail moths and the employment of 2,000 men to pull up cotton as misuse of money. We ought not to permit it in another case relating to wheat and barberry bushes.

Mr. WALSH. Will the gentleman yield?

Mr. McLAUGHLIN of Michigan. I will.

Mr. WALSH. Is not this just as important as the eradication of the citrus canker or the white-pine blister, and might it not be safeguarded with the same kind of a proviso and handled in the same way? They appropriate there for the eradication and control, and if this destroys the entire wheat crop, it seems as though appropriations of this sort would be justified if we could safeguard them.

Mr. McLAUGHLIN of Michigan. I take the same position with reference to the wheat crop as to the park trees in Massachusetts and the cotton crop, and all these things. I think it is the duty of the Federal Government to ascertain the cause, work out a plan or remedy, but not to employ an immense number of men to do physical labor.

Mr. MOORE of Pennsylvania. Mr. Chairman, I do not favor the amendment offered by the gentleman from North Dakota at this time, because I think it would lead to interminable trouble. Barberry bushes have not been sufficiently exploited in the House to justify our taking such summary action in regard to them. The gentleman from New York sitting by my side has just invested $25 in barberry bushes and others are buying them and have been doing so for years. The bush is used for ornamental purposes throughout the land, and has been sent out by Members of Congress in their Washington allotments. Apparently the Department of Agriculture is primarily responsible for the distribution of the barberry bush.

Mr. NORTON. Mr. Chairman, the gentleman appears not to have heard the splendid address on this subject the other day by my colleague from North Dakota [Mr. YOUNG].

Mr. MOORE of Pennsylvania. I heard the gentleman from North Dakota to-day. He said if we would win the war we must get rid of the barberry bush. In this my genial friend from North Dakota [Mr. YOUNG] goes Hoover one better.

Mr. NORTON. If the gentleman was shown that the barberry bush was responsible for the black rust in wheat and other cereal crops and we had no means of destroying the black rust except by the eradication of the barberry bush, would he not then favor the eradication of the barberry bush?

Mr. MOORE of Pennsylvania. Under these circumstances "the gentleman from Pennsylvania" would favor the eradication of the barberry bush in North Dakota, but he would not favor going into the front yard or the back yard of every person who had a comfortable little home in Pennsylvania and New Jersey to prevent the flight through the air all the way to North Dakota of these little atoms described by the gentleman from North Dakota, who states that 300 miles is the extent of the flight.

Mr. NORTON. I will say to the gentleman that scientists have made a careful study of this question. It is not at all a new one. The black-rust problem has been encountered in Europe for many years. There it has been found that it can be controlled by the eradication of the barberry bush.

Mr. MOORE of Pennsylvania. We have no official information of that fact in the House.

Mr. NORTON. You have if you have read the hearings before the Agricultural Committee. It is not a new question at all. These scientists have unanimously declared to the world that the native barberry bush is one of the hosts in the life cycle of the germs of black rust. It has been thoroughly demonstrated that through the eradication of the native barberry bush the spread of black rust can be controlled.

Mr. MOORE of Pennsylvania. We have the word of two gentlemen from North Dakota that the cause of the black rust which destroys the wheat crop in North Dakota is the barberry bush that grows in front of residences in New Jersey and elsewhere throughout the United States.

But there is a reason for doubting the propriety of this amendment. I am not willing that the gentlemen from North Dakota shall indulge in the happy practice, which is characteristic of the other side, of appointing 500 inspectors from North Dakota and elsewhere to go into the front yards of the people who happen to reside along the Atlantic seaboard and dig up their barberry bushes. I can not quite see the connection between the barberry bushes that thrive on the salt air of the Atlantic coast and the wheat crop of North Dakota which is destroyed by the black rust. The gentleman from North Dakota [Mr. YOUNG], who is unquestionably as great a scientific expert upon this question as is the other gentleman from North Dakota [Mr. NORTON], admits in his scientific analysis of the situation that this microbe, or whatever it may be, that emanates from the barberry bush does not float more than three or four hundred miles at the most, and there is considerably more distance than that between the barberry bushes that ornament the residences of people in New Jersey or New York and the wheat fields of North Dakota.

I do not like the idea of appointing 500 inspectors for this work, as suggested by the gentleman from Michigan, first, because it would be a heavy charge upon the Government. Then, again, these gentlemen who would naturally tour the country—very capable gentlemen and good talkers all of them—might, in their patriotic enthusiasm, forget the influence of the barberry bush in "winning the war" to say a few kind words about the administration and the necessity of "upholding the hands of the President." With expenses paid, they might be tempted to forget the barberry bush.

Mr. RUBEY. Mr. Chairman, the gentleman in his discussion is winning votes for the amendment on this side of the House.

Mr. MOORE of Pennsylvania. The gentleman sees the point. It seems to me, if these 500 men are to go about lecturing on the barberry bush, telling us to dig it up and destroy our hedges to "win the war," it might have a serious effect upon the approaching campaign.

Mr. LOBECK. The gentleman is in favor of winning the war, is he not?

Mr. MOORE of Pennsylvania. Oh, yes; winning it by strength of arms, by vigorous action. I question whether the elimination of the barberry bush is going to have the effect which the gentleman from Nebraska and I desire.

Mr. LOBECK. Would it not be helpful, according to the gentleman's statement?

Mr. MOORE of Pennsylvania. This is the first time we have heard of the evil effects of the barberry bush upon the Nation, and the world at war. A while ago we heard about the advisability of using horse meat to "win the war." Now we are told that the barberry bush is stopping our progress. I trust the administration will overcome these difficulties and that notwithstanding the ravages of the barberry bush we may go ahead and win the war.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. GREEN of Iowa. Mr. Chairman, let me reassure my friend from Pennsylvania [Mr. MOORE] as to the prospect of any inspector digging up barberry bushes in the yards of gentlemen coming from New York or New Jersey. Nothing we can do in connection with the paragraph could possibly give the inspectors power to race over the dooryard of the gentleman from New York, even if he was so unpatriotic as to refuse to dig up the barberry bush after he had been convinced that it is the cause of the black rust. It is true that the words suggested to be inserted by the gentleman from North Dakota [Mr. YOUNG] may empower inspectors who are given consent by owners to go and dig some barberry bush, but we ought not to lose sleep over that. What we want is to get the barberry bush eradicated all over the country, because there are wheat fields near New York and near New Jersey, in all of the States, or practically all of them, and these scientists having agreed that this is the cause of the black rust. I am sure that everybody in the United States will be patriotic enough to dig up his bushes himself.

Mr. TOWNER. Mr. Chairman, will the gentleman yield?

Mr. GREEN of Iowa. Yes.

Mr. TOWNER. Is not the best method—and, in fact, the only practical method—of controlling this, through the prevention of interstate shipment of barberry bushes?

Mr. GREEN of Iowa. I intended to mention that, but I did not have time enough; but the main object, as I understand the gentleman from North Dakota, is to prevent interstate shipment of barberry bushes.

Mr. HAUGEN. Mr. Chairman, I believe that the scientists are generally agreed that the only way to eradicate the black rust is by eradicating the barberry bush. As has been stated here, the barberry bush is the host of the fungus—the plant in its first stage. It develops in the barberry bush. In the second stage it has for its host the various grains and grasses. Anybody who knows anything about black rust knows about its ravages; and it is a safe estimate to say that the black rust for the last 25 years, at least, has decreased the wheat yield at least 25 per cent, and it is safe to say that if black rust can be eradicated the yield of wheat—not only wheat, but oats and other grains as well—could be increased at least 25 per cent. Our allies are asking for 800,000,000 bushels of grain. We have not got them, and they can not fight without food. We must provide them with food if we are going to win the war. We can afford to make this small appropriation, and we can afford to agree to the language that is proposed. I believe that it will bring good results. It has brought good results in other countries. Denmark has tried it out, and there black rust has been eradicated and the yield of wheat has been largely increased. I believe that it is well worth the experiment and the appropriation suggested.

Mr. MORGAN. Mr. Chairman, I have a separate amendment to offer, which has nothing to do with this discussion. I would like to offer the amendment after we get through with this discussion.

Mr. LEVER. I suggest that the gentleman offer it in his own time now, have it considered pending, and discuss it.

Mr. MORGAN. Very well, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 23, line 11, strike out "$241,505" and insert "$250,000."

Mr. MORGAN. Mr. Chairman, in offering the amendment to increase this general appropriation for all these items I do not, of course, reflect upon the committee. I know the great attention the gentlemen have given to all the paragraphs and all the items of this bill, yet this is a very important paragraph. It relates in general to cereals, wheat, corn, and so forth, and includes broom corn. I happen to represent a district which is very largely a wheat-producing district, and one portion of it is a very large broom-corn producing district. A few years ago Oklahoma produced more than 50 per cent of all the broom corn produced in the United States. There are four counties in my district in which there is a large amount of broom corn produced. I think the United States Government should give encouragement to this industry. Broom corn this year is a good price. Some years it is so low in price that our farmers do not get pay for raising it. The broom-corn growers should have a good price and it should be uniform in price from year to year. The eighth congressional district of Oklahoma is a great agricultural district, composed of 12 of the best agricultural counties in the United States. [Applause.] It is a district composed of the most intelligent farmers in the United States. In its educational facilities—of common schools, of city schools, of colleges and universities—the district is not surpassed in the United States. [Applause.] That is saying a good deal in view of the fact that only about 20 years ago the first settlements were established in the district.

It is a wheat-producing district. We can not, as a Government, give too much attention to increasing the production of wheat. As has been said here in the discussion which has just taken place, whether we and our allies shall be victorious in this great war in a large measure depends upon the production of wheat. Through our Food Control Administration, we are to eat bread composed of only 75 per cent of wheat, but, my friends, what is true in time of war in a few years may be true in time of peace. With the increase of population in this country and throughout the world, the time soon will come, if we do not increase our production of wheat, when there will not be sufficient wheat to supply our population with wheat bread. The National Government should do everything possible to encourage the production of wheat. I am in favor of enlarging this appropriation to the amount which I have suggested in my amendment.

It should be the policy of the National Government to encourage the farmers to enlarge the area cultivated in wheat, to increase the yield per acre, and to maintain a remunerative price for wheat. After all, we can not expect an increased production of wheat unless wheat raising is a profitable business. Low-priced wheat simply means less wheat.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, I ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Dakota.

The question was taken, and the Chair announced the noes appeared to have it.

On a division (demanded by Mr. YOUNG of North Dakota) there were—ayes 18, noes none.

So the amendment was agreed to.

The CHAIRMAN. The question now is on the amendment offered by the gentleman from Oklahoma.

The question was taken, and the amendment was rejected.

Mr. YOUNG of North Dakota. Mr. Chairman, I have another amendment which I desire to offer.

The CHAIRMAN. The Clerk will report it.

The Clerk read as follows:

Page 23, line 15, after the last word, insert "which sum shall be immediately available."

Mr. LEVER. Mr. Chairman, I reserve a point of order on that.

Mr. YOUNG of North Dakota. Mr. Chairman, will the gentleman yield to me for a moment?

Mr. LEVER. The time has been closed, but I ask that the time be extended for two minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. YOUNG of North Dakota. Mr. Chairman, I desire to call the attention of the chairman of this committee to the fact that unless the barberry bushes are destroyed before May 15 it will not do any good to destroy them this year.

Mr. LEVER. If the gentleman will permit, the gentleman has discussed this matter with me, and I fully recognize his position, and I have no objection to making it immediately available, because if we are going to use it at all we ought to use it when it is effective. Unless some of my colleagues object I shall have no objection.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, reserving the right to object, is this going to be used for the purpose of engaging a lot of men to go out and dig up these bushes?

Mr. YOUNG of North Dakota. I do not believe a single man will be employed that way. As far as I am concerned, I do not want to make promises. I think it is a matter of sufficient importance, and the gentleman from Michigan surely ought not to ask me to make pledges in reference to this. I will say this, that I talked with Dr. Kellerman, who is largely in charge of this matter, and he assured me the use they contemplated to make of this money was this, that they would make a campaign of education and they would use the money in that way; that they expected to make it very comprehensive, and through the county agents, the schools, the colleges, the farm journals, the trade journals, the milling-trade journals, and in every way possible to educate the people on patriotic grounds this year to dig up their barberry bushes.

Mr. LEVER. Will the gentleman yield to me a moment? Let me say, in answer to the question of the gentleman from Michigan, that if the department should undertake to use this money for the purpose of absolute eradication, the physical destruction of the barberry plant, I think, in view of their statement before the committee, it would be a breach of faith to the committee, and I think it would be a breach of faith with Congress. I do not believe the House intended any such kind of work, and I felt I ought to make that statement.

Mr. McLAUGHLIN of Michigan. I do not recall any statement before the committee as to just how they would use this money or that would preclude them doing the very thing I object to.

Mr. LEVER. The theory, as expressed before the committee, was that it was to be used for educational purposes.

Mr. MOORE of Pennsylvania. Does that mean that they would have the power to go into the States and visit private property and gather and eradicate these bushes?

Mr. LEVER. The gentleman is too good a lawyer to believe that.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

Mr. MORGAN. Mr. Chairman, I ask unanimous consent to revise and extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Wyoming makes the same request. Is there objection? [After a pause.] The Chair hears none.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the item to which I offered an amendment earlier in the day—the tuberculosis matter.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to extend his remarks in the RECORD in respect to the item to which he refers. Is there objection? [After a pause.] The Chair hears none. The Clerk will read.

The Clerk read as follows:

For the investigation and improvement of tobacco and the methods of tobacco production and handling, $32,000.

Mr. WALSH. Mr. Chairman, I move to strike out the item. It seems to me that, in view of the action of this House, in response, undoubtedly, to the preponderance of sentiment in various sections of the country as expressed in many different ways in favor of regulating the personal habits of people within our borders, there is no good reason at this time to expend $32,000 for investigating and improving a noxious weed which is used in large quantities in this Nation; and if we should now refuse to appropriate this $32,000 and thereby put a stop to improving this weed or improving the method of its production and handling, we would anticipate in large measure a demand which, sooner or later, is going to reach the Representatives of the people in the Congress to prohibit the use of tobacco for smoking or chewing by the people, both in their homes and in public places. And I think the time has come, and here is an opportunty for the Congress to lead the movement and to show the way, and that if we should adopt the amendment, which I offer in all seriousness, we would be taking a step of much benefit and advantage to the American people.

Mr. LOBECK. Will the gentleman yield?

Mr. WALSH. I prefer not to yield just at present, because I have a few more observations to make, and I know that the searching questions of the learned gentleman from Nebraska would put me entirely off my track in presenting to the House these observations.

It seems to me, as I have stated, that here is an opportunity for Congress to anticipate the wishes of the people and to lead the way, to sound the alarm, to set the pace, to blaze the path, and to arouse the sentiment of the country to the dire results that follow the profligate expenditure of many hundreds of thousands of dollars yearly for advertising the various brands of this weed and in purchasing the tobacco that is grown and improved by Federal experts and consuming it simply as the result of a habit. If we can save $32,000 by eliminating this item, in a few years from now, because we do not investigate and improve tobacco, we can enable the people to save many hundreds of thousands of dollars. We will be following in the wake of the legislation enacted by this Congress in connection with the food-control bill, wherein we vested wide discretion in the President to prohibit the manufacture of alcoholic and intoxicating liquors, which discretion, in my opinion, has been most wisely used by him. And also we will follow in the wake of the action of both branches of this Congress in submitting to the legislatures of the various States the constitutional prohibition amendment. We will be paving the way, in my opinion, whereby instead of appropriating money for investigation and improvement of tobacco and methods of tobacco production we will in the future be appropriating money for the investigation and eradication of tobacco and the discontinuance of tobacco production and handling, and in that way, by legislative enactment and without the necessity of constitutional amendment, we will do much to eliminate another habit which is growing and causing the expenditures of vast sums of money by our people. [Applause.]

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Massachusetts.

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. WALSH. Division, Mr. Chairman.

The committee divided; and there were—ayes 18, noes 22.

So the amendment was rejected.

The Clerk read as follows:

For testing and breeding fibrous plants, including the testing of flax straw and hemp, in cooperation with the North Dakota Agricultural College, which may be used for paper making, $16,760.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Pennsylvania moves to strike out the last word.

Mr. MOORE of Pennsylvania. Mr. Chairman, it seems to me this paragraph might be amended, so far as the language itself is concerned, by bringing the words "which may be used for

paper making" up to follow the word "hemp," on line 22. But I leave that to the chairman of the committee.

However, I desire to inquire about this item, which carries an appropriation of $16,760, and which seems to contemplate the testing and breeding of fibrous plants and the testing of flax straw and hemp by the Government in cooperation with the North Dakota Agricultural College. This item has been carried at varying amounts for several years, and it would seem to cover a proposition about which we ought to have some definite information by this time. The committee does not want to duplicate its appropriations or waste public money, I am sure. But on page 22 and on page 23 provision is made for studying and testing commercial seeds, being much the same proposition, to the extent of $36,680, and $241,505.

Now, it would seem that some one ought to explain whether anything is actually being accomplished through these appropriations or through this appropriation to the North Dakota Agricultural College.

Mr. LEVER. If the gentleman will permit, I asked Dr. Kellerman, associate chief of the Bureau of Plant Industry under this item, as to the progress that has been made. I will read from that gentleman's testimony. He says:

Dr. KELLERMAN. The work is progressing favorably, although somewhat slowly. It appears that there is an opportunity for developing a very good grade of paper from flax straw, especially for such purposes as making counters in shoes.

Mr. MOORE of Pennsylvania. "Counters in shoes"?

Mr. LEVER. Yes; "counters in shoes." I read further:

This is being thoroughly tested out, and the practicability of straw assembling and utilization for paper making is now under way.

Mr. THOMPSON. How long has that testing out been going on?

Dr. KELLERMAN. It was begun in a small way several years ago; I think that work has been going on approximately five years.

Mr. THOMPSON. How long will it take you to complete the work and eliminate this appropriation?

Dr. KELLERMAN. Probably one or two years, I think. We had contemplated greatly reducing this work about this time, but delays in getting satisfactory tests of the papers that might be manufactured made it seem desirable to continue it. We were not considering the complete ending of the project, but we were planning to reduce our work.

Mr. THOMPSON. This will not be a continuing appropriation, then?

Dr. KELLERMAN. This is not likely to be continuing much longer.

Mr. ANDERSON. Mr. Chairman, will the gentleman yield for one minute right there?

Mr. MOORE of Pennsylvania. I have little time, but I would like to get the information. I would like to know why we are testing and breeding all these years and not getting results.

Mr. ANDERSON. I will say to the gentleman that I believe in my district there is the first commercial concern using straw as a basis in making news-print paper, and that paper is now being used by some of the newspapers in my district. [Applause.]

Mr. MOORE of Pennsylvania. That is progress. Will the gentleman tell me who is employed to do this testing and how the money is expended?

Mr. ANDERSON. I can not answer that question.

Mr. MOORE of Pennsylvania. That is the purpose of my question. Here we have two appropriations, one for $241,505, which puts at work a number of Government specialists, and another appropriation of $36,680, which puts some other Government experts at work; and then comes a specific appropriation for testing and breeding on the same line, in conjunction with the North Dakota Agricultural College, for which we appropriate $16,760, and for which we have been making an appropriation right along. The purpose of it seems to be to "test" these fibers. It has been going on for years.

Mr. LEVER. It goes further than actual testing. I understand they have made a great many investigations under this item as to growing hemp for fiber purposes. I can give the gentleman the exact expenditures under this item.

Mr. MOORE of Pennsylvania. Can the gentleman tell how many men are employed by the Government in connection with the North Dakota Agricultural College for testing and breeding?

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. NORTON rose.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on this item and amendments thereto close in eight minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this item and amendments thereto close in eight minutes. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object—and only for the purpose of asking the question—will the gentleman cover the point I made?

Mr. LEVER. Yes.

The CHAIRMAN. Is there objection to the gentleman's request, that debate close on this item and all amendments thereto in eight minutes, five minutes to go to the gentleman from North Dakota [Mr. NORTON] and three to the gentleman from South Carolina?

There was no objection.

Mr. LEVER. This appropriation of $16,660 is proposed to be expended as follows: For salary of paper-plant chemist, $2,280; one assistant, $1,320; one assistant physicist, $1,200; traveling expenses, $2,000.

Mr. MOORE of Pennsylvania. Two thousand dollars for mileage—traveling expenses?

Mr. LEVER. Two thousand dollars for traveling expenses; equipment and material, $3,950; miscellaneous items, $5,710.

Mr. MOORE of Pennsylvania. How long has this been going on?

Mr. LEVER. Dr. Kellerman in his statement says several years.

Mr. MOORE of Pennsylvania. He says several years. Gentlemen about me say it has been going on for five or six years.

Mr. LEVER. My knowledge is that it has been going on probably more than six years.

Mr. MOORE of Pennsylvania. Does not the gentleman think an expenditure of $2,000 for mileage out of an appropriation of $16,760 is rather high?

Mr. LEVER. I confess that it does look rather high, although I did not make any investigation to find out how they used it and what traveling they did.

Mr. MOORE of Pennsylvania. Did the committee make inquiries with a view to bringing these tests to an end?

Mr. LEVER. In the hearing the gentleman from Oklahoma [Mr. THOMPSON] repeatedly asked how long this was to continue, and the answer of Dr. Kellerman was from one to two years longer.

Now I yield to the gentleman from North Dakota [Mr. NORTON].

Mr. NORTON. This item has been carried in the bill for six or seven years. It was first carried for $10,000. Two years ago I made some extended inquiries in regard to the work that was being done under the appropriation. I found that the North Dakota Agricultural College up to that time had been attempting by scientific study and experiments to ascertain whether or not paper could be manufactured from flax on a profitable commercial basis. It was found that in the laboratory there was no great difficulty in manufacturing paper of a very superior quality from flax straw. No method, however, was found for the manufacture of paper from flax straw or from wheat straw which was considered a paying commercial proposition. The methods necessary to be employed in the manufacture of paper from flax straw and from wheat straw were said to be too expensive for practical commercial purposes. I know nothing of the investigations that have been carried on in the last two years. I have been very much surprised to find that $2,000 is expected to be expended out of this item next year for traveling expenses. It seems to me that the agricultural college is falling into the error that a great many of the Government departments fall into, in using money in a very free-handed way and not directly for the purpose for which it has been appropriated. There is a splendid field for investigation along this line if it is properly carried on. It would mean many hundreds of thousands of dollars to the Northwest if a commercially practicable method could be discovered for the manufacture of paper out of flax straw or wheat straw.

Mr. CAMPBELL of Kansas. Will the gentleman yield?

Mr. NORTON. I yield to the gentleman.

Mr. CAMPBELL of Kansas. The gentleman from Minnesota [Mr. ANDERSON] stated a moment ago that they were manufacturing this paper in a commercial way in his district, and are now using it. Why do not these fellows use some of this traveling-expense money to go out there and see how these people are manufacturing this paper, and work a little along that line for a month or two, and then quit asking Congress for traveling expenses?

Mr. NORTON. Let me say to the gentleman from Kansas that I hope that the industry that has been developed in the district of the gentleman from Minnesota [Mr. ANDERSON] has come in large part through the investigations and experiments with flax straw and wheat straw that the North Dakota Agricultural College has been able to carry on with these appropriations.

Mr. CAMPBELL of Kansas. Then it is all over.

Mr. NORTON. I take it that it is not, but that they expect to improve on the best methods that have already been discovered.

The CHAIRMAN. All time has expired. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For sugar-plant investigations, including studies of diseases and the improvement of the beet and beet seed, and methods of culture, and to determine for each sugar-beet area the agricultural operations required to insure a stable agriculture, $64,115: *Provided*, That not less than $10,000 of this sum shall be used for the development and improvement of American strains of sugar-beet seed and for the establishment of a permanent sugar-beet seed industry in the United States: *Provided further*, That this sum of $12,500 may be used for investigations in connection with the production of cane and sorghum sirup, including the breeding, culture, and diseases of cane and sorghum, and the utilization of cane and sorghum by-products.

Mr. MAPES. Mr. Chairman, I move to strike out the last word. I believe it is generally understood that the Committee on Agriculture, which reports this bill, will soon be considering and will report to the House another price-fixing bill as a supplement to the law which was passed at the last session of Congress along the same line.

In connection with the consideration of this paragraph relating to sugar-plant investigations, it seems to me a proper time to call the attention of the committee to a situation which is liable to seriously affect next year's sugar supply of the country unless some action is immediately taken to remedy it. This is the time of year when the sugar-beet manufacturing companies contract with the farmers for their sugar-beet crop of next fall. The Food Administration has fixed the price of sugar. The sugar-beet companies claim that the price so fixed by the Food Administration does not enable them to pay a price which the farmers claim they must receive in order to make the raising of sugar beets profitable under the present abnormal conditions.

I am not familiar enough with the sugar-beet industry to tell which party to this controversy is correct, but I believe that the committee should carefully investigate it in preparing its next price-fixing bill. It certainly seems as though the consumer pays enough for his sugar now. At the same time the farmer with a good deal of justice complains that the price of the products of the farm is fixed, while no limit is put upon the price of those things which the farmer has to buy. He ought to receive a price for his sugar beets, which, taking all things into consideration, is a fair and reasonable one and which will encourage him to raise as large a crop as possible. Everything within reason should be done to enable him to raise them at a profit, or he will not raise them at all. If the sugar companies and the farmers can not agree upon the price the farmers will raise something else upon their farms and the sugar factories will be closed next fall. It necessarily follows that the sugar in the country will be much scarcer next year than it is this year even. I think it is only necessary to call the attention of the committee to the possibilities in this situation to show how important and serious a matter it may become. A deadlock between the farmers and the sugar-beet manufacturers can not be allowed under present world conditions. In the consideration of the next price-fixing bill I hope the committee will work out some plan which will enable the farmers to produce the maximum quantity of sugar beets and at a reasonable profit. If the chairman of the committee has any information that will throw light on the question now, I am sure the farmers in the sugar-beet localities will be glad to know what it is so that they can plan for the next crop accordingly. [Applause.]

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in seven minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on the paragraph and amendments thereto close in seven minutes. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, I understood the gentleman from Michigan [Mr. MAPES] to say that he understood, or rather anticipated, that the Committee on Agriculture would soon bring in a bill fixing prices on a variety of products. My own hope is that the Agricultural Committee will consider any such proposition as that a long time, a very long time, give it a very good deal of consideration, and then forget about it. [Laughter.]

Mr. MAPES. Will the gentleman yield?

Mr. MONDELL. I should be glad to yield.

Mr. MAPES. The gentleman comes from an agricultural State and certainly is in sympathy with the position of the farmers that grow the sugar beets complaining that Congress has fixed the price of the products of the farm to a large extent but have not fixed the price of things that the farmers buy.

Mr. MONDELL. Congress, my friend will remember, has fixed the price of nothing. Congress has guaranteed that the farmer on next year's crop of wheat shall receive at the principal market points at least $2 a bushel. That is all Congress has done in the way of price fixing, and that is not a fixing but a minimum guaranty. The price may go much above $2.

Mr. MAPES. Congress has enabled the Food Administration to fix the price of a great many products.

Mr. MONDELL. The Food Administration has in a way attempted to regulate certain prices, but the only price it has actually fixed is that of sugar at wholesale, and they have been enabled to do that because of the fact that sugar is produced by comparatively few concerns. The price, I am rather inclined to think, taking everything into consideration, was a fair one. I doubt if the farmers and beet-sugar manufacturers would have had any great difficulty in regard to fixing a price on sugar beets that would have been mutually satisfactory if certain busybodies had kept out of the affair and let the farmers and the beet-sugar manufacturers settle it between themselves. I am rather inclined to think now that a price may still be agreed upon which will be fairly satisfactory to both sides. Of course, it is true that with the high price of all agricultural products the growing of sugar beets, even at a maximum of nine or nine dollars and a half a ton, is not altogether attractive to the farmers in some sections, other farm products being so high. I am still of the opinion, however, that arrangements can be made, with sugar at approximately the present price, under which the farmers can get a price for beets that will encourage them to grow them.

The Clerk read as follows:

For the investigation and improvement of methods of crop production under subhumid, semiarid, or dry-land conditions, $160,000: *Provided*, That the limitation in this act as to the cost of farm buildings shall not apply to this paragraph: *Provided further*, That no part of this appropriation shall be used in the free distribution, or propagation for free distribution, of cuttings, seedlings, or trees of willow, box elder, ash, caragana, or other common varieties of fruit, ornamental, or shelter-belt trees in the Northern Great Plains area, except for experimental or demonstration purposes in the States of North and South Dakota west of the one hundredth meridian, and in Montana and Wyoming east of the 5,000-foot contour line.

Mr. MONDELL. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amendment by Mr. MONDELL: Page 25, lines 5 and 6, after the word "Wyoming," strike out the words "east of the 5,000-foot contour line," and insert in lieu thereof the words "in regions of less than 6,000 feet altitude."

Mr. LEVER. Mr. Chairman, I reserve a point of order on that.

Mr. MONDELL. Mr. Chairman, there are two objections to the language that now occurs in the bill. The first is that the territory is described as that east of the 5,000-foot contour line. There is a good bit of territory both in Wyoming and Montana that is less than 5,000 feet in altitude—that is, west of the mountain 5,000-foot contour line. Some of it lies in the interior valleys of the Rockies and some of it on the western side of the Continental Divide. The other objection is that the altitude limit is a little low. We can grow these trees at altitudes up to 6,000 feet, so that my amendment first raises the permissible altitude a thousand feet and changes the language so that it will apply to all parts of these States with lower altitudes. I trust there will be no objection on the part of the committee to the modification. We get very few of these trees, I will say, but it happens that last season when I wanted a few pennies' worth of the trees for an interior section of my State which is about 3,800 feet high, I could not, because the language of the bill prohibits it. It was not east of the 5,000-foot contour line.

Mr. ANDERSON. Mr. Chairman, I have always thought that this appropriation ought not to be used for the production of shelter-belt trees for free distribution throughout any area. The department, however, has said that it is desirable to grow these shelter-belt trees at the Mandan station so that they might be used in a demonstrational way throughout the area described by this limitation. The tendency of the department, however, is to extend the work under this appropriation so as to make the station at Mandan nothing more or less than a free-tree distribution station. I do not think that that free distribution ought to be extended. The language in the bill is the language suggested by the department. The language describes the area in which this work can be properly carried on, and I should be very sorry to see it extended by the amendment proposed by the gentleman from Wyoming, much as I would like to see the gentleman from Wyoming accommodated in this or any other matter.

Mr. NORTON. The language is the same as we agreed on last year?

Mr. ANDERSON. Yes.

Mr. LEVER. Mr. Chairman, in view of the statement of the gentleman from Minnesota, who is more familiar with this item than I am, because he was one of the parties to an agreement

that got the item in shape so that it could pass, and inasmuch as this has been sprung without the committee having any knowledge of the effect of the amendment, I feel that I should insist upon the point of order.

Mr. MONDELL. Mr. Chairman, will the gentleman withhold that for a moment?

Mr. LEVER. Yes.

Mr. MONDELL. In any event the committee wants the language to accurately state what the committee had in mind. The use of the word "east" does not accurately state it. What the committee intended was that these trees might be used in territory and regions below the 5,000-foot contour line. In other words, you have no objection to having these trees used in western Montana, though under the language of your bill they could be used only in eastern Montana below the 5,000-foot line and not in western Montana. If the word "east" is stricken out and the word "below" is inserted, the committee will accomplish just what it sought to accomplish.

Mr. LEVER. I confess to the gentleman that I do not recall just why the limitation "east" is used.

Mr. MONDELL. Undoubtedly that was adopted without thought of the fact that Montana and Wyoming both lie on the ridge of the continental divide and they have territory of comparatively low altitude on both sides, some of it on the west and some of it on the east. There is no more reason why you should give eastern Montana below 5,000 feet the trees than western Montana, and that is also true of Wyoming.

Mr. LEVER. The gentleman would modify his amendment by striking out the word "east" and inserting the word "below"?

Mr. MONDELL. Yes.

Mr. LEVER. Is that all right?

Mr. ANDERSON. I do not want it.

Mr. MONDELL. The gentleman from Minnesota wants to confine this distribution to eastern Montana and eastern Wyoming. That was not intended by any one. It was intended that these trees should not be distributed in high altitudes, and some of the lowest altitudes in Wyoming and Montana, both, are excluded from the benefits of this provision by the language as you have it there, because they are not east of the 5,000-foot contour line.

Mr. ANDERSON. Mr. Chairman, the gentleman from Wyoming is entirely wrong in his interpretation of what was intended to be accomplished. What was intended is to fix a north and south line beyond which this distribution from the Mandan station should not extend. It was not a question of altitude at all. The 5,000-foot contour line was taken because that prevents a north and south line which could be utilized as a boundary beyond which the Mandan station would not undertake its free distribution of trees.

Mr. LEVER. I think, Mr. Chairman, without having fuller information about this, that I am justified in making the point of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. The first part of this paragraph provides for the investigation and improvement of the methods of crop production under subhumid, semiarid, or dry-land conditions, $160,000. No one appreciates more than I do the splendid work of the Agricultural Department. I think good work is done under nearly every item of this bill, and I regret that I feel it my duty to criticize the acts, the attitude, and the administration of those who expend these moneys. We have a great area in the West with little rainfall, a country that the hardy pioneer has been gradually winning from the desert, transforming from a cattle and sheep range into a cereal-growing, farming, dairy country. There are certain practices that must be followed, as has been demonstrated innumerable times by many people in widely separated sections of that region, in order to make farming in that section reasonably certain and profitable, and yet gentlemen in the Agricultural Department, having charge of these investigations and demonstrations, have for years and do now take the position that there is no such thing as reasonably insuring crop growth in those semiarid sections; that the best we can do is to just farm and take the chances, and if we get a crop, well and good, and if we do not get a crop that is the misfortune of the farmer. It is true—they have themselves proven on half a dozen demonstration farms—that the system of biennial crops, or the growing of two crops in three years, deep plowing, thorough cultivation, occasional or alternating summer fallow; summer cultivation not only greatly increases the production but renders farming in this section almost as certain as under an irrigation ditch, but after having demonstrated all this they discredit these thorough and scientific practices, these good farming practices, by saying that they do not pay. I am wondering when and where and under what circumstances or conditions the Agricultural Department has ever demonstrated whether or not a certain practice is profitable. Under the conditions surrounding such experiments the best that can be demonstrated is the possibility of accomplishment. They may and continually do point out how a thing can be done, the methods necessary to accomplish it, but whether or no it will pay under ordinary or commercial conditions or the usual practice of the people is something that can only be demonstrated by the people themselves.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MONDELL. I ask that I may have two minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Right now we are needing grain. The world is needing grain. This semiarid region, a considerable portion of it, is a fairly safe winter and spring wheat country, under good farming methods. A very much greater proportion of it is a perfectly safe barley and rye country. There are millions of acres that will produce rye, and rye is the grain which the people across the sea—our allies—many of them, have been accustomed to use, in the main, for bread for many years. There is an opportunity for encouraging increased development, increased production, but our friends in the Department of Agriculture, whom we pay to encourage agriculture in that section, after having demonstrated the possibility of carrying on agricultural operations with certainty, advise the farmer that it is doubtful as to whether it will pay to do it or not. We need new blood, new ideas, and new thoughts in the Agricultural Department in the matter of farming under semiarid conditions. We need people who will say to the farmers of that section: "You must farm thoroughly; you must farm carefully; you must farm scientifically; you must put into your work not only energy but care and thought; you must adopt the methods that will remove to a great extent the element of chance; and you will receive a goodly reward."

Instead of that, the views they promulgate encourage shiftlessness and thriftlessness, slipshod and careless methods and practices, by proclaiming that there is no plan or system that the farmer can afford to follow that will make his operations reasonably safe and secure—and yet our people are doing better every year, in spite of such teachings. You can not altogether prevent progress even by official error and misguidance.

The CHAIRMAN. The time of the gentleman has again expired. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

The Clerk read as follows:

For the investigation and improvement of fruits, and the methods of fruit growing, harvesting, and, in cooperation with the Bureau of Markets, studies of the behavior of fruits during the processes of marketing and while in commercial storage, $85,280: *Provided*, That $9,000 of said amount shall be available for the investigation and improvement of the pecan, and methods of growing, harvesting, packing, and shipping of same.

Mr. SNELL. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question.

I notice, on page 19, there is a provision of $8,000 for the investigation of the diseases of the pecan. On page 25, just read, $9,000 is made available for the investigation and improvement of the pecan. On page 55 $9,600 is made available for the investigation of insects affecting the pecan. What is the difference between those three appropriations?

Mr. LEVER. The first item to which the gentleman refers is for the purpose of studying the diseases of the pecan. The item under consideration immediately is for the purpose of studying the handling and marketing of the pecan. The other item in the bill, in the Bureau of Entomology, is for the purpose of studying the insect pests which affect the pecan. All of these were put in the bill in the Senate last year, and the committee conferees, of course, agreed to them.

Mr. SNELL. What is the difference between investigating the diseases and the insects that affect them?

Mr. LEVER. There is a good deal of difference. The investigation of the diseases of the tree and the nut itself would be in the hands of men who are scientific along plant-disease lines. The investigation from the standpoint of the insect would be in the hands of an entomologist.

Mr. SNELL. It would not be proper, then, to put all three of these in one appropriation?

Mr. LEVER. It could be done. I thought of it at one time, but I did not see that it would be of any advantage, because we have three sets of specialists engaged in this work.

Mr. SNELL. Is the condition such as to warrant the appropriation of this amount for it at this time?

Mr. LEVER. The industry is spreading very rapidly throughout that area of the country in which the hickory-nut scaly bark will grow.

Mr. SNELL. To what part of the country is this industry confined?

Mr. LEVER. Practically throughout the South; but it will grow in this section of the country.

Mr. BLACK. I will just state for the gentleman's information that in my home county of Red River this year there have been marketed $25,000 worth of pecans, whereas six or eight years ago it would not have amounted to over $6,000 or $8,000.

Mr. SNELL. I was wondering why it was put in three appropriations. Why should it not be carried in one lump sum? It seemed to me that they were all the same thing.

Mr. LEVER. It is for the reason that these three lines of scientists have grown up in the bureau.

The Clerk read as follows:

For the purchase, propagation, testing, and distribution of new and rare seeds; for the investigation and improvement of grasses, alfalfa, clover, and other forage crops, including the investigation of the utilization of cacti and other dry-land plants; and to conduct investigations to determine the most effective methods of eradicating weeds, $143,180: *Provided*, That of this amount not to exceed $60,000 may be used for the purchase and distribution of such new and rare seeds.

Mr. BLACK. Mr. Chairman, I offer an amendment.

Mr. LEVER. Will the gentleman withhold that a moment for me to offer an amendment to correct the text?

Mr. BLACK. I will.

The CHAIRMAN. The gentleman from South Carolina [Mr. LEVER] offers an amendment, which the Clerk will read.

The Clerk read as follows:

Committee amendment: Page 27, line 3, strike out the last "s" in the word "investigations."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. BLACK: Page 27, line 6, after the word "seeds," strike out the semicolon, insert a colon, and add the following:

"*Provided further*, That in the distribution of cotton seed under authority of this paragraph they shall be distributed in packages of not less than 1 peck to the package."

Mr. LEVER. Mr. Chairman, I reserve a point of order on that, and I ask unanimous consent, before the gentleman proceeds, that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. BLACK. Mr. Chairman, I will briefly explain the reason for the amendment which I have offered. The packages of cotton seed that are now distributed by the Department of Agriculture under authority of this paragraph contain a quart of seed. Now, usually it takes about 1 bushel of seed to plant an acre of cotton, and therefore you can see that the distribution that is now made by the department will only plant a very small part of an acre. The result is that, notwithstanding these seeds that are distributed are of improved variety, the quantity sent out is so small that very often it does not interest the farmer that receives them and the advantage of the distribution is lost. I am very heartily in favor of the distribution of these improved varieties of seed, but I think much better results can be accomplished by increasing the quantity sent to each one person.

Now, I presume that the only cotton-breeding station in the South is the one located in the section of Texas which I have the honor in part to represent. This station is located at Greenville and is under the supervision of one of the ablest and best informed men on agricultural subjects that I know, Dr. Saunders, and under his skill and knowledge there have been bred some very valuable improved varieties of cotton seed.

He has taken long-staple varieties and crossed them with what we call the big-boll early maturing varieties, and by that means he has developed the "Lone Star" and the "Hold On," the "Foster," and others, all of which have a strong fiber and a longer staple than the short-staple varieties and are nearly as quick in their maturing. Now, as I said awhile ago, the package sent out is a fine quality of seed, but is such a small quantity that it very often does not interest the farmer who receives it, and I think if the quantity was increased to packages of not less than a peck a great deal better results would be obtained. I am anxious to promote the success of this enterprise of interesting our farmers in these improved seeds, and that is why I have offered the amendment.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Mr. Chairman, will the gentleman yield right there?

The CHAIRMAN. To whom does the gentleman yield?

Mr. BLACK. I yield to the chairman of the Committee on Agriculture, Mr. LEVER.

Mr. LEVER. If the gentleman will permit, I think practically every member of the Committee on Agriculture from cotton-growing States agrees with the gentleman on this proposition; but not being able to examine carefully just how far the gentleman's amendment goes, I thought I ought to reserve a point of order. I may say, further, that we called the attention of the chief of the bureau in charge of the work to the fact that we did not think they were getting very good results from their quart-measure distribution. I am inclined to think that matter will be remedied without legislation.

Mr. BLACK. If that is so, of course there would be no special need for my amendment. But I fear that under the present system a great deal of the seed is being wasted.

Mr. LEVER. Yes; I agree with you. I think the amendment will have a very salutary effect in bringing the department to realize the situation.

Mr. WALSH. Does the gentleman's amendment contemplate an increase in the amount?

Mr. BLACK. Not at all, in the amount of the appropriation.

Mr. WALSH. Then if your amendment is adopted it would result in fewer people getting the seed?

Mr. BLACK. Yes. The point I make is that the money we do spend ought to be spent in a way certain to bring results. I know from my knowledge and experience of farming that these quantities are so small that a great many planters just discard them and throw them away and do not pay any attention to them.

Mr. FOSTER. The difficulty is not in planting but in saving the seed?

Mr. BLACK. Yes. They need a larger quantity.

Mr. CANDLER of Mississippi. Yes. I have had a similar experience. One of my constituents, to whom I had sent some of this seed, said to me, "Zeek, there were so few of them that I did not think I could get any results from them, and I cast them aside."

Mr. BLACK. Yes; I wish the gentleman would withdraw his point of order.

Mr. LEVER. Well, this is a matter of importance, and I am satisfied that we can remedy the situation without legislation.

Mr. BLACK. Of course, I am glad to receive that assurance from the chairman. I hope he will interest himself in the subject as he always does in matters affecting agriculture and the welfare of our farmers.

Mr. LEVER. I will. I am glad the gentleman called my attention to it.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. LEVER. Mr. Chairman, I insist on the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. MOORE of Pennsylvania. Mr. Chairman, I rise for the purpose of making an inquiry of the gentleman from South Carolina concerning the item beginning on line 3 of page 26. My attention was diverted at the moment when that item was read, otherwise I would have called attention to it then. The item pertains to horticultural investigations. In it is a peculiar phrase—"study of the behavior of vegetables while in the process of marketing and in commercial storage." Does the gentleman wish to hold to that language? [Laughter.]

Mr. LEVER. It is peculiar language. I realize that fact. It was submitted by the department, however. It means, when translated into the language of Congress, what changes take place in these various vegetables.

Mr. MOORE of Pennsylvania. If these words regarding "behavior" were stricken out would it lessen the effect of the paragraph? The language is, "studies of the behavior of vegetables." It seems to me that such a peculiar phrase ought to go out.

Mr. LEVER. I am a little afraid it would make a difference. Under this item in past years we have not only studied what takes place within the vegetable while it is in process of shipment but we have also studied the marketing conditions of the vegetables. We have transferred those to the Division of Markets, and we want to use this language so that we will not study the market features of the vegetables, but only the vegetables themselves while they are being marketed.

Mr. MOORE of Pennsylvania. If left as it is the "behavior" of the potato might mean acrobatic behavior or good or bad behavior. Or it might refer to the sprouting of potatoes, or something of that kind. If that is what it means it seems to

me the effect would be the same if you struck out the word "behavior." "Studies" of vegetables while they are being transported would seem to be sufficiently comprehensive.

Mr. LEVER. They use that language to make clear to Congress the discrimination between the studies conducted under this item and those conducted under the item for the Bureau of Markets. I think we had better leave these words in the bill.

Mr. MONDELL. Does not the gentleman think we have done a pretty good day's work?

Mr. LEVER. I am going to ask the Clerk to read the general administrative item of seed distribution, and then I will move to rise.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

Purchase and distribution of valuable seeds: For purchase, propagation, testing, and congressional distribution of valuable seeds, bulbs, trees, shrubs, vines, cuttings, and plants; all necessary office fixtures and supplies, fuel, transportation, paper, twine, gum, postal cards, gas, electric current, rent outside of the District of Columbia, official traveling expenses, and all necessary material and repairs for putting up and distributing the same; for repairs and the employment of local and special agents, clerks, assistants, and other labor required, in the city of Washington and elsewhere, $242,320. And the Secretary of Agriculture is hereby directed to expend the said sum, as nearly as practicable, in the purchase, testing, and distribution of such valuable seeds, bulbs, shrubs, vines, cuttings, and plants, the best he can obtain at public or private sale, and such as shall be suitable for the respective localities to which the same are to be apportioned, and in which same are to be distributed as hereinafter stated, and such seeds so purchased shall include a variety of vegetable and flower seeds suitable for planting and culture in the various sections of the United States: *Provided*, That the Secretary of Agriculture, after due advertisement and on competitive bids, is authorized to award the contract for the supplying of printed packets and envelopes and the packeting, assembling, and mailing of the seeds, bulbs, shrubs, vines, cuttings, and plants, or any part thereof, for a period of not more than five years nor less than one year, if by such action he can best protect the interests of the United States. An equal proportion of five-sixths of all seeds, bulbs, shrubs, vines, cuttings, and plants shall upon their request, after due notification by the Secretary of Agriculture that the allotment to their respective districts is ready for distribution, be supplied to Senators, Representatives, and Delegates in Congress for distribution among their constituents, or mailed by the department upon the receipt of their addressed franks, in packages of such weight as the Secretary of Agriculture and the Postmaster General may jointly determine: *Provided, however*, That upon each envelope or wrapper containing packages of seeds the contents thereof shall be plainly indicated, and the Secretary shall not distribute to any Senator, Representative, or Delegate seeds entirely unfit for the climate and locality he represents, but shall distribute the same so that each Member may have seeds of equal value, as near as may be, and the best adapted to the locality he represents: *Provided also*, That the seeds allotted to Senators and Representatives for distribution in the districts embraced within the twenty-fifth and thirty-fourth parallels of latitude shall be ready for delivery not later than the 10th day of January: *Provided also*, That any portion of the allotments to Senators, Representatives, and Delegates in Congress remaining uncalled for on the 1st day of April shall be distributed by the Secretary of Agriculture, giving preference to those persons whose names and addresses have been furnished by Senators and Representatives in Congress and who have not before during the same season been supplied by the department: *And provided also*, That the Secretary shall report, as provided in this act, the place, quantity, and price of seeds purchased and the date of purchase; but nothing in this paragraph shall be construed to prevent the Secretary of Agriculture from sending seeds to those who apply for the same. And the amount herein appropriated shall not be diverted or used for any other purpose but for the purchase, testing, propagation, and distribution of valuable seeds, bulbs, mulberry and other rare and valuable trees, shrubs, vines, cuttings, and plants.

Mr. LEVER. Mr. Chairman, I offer an amendment to correct a typographical error.

The CHAIRMAN. The amendment of the gentleman will be read:

The Clerk read as follows:

Committee amendment: Page 30, line 2, after the word "cuttings" insert a comma.

The amendment was agreed to.

Mr. CANDLER of Mississippi. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Mississippi offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. CANDLER of Mississippi: Page 27, line 24, strike out the figures "$242,320" and insert in lieu thereof the figures "$363,480."

Mr. LEVER. Mr. Chairman, I would like to see if we can not arrange to close debate on this paragraph and all amendments thereto. As far as I am personally concerned I do not desire any time, and I would like to test out the committee to see just how much time is needed.

Mr. ANDERSON. Mr. Chairman, I do not see how we can agree on closing the debate to-night. I think I am the only member of the committee on this side who is still present. There are only a very few here, and I would not feel that I was doing justice to my colleagues on this side if I undertook to make an agreement or permitted an agreement to be made.

Mr. LEVER. In view of the gentleman's statement I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CRISP, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the Agricultural appropriation bill, H. R. 9054, and had come to no resolution thereon.

THE VIRGIN ISLANDS.

The SPEAKER laid before the House the following communication:

ST. THOMAS, VIRGIN ISLANDS,
January 17, 1918.

SPEAKER OF THE HOUSE OF REPRESENTATIVES,
Washington:

The executive committee in charge of celebrations commemorating this day on behalf of those accepting citizenship in the United States solemnly pledge their loyalty to the United States; being fully conscious of and duly appreciating the great benefits of American citizenship, beg to assure the Government of their true and faithful allegiance.

BALDEMAR MILLER, *Chairman.*

The SPEAKER. This communication will be referred to the Committee on Foreign Affairs.

LINCOLN'S BIRTHDAY, FEBRUARY 12.

Mr. BARKLEY. Mr. Speaker, I ask unanimous consent that on February 12, after the reading of the Journal and the disposition of matters on the Speaker's table, I may be permitted to speak for 45 minutes on the life and character of Lincoln.

The SPEAKER. The gentleman from Illinois [Mr. GRAHAM] got 30 minutes in which to make a speech, and the gentleman from Missouri [Mr. RUSSELL] got time to read Lincoln's Gettysburg speech, so that the gentleman's request comes in after that of the gentleman from Illinois [Mr. GRAHAM]. Is there objection?

There was no objection.

Mr. LONDON. I ask unanimous consent that following the gentleman from Kentucky I may address the House for 15 minutes on Lincoln as a world force.

The SPEAKER. The gentleman from New York [Mr. LONDON] asks unanimous consent that at the conclusion of the speech of the gentleman from Kentucky [Mr. BARKLEY] on Lincoln's birthday he be permitted to address the House for 15 minutes on Lincoln as a world force. Is there objection?

There was no objection.

DIPLOMATIC AND CONSULAR APPROPRIATIONS.

Mr. FLOOD, from the Committee on Foreign Affairs, reported a bill (H. R. 9314) making appropriations for the Diplomatic and Consular Service for the fiscal year ending June 30, 1919, which was read a first and second time, referred to the Committee of the Whole House on the state of the Union, and, with the accompanying report (H. Rept. No. 271), ordered to be printed.

Mr. FESS. Mr. Speaker, I reserve all points of order on the bill.

The SPEAKER. The gentleman from Ohio reserves all points of order.

EIGHT-HOUR STANDARD WORKDAY FOR RAILROAD EMPLOYEES (H. DOC. NO. 690).

The SPEAKER laid before the House the following message from the President of the United States, which was read, ordered printed, and referred to the Committee on Interstate and Foreign Commerce:

To the Senate and House of Representatives:

In compliance with the provision of section 2 of the act of Congress approved September 3 and September 5, 1916, to establish an eight-hour day for employees of carriers engaged in interstate and foreign commerce, and for other purposes, I transmit herewith the report of the commission appointed to observe the operation and effects of the institution of the eight-hour standard workday for railroad employees.

WOODROW WILSON.

THE WHITE HOUSE, *28 January, 1918.*

LEAVE TO EXTEND REMARKS.

Mr. SLOAN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks on the pending bill.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 47 minutes p. m.) the House adjourned until to-morrow, Tuesday, January 29, 1918, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. HASTINGS, from the Committee on Indian Affairs, to which was referred the bill (H. R. 357) conferring jurisdiction upon the Court of Claims to hear, consider, and determine certain claims of the Cherokee Nation against the United States, reported the same without amendment, accompanied by a report (No. 266), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. DILL, from the Committee on the Public Lands, to which was referred the bill (S. 2493) to amend section 3 of an act entitled "An act to provide for stock-raising homesteads, and for other purposes," approved December 29, 1916, reported the same without amendment, accompanied by a report (No. 267), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (H. R. 5673) to extend payment to the homesteaders on the south half of the Colville Reservation, reported the same with amendment, accompanied by a report (No. 268), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. TILLMAN, from the Committee on the Public Lands, to which was referred the bill (H. R. 855) for the relief of Harriet Fisher, reported the same without amendment, accompanied by a report (No. 269), which said bill and report were referred to the Private Calendar.

Mr. RAKER, from the Committee on the Public Lands, to which was referred the bill (H. R. 1423) for the relief of Alexander F. McCollam, reported the same without amendment, accompanied by a report (No. 270), which said bill and report were referred to the Private Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

The bill (H. R. 1919) granting a pension to Harry N. Gates; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

The bill (H. R. 2863) granting a pension to John Ferriter; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

The bill (H. R. 8300) granting an increase of pension to George Perkins; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

The bill (H. R. 9084) granting a pension to Harry N. Gates; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HICKS: A bill (H. R. 9311) for the reorganization of the Medical Department of the United States Army; to the Committee on Military Affairs.

By Mr. CARY: A bill (H. R. 9312) to amend section 5 of the motor-boat law passed June 9, 1910; to the Committee on the Merchant Marine and Fisheries.

By Mr. MILLER of Minnesota: A bill (H. R. 9313) to reimburse the State of Minnesota for expenses incurred in mobilizing its National Guard pursuant to the calls of the President during the years 1916 and 1917; to the Committee on War Claims.

By Mr. FLOOD: A bill (H. R. 9314) making appropriations for the Diplomatic and Consular Service for the fiscal year ending June 30, 1919; to the Committee of the Whole House on the state of the Union.

By Mr. CARY: Resolution (H. Res. 237) authorizing the President and Attorney General of the United States to issue orders to corporations and individuals concerning control of cold-storage and other large supplies of food and fuel; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 9315) granting an increase of pension to Henry Athey; to the Committee on Invalid Pensions.

By Mr. BEAKES: A bill (H. R. 9316) for the adjudication and determination of the claims arising under joint resolution of July 14, 1870, authorizing the Postmaster General to continue in use in the Postal Service Marcus P. Norton's combined postmarking and stamp-canceling hand stamp patents, or otherwise; to the Committee on the Post Office and Post Roads.

By Mr. BOWERS: A bill (H. R. 9317) granting an increase of pension to Hezekiah Miller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9318) for the relief of Susanah Nice; to the Committee on War Claims.

By Mr. CAMPBELL of Kansas: A bill (H. R. 9319) granting a pension to William F. Conklin; to the Committee on Pensions.

By Mr. CARY: A bill (H. R. 9320) granting a pension to Mrs. Albert J. Wolff; to the Committee on Pensions.

By Mr. DYER: A bill (H. R. 9321) granting a pension to Joseph Donnelly; to the Committee on Pensions.

Also, a bill (H. R. 9322) granting a pension to Emma R. Steen; to the Committee on Pensions.

By Mr. FAIRFIELD: A bill (H. R. 9323) granting a pension to Lusina Clouse; to the Committee on Invalid Pensions.

By Mr. FLOOD: A bill (H. R. 9324) granting a pension to Thomas W. Trent; to the Committee on Pensions.

By Mr. FULLER of Illinois: A bill (H. R. 9325) granting an increase of pension to Mary Butler; to the Committee on Invalid Pensions.

By Mr. GALLAGHER: A bill (H. R. 9326) granting an increase of pension to Henry Page; to the Committee on Invalid Pensions.

By Mr. GARD: A bill (H. R. 9327) granting a pension to Louis A. Rowe; to the Committee on Pensions.

Also, a bill (H. R. 9328) granting a pension to James Green; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9329) granting an increase of pension to Albert McMichaels; to the Committee on Pensions.

Also, a bill (H. R. 9330) for the relief of Sylvester Haus; to the Committee on Military Affairs.

By Mr. GRAHAM of Illinois: A bill (H. R. 9331) granting an increase of pension to Alonzo Brown; to the Committee on Invalid Pensions.

By Mr. HAMLIN: A bill (H. R. 9332) granting an increase of pension to George W. Griffin; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 9333) granting an increase of pension to Sarah E. Hathaway; to the Committee on Invalid Pensions.

By Mr. KENNEDY of Rhode Island: A bill (H. R. 9334) granting a pension to Christine Cook; to the Committee on Pensions.

By Mr. KINKAID: A bill (H. R. 9335) granting an increase of pension to Archie V. Chambers; to the Committee on Invalid Pensions.

By Mr. KRAUS: A bill (H. R. 9336) granting an increase of pension to James M. Perry; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9337) granting an increase of pension to Alfred McFeely; to the Committee on Invalid Pensions.

By Mr. MAPES: A bill (H. R. 9338) granting an increase of pension to Guilford D. Taylor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9339) granting a pension to Robert E. McCormick; to the Committee on Pensions.

By Mr. MILLER of Minnesota: A bill (H. R. 9340) granting an increase of pension to Andrew Tredway; to the Committee on Invalid Pensions.

By Mr. MOON: A bill (H. R. 9341) granting an increase of pension to Jesse C. Eldridge; to the Committee on Invalid Pensions.

By Mr. NELSON: A bill (H. R. 9342) granting a pension to Charles H. Carey; to the Committee on Pensions.

By Mr. PETERS: A bill (H. R. 9343) for the relief of Herbert R. Cornforth; to the Committee on Claims.

By Mr. RAMSEYER: A bill (H. R. 9344) granting an increase of pension to James K. King; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9345) granting a pension to Nancy C. Saylor; to the Committee on Invalid Pensions.

By Mr. RANDALL: A bill (H. R. 9346) granting a pension to Alfred Cushman; to the Committee on Pensions.

By Mr. SANFORD: A bill (H. R. 9347) authorizing the appointment of Brig. Gen. John H. Patterson, United States Army, retired, as a major general on the retired list; to the Committee on Military Affairs.

By Mr. SHACKLEFORD: A bill (H. R. 9348) for the relief of J. H. Livingston; to the Committee on Claims.

By Mr. TIMBERLAKE: A bill (H. R. 9349) authorizing the Secretary of the Interior to issue a patent to John Zimmerman for certain lands in the Colorado National Forest upon the surrender of other lands of an equal acreage also located in the Colorado National Forest, Colo.; to the Committee on the Public Lands.

By Mr. VESTAL: A bill (H. R. 9350) granting an increase of pension to Robert McMartin; to the Committee on Invalid Pensions.

By Mr. WILLIAMS: A bill (H. R. 9351) granting a pension to Thomas J. Cook; to the Committee on Pensions.

PETITIONS, ETC.,

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Resolution of the Missouri Live-Stock Producers' Association, asking that the rural-credit law be strengthened, and asking the Food Administration to state whether the ratio of 13 to 1 would be maintained in the purchase of spring farrows, or whether the price of corn would be arbitrarily fixed; to the Committee on Agriculture.

Also, memorial of Lady of the Lake Lodge, No. 512, Brotherhood of Railroad Trainmen, of Toledo, Ohio, urging increase in salaries particularly to those employed by the Post Office Department; to the Committee on the Post Office and Post Roads.

Also, petition of sundry rural carriers of the ninth congressional district of Missouri, asking maintenance and equipment allowance for extra mileage and additional pay for pouch mail; to the Committee on the Post Office and Post Roads.

Also, resolution of the board of governors of the International Allied Printing Trades Association (approved by the tenth annual convention of the union label trades department of the American Federation of Labor), protesting against the zone system as applied to second-class mail; to the Committee on Ways and Means.

Also, resolution of the Asbury Park Chamber of Commerce, of Asbury Park, N. J., recommending the abandonment of the zone plan for second-class mail; to the Committee on Ways and Means.

By Mr. CLARK of Pennsylvania: Petition of 43 employees of the Trask, Prescott & Richardson department store, of Erie, Pa., praying for the passage of House bill 7995, for the preservation of the *Niagara*, Commodore Perry's flagship in the Battle of Lake Erie; to the Committee on Naval Affairs.

By Mr. DALE of New York: Petition of W. S. McCrea, Spokane, Wash., favoring S. 313, providing for an absolute long-and-short-haul law; to the Committee on Interstate and Foreign Commerce.

Also, petition of Colgate & Co., New York, N. Y., urging the passage of the Calder daylight-saving law; to the Committee on Interstate and Foreign Commerce.

Also, resolutions of the Board of Governors of the International Allied Printing Trades Association, of the New York Business Publishers' Association, and of the Asbury Park Chamber of Commerce, Asbury Park, N. J., protesting against the provisions of the revenue act concerning second-class postage; to the Committee on Ways and Means.

Also, a letter from the Pineoleum Co., New York City, favoring the provisions of the revenue act dealing with second-class postage; to the Committee on Ways and Means.

By Mr. ESCH: Resolution of the Board of Governors of the International Allied Printing Trades Association urging the repeal of the zonal system for second-class mail; to the Committee on Ways and Means.

By Mr. FULLER of Illinois: Memorial of New York Business Publishers' Association, favoring repeal of the zone system for second-class mail; to the Committee on Ways and Means.

By Mr. GALLIVAN: Memorial of the Irish Women's Council, appealing for the recognition of Ireland as the Irish Republic; to the Committee on Foreign Affairs.

By Mr. GRAY of Alabama: Petitions of Louis Long, R. F. D. No. 1, Irvington, Ala.; Rudolph B. Cox, R. F. D. No. 1, Coffeeville, Ala.; G. L. Shreve, R. F. D. No. 1, Chrichton, Ala.; and G. W. Riley, R. F. D. No. 1, Jeddo, Ala., urging an increase in the salaries of rural free-delivery mail carriers; to the Committee on the Post Office and Post Roads.

Also, a petition of Earl C. Garrison, H. L. McElroy, Thomas J. Robinson, David E. Wilson, Seaborn L. Bonner, and Wilton P. Woolf, rural letter carriers of Choctaw County, Ala., urging an increase of salaries, etc.; to the Committee on the Post Office and Post Roads.

By Mr. HAMLIN: Papers to accompany House bill 8585, granting a pension to Eugene V. Wagner; to the Committee on Pensions.

By Mr. McKINLEY: Petition of 46 rural carriers, urging the passage of a bill providing a maintenance and equipment allowance, additional pay for mileage in excess of 24 miles, and an allowance for those carriers who must carry pouch mail; to the Committee on the Post Office and Post Roads.

By Mr. MOORE of Pennsylvania: Resolution of knitting manufacturers of Philadelphia, of the National Association of Hosiery and Underwear Manufacturers, protesting against the action of the Fuel Administrator in closing industrial plants; to the Committee on Agriculture.

By Mr. PLATT: Petition of citizens of Newburgh, N. Y., favoring the passage of House bill 7995 for the preservation of the *Niagara*, Commodore Perry's flagship in the Battle of Lake Erie; to the Committee on Naval Affairs.

By Mr. PRATT: Petitions of sundry rural mail carriers of the Thirty-seventh New York congressional district, favoring adequate compensation for their services; to the Committee on the Post Office and Post Roads.

By Mr. RAINEY: Petition of rural-route carriers of the twentieth district of Illinois for a larger allowance; to the Committee on the Post Office and Post Roads.

By Mr. REED: Evidence in support of House bill 9303, granting an increase of pension to Joseph Crites; to the Committee on Invalid Pensions.

By Mr. SANFORD: Papers to accompany House bill 9143, granting a pension to Henrietta De Groat; also, papers to accompany House bill 9139, granting an increase of pension to Charles N. Trimble; and also, papers to accompany House bill 9141, granting a pension to Rosella Magee; to the Committee on Invalid Pensions.

Also, papers to accompany House bill 9145, for the relief of John J. Dooley; also, papers to accompany House bill 9148, for the relief of Martin W. Joraleman, alias Whitbeck; also, papers to accompany House bill 9147, for the relief of Henry C. Romaine; also, papers to accompany House bill 9146, for the relief of Ferris W. Wade; to the Committee on Military Affairs.

HOUSE OF REPRESENTATIVES.

TUESDAY, *January 29, 1918.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou who hearest the prayers of those who seek Thee in faith and confidence, hasten the day, we beseech Thee, when pure and undefiled religion shall be spread abroad in all the earth; when men of all nations and of all climes shall look up to Thee in faith and call Thee Father; that by the strong ties of brotherhood men shall, indeed, fulfill the prophecy of old and beat their swords into plowshares, their spears into pruning hooks, and learn war no more.

So may Thy Kingdom come and Thy will be done in all the world, through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

MAIL TO EXPEDITIONARY FORCES.

Mr. ROGERS. Mr. Speaker, I call up a privileged resolution, H. Res. 232, and move to discharge the Committee on the Post Office and Post Roads from further consideration of the same and that the same be agreed to.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 232.

Resolved, That the Postmaster General be requested to inform this House upon the following:

First. What is the length of time now required to transmit postal matter from the United States to members of the American Expeditionary Force in France, and from members of the American Expeditionary Force in France to the destination of such postal matter within the United States.

Second. Whether he or any other person or persons or committee or committees or commission or commissions appointed by him have investigated or are now investigating the subject in order to ascertain whether the time now consumed in transit can be curtailed, and losses, if any, of mail matter be reduced.

Third. Whether he or such other person or persons or committee or committees or commission or commissions have reported.

Fourth. What were the findings and recommendations, if any, contained in such report.

Fifth. And what, if any, steps he has taken to curtail the time of such postal matter in transit and reduce the losses thereof, if any.

Mr. KITCHIN. When was the resolution referred?

Mr. ROGERS. On the 22d of this month.

The SPEAKER. The question is on the motion to discharge the Committee on the Post Office and Post Roads from further consideration of the resolution and agree to the same.

The motion was agreed to.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, its enrolling clerk, announced that the Senate had passed bill and joint resolution of the following titles, in which the concurrence of the House of Representatives was requested:

S. 3448. An act granting the consent of Congress to the village of East Dundee and the village of West Dundee to construct a bridge across the Fox River; and

S. J. Res. 125. Joint resolution authorizing the Joint Committee on the Library to provide for the restoration and completion of the historical frieze in the Rotunda of the Capitol.

The message also announced that the Senate had passed without amendment bill of the following title:

H. R. 3135. An act to amend section 4 of the act entitled "An act to provide for an auxiliary reclamation project in connection with the Yuma project, Ariz."

AGRICULTURAL APPROPRIATION BILL.

Mr. CANDLER of Mississippi. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 9054, the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. CRISP in the chair.

The CHAIRMAN. When the committee rose last evening an amendment was pending, offered by the gentleman from Mississippi [Mr. CANDLER], which the Clerk will report.

The Clerk read as follows:

Page 27, line 24, strike out the figures "$242,320" and insert the figures "$363,480."

Mr. LEVER. Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto may close in 30 minutes.

The CHAIRMAN. Is there objection?

Mr. STAFFORD. Mr. Chairman, reserving the right to object, I wish to inquire whether we are going to have the customary motion to strike out the seed item, which is the provision under consideration?

Mr. LEVER. I am not advised as to that, but I presume we will have it, however.

Mr. FOSTER. I think the gentleman from Massachusetts [Mr. WALSH] said that he wanted to do that.

Mr. LEVER. He gave some indications of that, but he did not quite say so.

Mr. STAFFORD. I think the proceedings of Congress would be hardly complete without some person moving to strike out the paragraph.

Mr. LEVER. Or moving to increase the amount.

Mr. STAFFORD. Both motions are always in order, and always take place.

Mr. CANDLER of Mississippi. There is an amendment pending, and that comes first.

Mr. STAFFORD. There is no question that the gentleman's amendment takes precedence.

Mr. LEVER. I feel that this is a matter so well understood by the members of the committee that we ought not to spend any great time in discussing it.

Mr. STAFFORD. Can there be some understanding as to the control of the 30 minutes, that some of the time, if desired, may be used in consideration of a motion to strike out the paragraph?

Mr. LEVER. Mr. Chairman, I modify my request by adding that the time be equally divided between the gentleman from Mississippi [Mr. CANDLER], who is proposing to increase the amount, and myself in the interest of those who may desire to strike it out.

Mr. STAFFORD. Then the gentleman will allow at least 15 minutes of that time for those in opposition to the provision itself?

Mr. LEVER. I shall allow half the time to those who are opposed to the Candler amendment and half the time to those who are in favor of striking the provision out altogether.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto be limited to 30 minutes, 15 minutes of that time to be controlled by the gentleman from Mississippi [Mr. CANDLER] and the remaining 15 minutes by the gentleman from South Carolina [Mr. LEVER].

Mr. LONDON. Mr. Chairman, reserving the right to object, I would like to have 10 minutes on a motion to strike out the provision relating to the congressional distribution of seeds.

Mr. LEVER. I would not be able to promise the gentleman 10 minutes of the 15 minutes that I would have myself.

Mr. LONDON. I want to argue in favor of a motion to strike out in an original way, and I want to have 10 minutes.

Mr. LEVER. The gentleman always argues in an original way.

Mr. LONDON. I thank the gentleman.

Mr. LEVER. I shall try to give the gentleman at least five minutes of my 15 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

Mr. JOHNSON of Washington. Mr. Chairman, is it not possible to get along with 10 minutes debate on this paragraph, one in favor and one against it?

Mr. LEVER. If I had my own way, I would say 10 minutes.

Mr. JOHNSON of Washington. Would it not be better for the House of Representatives to have a little more discussion about bullets and a little less about bird seed?

The CHAIRMAN. Does the gentleman from Washington object to the request?

Mr. JOHNSON of Washington. Mr. Chairman, I withdraw the objection.

The CHAIRMAN. The Chair hears no objection. The gentleman from Mississippi is recognized for 15 minutes.

Mr. CANDLER of Mississippi. Mr. Chairman, I have no inclination to detain the House in reference to this matter but a very few moments. The fact is all I desire to do is to call the attention of the House to the effect of the amendment which I have offered and which is now pending. The provision of the bill is the same provision which appeared in the bill last year, and I believe the bill of the year before last and several preceding years. The motion which I propose only changes the amount and does not change a single word in the provision itself. The amount provided in the bill at the present time is $242,320. My motion is to strike out $242,320 and insert in lieu thereof $363,480, which is a 50 per cent increase over the amount provided for in the bill. I do this for the reason that a great many Members of Congress this year have come to my office and told me they did not have a sufficient quantity of seed to meet the demands which were yearly made upon them, and hence they desired that the amount should be increased. Under the appropriation this year each Member of Congress is allotted 20,000 packages of garden and 3,000 packages of flower seed. If this amendment is adopted and the price remains the same as it is now, next year you will be allotted 30,000 packages of garden seed and 4,500 packages of flower seed, and the only question, therefore, for the committee to determine is whether or not you want this increase made, whether you want this increased amount of money in order that there may be available an increased number of packages of flower and garden seed. If you do, you will vote for the amendment; if you do not, you will vote against the amendment. That is the sole issue involved. [Applause.]

Mr. LEVER. I yield five minutes to the gentleman from Massachusetts, who, I understand, is in favor of striking out the whole item.

Mr. WALSH. Mr. Chairman, I move to strike out the entire paragraph.

The CHAIRMAN. The gentleman from Massachusetts offers a motion to strike out. Of course that will not be disposed of until the motion to perfect has been disposed of.

Mr. WALSH. Mr. Chairman, notwithstanding the argument of the gentleman from Mississippi [Mr. CANDLER] in the nature of a very alluring bait held out by him in offering an amendment to increase this amount to approximately $360,000 and the fact that next year we will get 30,000 packages of vegetable seed and 4,500 packages of flower seed, it seems to me that at this time, when we are straining every effort to raise money to carry on this tremendous struggle, that we ought not to appropriate even the $243,000 carried in the bill as reported by the committee—nearly a quarter of a million dollars—for the purpose of making these governmental gifts to our constituents. I was interested the other day in receiving a little pamphlet which has been issued by the National Grange, and I noted that amongst the recommendations made by that great organization, speaking for the real farmers of the Nation, was one for the elimination of this congressional seed distribution. Those with whom I had the honor to serve in the Sixty-fourth Congress know my views upon this matter, because at that time I set them forth somewhat at length in opposition to this form

of expenditure and to this method of distributing this form of Federal gratuities. The purpose is, I presume, to encourage and stimulate agriculture, and we give little packages of seed which are sent out throughout the length and breadth of the district and which contains upon the package, printed there by the department, a request that the people planting those seeds will write to the department the results that they obtain, and yet you can read the reports of the Secretary of Agriculture year after year and all you will ascertain is that a certain amount of money has been expended for these seeds and they have been distributed through requests from Members of Congress. Now, while the appropriation is made—and presumably it is the intention for these seeds to be sent to the different congressional districts to the people who are interested—if the number of requests that are received for seeds can be taken as any standard as to the interest in this congressional seed distribution, the interest, particularly in my section of the country, is not very great, and I doubt if it is warranted even if the requests filed are very numerous. If the people are going to utilize these seeds and if they are going to attempt to stimulate agriculture, why should not some report be made as to how many new farmers each year were made as the result of this activity or how much the crop of a particular vegetable or flower has been increased or how much any particular community has been benefited by this distribution. I say, Mr. Chairman, that at this time we might well afford to save $243,000, or, if the amendment of the gentleman from Mississippi is adopted, the larger sum, $360,000 plus, and transfer it to the funds which will have to be expended by the military branch of this Government in giving our soldiers proper food, clothing, or shoes, or equipment and not put a burden upon the people of nearly a quarter of a million dollars additional for any such purpose as this, and I think this is a good time for the House to indicate a spirit of economy and for them to be willing to put aside any personal desires to be known as distributors of seed and say to the country that they are willing to forego this congressional seed distribution during this great war. I believe it will meet with general commendation.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CANDLER of Mississippi. I yield three minutes to the gentleman from Mississippi [Mr. QUIN].

Mr. QUIN. Mr. Chairman, I am in favor of the amendment increasing by 50 per cent the amount for garden seed offered by my esteemed colleague, the gentleman from Mississippi [Mr. CANDLER]. Of course, the gentleman from Massachusetts [Mr. WALSH] does not want the people of this country to have enough to eat. He proposes to take this little dab that the farmers have in the way of garden and flower seed and put it into cannon. The gentleman from Massachusetts well knows that you could get but one cannon for this total amount of $243,000. We are now giving to every household in the United States these packages of seeds, and the people plant them in their little back yards and gardens in every town, village, city, and farm of this Republic, and it does more good than any other money that this Congress ever appropriates. The gentleman from Massachusetts says that he never gets any requests for seeds to amount to anything. Perhaps his people live where they do not work, or perhaps his people are living off of somebody else or out of the public crib. [Laughter and applause.]

Every man, I care not what may be his station in life, should be encouraged, especially at this time, to have a little garden. For the money involved, for the exercise it gives a man of sedentary habits—the lawyer, the doctor, the banker, the merchant—every man, not only farmers, really should be encouraged to enjoy raising a garden, to be certain that every home in our land will have plenty of fine fresh vegetables on the dining table. At this time, when food is scarce, every individual of this Republic is encouraged by the Food Administrator to have gardens. Why, last year you saw the propaganda everywhere urging every city of this Republic to plant vegetables on every vacant lot.

Mr. BLANTON. Will the gentleman yield?

Mr. QUIN. I will.

Mr. BLANTON. The gentleman states that these seeds went to every household in our Nation. I would like to ask the gentleman how many lawyers, doctors, bankers, and merchants in his district receive seeds from his office but who have no garden, and who throw them in the wastebasket every year?

Mr. QUIN. I want to say that I have not any type of lawyers and bankers and merchants of that kind. Every lawyer and every banker and merchant in my district, if his name is on the registry list, gets a package of seed from his Congressman. That lawyer or banker or merchant plants those seeds, just like the farmers and laboring people of the towns, and as a rule they have good gardens.

Right down here on the Potomac River we had the Boy Scouts growing corn last year, the finest corn I have ever seen in the North or in the East, 10 feet high, growing ears of corn that almost broke the stalks down, and yet the gentleman from Massachusetts [Mr. WALSH] objects to people having garden seeds with which to plant gardens and raise vegetables.

Why, the garden seeds that I send out, so the people write me, grow tomatoes as big around as horse apples. The finest vegetables seeds that have been sent out in years were those the department furnished us to send out last year, and now the gentleman from Massachusetts seems to think that we should not only not increase the amount by adopting the amendment that the gentleman from Mississippi offers, but should be barred altogether from having a single seed to give the people of this Republic.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. QUIN. Could the gentleman from Mississippi give me two minutes more?

Mr. CANDLER of Mississippi. I yield two minutes to the gentleman.

Mr. QUIN. I thank the gentleman.

All over the United States the cry is going up, "Plant your fence corners in foodstuffs." I take it that every patriotic Congressman in this House feels like encouraging the people to do that thing. Every farm demonstrator is a patriot, and is urging the people on the platform and in his daily contact with them to plant all the food crops possible. And yet the gentleman from Massachusetts wants to take away from the farmers the seed that the Government is sending out.

Mr. WALSH. Will the gentleman yield?

Mr. QUIN. I will.

Mr. WALSH. Are all the farmers in the gentleman's district voters?

Mr. QUIN. Oh, yes; if they want to be.

Mr. BLANTON. Will the gentleman yield?

Mr. QUIN. I can not, my time is limited.

I have not this foreign element that comes over here, a strain of anarchists and loud-mouthed fellows. The people in my district and their ancestors are all full-fledged Americans. The farmers are not aliens or foreigners waiting to be naturalized. They are native-born citizens. Of course, the people in my country are loyal, patriotic American citizens and appreciate what the Government is doing for them.

And I wish to say further, my friends, that the patriotic farmer away back from the railroad, with his house on a hillside, when receiving a package of garden seed from his Government, from his Congressman, realizes that the Government thinks something of him. That man loves his country and is at all times ready to fight for our Nation's flag. The gentleman from Massachusetts proposes to take that man's son, grab him by the nap of the neck and throw him into the Government service by force, and yet he objects to that man receiving a package of free garden seed to plant. [Applause.] I want to encourage the good feeling between the people and the Government, and the more we can encourage the people of this country to plant food crops by distributing free seeds to them the better it is for the Government. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. QUIN. I thank the gentleman.

The CHAIRMAN. The Chair desires to admonish the galleries that it is contrary to the rules of the House for the occupants of the galleries to express either approval or disapproval of remarks made on the floor.

Mr. LEVER. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. LONDON].

Mr. LONDON. Mr. Chairman, I am not opposed to the distribution of seeds. The Agricultural Department is one of the most valuable departments in the Government. The farmer, the tiller of the soil, is the most valuable element of the citizenship of the country, and the Government should be ready to aid him. What I do oppose, however, is the distribution of seed by Members of Congress. I can not for the life of me understand why a Member of Congress should be called upon to do the work of the Department of Agriculture. Members of Congress permit themselves entirely too much to be employed in clerical capacities for their districts. In the past the work of Congress was limited to appropriation bills and to the discussion of two or three fundamental issues relating to the tariff or to reform of the currency. That almost exhausted the legislative work of the House and of the Senate. Recently the scope of national legislation has been widening. Measures calculated to prevent the farmer from sinking into the condition of the farmless tenant have been engrossing the attention of Congress. The farmless

farmer will soon be heard from. Industrial labor will have something to say to us.

With concentration of industry and agriculture, State legislation has been giving way to national legislation.

New problems are pressing upon us. They will become more and more acute. We are in the midst of the greatest crisis of the world. The world is being remade. Instead of applying ourselves to a study of the new forces that have been awakened in the world, we are busy sending franks to the Department of Agriculture for the distribution of seed. It is degrading in another sense. It makes the average man believe that his Member of Congress is doing something for him. The name of the Member appears on the package, and the average man is made to believe that he is the recipient of a special benefit, of a special blessing, coming from the Member of Congress. He is distributing seed. He is distributing favors. He is doing something for which he deserves the special gratitude of his constituents.

I would like to see that provision stricken out. I am with the farmer and for the farmer. He is the most useful man in the world, the most valuable man. I wish the world could have retained that rugged integrity, that honesty, that simplicity of soul that is so characteristic of the man who tills the soil. The world would have been better off. [Applause.]

I am trying to point out to you the necessity of using every moment of our time, of applying ourselves completely, uninterruptedly, to the study of the great problems that are facing the country and facing the world to-day. We can not properly do that if we encourage our constituent to believe that all that he has to expect from us is the distribution of seeds, the distribution of documents, and a lot of other clerical work. We should not be asked to chaperon the individual constituents in the various departments.

I would like to see the provision which relates to the congressional distribution of seeds stricken out. I would vote for any adequate appropriation of money to distribute anything of value to the farmer through the Agricultural Department. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. LEVER. Mr. Chairman, I yield one minute to the gentleman from Texas [Mr. BLANTON].

The CHAIRMAN. The gentleman from Texas is recognized for one minute.

Mr. BLANTON. Mr. Chairman, I wanted to devote one minute to asking a question of my friend from Mississippi [Mr. CANDLER]. I would like to ask him if he is willing to incorporate in his amendment a provision that would take the name of every Congressman off the packages of garden seeds and let them be distributed by the Department of Agriculture, where they belong, not to the lawyers, doctors, bankers, and merchants in cities who have no gardens and who do not want them, but to all people alike who have gardens and who do want them, eliminating all political preference to political friends entirely. Is the gentleman willing to incorporate that in his amendment?

Mr. CANDLER of Mississippi. I have had similar questions asked of me a number of times in previous sessions of Congress. I do not care anything about my name being on the package, or the name of any other Member of Congress, and I do not favor distributing them for political preferences. I have always said I prefer to have the seeds distributed by the Members rather than directly by the Department of Agriculture. I favor distributing them to all the people alike. I have always insisted that the seeds should be distributed by Members of Congress to their constituents, because the Members are more familiar with the wants of their constituents than the department could possibly be, and therefore the Members can render their constituents better service, and I feel sure they distribute the seed equitably, and what I want is to give the people the best benefits possible, and I believe it can best be done by that method, and therefore I would not accept such an amendment as the gentleman from Texas suggests.

Mr. BLANTON. Then I am against the gentleman's amendment.

Mr. CANDLER of Mississippi. Would you have favored it otherwise?

Mr. BLANTON. I would be in favor of increasing it $100,000 if the gentleman would adopt my suggestion. I shall give my views on this legislation more in detail later on during this debate.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. CANDLER of Mississippi. Mr. Chairman, I yield to the gentleman from Illinois [Mr. MCKINLEY] three minutes.

The CHAIRMAN. The gentleman from Illinois is recognized for three minutes.

Mr. MCKINLEY. Mr. Chairman, last summer, while the industrious House of Representatives had completed all of the bills pending before it and was waiting on the Senate, I used up about a week visiting around Boston, Mass., and vicinity. I found around there rocks and swamps, ammunition factories and shipyards. I can very well appreciate how a Representative from that locality would feel it would be much better for the House to use the $27,000,000 appropriated for the Department of Agriculture and put it into one battleship, because we could kill somebody with that battleship.

Now, out our way we are trying to follow out the recommendations of Mr. Hoover, to teach the people to save and to raise food. Out there in my district there are some 20,000 children between 8 and 12 years old. Mr. Hoover and the Department of Agriculture want those children to be encouraged to cultivate more gardens. Therefore I am sending out the 20,000 packages of seed that will be allotted to me to the children. I am sending with them a pamphlet from the Department of Agriculture, specially prepared, to encourage children to cultivate gardens. I hope and I know that by next year in our district, where we are rapidly increasing in population, there will be 30,000 children who will want these packages to supply 30,000 gardens. Therefore I support the amendment to increase this distribution from 20,000 to 30,000 packages. [Applause.]

I yield back the remainder of my time.

Mr. LEVER. Mr. Chairman, I yield two minutes to the gentleman from Indiana [Mr. ELLIOTT].

The CHAIRMAN. The gentleman from Indiana is recognized for two minutes.

Mr. ELLIOTT. Mr. Chairman, I come from one of the finest agricultural districts in the United States. It is not made up of swamps and rocks and munition factories. The Government has been distributing these garden seeds over that district for the last 25 years, perhaps; and I wish to say this, that out from that great agricultural district I have received less than 50 applications from farmers for these seeds. I have received less than 500 applications from men who work in the factories for these seeds.

Before I left home I talked to the agricultural agent in my county, and asked him if he would not take off my hands the matter of distributing these seeds. He said, "No; I do not want to have anything to do with them. They are a fraud and a humbug, and I do not want to get into trouble with the farmers of this county by having to distribute those seeds among them."

I am not opposed to the Government furnishing free seeds to the poor people in any part of this country if it is necessary in order to enable them to have gardens, but I am opposed to this political propaganda of scattering bunches of seed all over this country under congressional frank for whatever political benefit may come from it to the man who sends them. I am therefore in favor of voting to strike out that part of this bill which appropriates for seeds nearly a quarter of a million dollars of the people's money that can be better used for some other purpose in this war. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. CANDLER of Mississippi. Mr. Chairman, I yield to the gentleman from North Carolina [Mr. DOUGHTON] three minutes.

The CHAIRMAN. The gentleman from North Carolina is recognized for three minutes.

Mr. DOUGHTON. Mr. Chairman, I shall heartily support the amendment of the gentleman from Mississippi [Mr. CANDLER] to increase this appropriation for the purpose of extending the work of the distribution of field seeds for the benefit of the agricultural interests of our country.

I have taken a good deal of pains and trouble to ascertain whether or not this appropriation in the past has been worth while, and whether or not it really brings to the country as a whole beneficial results; and my experience in my own district is that the people have been benefited, and that they would be greatly disappointed and feel themselves injured if this small allowance of field seeds were withheld from them.

Now the argument seems to be advanced by some Members on the floor of this House that it is all right to distribute the seeds, but that the method is all wrong, and that we are resorting to political methods and using this as a means of political advertisement. Mr. Chairman, I am not disposed to quibble or debate as to the method. If some more satisfactory and beneficial method can be devised I am entirely willing to support that; but in the absence of some more feasible and successful method I think we had better adhere to the present plan. I have sent seeds to every citizen in my district, and in so doing I find that every year I overdraw my allowance of field seeds and must hustle around and see if I can find enough to supply all.

I do not make it a political matter at all. I get a list of all voters, Democrats and Republicans alike, and of widows and of those who have not reached their majority, and I endeavor to distribute these seeds like the rain from heaven to Democrats and Republicans, the just as well as unjust, if there be any of the latter. [Laughter.] My friends all pay taxes similarly and hould all receive the same benefits from the Government. At this time when the price of living is so high and foodstuffs are so scarce, and there is a tremendous propaganda conducted by the Agricultural Department and by the other departments of our Government to encourage our people to increase the production of foodstuffs, I think it is rather too small a policy for us to deny to the farmers this infinitesimal appropriation or try to cut it off or to fail to increase it, so that the farmer may be benefited and the opportunity be given to increase the supply of foodstuffs and reduce the cost of living.

There was a time, perhaps, when the Department of Agriculture paid little attention to the selection of vegetable and other seeds to be distributed among the people of the country. But that time has passed. I have discussed with the authorities at the Agricultural Department, and they inform me that great care and pains are exercised in the selection of these seeds, and that none but the best are distributed. Frequent letters received from my constituents bear me out in this statement that these seeds are not only appreciated in most instances but are expected and result in a lot of benefit to the people as a whole. Of course, there are some that do not care to have them and feel that it is money thrown away. But I doubt if the Government makes a single appropriation of similar amount which results in greater benefits, that is more evenly distributed to all the people than this small appropriation.

During the Sixty-second, Sixty-third, and Sixty-fourth Congresses more legislation was enacted for the benefit of agriculture than had previously been done perhaps in 50 years. The legislation making Federal aid to the construction of public roads, the farm-loan act, the Federal reserve law, and many more too numerous to mention have given the farmer recognition and opportunity that he had never been accorded before. Are we now during this Congress, when the world demand for production of foodstuffs is the greatest ever known since the beginning of time, to do anything that would manifest a lack of appreciation to the agricultural class? Instead of denying or curtailing this appropriation we should increase it, as this amendment proposes to do, and by this means contribute at least in a small way to increase the production of food for the benefit of ourselves and our allies to reduction in some measure of the high cost of living and to the contentment and welfare of humanity. [Applause.]

The CHAIRMAN. The time of the gentleman has expired. The gentleman from Mississippi [Mr. CANDLER] has two minutes and the gentleman from South Carolina [Mr. LEVER] two minutes. If they do not desire to use it, the Chair will put the question.

Mr. LEVER. I yield one minute to the gentleman from Michigan [Mr. MCLAUGHLIN].

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I am willing to vote for the appropriation carried in the bill, although at some times and under different conditions than those now existing I have been in favor of striking it out. I think, however, the amount is enough and that the amendment offered by the gentleman from Mississippi to increase the appropriation largely ought not to be adopted.

Mr. LEVER. I ask the gentleman from Mississippi to consume his time. I have only one speech.

Mr. CANDLER of Mississippi. Mr. Chairman, I shall take my remaining two minutes merely to emphasize and call attention to what is involved, because quite a number of members have come in since the discussion began and some have come to me and asked what is involved. The sole question involved in this amendment is whether or not you will increase the appropriation for this purpose 50 per cent. If you do so, then, of course, the quantity of seed which will be distributed next year will be increased 50 per cent over what it is this year. If you were allotted 20,000 packages this year, if the price remains the same, next year there will be 30,000 packages allotted to you for distribution. The gentleman from Massachusetts [Mr. WALSH] says turn this money over to the military department of the Government. I am willing to vote for every dollar the military department needs, but the mflitary department do not need money. They have plenty of money. There is no difficulty about that. They have money for every purpose that they can usefully apply it to. Now, to this immediate question under consideration. Take the one item of the velvet bean. Nobody knew anything about that. It was discovered and put into circulation, and distribution through Members of Congress by the Department of Agriculture, and it has proven to be a great source of food supply throughout the country, and by reason of its use in feeding it the people are enabled to increase their meat supply to a marvelous extent. That is simply an illustration. Here is another. Listen to this letter:

Hon. E. S. CANDLER,
Washington, D. C.:

MY DEAR MR. CANDLER: Last winter while I was in Washington you told me of the success of a friend of yours with a new variety of sorghum, the seed of which you sent from the Department of Agriculture. At my request you had a small bag of these seed sent to me. Enough to plant, with care, about 1 acre. I divided them among several friends—planting about one-fifth acre myself. The result was most gratifying. In spite of an excessive local drouth the result on all plots was extremely satisfactory. The yield was 120 to 260 gallons per acre—fully double the local average of other sorghums. Quality of sirup the very finest. General report is that as a food it is splendidly digestible—much more so than is the sirup of ribbon cane. I find the flavor most attractive. Like it as well as I do the good sirup of ribbon cane.

The cane headed out well, but the extreme drouth prevented maturing of seed. For this reason we have none. So I am asking you to have sent to me a full-size package of the seed, Honey Sargo. If permissible—as I wish to divide with neighbors—would like to have two packages. Be sure it is Honey Sargo.

There is a general clamor for Government seed. Our people are learning that these Government garden seed are the very best.

[Applause.]

I might use many others to show how the production of food in this country has been increased in this way. And while the President of the United States, the Food Administrator, and everybody down along the line are calling upon the people throughout this country to be patriotic and increase the production of food, to use every bit of ground that is possible, to utilize the back yards and front yards, the vacant lots, and every available space in order to increase food production, it is a poor policy to turn around and say to the people you will not allow the seeds to plant the available ground to bring about the increased production so necessary. [Applause.]

Mr. LEVER. I yield a minute of my time to the gentleman from North Dakota [Mr. YOUNG].

Mr. YOUNG of North Dakota. Mr. Chairman, there are two items in this bill in respect to the distribution of seeds. One is for rare and valuable field seeds. The other is for the ordinary congressional distribution of garden and flower seeds. I am in favor of the distribution of the rare and new varieties of field seeds. Those are needed by the farmers and are very valuable. The ordinary garden seeds and flower seeds which we distribute are of such a quality as the ordinary farmer can buy at any country store. We are not sending to the farmers something that they can not buy or can not get conveniently. I find in my district a very great demand, a real demand for new varieties of field seeds. The farmers in my district are anixous to try out and introduce into their localities new kinds of crops, better crops, better varieties of seeds. There is a real demand for them, and I think all of this money ought to be used for the new varieties of field seeds. It would not be too much money to spend in that way. I regard the money spent for flower seeds and garden seeds as largely wasted, and I believe that is the view of most of those who live in my congressional district. That is true to such an extent that I sometimes hesitate to send out the seeds. I have made the distributions in the past upon the theory that after having been voted by Congress the people of my district have a right to their share even if they are of little value. But, gentlemen, do you not think this practice ought to be stopped? It can not be defended. It is not necessary. It does not improve agriculture in any way, and I do not believe it reflects any credit upon Congress.

Mr. Chairman, if those here to-day, evidently in the majority, desire to distribute seed, why not let it be a quality of field seeds such as the farmers can not buy in the ordinary markets or some rare or new variety of seeds. A good example is Durum wheat, which the Government introduced into this country and distributed among farmers to be tried out. It has been a wonderful success. Some years it has sold for better prices than the old varieties, and it has resisted plant diseases better than most of the other varieties of wheat. That is the kind of intelligent selection and distribution of seeds which is helpful to the grain raisers, and if followed to the exclusion of the cheap, ordinary varieties of garden seeds will reflect credit upon Congress. I appeal to you, gentlemen, to eliminate this wasteful appropriation. I hope the motion to strike out will prevail.

The CHAIRMAN. The gentleman from Mississippi [Mr. CANDLER] moves to perfect the text by increasing the amount of the appropriation, and the gentleman from Massachusetts [Mr. WALSH] moves to strike out the paragraph. The amendment to perfect the text must first be voted on.

The question was taken; and on a division there were—ayes 65, noes 37.

Accordingly the amendment of Mr. CANDLER of Mississippi was agreed to.

The CHAIRMAN. The question now is on the motion of the gentleman from Massachusetts [Mr. WALSH] to strike out the paragraph.

The question being taken, on a division (demanded by Mr. WALSH) there were—ayes 26, noes 75.

Accordingly the motion was rejected.

The Clerk read as follows:

General expenses, Forest Service: To enable the Secretary of Agriculture to experiment and to make and continue investigations and report on forestry, national forests, forest fires, and lumbering, but no part of this appropriation shall be used for any experiment or test made outside the jurisdiction of the United States; to advise the owners of woodlands as to the proper care of the same; to investigate and test American timber and timber trees and their uses, and methods for the preservative treatment of timber; to seek, through investigations and the planting of native and foreign species, suitable trees for the treeless regions; to erect necessary buildings: *Provided*, That the cost of any building erected shall not exceed $650; to pay all expenses necessary to protect, administer, and improve the national forests; to ascertain the natural conditions upon and utilize the national forests; and the Secretary of Agriculture may, in his discretion, permit timber and other forest products cut or removed from the national forests to be exported from the State or Territory in which said forests are respectively situated; to transport and care for fish and game supplied to stock the national forests or the waters therein; to employ agents, clerks, assistants, and other labor required in practical forestry and in the administration of national forests in the city of Washington and elsewhere; to collate, digest, report, and illustrate the results of experiments and investigations made by the Forest Service; to purchase necessary supplies, apparatus, and office fixtures, and technical books and technical journals for officers of the Forest Service stationed outside of Washington, and for medical supplies and services and other assistance necessary for immediate relief for artisans, laborers, and other employees engaged in any hazardous work under the Forest Service; to pay freight, express, telephone, and telegraph charges; for electric light and power, fuel, gas, ice, washing towels, and official traveling and other necessary expenses, including traveling expenses for legal and fiscal officers while performing Forest Service work; and for rent outside of the District of Columbia, as follows:

Mr. LEVER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from South Carolina.

The Clerk read as follows:

Committee amendment: Page 33, line 25, after the word "relief," strike out the word "for" and insert in lieu thereof the word "of."

The amendment was agreed to.

Mr. WALSH. Mr. Chairman, I move to strike out the last word. I desire to ask the chairman of the committee a question. I notice that in this paragraph there is provision for the transportation and care of fish and game supplied to stock the national forests or the waters therein. I desire to ask where that fish is procured, whether from the National Bureau of Fisheries or from other sources, and if from the Federal commission or bureau, why it is necessary to provide for the care of its transportation.

Mr. LEVER. Without having the specific information at hand, I should say that it refers to the fish and game of the national forests.

Mr. WALSH. That is separate and distinct from the Bureau of Fisheries?

Mr. LEVER. Yes.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last two words. I want to call the attention of the chairman of this committee to the situation in the law that interferes with the procuring of timber by the military arm of the United States, which it needs badly for aeroplane stock from the forest reserves. I want to say that after some effort on my part to straighten out the confusion the Secretary of Agriculture and the Bureau of Forestry have looked into the matter, and at my request there has been prepared an amendment to amend the law passed in the Fifty-sixth Congress by which timber can not be sold until advertisements for bids are made 30 days ahead of the sale. It is proposed to let sales for war uses be made without advertising. I shall have a copy of the amendment in a few moments. I am not certain to which section it ought to be offered. I rise to ask that we proceed with the bill with the privilege of returning to any section dealing with the Forest Service to which the amendment may be germane for the purpose of offering that amendment.

Mr. LEVER. Mr. Chairman, I am familiar with the matter mentioned by the gentleman from Washington, and I have no objection to it.

Mr. JOHNSON of Washington. Mr. Chairman, I ask unanimous consent that we proceed with the reading of the bill, with the privilege of returning to the forest-reserve sections to offer an amendment.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to return to any section pertaining to the Forest Service in the bill for the purpose of offering amendment. Is there objection?

There was no objection.

The Clerk read as follows:

Olympic National Forest, Wash., $16,598.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. I would like to ask how this appropriation for the Olympic National Forest, Wash., $16,598, compares with the appropriation of the preceding year. Has it come down any?

Mr. LEVER. It is exactly the same.

Mr. JOHNSON of Washington. Are most of these forest-reserve appropriations in the bill about the same as they were last year?

Mr. LEVER. Yes; about the same.

Mr. JOHNSON of Washington. Any new forest reserves been created?

Mr. LEVER. No.

Mr. JOHNSON of Washington. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

Umpqua National Forest, Oreg., $10,109.

Mr. FESS. Mr. Chairman, I move to strike out the last word in order to ask the chairman a question. Can the chairman give any definite information as to the ability of these forest reserves to be self-supporting?

Mr. LEVER. I should be glad to furnish the information to the gentleman and the House. The past fiscal year the receipts from the national forests amounted in the total to $3,457,000, an increase of $633,000 over the present fiscal year. This increase was $265,000 from timber sales, $339,000 from the grazing receipts, and $29,000 from other miscellaneous sources, like the sale of wood and things of that kind. The total cost of administering, normally, the forest reserves is about $4,000,000, so that the receipts and the cost of administration are coming pretty close together; $3,450,000 in the way of receipts as against $4,000,000 in the way of expenditure.

Mr. FESS. If we go back for a period of years has the cost of administration increased with the years?

Mr. LEVER. If we go back a long period that is true, but for the last three or four years the cost of administering the forest reserves is about the same, a little decrease in this bill.

Mr. FESS. But the revenue has increased?

Mr. LEVER. Slowly and steadily increased.

Mr. FESS. Then we may infer that ultimately the forest reserves will be a source of income to the Government?

Mr. LEVER. I see no reason why it should not become a source of income to the Government.

Mr. FESS. I asked the question purely as a matter of information. I wanted to know whether or not there is a possibility in the near future of this particular agency becoming productive financially.

Mr. LEVER. I do not think there is any question but that the forests can be made self-sustaining under normal conditions.

Mr. FESS. I might say to the chairman that on a trip West I visited the national park at Tacoma, the Ranier Reservation, and it was a great eye opener, having lived in the country and knowing something about wood and timber. I could not imagine the possibilities of the forest and timber in such a place as that. It is incredible to one who had never seen anything of that sort. I was wondering whether such possibilities were outside of a few of these national parks.

Mr. LEVER. There is an immense amount of timber in the national forests, and I am satisfied that the Forestry Service could be made self-sustaining in a very short time if the cutting of the timber should be speeded up.

Mr. FESS. Is any of this appropriation expended in road building?

Mr. LEVER. Yes; we carry an item of $400,000 further on in the bill for the improvement of the national forests, and out of that we build some roads.

Mr. JOHNSON of Washington. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. JOHNSON of Washington. The gentleman spoke about the normal expenses being about so much. Did the gentleman mean that the expense had been increased in the last year or two?

Mr. LEVER. No; I do not think the Forest Service expenses have been increased, except, probably, very little in the last five or six years.

Mr. JOHNSON of Washington. The gentleman from Ohio, Mr. FESS, saw the big timber on the Rainier Forest Reserve, but he must realize that if the Government should start in on a policy of cutting and selling that timber in great quantities, in order to make the Forest Service pay, it would ruin the

timber business in the State in which the reserve is located. In other words, when you put private timber owners into competition with the great timber on these reserves both sides are going to suffer.

Mr. LEVER. I will say to the gentleman from Washington that I think the policy pursued by the Government heretofore in timber cutting has been safe and sane.

Mr. JOHNSON of Washington. We in the West agree to that; the Government has pursued a policy of not ruining the industry, and at the same time has made the Government prices act as a regulator of the market. Of course, for a number of years, until 20 months or so ago, the bottom was out of timber, and all prices were at the lowest possible level. But whether timber is high or low, people in the Middle West—people in Nebraska, for instance—never can understand why rough lumber costs them $40 to $45 a thousand feet—never less and frequently more. They believe somebody is making an enormous profit at the tree; but when the people in Nebraska are paying $40 to $45 a thousand feet for rough lumber, the man who has bought the tree from the man who felled it, has sawed it up at the mill, gets only $7 or $8 or $9 a thousand feet, so he is not making any great profit.

Mr. FESS. Does the country suffer any great loss from forest fires, or has it in the last few years?

Mr. LEVER. In 1910 we had a terrifically destructive forest fire, which destroyed property valued, if my recollection serves me right, at about $25,000,000. This past year we had another rather destructive forest fire, but on account of the increased efficiency of the Forest Service, while they had a larger number of outbreaks than they had in 1910, probably 500, they held the losses down to very much less than they were in 1910. They created a deficit this year of $775,000 for fighting fires that occurred. We carry an appropriation of only $150,000 for that purpose. It was necessary for them to create a deficit, and they have that matter now before the Committee on Appropriations.

Mr. FESS. Are we supporting any school as a Government school for the training of forest rangers to fight fires?

Mr. LEVER. No.

Mr. FESS. I think some States are. Pennsylvania, I believe, has a school devoted entirely to that work.

Mr. LEVER. A patriotic Frenchman was conducting some years ago a forest school at Asheville, N. C., but I am not sure whether he is continuing to do that now or not.

Mr. FESS. The danger from forest fires is imminent. I should judge, and is the Government taking any additional steps which we have not heretofore taken?

Mr. LEVER. Yes; we are providing in this bill a little different system of employing fire fighters. Heretofore we have employed only two classes of forest rangers, one a year-long forest ranger and the other a six-months-long forest ranger. We are proposing to reduce the number of year-long forest rangers and increase the number of six-months forest rangers, and, in addition to that, provide for a three-months forest ranger, so that we can have the longest body of men at the critical seasons of the year, when fires are most likely to occur.

Mr. FESS. What about this range along the Adirondacks? Are we continuing operations there?

Mr. LEVER. Oh, yes; last year, the gentleman will remember, we carried in this bill, and it became a law, $3,000,000 in addition to the original amount carried in the Weeks Act of $10,000,000.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For investigations of methods for wood distillation and for the preservative treatment of timber, for timber testing, and the testing of such woods as may require test to ascertain if they be suitable for making paper, for investigations and tests within the United States of foreign woods of commercial importance to industries in the United States, and for other investigations and experiments to promote economy in the use of forest products, and for commercial demonstrations of improved methods or processes, in cooperation with individuals and companies, $173,260.

Mr. WALSH. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question as to how extensive these tests and investigations have been with reference to finding suitable material for making paper from these wood or timber products.

Mr. LEVER. The work at the Madison laboratory at this time is being concentrated very largely on the proposition of testing timber for the uses in the Army. For example, they are testing spruce now for use in the building of aeroplanes, and they are testing other woods for wagons and other purposes that the Army needs. The work is being concentrated along that line. Heretofore, however, extensive experiments and investigations have been made at this laboratory with a view of finding whether we have any timber available out of which we could get print paper, and while we have no definite report this year about it, except in the report of the Forest Service, I think it is safe to say that they have made some headway and have developed some rather interesting results.

Mr. WALSH. Where did the gentleman say this laboratory is located?

Mr. LEVER. At Madison, Wis.

Mr. WALSH. How long have these investigations been going on?

Mr. LEVER. This work has been going on, I should say, 12 years at least—a good long while.

Mr. WALSH. And during all of that time they have not yet discovered whether some timber products are available for paper?

Mr. LEVER. I think they have, as a matter of fact.

Mr. JOHNSON of Washington. Mr. Chairman, if the gentleman will permit, the school has done a great service in testing the strength of woods and developing by-products of wood, and in the making of wood flour for use in linoleum, and a thousand different things.

Mr. LEVER. Oh, yes.

Mr. WALSH. My inquiry went to the making of paper. I wanted to ascertain what has been accomplished during this period in ascertaining the suitability of timber products for the making of paper.

Mr. LEVER. I think I can say that the results have been both positive and negative. In other words, they have developed that a great many woods that we thought were valuable for the making of print paper and other kinds of paper were not so, and they have had some positive results also which they have given to the trade, of course.

Mr. FESS. What proportion—or can the gentleman give the figures—of the wood that we use for wood-pulp purposes is imported into the country?

Mr. LEVER. I could not give the exact figures, but I know it is a very large proportion.

Mr. FESS. In proportion, is it larger than that which we use at home?

Mr. LEVER. That would be my recollection; but it is only a recollection that I am giving the gentleman.

The Clerk read as follows:

For silvicultural, dendrological, and other experiments and investigations independently or in cooperation with other branches of the Federal Government, with States and with individuals, to determine the best methods for the conservative management of forests and forest lands, $78,728;

Mr. WALSH. Mr. Chairman, I move to strike out the last word, and I may be pardoned for asking this question of the chairman of the committee, coming from a region of rocks and swamps. Will the gentleman tell me what these silvicultural and dendrological experiments are? Of what do they consist?

Mr. LEVER. The silvicultural work has to do with the study of the tree itself as it stands in the forest. The dendrological study is a study, as I understand the word, of the life and history of the tree.

Mr. WALSH. And how is that distinguished from arboriculture?

Mr. LEVER. Arboriculture is the study of the cultivation of trees and shrubs.

Mr. WALSH. But it has to do with a tree, grown either in the forest or as an individual specimen?

Mr. LEVER. Yes.

Mr. WALSH. I withdraw the pro forma amendment.

The Clerk read as follows:

In all, for general expenses, $3,247,935.

Mr. JOHNSON of Washington. Mr. Chairman, the amendment which I referred to a few moments ago I have, and I believe this is the best place to insert the same. After line 11, insert a new paragraph to read as follows.

Mr. LEVER. What page?

Mr. JOHNSON of Washington. Page 45.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 45, after line 11, insert as a new paragraph the following: "And hereafter during the existing state of war the Secretary of Agriculture is authorized to sell without advertisement to any individual, firm, association, or corporation at a fair value to be determined by him, national forest timber which he shall find is to be used for war purposes, and he is also authorized, under regulations to be prescribed by him, to permit the War Department to take from the national forests such timber as may be needed in the prosecution of the war. The Secretary of War, under regulations to be prescribed by him, is hereby authorized to sell, or otherwise dispose of, any of the material manufactured from such timber that is not suitable for war purposes. Any moneys received on account of such material shall be deposited in the Treasury as miscellaneous receipts."

Mr. LEVER. Mr. Chairman, I reserve a point of order on the amendment.

Mr. JOHNSON of Washington. Mr. Chairman, the amendment is twofold in its purposes. First, it permits the sale of spruce timber at a price without the customary 30-day advertisement for bidders.

There is urgent need of legislation which will authorize the sale of national forest timber, to be used for war purposes, at its appraised value, but without advertisement. The War Department is urging the production of spruce aeroplane stock in every possible way. Some contractors wish to cut timber on the national forests and are ready to pay the appraised stumpage values but hesitate to cut or to get ready to cut during the 30-day period of advertising, since others may submit higher bids for the timber. The result is that very valuable time is lost and the production of spruce is hampered.

The effect of such legislation would not be to reduce the receipts from the sale of timber appreciably. The War Department has fixed the price for spruce logs. In all forest-reserve timber sales competition actually develops in only a very small proportion of the sales in spite of wide advertisement. Forest Service appraisals are very detailed and usually fix prices as high as the ordinary prudent business man can afford to pay.

Mr. Chairman, the other phase of the amendment permits the War Department to go into the forest reserves and get the timber that it needs.

The need for legislation authorizing the granting of timber free to the War Department during the period of the war also arises chiefly in connection with the production of spruce for aeroplane construction. The War Department lets some contracts for spruce aeroplane material on a cost plus percentage basis. If the contractor has to buy stumpage, it appears as a cost in his accounts and he receives a profit on it. Similar provisions of law already exist authorizing free use of timber on the national forests for the Navy Department, the Alaskan Engineering Commission, and the Reclamation Service.

If the authority is granted, the Government will make a direct saving in the case of contracts let on a cost plus percentage basis in that stumpage will not appear as a cost. Even more important at this time will be the saving in time and the encouragement to contractors to begin operations promptly. Small operators especially will be relieved of the necessity for paying for stumpage in advance of receiving payment for their product. The present situation is embarrassing to the forest officers, who are anxious to have the resources of the national forests used to the fullest extent in connection with the war activities of the Nation.

Mr. HAUGEN. Will the gentleman yield?

Mr. JOHNSON of Washington. I will.

Mr. HAUGEN. The cost will be the same whether you buy it in the stumpage or not.

Mr. JOHNSON of Washington. Well, I do not know about that.

Mr. HAUGEN. If you pay more for the finished product, of course, the receipts for the raw product are going back to the Treasury.

Mr. JOHNSON of Washington. Yes.

Mr. HAUGEN. And in the end the cost will be exactly the same. Now, it seems to me the language proposed here is broad language which gives power for the wholesale disposal of this valuable timber and only 30 days' time can be gained.

Mr. JOHNSON of Washington. Yet that time is exceedingly valuable. Now, let me explain to the gentleman what has happened in reference to spruce timber. The Government here in the last month made a contract with the Grant Smith Co., a nationally known firm of contractors, for the delivery of 5,000,000 feet of spruce a month, and the company went at once to the southwestern Washington district and tried to find that spruce. They went south from Grays Harbor, the spruce-belt center, to the North River country and found plenty of spruce there, about one tree in every five being valuable for aeroplane stock, and even these suitable trees are not all accessible. This big firm now admits that it has a very hard contract. The trees are there. It costs money to fell them. When one falls into a ravine it can not be drawn from there except with a donkey engine, and this work does not permit the putting in of heavy logging machinery to get out the spruce trees alone. Now, I want to say to the gentleman this amendment has the approval of the Agricultural Department. It resulted from an effort to coordinate the War Department and the Agricultural Department.

The same difficulty existed in trying to coordinate the Indian Commissioner's Office of the Interior Department and the War Department. Last week the House corrected that. Anyone who has had experience in trying to get these things the War Department needs from other departments will discover in a minute that the difficulty is to get the departments to a point where they will agree on what should be done. This amendment comes from the office of the Secretary of Agriculture and is the result of much effort to find some way by which the United States Government, for war purposes, can get out of the great spruce belt in my district twice as much spruce as is now in sight for aeroplane stock.

The CHAIRMAN (Mr. MAYS in the chair). The time of the gentleman has expired.

Mr. JOHNSON of Washington. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Washington asks unanimous consent for five minutes more. Is there objection?

There was no objection.

Mr. HAUGEN. Will the gentleman yield?

Mr. JOHNSON of Washington. Certainly.

Mr. HAUGEN. I take it that much of the timber is sold above the appraised value?

Mr. JOHNSON of Washington. Yes.

Mr. HAUGEN. The proposition provides for the selling of the timber at the appraised value?

Mr. JOHNSON of Washington. But the Forestry Service follows the War Department's price in this case. Spruce is selling for $7.50 a thousand feet in the tree. The price of spruce stumpage has ranged around $2 and $2.50 in years past.

Mr. HAUGEN. Is $2.50 the appraised value?

Mr. JOHNSON of Washington. I think about that; or, say, $3 a thousand. In normal years forestry sale of timber is made on an appraised valuation that runs with the valuation of stumpage in private hands in that section.

Mr. HAUGEN. As I understand the gentleman, this would leave it entirely to the discretion of the forester to determine the price?

Mr. JOHNSON of Washington. In the case of a war emergency.

Mr. HAUGEN. It must be not less than the appraised value?

Mr. JOHNSON of Washington. Absolutely. The timber that is wanted now is many times its normal commercial price.

Mr. HAUGEN. With the appraised price of $2 or $2.50 and the selling price at $7.50, it leaves open the door at $2.50 instead of $7.50.

Mr. JOHNSON of Washington. The War Department has fixed the price at $7.50 for spruce.

Mr. HAUGEN. Suppose it would be fixed at $2.50 and it would sell at $2.50, the Forest Department would be a loser to the extent of $5?

Mr. JOHNSON of Washington. Before the United States went into the war the British Government and the French Government scoured that country for spruce and paid a tremendous price for it, far in excess of what our War Department is now paying. The present regulated price is the result of an understanding between ourselves and our allies as to the price of sawed and rived spruce. In the meantime, spruce trees available for aeroplane stock, and within the reach of transportation, have been very largely collected.

Mr. LEVER. Let me ask the gentleman from Washington if the statement he is reading from is a letter from the Secretary of Agriculture?

Mr. JOHNSON of Washington. No; this is a memorandum only. I have a statement of indorsement from the Bureau of Forestry, however, along the same line. The Agricultural Department, the War Department, and the Forestry Bureau, all are anxious that crews of men should go into the timber and rive spruce; that is, hand-hew it. This amendment came from the office of the Acting Forester, who caused it to be drafted after I had appealed to him for an amendment that would cut the Gordian knot, so that the War Department could secure from the Agricultural Department the spruce that is needed to make the aeroplanes this Congress has authorized.

Mr. STAFFORD. Mr. Chairman, no one, I take it, from the remarks of the gentleman from Washington and the observations of the gentleman from Iowa, takes issue with that provision which relates to allowing the War Department to go into our national forests and cut down any trees they may see fit to do, but there may be a serious question as to whether we should grant authority to the Secretary of Agriculture to allow private contractors to go there and obtain timber at the appraised value, merely to gain 30 days. They have the privilege to-day, as I understand it, or, rather, the Secretary of the Interior has the privilege to-day, of waiving that 30-day requirement, subject to the condition that if any person in the 30-day period bids more, the private contractor should pay that additional price.

Mr. JOHNSON of Washington. Yes.

Mr. STAFFORD. Now, we have large contractors with Government contracts on hand. They have estimated what the cost of the raw material will be under existing conditions. They have taken that into consideration that other bidders might raise the price of the timber, and yet we are waiving that absolutely and giving them that profit.

Mr. JOHNSON of Washington. No; we are not.

Mr. STAFFORD. No one here desires to place any obstacle in the way of the War Department or even of private contractors getting the necessary material for construction work necessary for war purposes. And yet, here the gentleman springs a proposition that even has not the recommendation of the Secretary of Agriculture, but merely prepared by the Forestry Bureau.

Mr. JOHNSON of Washington. I think the amendment was prepared in the legal department of the Department of Agriculture.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. JOHNSON of Washington. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. JOHNSON of Washington. The intimation is made that there might be some additional profit made by some contractor, which is not the case at all. The gentleman must understand that after the United States joined with its allies in the handling of spruce stock—that is, the spruce brought down to the mill—the Government fixed the price for sawed spruce at $110 per thousand feet, and for rived spruce $90 a thousand, with a bonus of $40 if it could be produced by the 31st day of January, and a $30 bonus if it was produced after the 1st day of January, and before a certain later date. Now, the Government is not only paying that great price but paying bonuses, and still they can not get enough crews to go far into the woods and bring out the spruce, of which the War Department has announced that it and our allies need a hundred million feet at once.

Mr. STAFFORD. But nothing has been shown by the gentleman to prove that they are meeting obstacles by reason of the 30-day provision.

Mr. JOHNSON of Washington. Yes; except this: "Thirty days" does not sound serious, but anybody who ever tries to cut any red tape usually finds that "30 days" quickly runs into 130 days. It took a year and a half to get at the cutting of spruce out there on the Indian reservations.

Mr. STAFFORD. But the law allows the Secretary to waive that 30-day requirement; but the contractor must do it subject to the condition that if anyone bids more, he must pay that price.

Mr. JOHNSON of Washington. When I asked the Forest Service to make such a waiver, they were rather afraid it could not be effective even if they had the authority. When the contractors are asking to be allowed to go and get this timber, they are suspicious lest, before they have completed their contract at this already high price of spruce, somebody else would step in and bid for spruce at a still higher price—at which the latest bidder might never deliver—and it would embarrass them. The real price will be the War Department's price, bid or no bid. I hope the gentleman will withdraw his objection.

Mr. STAFFORD. I have no objection to the proposition of vesting the War Department with power to go into the national forests and take all the timber it sees fit for war purposes, but the other proposition is, in my opinion, open to serious objection.

Mr. JOHNSON of Washington. Here is the Federal Government owning in the Olympic Peninsula millions upon millions of spruce timber, but very little of it, of course, is available on account of lack of transportation. Here is the War Department of the Government clamoring for spruce and offering a bonus to get spruce within a few days, and here is the Agricultural Department willing and anxious to help the War Department, but afraid to cut the red tape without an act of Congress. I hope the Congress will come to the rescue. This applies to the period of the war only.

Mr. HAUGEN. Is a price set on it?

Mr. JOHNSON of Washington. Yes. When the War Department says $7.50 for stumpage, that will be the price agreed upon. That price is high, but it may be higher. A crew of 10 men can go in and find half a dozen of these trees, fell them, rive out the pieces, and drag them out, and get them to a road somewhere and bring them to tidewater.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. LEVER. I suggest to the gentleman from Washington that he permit this amendment to go over, so that we can have opportunity to examine it.

Mr. JOHNSON of Washington. I will agree to that.

Mr. LEVER. I ask unanimous consent, Mr. Chairman, that this amendment be passed over without prejudice, and that we may return to it later, with a point of order pending against it.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that this amendment be passed over temporarily without prejudice, still reserving a point of order upon it. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

And hereafter, in lieu of actual transportation expenses, the Secretary of Agriculture may, under such regulations as he may prescribe, authorize the payment of not to exceed 2 cents per mile for a motorcycle or 6 cents per mile for an automobile used for necessary travel on official business in the Forest Service.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Wisconsin reserves a point of order on the paragraph.

Mr. STAFFORD. Mr. Chairman, this is a new provision of law. It is also something novel in the history of legislation, providing for allowances for the use of automobiles. I assume that the committee has in mind compensating those connected with the Forest Service who happen to own an automobile or a motorcycle by giving them an allowance at the rate of 2 cents a mile for a motorcycle and 6 cents per mile for the use of an automobile when used on necessary travel in connection with official business. Will the chairman advise us as to what investigation was had as to the rate determined in this item, and whether this was recommended by the department?

Mr. LEVER. Yes; this item was recommended by the department and submitted in the Book of Estimates. It is now costing the Forest Service something like $32,000 a year for automobile service. They figure that with this authority submitted here—2 cents a mile for motorcycles and 6 cents a mile for automobiles—they could make a very distinct saving in the amount of money expended for travel in the national forests. The committee looked into the matter carefully—for instance, into the question of 6 cents a mile—and considered whether that was reasonable or not. While I do not own an automobile myself, members of the committee do own them, and I think they all agree that that is a very reasonable charge, and that is also true as to motorcycles.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. STAFFORD. Yes.

Mr. McLAUGHLIN of Michigan. Would it not be well to limit this by some such language as this, that "motorcycles and automobiles which have been furnished and the maintenance of which is paid by the Federal Government ought not to be included" in this? Some of these machines are supplied by the Government, and money is supplied for their upkeep. Now, the use of those ought not to be paid for in this way, it seems to me, by the Federal Government.

Mr. STAFFORD. Mr. Chairman, when I first read this paragraph I assumed that it related only to an allowance to those in the Government service who owned in their own right an automobile.

Mr. LEVER. That was certainly the idea of the committee, and then I think——

Mr. STAFFORD. There may be some strength in the position of the gentleman from Michigan [Mr. McLAUGHLIN] that it should be qualified so as to apply expressly only to those that are privately owned by Government employees.

Mr. McLAUGHLIN of Michigan. If the gentleman will permit me further, I think I am right in the impression that some of these machines are owned privately and some are furnished by the Government, and the cost of the upkeep is paid by the department out of money recommended by this committee.

Mr. LEVER. As a matter of fact, the Forest Service owns quite a number of automobiles, but it never occurred to me, nor, I think, to the committee, that this would authorize the department——

Mr. McLAUGHLIN of Michigan. The chairman will recall that when the language came from the department it did not contain the words on lines 13 and 14, "under such regulations as may be prescribed." I offered that amendment, and it was adopted by the committee, and I had in mind the control of just such a situation. But it occurs to me now that there is not enough to that language. It is not specific enough.

Mr. LEVER. I wish the gentleman would offer an amendment to make it entirely specific.

Mr. McLAUGHLIN of Michigan. In case the officer or employee furnishes his own machine and pays for its upkeep, there is good reason for this provision.

Mr. LEVER. Yes.

Mr. McLAUGHLIN of Michigan. But in case the department owns the machine and pays for its upkeep, the person who operates it should not in addition to his salary be paid for running it or be compensated by the mile for the travel he makes in it.

Mr. LEVER. Oh, undoubtedly not; and if this language is not strong enough to provide against it, if the gentleman will frame an amendment to cover it, I shall have no objection to it.

Mr. STAFFORD. I understand that under the existing practice those connected with the Forest Service who own automobiles or motor cycles and use them in the discharge of their official duties receive nothing in the way of transportation expenses?

Mr. LEVER. That is true. There is no provision by which the owner of an automobile using it even on official business for the department can now receive reimbursement.

Mr. STAFFORD. Then, on what basis did the department estimate that $32,000 would be saved if this language was incorporated in the law?

Mr. LEVER. The department do not estimate that they will save $32,000. They estimate that it is now costing the Forest Service for its automobiles and motor cycles $32,000 a year. They estimate that there will be some saving, just how much I do not recall.

Mr. STAFFORD. Can the gentleman inform the committee who bears the expense of the upkeep of the horses that are used by the rangers in the Forest Service?

Mr. LEVER. That question has been asked by the committee. I will say offhand—if I am not correct, I will correct it in my printed remarks—that the ranger himself pays that expense. I think that was the testimony before the committee a year or so ago.

Mr. STAFFORD. That was my impression—that the rangers and assistant rangers pay for the upkeep of their horses.

Mr. LEVER. That is my recollection.

Mr. STAFFORD. If that is the case, we are making an exception in providing for the upkeep of automobiles in the Forest Service while not providing for the horses of the rangers and assistant rangers who use steeds.

Mr. LEVER. I may be mistaken about that. I will find out.

Mr. STAFFORD. That was my impression from my visits to the national forests and my conversations with the rangers—that they were obliged to feed their own horses.

Mr. LEVER. That they furnish their own horses and equipment and feed.

Mr. DOWELL. Does the gentleman know what proportion of these automobiles are owned and maintained by the Government?

Mr. STAFFORD. This provision, as the gentleman says, is for the purpose of compensating employees who own their own automobiles.

Mr. DOWELL. I understand; but it has been stated here in the discussion that the Government owns part of the automobiles. I am asking what proportion of the automobiles are owned and maintained by the Government?

Mr. LEVER. I can not tell the gentleman that. I know that the automobiles in the Forest Service are costing the Government $32,000 a year. We have a list of them.

Mr. DOWELL. Does the gentleman mean that the automobiles owned by the department are costing the Government that?

Mr. LEVER. For the upkeep, expense, and the like of that.

Mr. DOWELL. The ones owned by the Government.

Mr. LEVER. Yes.

Mr. DOWELL. I understand that up to this time there has been no payment to persons with automobiles, except those maintained by the department.

Mr. LEVER. That is true.

Mr. DOWELL. Then the purpose of this, as I understand it, is to go beyond the automobiles owned by the department and to use this money in compensation of persons who own their own automobiles.

Mr. LEVER. Persons who are operating Government-owned automobiles in the Forest Service now receive nothing for gasoline and other expenses except their own salaries. The purpose of this proposition is that if a forest ranger, for instance, owns a little Ford automobile and is using it on official business, he may get reimbursement at the rate of 6 cents per mile.

Mr. STAFFORD. Does not the gentleman think that, in view of the fact that at present rangers are obliged to pay for the upkeep of their horses, this matter ought to be deferred? If we are going to give consideration to the employee who happens to have an automobile and allow him the cost of its upkeep, why should we not do the same for the ranger who has a horse? The same principle is involved.

Mr. LEVER. Does the gentleman think we ought to pass it over or to let it go out on a point of order?

Mr. STAFFORD. I think we ought to pass it over until the committee have considered both these subjects together.

Mr. LEVER. I will not shed any tears over that course.

Mr. HAUGEN. The gentleman from Michigan [Mr. McLAUGHLIN] has an amendment that I think will take care of it.

Mr. DOWELL. One further question. Is the question of expense taken into consideration in fixing the compensation in these cases?

Mr. LEVER. Out of the 6 cents per mile?

Mr. DOWELL. No; at the present time. The gentleman has stated that there is no provision now for the expense that is attempted to be covered by the 6 cents a mile.

Mr. LEVER. There is not.

Mr. DOWELL. I am asking if at the present time the compensation does not cover the expenses?

Mr. LEVER. The salary?

Mr. DOWELL. Yes.

Mr. LEVER. I take it that it does not, or else the department would not make this recommendation.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. LEVER. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. MONDELL. May I make a very brief statement in this connection?

Mr. LEVER. Yes.

Mr. MONDELL. I have in the last year met several forestry officials, head rangers, assistant superintendents, and so forth, who owned automobiles, flivvers, and who were operating them entirely at their own expense. They felt, and I think they were justified in that view, that their duties required these machines, and that they could perform very much more effective service by having them. They get around so much more rapidly in these parts of the forest reserve where there are roads on which a machine can be used. They have felt, however, that while they were using machines on public business they ought not to be required to pay all of the expenses of the maintenance of the machine, that there should be some provision made similar to this in the bill. I did not know that the committee had taken that matter into consideration and made provision for it. In view of my talk with the men and the knowledge of the situation, I should say that it was a very wise provision and in the interest of the public service.

Mr. STAFFORD. Does the gentleman recognize the fact that if we adopt this provision it will be a discrimination in favor of the officials who own automobiles and a discrimination against the ranger who is obliged to purchase his horse and maintain him out of his salary?

Mr. MONDELL. I do not look at it in that way. In the first place it costs comparatively little to maintain a horse, particularly in the summer time on a forest reserve. The horses feed on the grasses in the main, and they are fed little grain, for they do not require it. Furthermore, some of these very men that have automobiles also have horses, probably the most of them. They could use horses and travel about at a very much slower pace. The use of the automobile enables them to get around more quickly over the territory and render better and more effective service. It seems to me a wise provision and I can think of other branches in the public service where a provision of this kind would be helpful and wise. I think it is better than a liberal appropriation for the purchase of automobiles. If you can get an individual to buy an automobile and give him a small sum for the use of it you get the use of the automobile at a lower cost than if the automobile was owned by the Government.

Mr. LEVER. Will the gentleman yield to me out of my own time?

Mr. MONDELL. Yes; I am much obliged to the gentleman for yielding me so much time.

Mr. LEVER. The gentleman from Michigan has an amendment, which I would like to have the Clerk read for information.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Michigan.

The Clerk read as follows:

Page 45, line 17, at the end of line 17, add the following:

"*Provided*, That there shall be no payment of mileage for the use or travel of motorcycle or automobile furnished or owned by or maintained by the Government of the United States."

Mr. LEVER. I have another suggestion which I think might be wise in this connection. We are making this permanent law, and I think we had better strike out the word "hereafter" and try it and see what report we get from it, if Members have no objection.

Mr. McLAUGHLIN of Michigan. That would be striking out the word "hereafter" in the second line. I have no objection.

Mr. LEVER. Mr. Chairman, I offer the following amendment:

Line 12, after the word "and," strike out the word "hereafter."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 45, line 12, after the word "and," strike out the word "hereafter."

Mr. STAFFORD. Mr. Chairman, I recognize what the gentleman from Wyoming has said, that this will be a saving to owners of automobiles in the way of having the Government provide for their upkeep to a certain extent, and yet it is certain, if we pass this provision, that we will be presented next year with a demand from the rangers who maintain their horses to have us provide for the upkeep of their horses. I have no objection to trying it out for a year, and I withdraw the reservation of the point of order.

Mr. DOWELL. Mr. Chairman, I make the point of order on the paragraph and amendment.

Mr. LEVER. Mr. Chairman, I do not concede the point of order. This is a provision which undoubtedly, from all the testimony we have, reduces expenditures, and I think it would fairly fall within the Holman rule.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, in my judgment the clause is not subject to a point of order. It simply relates to the manner in which the necessary public business shall be carried on, for the department to provide the means of transportation, the means by which these men can carry on their business, the same as they provide houses for the men built at public expense. The department has determined that one of the better ways of having the public business transacted out there is to pay mileage for travel of those engaged in the business. It seems to me it relates to the manner of conducting the public business.

Mr. DOWELL. Mr. Chairman, I think it is very clear that this comes within the rule. There is no question that it is subject to a point of order. It is new legislation, an entire change of law on the subject.

Mr. McLAUGHLIN of Michigan. What law on the subject?

Mr. DOWELL. The methods by which business is transacted.

Mr. McLAUGHLIN of Michigan. What is the method fixed by law for men traveling in the national forest?

Mr. DOWELL. I will say to the gentleman that he is attempting to legislate here a different and special method which is different from the method now carried on.

Mr. McLAUGHLIN of Michigan. The method adopted heretofore is not fixed by law; it is a regulation of the department.

Mr. HOWARD. What is the method of transporting these rangers from one part of the forest reserve to another? Does the Government expect the men to walk?

Mr. DOWELL. That is not the question; the question of what method shall be adopted is not the question here. It is a question of order, whether or not this section changes the plan of conducting this business.

Mr. HOWARD. Wherein does it change the method?

Mr. DOWELL. It changes it, and therefore it comes within the rule.

Mr. FOSTER. Let me ask the gentleman if it does not make law?

Mr. DOWELL. Certainly; it does make law regulating this question, not only now but hereafter.

The CHAIRMAN (Mr. MAYS). The point of order is sustained.

Mr. McLAUGHLIN of Michigan. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. McLAUGHLIN of Michigan. Does the Chair hold this out of order if the word "hereafter" is eliminated?

The CHAIRMAN. The word "hereafter" has been stricken out, and the Chair thinks the paragraph is new legislation and is subject to the point of order.

Mr. HAUGEN. Under the Holman rule new legislation is permitted.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For investigating the handling, grading, packing, canning, freezing, storing, and transportation of fish, and for experimental shipments of fish, for the utilization of waste products, and the development of new sources of food, $14,000.

Mr. LEVER. Mr. Chairman, I offer the following amendment which I send to the Clerk's desk and ask to have read.

The Clerk read as follows:

On page 49, line 5, strike out "exerimental" and insert the word "experimental."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

For the biological investigation of food and drug products and substances used in the manufacture thereof, including investigations of the physiological effects of such products on the human organism, $15,000.

Mr. FESS. Mr. Chairman, I move to strike out the last word. I would like to have the chairman, if he has the figures in mind, to indicate to us what portion of the Agricultural appropriation bill's fund goes to negative sources to counteract disease, and so forth, and what amount goes to positive effort to increase rather than to conserve. Has the chairman made any estimate on that score?

Mr. LEVER. No; I have not; but my familiarity with this bill would lead me to say that the larger part of the work of the Department of Agriculture at this time is being expended in the direction of increased production rather than along the line of research. I take it that is what the gentleman means.

Mr. FESS. That is the substance of my question.

Mr. LEVER. Of course, you would have to except the Forest Service from that statement.

Mr. FESS. I notice in the Animal Industry item that it was about 8 to 3 in favor of the negative, or remediable, activity.

Mr. LEVER. Yes.

Mr. FESS. And I had not examined the vegetable items with this point in mind.

Mr. LEVER. It would be found to be pretty well true with the Bureau of Plant Industry, but when you come to the States Relations Service and some of the other services the Bureau of Markets, for instance, it will be seen that a great deal of their work is in the other direction—conservation and production.

Mr. FESS. I notice the Bureau of Chemistry is almost entirely devoting its time to the finding of new means of increasing production rather than counteracting any agencies that are designed to decrease it.

Mr. LEVER. That is very true.

Mr. FESS. How does the Bureau of Chemistry stand in comparison with such organizations in other countries?

Mr. LEVER. I have made no investigation of my own to form a judgment based upon original investigation, but I take it, and have always been told by people, that the Bureau of Chemistry is one of the great organizations of its kind in the world, probably the greatest.

Mr. FESS. I am asking that because as one somewhat familiar with university research work I recall that the Bureau of Chemistry here at Washington has been regarded as one of the most advanced in its research work, not only in this country but of any in any country.

Mr. LEVER. That has been my information also, and I am glad to find the gentleman feels the same way. I regard the chief of that bureau as one of the big men in the Government service.

Mr. COX. Who is the chief?

Mr. LEVER. Dr. Alsberg.

Mr. FESS. Is it not rather exceptional that we can hold such men at the command of the Government at the salaries paid with such solicitations in other fields that might take them out?

Mr. LEVER. It is absolutely remarkable that many of the greatest men in their lines of work in the world are working at salaries that range from $3,500 to $4,500 a year. The only explanation that has been given is that they are devoted to their work, and that in the Government service they have the machinery with which to work, and there is the other reason that their tenure of office is more certain.

Mr. FESS. We in the past have suffered considerably from the loss of some of these research men, have we not?

Mr. LEVER. Undoubtedly.

Mr. FESS. Are we losing many now?

Mr. LEVER. We are losing men every day from the Department of Agriculture who are going into private industries whom we can ill afford to lose.

Mr. FESS. However, there is no possibility of curing that difficulty by a general increase in salary?

Mr. LEVER. None whatever.

Mr. FESS. We have to depend upon the devotion of these research men to work for the Government, and especially to the work of research for the sake of knowledge.

Mr. LEVER. Undoubtedly. You can not correct it by salary.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For investigation and experiment in the utilization, for coloring purposes, of raw materials grown or produced in the United States, in cooperation with such persons, associations, or corporations as may be found necessary, including repairs, alterations, improvements, or additions to a building on the Arlington Experimental Farm, $70,720.

Mr. NORTON. Mr. Chairman, I move to strike out the last word. I would like to inquire from the chairman of the committee what particular work is being done under this appropriation?

Mr. LEVER. I would say to the gentleman from North Dakota that he will recall that about two years ago this item was inserted. It was inserted for the reason that this country was practically dependent upon Germany for dyestuffs. They have now gotten the work in fairly good shape and are cooperating very closely with the Bureau of Standards. The testimony before the committee tells us that they have now discovered the bases, or whatever you would call it, for the colors red and blue, and from these they hope, of course, to get a good many collateral colors. The purpose of this item is, if possible, to put this country on an absolutely independent footing with respect to dyes.

Mr. NORTON. I had in mind that experiments were being made in respect to the production of aniline dyes, coal-tar dyes, and mineral dyes. It occurred to me that these experiments and investigations were being made by the Bureau of Standards and by the Bureau of Mines, and that large appropriations were made for that purpose last year in other bills. I would like to know what real work, if any, the Department of Agriculture has been doing on this subject, and whether the Agricultural Department is doing any independent research work, or whether it is merely duplicating work being done by the Bureau of Standards and Bureau of Mines, to discover new processes of manufacturing dyes.

Mr. McLAUGHLIN of Michigan. When this item was first inserted in the Agricultural appropriation bill the question was raised as to which department had better take it up, and it was stated at that time that consideration had been given to that by the Secretary of Agriculture and the Secretary of the Interior and the chief of the Bureau of Standards, and it was thought it had better be taken up by the Department of Agriculture; hence the first appropriation suggested for that purpose.

Mr. NORTON. Does the gentleman mean to convey the information to the committee that the chief experiments that are being made by the Government to develop in this country the dye industry are being carried on under this appropriation by the Department of Agriculture?

Mr. McLAUGHLIN of Michigan. I will say that there is a perfect understanding between those who are carrying on the work along this line so that there is no duplication. The kind of work provided for in this appropriation is being done wholly by the Department of Agriculture. There will be no encroachment and, as I say, no duplication of work.

Mr. NORTON. Well, does the gentleman know, so that he can tell the committee, what particular work the Department of Agriculture is doing, if any; what particular work of investigation or experimentation is being carried on by the Department of Agriculture?

Mr. TOWNER. Will the gentleman yield?

Mr. NORTON. I will yield if the gentleman has any information he can give on the subject.

Mr. TOWNER. I am sure I do not know; I could not label it in advance. But the gentleman knows that dye products are produced both from mineral and vegetable products?

Mr. NORTON. Yes.

Mr. TOWNER. And that it is necessary that we should have both; in fact, it is necessary very often to use them in combination. As I understand it, the Bureau of Standards is principally occupying their attention, and to a very large degree, with the development of dyestuffs that are obtained from minerals.

Mr. NORTON. Yes; and also the Bureau of Mines.

Mr. TOWNER. And the Agricultural Department is engaged in its proper sphere in developing, as it can, dye substances from vegetable products, which is perfectly proper.

Mr. NORTON. Can the gentleman tell me anything the Department of Agriculture has done along this line in securing results or making new discoveries within the last year or two?

Mr. LEVER. I can give the gentleman that information if I can pronounce the words.

Mr. NORTON. I will yield to the chairman of the committee if he can give us a little information on the subject.

Mr. STAFFORD. Mr. Chairman, when it was first suggested two years ago that the Government should undertake some activity looking to the furtherance of the dye industry, the question arose whether or not the Bureau of Standards or the Department of Agriculture should undertake the work. There was correspondence had between the Director of the Bureau of Standards and the Secretary of Agriculture.

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. NORTON. Mr. Chairman, I ask that I may have three minutes more to get a little information on this subject if possible. I have not obtained any so far.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. STAFFORD. At that time it was agreed between the two respective heads that the work of the two bureaus was entirely distinct and different, and that the Department of Agriculture should undertake the work of chemical analysis of the various coloring substances and as to the processes of manufacture, and that the Bureau of Standards should only consider the question as to the standardization of colors; that analyses and all the work that goes into the determination of the processes of manufacture should be undertaken by the Department of Agriculture.

Mr. NORTON. Does the gentleman mean to convey to the committee the information that the Department of Agriculture is investigating dyestuffs made from mineral products?

Mr. STAFFORD. They are investigating the entire subject as to processes of manufacture and the chemical analyses of the various dyestuffs, and the Bureau of Standards is not engaged in that investigation.

Mr. NORTON. Now I will yield to the gentleman from South Carolina.

Mr. LEVER. I was just going to read from the testimony of Dr. Alsberg:

Dr. ALSBERG. We have made, I think, in the two years that this appropriation has been available, very important progress. We have developed a new method for the production of the substance known as phthalic anhydride. This substance is the basis of one of the methods of making indigo. It is the basis of phenolphthalein, which is one of the most widely used laxatives. It is the basis of numerous and important series of dyes. In fact, it is one of the most important of all the intermediates. It is itself not a dye, but is converted into many useful dyestuffs of the series. I estimate that the annual consumption of phthalic anhydride, were it available in this country, would be something in the neighborhood of 5,000,000 pounds. We have developed a new method, which is now in commercial use actually producing this material, which, we feel, is capable of producing phthalic anhydride here more cheaply than anywhere else.

The CHAIRMAN. Anywhere in the world?

Dr. ALSBERG. Anywhere in the world. But I must make this reservation: We do not know just exactly what is going on inside of German dyestuff factories, or what has been going on. It may be that they have a secret method of which we know nothing which is as good as ours or better. As far as we know, however, that is not the case. So far as we can judge from the price that was paid for the material before the war, we believe that this particular method for making this very important intermediate is capable of producing it very much more cheaply than any other method that we know anything about.

Then he goes on with three or four more pages of testimony.

Mr. NORTON. That is dealing with vegetable dyes.

Mr. LEVER. Well, there are three or four more pages of testimony in which he gives results along other lines.

Mr. NORTON. Does the gentleman understand, as stated by the gentleman from Wisconsin, that investigations by the Department of Agriculture are being made of mineral dyes?

Mr. LEVER. I think so. I do not think they are confined to vegetable dyes at all.

Mr. FORDNEY. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I think it is highly important that this appropriation be made for this purpose. There are many reasons why I have arrived at that conclusion. In the first place, let me say there are about $100,000,000 worth of dyestuffs produced in the world annually. Seventy-five per cent of those dyestuffs are produced in Germany, or were before the war. The people of the United States consume annually $15,000,000 worth, or about 15 per cent of all the dyestuffs manufactured in the world, and we were, before the war, practically producing none. There are 900 varieties of dyestuffs made and used in the world. We are now making in the United States, which industry has practically sprung up since this great war broke out in 1914, about 350 varieties of the 900 made and used in the world. Those dyestuffs are largely made from minerals. We have an abundance of raw material and capital and skill in the country to establish this industry in this country, so that

we may produce and keep in this country the $15,000,000 worth of dyestuffs for which we heretofore sent abroad this money. The dyestuff industry can be converted into the explosive industry within a week's time at a trifling expense and, vice versa, the industry in which explosives are made can be converted into the dyestuff industry. A gentleman came before the Ways and Means Committee a few months ago and stated that he was engaged in coloring cotton goods, not manufacturing, but wholly engaged in coloring. He was in favor of a protective tariff upon dyestuffs that that industry might be established in this country, which has not, or had not prior to the war, been established here.

He stated that he purchased dyestuffs from abroad and purchased a certain quantity, for which he paid $1,750 usually, and at the time he appeared before the committee, in 1915 or 1916, he had a shipment of that quantity on the way to this country from China, for which he was paying $52,500. That is the difference between the price the manufacturers in this country that are manufacturing cotton goods and coloring them pay to-day for coloring, and the price they did pay, before the war in Europe. We need an appropriation, and we need some action on the part of this Government to establish that industry in the United States.

Mr. NORTON. The gentleman knows that during the past two years several large dyestuff-manufacturing plants have been built up in the country.

Mr. FORDNEY. Oh, yes. I have just stated that we are now manufacturing in the United States from 300 to 350 varieties of the 900 varieties made in the world, nearly all of which industry has been established in this country since the declaration of war in 1914.

Mr. COX. Will the gentleman yield?

Mr. FORDNEY. I will.

Mr. COX. I thoroughly agree with everything the gentleman says, and that is one of the things I would vote for under the high-protective tariff. Here is the point I want to get at: Are our manufacturers in this country making as good a grade of dyestuffs as were formerly imported from Germany?

Mr. FORDNEY. Let me say to the gentleman that the variety of dyestuffs made and used to-day are not of as high a grade as those used prior to the war, for this reason, that their cheapness recommends them at this time and until the industry becomes well established and we become skilled in that industry in this country. The skill in the manufacture of high-grade stuffs in this country, perhaps, is not as great as in the old country, where they had been experimenting and have been engaged in the industry for many years.

Mr. COX. As I recall, two years ago this last summer, or possibly a year ago, our State Department worked out an agreement with England whereby we were able to get a certain amount of dyestuffs imported from Germany in order to keep our Bureau of Engraving and Printing going. Do you know whether that which we imported is still running the Bureau of Engraving and Printing or are we running that plant on some of our own manufacture?

Mr. FORDNEY. I am not positive, but my information is that we are supplying that in this country.

Mr. COX. From our own manufacture?

Mr. FORDNEY. From our own manufacture.

Mr. COX. Has there ever been any secret, so far as Germany's success is concerned, in their dyeing industry? That is, have her chemists been in possession of any secrets that the chemists of the world do not know anything about?

The CHAIRMAN. The time of the gentleman has expired.

Mr. COX. Mr. Chairman, I ask unanimous consent that the gentleman may have three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FORDNEY. I will say to the gentleman that I do not believe there are any secrets to-day used in Germany in the manufacture of dyestuffs that are not known by the experts in this country.

Mr. COX. Then, if that be true, the only thing that our capitalists or the American people want is a protection against the German monopoly. Is not that true?

Mr. FORDNEY. I think that is right.

Let me state this for the information of the House. It is very interesting to me. A dyestuff manufacturer stated to me personally, and he also appeared before the committee—he made this statement, that he was engaged in marketing raw material for dyestuffs out of the products of salt brine pumped from beneath the ground in the State of Michigan. He is experimenting in making indigo from salt brine. He stated that he was making a certain chemical from salt in this country, and he found there was an excellent market in Germany for that product. I will give the figures about as he gave them to me. I am not positive that I am exactly correct as to the dollars and cents. He was selling that product in this country for 37 cents a pound and manufacturing it for about 32 cents a pound. He sent agents to Germany and established a trade there and was doing a lucrative business at 42 cents a pound. Then, lo! and behold, a German representative of those industries in Germany came to his office, saw him in private, and said, "You are selling those dyestuffs in Germany and we want you to get out. I represent the dyestuff industries of Germany." My friend inquired, "Do you own the world?" "We think we own the German market, and it is for your best interest that you stop selling in Germany." There was no agreement reached. The German gentleman went away, my neighbor continued selling in Germany, and the first thing he knew that article was selling in this country from German manufacture at 22 cents a pound. He immediately withdrew his agent from Germany, and the price in this country went up to 37 cents a pound for German dyestuffs; and so he was obliged to keep out of Germany. This German gentleman said to him, "We have in Germany what we call a 'yellow-dog' fund, to which the manufacturers contribute one half and the Government the other half, and when we find it necessary to put an industry out of business in the United States or in any other country in the world we use that 'yellow-dog' fund and undersell you and put you out of business, and I advise you to get out of Germany." And my friend got out of Germany.

Mr. JUUL. Will the gentleman yield?

Mr. FORDNEY. I will be glad to do so.

Mr. JUUL. What I want to know is where was the protective tariff protecting this particular industry?

Mr. FORDNEY. My friend, let me tell you. I did not get up to make a tariff speech, but I will ask you to bear with me a minute or two to explain that point, and I am not getting into politics.

Mr. JUUL. If the gentleman will permit me, I am asking you in good faith.

Mr. FORDNEY. I know that, and for that reason I will answer you in absolute good faith.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that debate on the paragraph and all amendments thereto close in 15 minutes. I would like to have about 2 minutes myself.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto close in 15 minutes. Is there objection?

There was no objection.

Mr. FORDNEY. Let me say in good faith to the gentleman that there is no tariff law that can be enacted that will protect an industry of that kind when it meets such competition as that German gentleman described, unless we add to our tariff laws an antidumping clause such as Canada has to-day, and such as some other foreign countries, whose names I can not speak positively of now, have.

But Canada has this kind of a paragraph in her import law; that is to say, if an article of foreign manufacture is sold in Canada at a less price than it sells for in the country where it is made there is an additional duty of 15 per cent ad valorem added to the tariff rate when going into Canada, and if the article is on the free list there shall be a 15 per cent ad valorem duty placed upon it, and notice is given by the Canadian Government to that manufacturer that he can no longer ship into Canada, under any circumstances at all, unless he sells in Canada at a price equally as high as he obtains for that article in the country where he makes it.

That absolutely prohibits dumping at a price under cost of an article on our market or in the market of any country that has that kind of a law. If you have a reasonable rate of duty to offset the difference between our cost and the foreign cost, together with an antidumping clause, you can protect an industry and build it up in this country, where we have an abundance of raw material and capital and energy and skill, and under no other circumstances can it be done. [Applause.]

Mr. MONDELL. Mr. Chairman, the development of the dye industry is tremendously important, and it naturally divides itself into several classes for investigation and research. It is entirely proper that the agricultural bill should carry a provision for investigation and experiment in the utilization for coloring purposes of raw materials grown in the United States, inasmuch as the Department of Agriculture has to do with the products grown in the United States and may properly carry on that kind of an investigation. The trouble is that, judging from the hearings had before the committee—and I would like to have the attention of the gentleman from Michigan [Mr.

FORDNEY], who is so much interested in this matter—the Agriculture Department has done almost everything except make any effort whatever to develop dyes from agricultural products—vegetable dyes. They told the committee that in the two years during which this appropriation had been running they had made important progress in a new method for the production of a substance known as thallic-hydride. Thallic-hydride, they tell us, however, is not a dye—it is a laxative; but it is, we are informed, the basis of an important series of dyes. It is an intermediate. We do not know that this new method will enable us to produce this product as cheaply as it must be produced in order to make it of commercial value, but we hope it will. They express, however, serious doubt about it.

Mr. NORTON. They could make quite a large hope on $70,000.

Mr. MONDELL. So far as the hearings develop the facts, that is about all that has been accomplished. They have made some investigations into the production of dyes from metallic substances. In other words, except for the alleged discovery of a new process, of doubtful benefit or advantage, for the production of a laxative, which is also an intermediate of dyes, they seem to have done nothing under this appropriation.

The trouble often is with appropriations of this sort no matter how well they may be intended or how useful a purpose they seek to serve, the departments or the bureaus receiving and using the appropriations are very likely to wander far afield from the actual purpose for which the appropriation was made, and that is, apparently, judging from the statement before the Committee on Agriculture, exactly what has been done in this case.

Now, we have a very considerable appropriation under the Bureau of Standards for the investigation of colors, dyes and dyestuffs, and dye manufactures. The matter is being investigated also by the Bureau of Mines, and properly so. The question divides itself into several classes of research and investigation, as I have suggested, and it is proper that the Department of Agriculture, the Bureau of Standards, and the Bureau of Mines, each within its own field, should follow and pursue proper lines of investigation and research. The Agriculture Department seems to have spent most of its money either in the fields that belong to the Bureau of Mines and the Bureau of Standards or in the discovery of an alleged but somewhat questionable new process for the manufacture of this laxative to which I have just referred. So far as the investigation of vegetable dyes are concerned, they seem to have forgotten all about it.

The CHAIRMAN. The time of the gentleman from Wyoming has expired. The gentleman from Wisconsin [Mr. STAFFORD] is recognized for three minutes.

Mr. STAFFORD. Mr. Chairman, I rise to inquire of the chairman of the committee as to the purpose of the phraseology found in this item to authorize this fund to be used "in cooperation with such persons, associations, or corporations as may be found necessary."

Mr. LEVER. The explanation given to the committee was that the department was now doing that very thing; that they were cooperating with persons, associations, and corporations in this work, but that they wanted to bring the fact to the attention of Congress.

Mr. STAFFORD. Then I understand that the department is sending its experts into the private establishments and aiding them in their laboratories in the development of these very processes of dye manufacture?

Mr. LEVER. Yes; getting information and helping as much as they can.

Mr. STAFFORD. Can the gentleman inform the committee how much of this fund is utilized in that way?

Mr. LEVER. No; I could not.

Mr. NORTON. Will the chairman of the committee tell the committee how much has been used for mileage out of this appropriation?

Mr. LEVER. I could tell the gentleman if I had a moment of time to look it up. It is all set out in the Book of Estimates here.

Mr. STAFFORD. Could the gentleman tell us what proportion of last year's appropriation of $49,400 was used in the Bureau of Chemistry here in Washington for this work of determining new processes of manufacture and new dye formulas, or is most of the money spent in the field in connection with private establishments?

Mr. LEVER. They propose to spend this year in salaries $31,320, and—if the gentleman from North Dakota [Mr. NORTON] will give me his attention—in travel, $1,500, and for equipment and material, $20,500; miscellaneous, $2,400, and construction work, $15,000. That is to complete their laboratory over at Arlington.

Mr. NORTON. How much did the gentleman say for mileage?

Mr. LEVER. One thousand five hundred dollars.

Mr. COX. That is not much.

Mr. FESS. Mr. Chairman, may I ask the gentleman one question?

Mr. LEVER. Yes.

Mr. FESS. There might be a misconstruction of the gentleman's answer a moment ago, that part of this money is being expended for development in private establishments. It would leave the impression that the Government is assisting private corporations.

Mr. LEVER. I did not intend to leave that impression, but the impression I intended to leave was that the Government is cooperating with these concerns in an endeavor to study the problem.

Mr. TOWNER. Will the gentleman permit a suggestion?

Mr. LEVER. Certainly.

Mr. TOWNER. Is it not true that it is impossible to understand the value of some of these experiments unless they are submitted to practical manufacturers?

Mr. LEVER. Undoubtedly that is true.

Mr. TOWNER. And they submit their processes and materials to manufacturers, who apply them and try them out to see whether or not they are efficacious.

Mr. LEVER. Yes; that is true.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For enabling the Secretary of Agriculture to carry into effect the provisions of the act of June 30, 1906, entitled "An act for preventing the manufacture, sale, or transportation of adulterated, or misbranded, or poisonous, or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes," in the city of Washington and elsewhere, including chemical apparatus, chemicals and supplies, repairs to apparatus, gas, electric current, official traveling expenses, telegraph and telephone service, express and freight charges, and all other expenses, employing such assistants, clerks, and other persons as may be considered necessary for the purposes named, and rent outside of the District of Columbia; and to cooperate with associations and scientific societies in the revision of the United States Pharmacopœia and development of methods of analysis, $589,081.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. The Committee on Agriculture does such good work, and brings in a bill which in the main so thoroughly commends itself to the judgment of the House, and the gentlemen of that committee are always so kind and considerate during the discussion of the bill, that it is with profound regret that I rise to make a mild criticism.

We are all of us curious with regard to the items of the bill and the statements made in support of them, even though we may be fully convinced that the items are supported by excellent reasons. But, at any rate, the Members of the House are entitled to the information brought out at the hearings. There is one committee of this House, the name of which I shall not mention, that, I think, never comes into the House with a bill—and it brings several bills into the House—until and unless its hearings have been printed, bound, and well indexed, so that they are available for all the membership of the House. I think the Committee on Agriculture generally does that, but this year it did not, with the result that it is very difficult for one first to secure all of the record of the hearings and next to find the part or section of the record that has reference to the particular item under consideration. I do not think this is fair to the House. I think the committee owes an apology to the House for not having had its hearings properly bound and indexed for our information and consideration, and I hope that in the future that will be done.

Mr. LEVER. If the gentleman will permit, let me say that if there is any dereliction at all, it is due to influences over which the committee had no control.

Mr. MONDELL. I felt that there must be a very excellent reason, although no reason is perfectly good.

Mr. LEVER. The Committee on Agriculture began the making up of the bill immediately after the hearings were closed. We made such good progress in getting together on the various items that the bill was reported before the hearings could be had from the printer and indexed by the clerk of the committee. The bill being reported promptly after its making up by the committee, there was not time to make an index. I think the gentleman's criticism would ordinarily be just, but in this case it is not, for the reason stated.

Mr. MONDELL. I feel confident that in the future the committee will endeavor to have the hearings indexed and accessible.

Mr. LEVER. We were trying to furnish some fodder for the House, and to do it rapidly.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

For investigating the grading, weighing, handling, and transportation of naval stores, the preparation of definite type samples thereof, and for the demonstration of improved methods or processes of preparing naval stores, in cooperation with individuals and companies, including the employment of necessary persons and means in the city of Washington and elsewhere, $10,000.

Mr. McKENZIE. Mr. Chairman, I wish to ask the chairman of the Committee on Agriculture a question or two. I do not want to ask anything that is captious or to have anyone think I feel that the committee has not given this bill thorough consideration; but I would like to know, with regard to this item at the bottom of page 50, whether this investigation of the grading, weighing, handling, and transportation of naval stores and the preparation of definite type samples thereof is for the benefit of the farmer, to help the agricultural interests of the country, or whether it is an auxiliary to the Navy? I have understood that everything was in such good shape in the Navy that they did not need any help, and what I would like to know is whether this is for the assistance of the farmer, to enable him better to market his product to the Navy, or whether it is an auxiliary to the Navy?

Mr. LEVER. This item was inserted in the bill about three years ago at the urgent request of the resin and turpentine producers of Florida, Georgia, and that section of the country, which produces large quantities of naval stores. Under this item they have now developed a type, with a view of standardizing the whole trade, and at this time a large part of this fund is being used for demonstrating to the producers and manufacturers the value of these types. We hope that this appropriation will not continue always.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For the investigation and development of methods of manufacturing insecticides and fungicides, and for investigating chemical problems relating to the composition, action, and application of insecticides and fungicides, $25,000.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph.

I believe this is a new item carried in the appropriation bill. Has this work ever been performed heretofore by the Department of Agriculture under its other authorizations?

Mr. LEVER. Mr. Chairman, the item is for developing cheaper methods of manufacturing insecticides and fungicides. The testimony before the committee shows that fungicides and insecticides have gone up enormously in price since this war began, and through this appropriation the department is undertaking to see if they can develop cheaper processes for manufacturing these things. They propose to employ some six or eight specialists on the work. It was pointed out that it was a very important matter. I happen to recall the statement of Dr. Howard, who was present when Dr. Alsberg was making his statement. He said that he desired to support the request of Dr. Alsberg for this small appropriation, to see if they could develop processes for cheapening the manufacture of insecticides particularly, and of fungicides also.

Mr. STAFFORD. What is the cause of the increased price of these articles?

Mr. LEVER. I do not know, except the general rise in the prices of everything.

Mr. STAFFORD. I was wondering whether it was due to any combination of the few manufacturers engaged in this line of production.

Mr. LEVER. I really could not say. I take it that it is another evidence of the general rise in the prices of everything.

Mr. STAFFORD. Then, as I understand, the department wishes to use this fund in experiments and in the investigation of methods to develop cheaper processes of manufacturing and give that knowledge to the public?

Mr. LEVER. Yes.

Mr. STAFFORD. Not to engage in the manufacture at all?

Mr. LEVER. Oh, no; not at all.

Mr. STAFFORD. It is merely to develop the processes, for the benefit of the public generally?

Mr. LEVER. That is all.

Mr. STAFFORD. To what extent are these insecticides and fungicides used?

Mr. LEVER. To a very large extent; just how large I can not say—that is, I do not know the total value.

Mr. TOWNER. Will the gentleman let me make a suggestion. The large increase is due to the arsenical preparations. They are used largely in the preparation of some of the ammunition, I do not know just how. There is a very large demand for it, and we have never developed the manufacture, I suppose, as we should. But for all the orchards and very many garden crops arsenical preparations are necessary. The price of arsenic and all its derivatives has largely increased—three or four times what it was before the war.

Mr. STAFFORD. This is for the purpose of ascertaining some substitute?

Mr. TOWNER. No; it could not be a substitute for arsenical preparations, but it is to develop the manufacturing process which has not been taken care of in a scientific character, as perhaps the gentlemen think it ought to be. So this is for the development of the process of manufacture in order to have an abundance of the fundamental supply.

Mr. STAFFORD. Mr. Chairman, I withdraw the reservation of a point of order.

The Clerk read as follows:

For chemical investigations of soil types, soil composition and soil minerals, the soil solution, solubility of soi and all chemical properties of soils in their relation to soil formation, soil texture, and soil productivity, including all routine chemical work in connection with the soil survey, $25,610.

Mr. LEVER. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 52, line 10, in the last word of the line, insert the letter "l."

The amendment was agreed to.

The Clerk read as follows:

For exploration and investigation within the United States to determine possible sources of supply of potash, nitrates, and other natural fertilizers, $31,340.

Mr. FESS. Mr. Chairman, I move to strike out the last word. I would like to ask the chairman what progress has been made in the work covered by this item, potash for fertilizer?

Mr. LEVER. Mr. Chairman, the Department of Agriculture, working through this appropriation, has discovered a large source of potash in connection with the cement-manufacturing establishments of this country. It appears that a large percentage of potash has been escaping through the chimneys of these factories. Some one some years ago discovered a process by which they could precipitate this potash and get it to the farmer for commercial use. Dr. Brown, who has charge of this matter, made this statement:

Our investigation of the cement industry covered every plant in the United States producing 100 barrels or more, and practically all the plants produce that much, and it showed that there was available annually seventy thousand and odd tons of potassium oxide, and that with a very slight change in the operation of the kilns 100,000 tons would be available, perhaps 150,000 tons. In normal times we use about 250,000 tons.

So in that respect we feel that progress has been made.

Mr. FESS. What about the nitrates?

Mr. McLAUGHLIN of Michigan. In that connection, Mr. Chairman, I want to say that some cement factories of the country have voluntarily changed their methods of operation and machinery so as to save this potash.

Mr. LEVER. That is very true; a number of large plants are installing this apparatus for precipitating the potash. I was about to discuss the work on kelp, but I recall that that is in another item, and I will defer it until we reach it.

Mr. FESS. That is another source of potash?

Mr. LEVER. Yes. I may say, while we are on that proposition, that the reports are that they are installing machinery and getting ready to manufacture potash out of kelp. They have had considerable trouble in getting the machinery, as its cost is considerable, and we are providing an item for overhead expenses.

Mr. FESS. The committee a year ago was very enthusiastic on the subject of deriving potash from kelp. Is the chairman satisfied with the progress made?

Mr. LEVER. Unless we can find some national deposit of potash our hope for very cheap potash is through kelp. I may be entirely mistaken about that, and I think some members of the committee disagree with that idea, but I have always had a strong belief in that proposition if we can get at it right.

Mr. FESS. I have understood that the source of potash from kelp is abundant.

Mr. LEVER. Absolutely inexhaustible.

Mr. FESS. Let me ask the gentleman, are we using coke ovens in any place for the production of nitrates?

Mr. LEVER. No; there is no Government plant as yet. They are about to establish a nitrate plant, but that is not carried in this bill. I may say, however, that there is a provision in this bill for the continuance of nitrogen work on the Arlington farm. My recollection is that I was told that they had not been permitted to erect a plant on account of the interference of the Fine Arts Commission, but that they were still working on the proposition.

Mr. BYRNES of South Carolina. Mr. Chairman, Dr. Brown, in discussing this matter of potash before the committee and discussing kelp as a source of supply, stated that the cost per unit was $3, whereas the cost per unit of the potash received

from Germany prior to the commencement of the European war was 70 cents a unit; that the possibility of securing commercial potash from kelp was dependent entirely upon our ability to secure by-products from the ash. But he held out the hope to us that in the cement industry there is an opportunity to secure a supply of potash. In fact, he says it is our one best bet, because this electric precipitator apparatus, which has been installed in cement plants of the country, is a great service to the plant in that it serves to solve for them their dust problem. They claim that they can get 5 or 6 pounds of potash to every barrel of cement, and the possibilities are that we can secure over 100,000 tons of potash a year from the cement industry.

But he does not say, however, what would be the cost per unit of potash secured in that way. The apparatus is said to be very expensive, costing $40,000 or $50,000 in some instances. The question is whether or not we have any probability of getting potash by this method at a price that will enable us to compete with German potash. It is a very doubtful matter. However, inasmuch as these expenditures are small, as long as they hold out any hope at all, there is no reason why we should not give every dollar that the department has asked for.

Mr. TILSON. Will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. TILSON. Has the gentleman any source of information in regard to the actual production of this potash from cement, whether there have been any machines already made and put into operation?

Mr. BYRNES of South Carolina. Yes; Dr. Brown says that in a number of plants it has been installed and is working satisfactorily. He named several plants, and said that one or two had voluntarily installed the apparatus because of the great advantage it is to the plant.

Mr. TILSON. So that it has actually been done and it is only a question now of doing it economically enough to make it worth while.

Mr. BYRNES of South Carolina. That is the only question, and Dr. Brown states as the result of his experiments that it is our one best bet. After reading the testimony in the hearing I am of the same opinion, that we have more hope of securing potash which can be sold cheaply to the farmers from that source than from any other source. If they can discover any plan by which they can obtain other by-products from the use of kelp, there is some hope there; but one thing is certain, and that is that the experience of every country in this war is that production has decreased. Since 1914 the amount of potash used in this country has been negligible, and with the continued cultivation of the soil there can be but one result, and that is a decreased productivity of the soil, and at a time when the farmers are crying that there is a shortage of labor, which also adds to the decreased productivity of the soil, we find it aggravated by the absence of potash. Any expenditure that is made to encourage the department to experiment and go the limit in obtaining a source of supply I believe to be money well spent.

Mr. BORLAND. I understood the gentleman to say that some cement plants had already installed this electric precipitator.

Mr. BYRNES of South Carolina. So Dr. Brown stated.

Mr. BORLAND. Did they install it at their own expense; did they regard it as a commercial proposition for them to install it.

Mr. BYRNES of South Carolina. That is my understanding of the testimony.

Mr. McLAUGHLIN of Michigan. It was at their own expense.

Mr. BORLAND. Was the idea of taking it up to make potash or to keep the dust down?

Mr. BYRNES of South Carolina. Keeping the dust down. They are looking at it from that standpoint alone. That is the statement of Dr. Brown. At the same time, the revenue from the potash during the continuance of the war will be considerable and will contribute to offset the expense of installing the apparatus. In the clay used in making cement there is some potash and the apparatus serves to save this potash, which has heretofore been wasted. The object of the department now is to convince the cement industry of the wisdom of installing this apparatus.

Mr. MONDELL. Mr. Chairman, I ask unanimous consent that I may continue for 10 minutes on this item.

The CHAIRMAN. Is there objection?

Mr. LEVER. Mr. Chairman, in connection with that I ask unanimous consent that debate on the item and all amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and amendments thereto close in 10 minutes, and that the gentleman from Wyoming have those 10 minutes. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, at the outbreak of the European war the United States and all the world was confronted with a very serious situation in regard to potash. Prior to the war practically all the world supply of potash came from Germany, where it is found in its native state in very large quantities, and where it can be mined and produced at a very low price. It was sold at 70 cents a unit of 20 pounds in our country before the war, and it could probably have been sold for half that sum if it had been necessary to do it, and still leave a large profit. At the beginning of the war this supply was cut off. It became necessary to develop supplies at home if possible. Naturally we were anxious to aid every governmental agency that offered any hope whatever for the development of potash from investigations and demonstrations. An appropriation was made in the Agricultural bill for the purpose of exploration, investigation, and to determine possible sources of a supply of potash. It was explained at the time that the explorations and investigations intended were those that properly came within the purview of the Agricultural Department. They proposed to examine the kelps, an agricultural product, and other like sources of possible potash supply, and some work along that line was done under this item. But here again we have an illustration of the evil, creeping in and growing at all times on all of these bills, of a department or a bureau of a department having an appropriation for one purpose, finding it impossible to develop along the lines of that purpose advantageously, and then branching out into the domain of other bureaus and departments of the Government. According to the hearings had before the committee, this sum of $31,300 has been expended for the purpose of finding out and stating to the committee that potash can be secured from the dust produced in the manufacture of cement. Any of us could have learned that by the simplest inquiry, without the expense of anything more than the sum necessary to address a letter of inquiry. We are told that certain plants have begun the manufacture of potash from cement, and the department has issued what it calls an exhaustive bulletin, setting forth the fact that with the installation of an apparatus for recovering the flue dust on all of the cement plants in the United States, it will be possible to produce 100,000 tons of potash from that source. That is one-half our normal annual consumption of potash. So that if these cement factories do install these appliances—and three or four of the largest in the country have—we will secure a large supply of potash from that source. However, the use of potash can be very largely increased, of course, and ought to be.

According to the statement made before the committee, this particular work, which was undertaken entirely outside of the proper domain and jurisdiction of the Agricultural Department and within the field of activity of the Bureau of Mines or of the Department of Commerce, was never contemplated at the time the appropriation was granted, and it has now been completed, and yet the item remains in the bill—the $31,300 is still with us. In the hearings it is stated that that is the investigation this item relates to. Is it proposed to build any of these mills? Oh, no; we could not do that without building a cement plant. Is it proposed to encourage the building of these by-product mills? No; because that encouragement only comes from the results of the operation of mills that are already in the business. It costs from $50,000 to $100,000 in each case, and it is only profitable by reason of the present very high price of potash. It would not be profitable if the price of potash were reduced to anywhere near its price level prior to the war. Potash now is selling at about $5 per unit and as high as $7 per unit, as against a price of 70 cents per unit, a price which, by the way, we protested vehemently through diplomatic channels before the war began. Of course at the present high price these cement mills can take up the work and, I hope, make it pay.

They are taking it up, but they did not take it up in the first instance by reason of any suggestion from the Agricultural Department. The hearings demonstrate they have been using $31,000 a year to discover that what is being done can be done, and if it were done extensively enough it would produce a lot of potash. That is very valuable information so far as it goes.

Mr. BORLAND. Will the gentleman yield?

Mr. MONDELL. For a very brief question.

Mr. BORLAND. They are not using any of this money in regard to the nitrate investigation. That question has been taken up in an entirely different way.

Mr. MONDELL. No, as far as the hearings would indicate. On the next page of this bill there is a new item. Not satisfied with the expenditure of $31,000 along the line of a pursuit that

does not belong to the Department of Agriculture at all, which belongs in the field of manufacture, with the field of mineral production—not satisfied with that, there is a new item of $127,000 for the purpose of completing and running a factory for the manufacture of potash from kelp out on the Pacific coast. After we have completed it and reach a point where we can actually produce potash, we do not now produce it, but we produce only the ash of kelp and sell that to those who do produce potash from it; after we have completed our plant and proven that we can actually manufacture potash, we expect to produce 5 tons per day, or 1,500 tons of potash per year, as against 200,000 tons consumption. We hope, or the department officials said they hoped, to produce it at a cost of $3 per unit of 20 pounds at the present time. If that hope were realized we could sell the product at a profit. But why should the Government enter upon or pursue an enterprise that has been entered upon and is being pursued in a commercial way and on a large scale by a number of private individuals and corporations? There are now a number of those plants on the Pacific coast producing the ash and the potash from the kelp. We can demonstrate nothing by our investigation or pursuit of this line of manufacture that will not be developed and can not be developed by private enterprise. We simply are entering upon a manufacturing enterprise in no way related to agriculture, except the potash is used in agriculture as a fertilizer, and entering upon it in a way that promises no hope of the development of new ideas or new processes, entering upon it along the line of private enterprises and in competition with them.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. MONDELL. If we are going to continue——

Mr. MADDEN. How many institutions are there in the United States doing the thing that the Government now proposes to do with the expenditure of $127,000?

Mr. MONDELL. I notice in the hearings several referred to; whether there are more I do not know.

Mr. MADDEN. This is a duplication of what they are already doing?

Mr. MONDELL. It is a duplication of what is being done by private enterprise.

Mr. MADDEN. There is not a new idea in the thing the Government proposes to do?

Mr. MONDELL. Nothing new at all. The Government is doing it in the same way that private enterprise is doing it and will do it—simply a manufacturing industry manufacturing right alongside with private manufacturing industries at a large expense. Of course, the private enterprise, if packed with capital, can increase its plant and introduce economies the Government can not, so that we are actually at a disadvantage as an experiment with the private concern.

The CHAIRMAN. The time of the gentleman has expired; all time has expired, and, without objection, the pro forma amendment will be withdrawn.

There was no objection.

The Clerk read as follows:

For the investigation of soils, in cooperation with other branches of the Department of Agriculture, other departments of the Government, State agricultural experiment stations, and other State institutions, and for indicating upon maps and plats, by coloring or otherwise, the results of such investigations, $198,200.

Mr. TREADWAY. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee something in relation to this item. I notice that it starts with an investigation of soils in cooperation with other branches of the Department of Agriculture, evidently with various State agricultural stations, and then it refers to coloring maps and plats. It seems to me, Mr. Chairman, the item is a very large one for the latter purpose. I suppose the chairman of the committee has details as to what portion of the $198,000 is to be expended actually in investigating soils and what in drawing pictures of it. It seems to me some explanation of this item might be of value.

Mr. LEVER. Mr. Chairman, as a matter of fact, this item has not been changed in amount for four or five years. It is the regular soil-survey item of the Department of Agriculture, through which the department sends its experts into the field to ascertain the character of soil within certain areas, and then not only draws a map of the territory covered but furnishes, in the form of a bulletin, a description of the soil and the kind of crops that will most likely grow profitably in the area. It is the regular soil-survey work that has been carried for many years in this bill without any change in language or the amount carried.

Mr. TREADWAY. Then, I understand the reference to maps and plats, by coloring or otherwise, is not for large drawings of the findings of the investigations, but are in the form of a bulletin such as are distributed by the department?

Mr. LEVER. Yes; each Member of Congress is entitled to 2,000 bulletins descriptive of the area surveyed and platted in his district.

Mr. GREEN of Iowa. If the gentleman will permit an addition there, the department, I understand, sends out these maps in colors, which indicate the character of the soil in a particular place.

Mr. LEVER. A certain color will indicate a certain kind of soil.

Mr. TILSON. Mr. Chairman, I move to strike out the last two words. Just how is this done? Is there a corps of investigators sent out in one part of the country who continue their work until it is finished and then move on to another?

Mr. LEVER. Yes.

Mr. TILSON. Then where do the State agricultural experiment stations and other State institutions come in?

Mr. LEVER. The fact of the matter is that most of the States in the Union are cooperating very earnestly in this line of work and they work in conjunction with each other.

Mr. TILSON. The gentleman means that the State also sends out its experts and they go along with the Federal experts?

Mr. LEVER. As far as I know, I do not think the experiment stations proper are doing any soil-survey work except in connection with their own individual experiments. But a number of the States appropriate money with which to supplement the Federal fund. For instance, the State of Alabama some years ago made a considerable appropriation in order to have the Government come into the State and make the survey. And while none of these survey parties is under the control of the State, yet the State itself puts up a part of the expense.

Mr. TILSON. Will the gentleman state whether they do this work intensively in spots and then move on to another place, or whether they try to cover the whole country?

Mr. LEVER. They have two kinds of soil surveys. One is what they call the reconnoissance work, which is done on a rather extensive scale. I mean to say by that that they do not make their soundings or findings as to soil in every 200, 300, or 400 yards, but they take a whole area, as on the western ranges, and give an idea of the type of soil they have there. But in the Eastern States, in the more populated sections, they make intensive surveys. They go into every county and into every community in the county and get the type of soil.

Mr. TILSON. How are they progressing in this work? Is it nearing completion? Are they getting the country mapped, practically?

Mr. LEVER. It is going to take many years to get the country properly mapped, but they are making good progress. For instance, the department is making the surveys in my own county, and I may say I did not ask for it. When it gets a little warmer this party will probably be sent to Connecticut, we will say. They try to handle the force so as to get the best results.

Mr. TREADWAY. Is the gentleman aware of how these particular parties are designated for the soil survey?

Mr. LEVER. I understand the department has a rule by which the survey must be asked for by some civil or official body within the county, like a chamber of commerce or a county supervisor, or some person or organization of that character.

Mr. TREADWAY. Is that all the requirement?

Mr. LEVER. And in addition to that it must likewise be requested by the agricultural college or experiment station of the State.

Mr. TREADWAY. I want to state, Mr. Chairman, that since my first inquiry there has been handed me one of the bulletins issued under the surveys of a county in Missouri, and I take it that is a fair sample of the style of bulletin generally issued by the department. It is evidently very complete and must be extremely useful to the community directly affected.

Mr. SNELL. Is it not necessary for the State and local communities to do something in these surveys also?

Mr. LEVER. There is no law that requires that the State shall put up a proportionate part of the expense, but there is a rule of the department which really requires it.

Mr. SNELL. I wish to say that I took this up with the department at the request of some people in order to get a soil survey made, and they replied to me, as I remember, that certain things must be done in connection with the agricultural department of my State before that could be granted.

Mr. LEVER. That is true. And the department, except when it is going into a State that has had no survey at all, as an educational proposition, does require the State or community to put up a part of the fund.

Mr. SNELL. And after they have made the original survey they go on and complete it and make the maps?

Mr. LEVER. They make the maps and do the printing.

The Clerk read as follows:

For the investigation and demonstration within the United States to determine the best method of obtaining potash on a commercial scale, $127,500: *Provided*, That the product obtained from such experimentation may be sold at a price to be determined by the Secretary of Agriculture, and the amount obtained from the sale thereof shall be covered into the Treasury as miscellaneous receipts.

Mr. MONDELL. Mr. Chairman, I think——

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Wyoming is recognized.

Mr. MONDELL. Mr. Chairman, though the paragraph is subject to a point of order, I hope the gentleman will not make it, because while I very greatly regret the way these moneys have been spent, I think the committee has in good faith appropriated, and we can not well at this stage of the game discontinue that kelp mill out on the Pacific coast. I suppose it is necessary we should waste a little more money out there. Probably we ought to complete it and let it run for a while if for nothing more than to demonstrate how unwisely the appropriation was made.

Mr. SNELL. Do I understand the Government owns the kelp mill out there?

Mr. MONDELL. The gentleman is correct, if that is his understanding. We have a kelp mill, and we are proposing to finish it and complete it and spend $127,000 to make, if all our hopes and expectations blossom into reality, 5 tons of potash per day. Of course there are a great many "ifs" and "ands" and "buts" and "whys" and "wherefores" along the trail between now and the accomplishment of that hope. But I think we will have to make this appropriation. I do not see how we can get out of it at this stage. I do not want to have what I said in regard to these two items taken as severely reflecting on the Committee on Agriculture, because I realize that with the shortage in potash, the demand for it, the necessity for having it, the committee feels under compulsion to do all that it can to encourage potash development. The trouble is the department has not used these appropriations as it was expected they would use them. They have used a large part of the appropriation for investigation, perfectly idle, in a domain clear outside of the department's proper scope or activities, and are here going into a manufacturing industry out of which nothing worth while has or will come.

Mr. STAFFORD. Mr. Chairman, I rise to ascertain the extent to which present law has been changed by the proviso incorporated in this paragraph. If my memory serves me right, under prior legislation we authorized the Secretary of Agriculture to sell the product of this mill.

Mr. LEVER. At the market price.

Mr. STAFFORD. What is purposed by authorizing the sale at any price that may be determined by him? Is it to sell below the market price? Will the product that is expected to be manufactured at this experiment station or experimental mill be of such a low grade that it will be necessary to sell it below the market price?

Mr. LEVER. No. Allow me to read the testimony.

Mr. STAFFORD. I wish to say, as the gentleman from Wyoming [Mr. MONDELL] has said, that the committee is at a great disadvantage in the consideration of this bill in not having the hearings indexed so that we can examine them ourselves, and we are subjected to the necessity of making many of these inquiries which I believe should be made before the matter is finally passed.

Mr. LEVER. I appreciate that, and therefore I think the gentleman will agree that I have been very liberal in the discussion.

Mr. STAFFORD. The gentleman is always liberal.

Mr. LEVER. We asked Mr. Harrison at our hearing for the reason for the change of this language, and his answer was:

Mr. HARRISON. As I understand it, the reason for changing the language was, in the first place, that the Secretary thought the department ought to have the authority to fix the price in the light of conditions existing at the time of the sale. The plant, of course, was not established for the purpose of making a profit. If we work out important processes and reduce the cost of production, there does not seem to be any real reason why the Federal Government should charge enormous prices simply because other companies engaged in the business may be doing so.

Then Mr. Brown, who is in charge of this work, made practically the same explanation of it.

Mr. STAFFORD. But the phraseology, if the gentleman will permit, is not limited to the cost of manufacture. He may sell below the market price, and sell below the cost of manufacture. There is no sense in that from the governmental standpoint. The Government has gone far enough into the Treasury for this experimental purpose without making a still further loss by selling below the cost of manufacture.

Mr. LEVER. Of course, I do not think they would do it, but that might be cured by providing that the product is not to be sold below the cost of manufacture.

Mr. McLAUGHLIN of Michigan. If the gentleman will recall, it was stated that in case the war should end and the price of potash should fall, the department might have on hand a large quantity of potash that had cost a certain amount to produce, and it could not sell it at all.

Mr. LEVER. That is true, of course. I had overlooked that fact.

Mr. STAFFORD. They could sell it under the law at the market price. Under this provision they can give it away or sell it at less than the cost of manufacture. They could go into the market where a private manufacturer is obtaining only a nominal profit and undersell him, and undersell him at a price which is less than the cost of manufacture by the Government.

Mr. LEVER. Yes.

Mr. SNELL. If we are making only 5 tons a day, as I understood to be the fact from the statement of the gentleman from Wyoming [Mr. MONDELL], I do not see how it would have any material effect on the market one way or the other.

Mr. STAFFORD. I did not follow the gentleman's statement closely as to whether or not that is the capacity of this experimental mill, but I question the advisability of this language being carried in this bill without qualification.

Mr. LEVER. I will say to the gentleman that I have absolutely no objection to inserting the old language. Probably it would be a wise thing to do.

Mr. STAFFORD. As I understand the existing law, the Secretary of Agriculture has that authority now?

Mr. LEVER. Yes.

Mr. STAFFORD. And therefore, Mr. Chairman, I make a point of order as to the proviso.

The CHAIRMAN. Does the gentleman from South Carolina wish to speak on the point of order?

Mr. LEVER. I concede the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. LEVER. I understood the gentleman to make the point of order only as to the proviso.

Mr. STAFFORD. Only as to the proviso.

The CHAIRMAN. The proviso is stricken out on a point of order. The Clerk will read.

The Clerk read as follows:

For investigations and demonstrations in bee culture, $35,000.

Mr. GREEN of Iowa. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Iowa moves to strike out the last word.

Mr. GREEN of Iowa. I simply desire to get a little explanation of this item. I have forgotten the construction that has been given to the word "demonstration" in this bill. Will this permit some of the agents to go out and make demonstrations as to the proper manner of handling bees and increasing the production of honey?

Mr. LEVER. It will.

Mr. GREEN of Iowa. What was the amount of this item last year?

Mr. LEVER. Twenty thousand dollars.

Mr. GREEN of Iowa. I thought it was increased, and I think very properly so.

Mr. LEVER. We have increased it $15,000.

Mr. GREEN of Iowa. One of the officials in the Department of Entomology told me that it was a conservative estimate that $25,000,000 worth of honey was lost every year which might, if proper means were taken, be saved through the bees. At this time, when there is such a shortage of sugar, the item, it seems to me, is very important, and I am glad that the committee has raised the allowance.

Mr. LEVER. It was on that theory that the committee made the raise.

Mr. GREEN of Iowa. Mr. Chairman, I withdraw the pro forma amendment.

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For investigations of insects affecting tropical and subtropical fruits, including insects affecting the orange, lemon, grapefruit, mango, etc., $16,500.

Mr. CONNELLY of Kansas. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Kansas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. CONNELLY of Kansas offers the following amendment at the bottom of the paragraph on page 55:

"For investigation and control of the grasshopper as a destructive agent in grain and grass fields and gardens, $20,000."

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the amendment.

Mr. LEVER. I ask unanimous consent, Mr. Chairman, that debate on this amendment and all amendments thereto shall close in seven minutes, the gentleman from Kansas [Mr. CONNELLY] to have five.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that debate on this amendment and all amendments thereto close in seven minutes. Is there objection?

Mr. DOOLITTLE. Reserving the right to object, Mr. Chairman, can not the gentleman make is 12 minutes?

Mr. LEVER. I will make it 12. The gentleman is a member of the committee.

The CHAIRMAN. The gentleman from South Carolina modifies his request and asks that the debate be closed in 12 minutes. Is there objection?

There was no objection.

Mr. CONNELLY of Kansas. Mr. Chairman, I hope that I may be able to convince the chairman of the Committee on Agriculture, as well as the other gentlemen of that committee and the House, of the merits of this amendment that I have just offered. It is possible that I should have sought the committee before the bill was completed and brought on the floor and there made my plea for this item. But I understand that it can be very properly offered at this place and time.

I find that the bill provides—and very properly so—for the investigation of insects of almost every other kind that destroy grain and vegetables that are raised upon the farms of the country. The man who should be encouraged to go to his limit at this time is the farmer. He is the man who has great responsibilities resting upon him, and he should have every encouragement that can be given. Those of you who know the adversities that must be met and overcome by the farmer know how important it is that after his crop has been produced, after he has gone out and plowed and planted and cultivated, that he should not then find his hopes dashed to the ground and his season's labor lost by the visitation of some pest that he is helpless to combat.

The grasshopper, in many sections of the country, is the pest that blights the hopes of the farmer and robs him of his crop just at a time when it promises most. A great many of the States have given the matter of the control of the grasshopper some attention, but no State has the equipment for investigation along the lines provided for in this section of the bill that is possessed by the Agricultural Department with its well organized corps of specialists, scientists, and naturalists. The States are necessarily prevented by the expense involved from the doing of many things that can be more properly, efficiently, and economically done here. I realize that the control of the other insects mentioned in the bill is a matter of importance, and I hope the committee will adopt this amendment, which merely gives the farmer who is fighting the grasshopper—which is one of the oldest and greatest pests known—the same assistance that it does the other farmers who are having their crops devastated by insects.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. CONNELLY of Kansas. For a question; yes.

Mr. STAFFORD. Why would not the authority as carried in the paragraph on page 55, lines 8 to 10, "For investigation of insects affecting cereal and forage crops, including special investigation of the Hessian fly and chinch bug, $122,060," be available for the purpose of investigating the effects of the grasshopper on the wheat fields of Kansas?

Mr. CONNELLY of Kansas. The department, as I understand it, does not so consider it.

Mr. STAFFORD. Yes; but the language is broad enough to enable the department to make the investigation cover grasshoppers, if they wish to do so.

Mr. CONNELLY of Kansas. But the appropriation provided there will be used up under the other headings.

Mr. STAFFORD. Can the gentleman give the information that there is no available balance of that large appropriation of $122,060?

Mr. CONNELLY of Kansas. I am not sure about that. I would not like to state that that is true without more information. Mr. Chairman, I wish that Members might understand the importance of this amendment, and how the farmers on the western prairie lands are affected when thousands of acres of crops are destroyed overnight by grasshoppers. You gentlemen who are informed on the subject know that in one day thousands of acres are destroyed, when the crop is just coming into harvest.

Mr. KINKAID. Would it not accomplish the intention of the gentleman to have inserted in line 9, page 55, the word "grasshoppers," so that they will be included with the Hessian fly and the chinchbug, in accordance with the suggestion made by the gentleman from Wisconsin [Mr. STAFFORD]?

Mr. CONNELLY of Kansas. In answer to that, I would be satisfied if I could have the assurance of the chairman of the committee and the other members of the committee that the appropriation would justify the expenditure of $20,000 for this purpose.

Mr. KINKAID. I suggest that amendment as a substitute for the gentleman's amendment.

Mr. CONNELLY of Kansas. If the gentleman will agree to it and the committee will agree to it, that will be satisfactory to me. I hope they will, because I assure the gentleman that it is very important to a number of States.

Mr. KINKAID. I will not take up any more of the gentleman's time.

Mr. CONNELLY of Kansas. Mr. Chairman, I hope that gentlemen in the committee will not see fit to oppose this item. Personally I know that it is very essential. I wish I had the data at hand to convince gentlemen here of the meritorious character of this proposition.

Mr. ANDERSON. Will the gentleman yield?

Mr. CONNELLY of Kansas. I will.

Mr. ANDERSON. I have an impression that some years ago the Department of Agriculture made a very thorough investigation of the grasshopper, of its habits and habitat, and the character of the destructive work that it does. It is very well understood. I doubt very much if anything would be developed from another investigation which would be helpful. I understand the means of combatting the grasshopper are pretty well understood now.

Mr. CONNELLY of Kansas. Let me suggest to the gentleman that the old migratory grasshopper has been pretty well put out of business; but the grasshopper that now does the injury to the fields of the Central West is the local or nonmigratory grasshopper. The habits of this grasshopper, the manner of its reproduction, the manner of the laying of the eggs, and so on, have been studied by the States, but the States have never done it as thoroughly as could be done by the scientists in the Bureau of Entomology.

Mr. ANDERSON. Has the gentleman ever submitted his proposition to the Bureau of Entomology of the Department of Agriculture to ascertain whether they are conducting this investigation now, or whether there is likely to be anything of value learned by an investigation?

Mr. CONNELLY of Kansas. No; I have never submitted it personally, but I have known of the work in the last year by the State. For instance, the university in my State sent its young men to the western part of the State to make observations and study this very destructive agency. It is a matter of very great importance to the people in a large section of the country, and I hope gentlemen will not oppose it.

The CHAIRMAN. The Chair will recognize the gentleman from Kansas [Mr. DOOLITTLE] if he desires recognition.

Mr. DOOLITTLE. Mr. Chairman, I hope the gentleman who reserved the point of order against the amendment of my colleague will not insist upon it. It may be difficult for Members of the House to understand exactly what damage can be consummated by grasshoppers when they appear in the numbers that, I am sorry to say, they sometimes do appear in the western part of our State and in a great many other Western States. It may be interesting to the committee to know that there is a statute on the books of Kansas which makes it incumbent upon every able-bodied man to respond to the call of the township trustee when he orders them out to fight migratory grasshoppers. In the last few years we have been fortunate, as my colleague Mr. CONNELLY said, in getting rid of the migratory grasshoppers to a large degree; but when the country is visited by a drought like that we had in 1913, which, of course, is liable to happen at any time, the grasshoppers come out of the pastures down into the valleys where the vegetation is green and succulent, and they destroy that vegetation in the course of a few hours. They eat the leaves off of the growing corn. They even eat the leaves off the trees. If we can do anything to help eradicate this pest, it is the duty of the Government to do so, especially in this time of the demand for the production of more food; and this amount should be made available specifically for the purpose of destroying grasshoppers.

Mr. COX. Has the Government ever undertaken this before?

Mr. DOOLITTLE. Not that I know of.

Mr. COX. Does not the gentleman think it would be just as fair for the Government to undertake this investigation as it is to undertake the investigation of the boll weevil?

Mr. DOOLITTLE. I think so.

Mr. COX. I think so, too.

Mr. TILSON. Is it the gentleman's idea that the Government should take its soldiers or other able-bodied men, to join the able-bodied men provided for in the Kansas statute, and go out to combat this grasshopper? I thought this appropriation was simply for investigation. It seems to me from the knowledge of the grasshopper shown by the gentleman himself, his colleague, and others here on the floor, that we already know the problem, and that the real question is how to meet and solve the problem of eradication, which does not seem to be covered by the gentleman's amendment at all. The appropriation here is simply for investigation.

Mr. DOOLITTLE. I believe my friend will agree with me that we have more strenuous necessity for soldiers across the water.

Mr. TILSON. That is what I thought.

Mr. DOOLITTLE. I realize that my friend made the suggestion about the soldiers in good humor. I want to say that I cited the statute, which is more or less obsolete at this time, but, nevertheless, it is on the books and shows the importance in the State of Kansas utilizing or making a determined fight against the grasshopper.

Mr. TILSON. My question was whether the amendment was to make a fight against the grasshopper or an investigation that would enable the people of Kansas to make the fight.

Mr. DOOLITTLE. If the amendment is not broad enough—and I do not remember the exact wording of it—it ought to be amended so that demonstration work can be done. I think that was the intention of the gentleman from Kansas.

Mr. CONNELLY of Kansas. Will the gentleman yield?

Mr. DOOLITTLE. Yes.

Mr. CONNELLY of Kansas. I will suggest that the amendment was drawn following the language in the bill.

Mr. STAFFORD. Will the gentleman yield?

Mr. DOOLITTLE. Yes.

Mr. STAFFORD. Here we have an item to which I direct attention, providing, in lines 8 to 10, page 55, for investigation of insects affecting cereal and forage crops, $122,000, and the following item for the investigation of insects affecting southern field crops, $89,000. Those appropriations can be utilized for the same purpose for investigating grasshoppers that infest the wheat fields.

Mr. DOOLITTLE. We want a specific suggestion and direction from Congress undertaking the elimination of the grasshopper.

Mr. STAFFORD. The Congress and the committee is recommending a very large amount, over $200,000 that can be utilized for the very purpose which the amendment proposes. It is unnecessary. You should be modest in your efforts after appropriations when Congress has already made them. I assume that $200,000 is large enough to investigate this old trouble of the grasshopper.

Mr. DOOLITTLE. It would be if the grasshopper could be investigated under that appropriation, but it is claimed that it is not available, and I do not think it is.

Mr. ANDERSON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ANDERSON. Was the point of order reserved on this amendment?

The CHAIRMAN. It was; and the committee by unanimous consent limited the debate on the paragraph and all amendments thereto to 12 minutes.

Mr. ANDERSON. But I assume, Mr. Chairman, that the committee can not, by unanimous consent, limit debate on a point of order. That is in the discretion of the Chair.

The CHAIRMAN. The discussion was limited on the merits, the discussion on the point of order is for the Chair. The Chair can stop the discussion of the point of order at any time.

Mr. LEVER. Mr. Chairman, if the gentleman from Wisconsin is going to press the point of order, I will not take the remaining two minutes' time.

Mr. STAFFORD. I do not think it is necessary to insert another paragraph already covered by the new paragraphs in the bill. I think the point of order should be made.

Mr. LEVER. Mr. Chairman, if the Chair will indulge me for the two minutes to which I am entitled, I will say that I am reading from the program of work of the Department of Agriculture. Among other things, it says:

Extensive investigation on the grasshopper has been conducted and positive methods of control secured. The results of this investigation are summarized in an article published in the Yearbook of the department for the year 1915. The saving of money to the agricultural interests as the result of this investigation will undoubtedly be immense. A farmers' bulletin giving full direction for the application of the methods of destroying the grasshoppers is in course of preparation.

So that all of this whole matter has been investigated by the department and the methods have been worked out for the control of this pest. These methods have been published for those interested in the proposition. So that it seems to me that this is one of the lines of work the department has completed, and I hope that we will not put ourselves in a position of starting it over again.

Mr. STAFFORD. That is a sufficient warrant, Mr. Chairman, for pressing the point of order.

The CHAIRMAN. The amendment provides for an investigation and control of the grasshopper. The Chair is of the opinion that it is perfectly competent to offer an amendment to the bill providing for an investigation, but the Chair is further of the opinion that the amendment goes beyond that when it provides for control. Therefore the Chair sustains the point of order.

The Clerk read as follows:

For investigations, identification, and systematic classification of miscellaneous insects, including the study of insects affecting the health of man and domestic animals, household insects, and the importation and exchange of useful insects, $52,330.

Mr. TILSON. Mr. Chairman, is this the proper item for the consideration of the question of the eradication of mosquitoes?

Mr. LEVER. Yes; I am inclined to think, if you are going to consider the mosquito at all, it will come under this item.

Mr. TILSON. Will the gentleman state whether there is any investigation going on on the part of the Government as to the eradication, elimination or control of this universal pest?

Mr. LEVER. Yes, there is; the Department of Agriculture under this item has been conducting investigations in reference to the mosquito, especially on the effect of the mosquito upon farm operations in certain localities. For example, they have selected a community, say, in Mississippi, and they are investigating the habits of the mosquito there and of the effect it has upon agriculture. In that respect it differs from the work of the Public Health Service.

Mr. TILSON. The paragraph says "including the study of insects affecting the health of man and domestic animals." Of course it has been conclusively proven that the mosquito does injure the health of man, besides being a very provoking pest.

Mr. LEVER. The committee has been fearful for some years that there might be a conflict of authority or a duplication of work under this item with the work of the Public Health Service. I have tried to see that no such duplication takes place. The line of work already done by the department under this item is confined to its effect on the agricultural situation in the community.

Mr. TILSON. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

For general administrative expenses connected with above lines of investigation, and for miscellaneous expenses incident thereto, $9,000.

Mr. KINKAID. Mr. Chairman, I move to strike out the last word, for the purpose of asking the chairman a question. Is it not a fact that the Government has succeeded remarkably well in exterminating the mosquito on the Panama Canal Zone?

Mr. LEVER. I think one of the greatest accomplishments of the Government on the zone was the extermination of the mosquito.

Mr. KINKAID. That was the understanding when I tarried there some six or seven days six or eight years ago. I was not annoyed with a single mosquito. I failed to see a mosquito. I crossed the zone every day from one side to the other by rail, stopping here and there, observing the developments that were going on in the construction of the canal. We had mosquito nets over our beds at the hotel at night, but I heard not a mosquito humming around. The means employed there were wonderfully successful, I am sure. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

For the enforcement of sections 241, 242, 243, and 244 of the act approved March 4, 1909, entitled "An act to codify, revise, and amend the penal laws of the United States," and for the enforcement of section 1 of the act approved May 25, 1900, entitled "An act to enlarge the powers of the Department of Agriculture, prohibit the transportation by interstate commerce of game killed in violation of local laws, and for other purposes," including all necessary investigations in connection therewith, $22,000.

Mr. KINCHELOE. Mr. Chairman, I move to strike out the last word for the purpose of asking a question. I presume this is the same amount carried in the appropriation heretofore that has been expended for the enforcement of these sections?

Mr. LEVER. Exactly.

Mr. KINCHELOE. Has anyone in the Biological Survey Bureau undertaken to give the committee an itemized account of the expenditure of this money?

Mr. LEVER. We have the data. That is provided for in the report of the Secretary of Agriculture, which is filed each year with Congress, giving the details of the expenditures of the department.

Mr. KINCHELOE. My purpose in asking the chairman this question is that I have information from people who ought to know that not all of this appropriation in the years gone by has been expended for this purpose, but has been expended in other branches, probably, of the Biological Survey and not for the purpose solely of enforcing these sections of the statute.

Mr. LEVER. I have before me the details of the expenditures, and I shall read some of them:

Salaries: Assistant, $3,250; assistant, $2,500; assistant, $1,600; inspector, $1,800; four inspectors, $1,500; collaborators and inspectors, $600 to $1,200 each, doing part time; traveling expenses, $8,000; equipment and material, $500; miscellaneous items, $300.

Mr. KINCHELOE. The only question I had in mind was whether or not these gentlemen who are employed there to enforce these sections exercised all their energies in the enforcement of them?

Mr. LEVER. I can not say about that. I hope they do. If the gentleman has any information to the effect that they do not, I would like to have it.

The Clerk read as follows:

For investigating the food habits of North American birds and mammals in relation to agriculture, horticulture, and forestry, including experiments and demonstrations in destroying wolves, coyotes, prairie dogs, and other animals injurious to agriculture and animal husbandry, and for investigations and experiments in connection with rearing of fur-bearing animals, including mink and marten, $394,820: *Provided*, That of this sum $15,000 shall be used for the destruction of ground squirrels on the national forests and other public lands: *And provided also*, That of this sum not less than $125,000 shall be used on the national forests and the public domain in destroying wolves, coyotes, and other animals injurious to agriculture, animal husbandry, and wild game: *And provided further*, That of this sum not more than $125,000 shall be used on the public lands, national forests, and elsewhere in the Western and Northwestern States for the protection of stock and other domestic animals through the suppression of rabies by the destruction of wolves, coyotes, and other predatory wild animals.

Mr. MONDELL. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 59, at the end of line 25, insert:

"*Provided further*, That of this sum $10,000, or so much thereof as may be necessary, shall be used for the purpose of investigating the extent and effect of the killing and harassing by dogs of sheep and other meat-producing animals, and of the best methods for reducing and preventing the same."

Mr. LEVER. Mr. Chairman, I reserve the point of order on that and ask unanimous consent that debate upon the amendment and all amendments thereto close in 10 minutes, the gentleman from Wyoming [Mr. MONDELL] to have five minutes, the gentleman from Ohio [Mr. FESS] three, and reserving two minutes for myself.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that debate upon the amendment of the gentleman from Wyoming and all amendments thereto shall close in 10 minutes. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, one of the most serious shortages in the world food and material supply at this time is the shortage of mutton and wool. The number of sheep in the United States has been steadily decreasing since 1911. There were 53,000,000 at that time, 49,000,000 in 1914, and 46,000,000 in 1917. Our wool production has decreased in like degree. Those who have investigated the questions leading to the reduction of the number of sheep in the country have come to the conclusion that one of the potent influences in the reduction of the flocks and against the increase and extension of the flocks is the depredations of predatory sheep-killing dogs, just common, mangy curs.

Mr. COX. And old hounds.

Mr. MONDELL. And old hounds; of no value to anybody, living upon the substance of the world, wandering about over the country and making it utterly impossible in widely scattered and very extensive sections of the country to keep a flock of sheep with any safety or certainty. A sheep-killing dog not only kills for the purpose of food but after he has become accustomed and habited to that sort of thing takes it up as a pastime, and one sheep-killing dog will destroy an entire flock in a few hours.

Mr. WALSH. Mr. Chairman, will the gentleman outline briefly how it is proposed this money shall be expended for this very worthy object?

Mr. MONDELL. My hope is—and I want to say to the chairman of the committee that I think $5,000 would do—that the department will gather all the information obtainable with regard to the situation in the various States of the Union, where the depredations of the sheep-killing dog have had the greatest effect in keeping down the flock, to learn the effect of State laws and to suggest possible remedies, legal and otherwise. I have in mind a remedy. I expect to propose it in a short time in the form of a bill, and I have at least one Member of the House who is pledged to support it, the gentleman from Indiana [Mr. Cox].

Mr. COX. Provided you get your tax high enough.

Mr. MONDELL. You can make the tax as high as you like.

Mr. COX. I would not make it less than $50.

Mr. MONDELL. I shall propose a Federal tax upon dogs as a war measure, absolutely essential at this time to increase the wool needed for the uniforms for our boys, and to increase the food supply, and as a measure that will be as beneficial in peace as in war.

If we can reduce the sheep-killing dogs in the country by one-half we can double the number of sheep in the Union to the very great advantage and benefit of everybody. In 1915 the Department of Agriculture published bulletin 652, by V. O. McWhorter, on the sheep-killing dog. Let me quote briefly from it:

DOGS THE MAIN CAUSE OF DECREASE IN THE NUMBER OF SHEEP.

Sheep-killing dogs are not only recognized as the worst enemy of eastern flockmasters at the present time but are known to be the principal cause of so marked a decrease in the number of sheep kept on farms. The moral effect upon all persons who have seen sheep killed, injured, or frightened by dogs is far more destructive to the industry than the actual damage sustained. No farmer contemplating the raising of sheep is likely to venture on the enterprise while the flocks of his neighbors are continually meeting reverses through the attacks of dogs, as the ultimate financial losses following such reverses are incalculable. Dog depredations to flocks are not only disheartening and discouraging to the flockmaster but they also break up breeding plans and render flocks restless and nonproductive.

Sheep-killing dogs work both singly and in groups, but usually in twos or threes. They do not limit their attacks to the flocks of the immediate vicinity in which they are kept, but travel for miles in all directions, spreading destruction in the flocks with which they come in contact. Because their work is so often done under the cover of darkness, it is almost impossible to catch them in the act of worrying the sheep, and hence they can seldom be positively identified.

The ways in which different dogs attack and destroy sheep vary greatly. Some dogs simply kill one or two sheep in a flock, while others continue the attack until all the sheep are either destroyed or crippled. In many cases, where large numbers are killed, they are neither bitten nor wounded, but simply chased until they die from exhaustion.

After a dog has once formed the habit of killing sheep it seemingly becomes a mania with him, and he is seldom, if ever, broken of it. He not only destroys sheep himself but leads other dogs to the work. No consideration should be given such dogs; if additional losses to flocks from this source are to be avoided, they should be dispatched as soon as their habits are known.

That dogs are a real hindrance to the sheep industry is not only acclaimed by the testimony of thousands of sheep owners whose flocks have suffered through ravages by them, but is verified by figures showing a conservative estimate of the partial loss incurred by flockowners during the year 1913. The figures were compiled from the reports of county treasurers of different States, giving the number of sheep killed by dogs and paid for by the several counties during the year. Not all counties or States reported these losses, as in many cases no law existed which empowered the county to pay for sheep killed; for this reason it was necessary to compute the total loss on a percentage basis.

Through a summary of the replies received from crop correspondents in the 36 farm States regarding sheep, it is estimated that the present number of sheep in these States can be increased by 150 per cent without displacing other live stock on farms. This summary, given in detail in Table II, also shows that sheep raising is considered profitable by a majority of the correspondents in most of the States, and that dogs are the main barrier to keeping them.

TABLE II.—*Summary of replies from crop correspondents showing estimated possible increase in number of sheep on farms without displacing other stock and causes preventing such increase.*

State.	Is sheep raising profitable?		Average estimated possible increase in number of sheep.	Causes preventing increase.	
	Yes.	No.		Dogs.	Other causes.
			Per cent.		
Alabama	7	23	100.3	15	3
Arkansas	25	17	117.2	15	3

Wisconsin	26	18	80.5	4	21
Total	887	524	153.8	531	363

An increase of 150 per cent in the sheep of the States not included in the western division would increase the total number of sheep in this country by approximately 33,681,000 head. As computed from the average farm price per head of sheep in the sections considered for the year 1914, such an increase in number would bring about a corresponding increase in value of $144,267,000. It is believed by some who have made a study of the question that an increase of even 500 per cent need not seriously interfere with the keeping of other live stock now on farms.

I also desire to present the views expressed on the subject by the Wyoming Woolgrowers' Association in recent convention, as follows:

Whereas for many years the loss of sheep, calves, and other live stock from the depredations of dogs and predatory wild animals has resulted in great loss in production of food and clothing of this Nation; and

Whereas there now exists in several of the Western States a dangerous disease known as "rabies," affecting the coyote and resulting in menace to both man and beast; and

Whereas, as the presence of the sheep-killing dogs in certain portions of the United States menaces the sheep industry to such an extent as to make the successful raising and breeding of sheep impossible: Now, therefore, be it

Resolved, That we hereby petition Congress to levy a tax upon all dogs in the United States, and out of the fund thereby created such portion as may be necessary shall be used to exterminate the stock-killing dog, the predatory wild animals, and the range-destroying rodent.

Mr. Chairman, while I am on my feet I desire to present, as relating to various items of this bill, the resolutions adopted by the Wyoming Woolgrowers' Association at a meeting of that association held in Douglas, Wyo., January 9 to 11, as follows:

[Resolutions adopted by the Wyoming Woolgrowers' Association in fourteenth annual convention assembled, Douglas, Wyo., Jan. 9, 10, and 11, 1918.]

Whereas our country has been forced into the world's war by the lawless terrorism and inhuman brutality of the German Government: Therefore be it

Resolved, That the fourteenth annual convention of the Wyoming Woolgrowers' Association, in convention assembled, send greetings to our President and pledge to the President of our United States our undivided and earnest support to any and all efforts that he may make to win the war.

—

Whereas it is to the interest of the American people that legislation should be adopted which would prevent the misrepresentation of adulterated products of wool: Therefore be it

Resolved, That we respectfully urge the adoption of legislation by Congress that would result in the enactment of a suitable "pure-fabric" law.

We demand that no shoddy or other adulterants shall be mixed with wool that is to be made into soldier garments and that our soldiers shall be as well or better dressed than the soldiers of any other country.

—

Whereas the Biological Survey has been doing very creditable work in destroying predatory wild animals and the range-destroying rodents: Now, therefore, be it

Resolved, That we petition Congress for an appropriation of $500,000 for immediate use by the Biological Survey for the extermination of the aforesaid animals.

Resolved by the wool growers of Wyoming in convention assembled, at Douglas, Wyo., January 10, 1918, That the woolgrowers of Wyoming are in accord with the spirit and general plans of the Government in establishing values of industrial and commercial production, with direct and economic distribution; and be it further

Resolved, That, in cooperation with such proposed undertaking, the wool growers of Wyoming suggest that the wool clip of 1918 produced in the western range country be concentrated at logical delivering points adjacent to or near sources of production.

That National Wool Growers' Association be licensed and authorized by the Government to act as selling and distributing agents, to be empowered to make cash advances to wool growers on their shipments through sight drafts attached to railroad bills of lading at the open-market cost of money pending examination of wool, and flying values upon present range of open-market prices or upon such other basis calculated to increase profitable production, such determination to be made by committee of equal representation by the Government, the manufacturers, and the wool growers.

After wools have been concentrated and worked into commercial grades, the Government representatives to take over for account of the Government such grades and amounts suitable for military requirements, the remaining wool to be sold, either at public auction or by allotment, to manufacturers for their actual milling requirements, in proportion to available supply in charge of the aforesaid authorized committee.

—

Whereas the production of wool and meat is very necessary to clothe and feed our soldiers; and

Whereas skilled labor is necessary in this production: Therefore be it

Resolved, That we urge the Provost Marshal General to place the skilled labor employed in the production of live stock in class 3 under deferred classification plan of the selective-draft law.

—

Whereas western flockmasters are as desirous as any other class of citizens of having the West developed and its lands put to their proper use; and

Whereas it is necessary for the economical handling of live stock on the Government lands of the United States to have defined and established trails from the desert or winter grazing lands to the forest reserves and from the forest reserves to railway shipping points; and

Whereas Congress has passed a law for said purpose: Now, therefore, be it

Resolved, That we, the Wyoming Woolgrowers' Association, respectfully urge the Secretary of the Interior, after consultation by agent or otherwise with the various live-stock associations, under the provisions of this law, to cause to be set aside such unoccupied strips of Government land as will be consistent with the economical moving of live stock to and from such ranges: And be it further

Resolved, That said association is in favor of such national land regulation as shall have for its object the proper, sane, and beneficial development of the public lands within the State of Wyoming after full consideration of all the varied interests involved.

—

Whereas we recognize the value of grazing privileges upon the forest reserves, and we commend the forestry department for the building and improvement of highways and in the destruction of predatory animals; and

Whereas the activities of the National Wool Warehouse & Storage Co., both in its live-stock educational work and in the marketing of wool consigned to it, has resulted in pecuniary benefit to the flockmasters: Therefore, be it

Resolved, That the Wyoming Woolgrowers' Association favors and recommends the support by the Wyoming flockmasters of the varied activities of the National Wool Warehouse & Storage Co., so that this selling agency of the sheepmen may become a controlling factor in the marketing of wool.

—

Whereas the University of Wyoming, through its agricultural college and experiment station, is primarily interested in serving the agricultural interests of the State, thus aiding its best development; and

Whereas there are at present no authoritative channels through which the officers of the university and its college of agriculture and experiment station may seek advice and obtain direct knowledge in the various agricultural lines; and

Whereas the Wyoming Woolgrowers' Association, representing one of the major agricultural industries of the State, has no authority of advisory character or otherwise to shape the direction of teaching, demonstration, and research of said college and station along the lines in which said association may be interested; and

Whereas, believing that the best results may be obtained only by legislative enactment of laws recognizing the right of the various State industries to have a voice in the work which is being done by the agricultural college and experiment station of said university: Therefore, be it

Resolved, That the Wyoming Woolgrowers' Association favors the enactment of laws by the legislature authorizing the appointment of committees from the various agricultural and stock interests of the State, these committees to cooperate with the agricultural college and experiment station in the planning and carrying through of investigational work.

—

Whereas experience has shown that the removal of an import duty on wool and live-stock products failed to lower the selling price thereof; and

Whereas the removal of duty from live-stock products, and especially wool, deprived the National Government of millions of revenue which would otherwise have been received: Now, therefore, be it

Resolved, That the Wyoming Woolgrowers' Association does hereby petition Congress to amend the existing tariff laws so that revenue can be produced for the Government from the imports of wool, live stock, and other animal products to such an extent as the necessities of the country may require.

Mr. FESS. Mr. Chairman, this is one of the questions that has been agitating Ohio for a great many months. I referred yesterday to the fact that one of the large sheep raisers in my section of the State, which by the way is a sheep-growing State, growing a fine brand of sheep, came to see me during the holi-

days, during our vacation, and made the statement that three times this year already his fine flock of sheep has been torn up by the dogs. He said that it is not only the loss to him, but it so disintegrates the flock that the sheep amount to very little after one of these raids is made, and he told me that it appears that the dogs go in packs like wolves, and when once they break into a flock of sheep the sheep for that year are fairly ruined. Now, I hardly see any justification on the part of a legislative body not to do something to prevent this wicked destruction of a very useful source of our meat supply, as well as our clothing supply, and it requires a very drastic remedy in order to meet this situation. I have thought that perhaps the Government could not supply the remedy, but that we would have to move upon the State legislatures, and I so spoke to him. It has been suggested here that we can reach it in the form of taxation. I think all of us would realize there is one item in taxation that would be inequitable, and that is these dog fanciers, who have great wealth, and who would be very willing to pay any tax that might be levied upon them to keep their dogs, would not desist from the keeping of dogs simply because you have required a heavy tax. I thought that one of the things with which we could reach it would be to make the dog an outlaw, and as soon as he goes off the farm to which he belongs, or off the yard to which he belongs, that he be subject to destruction by anyone injured without any basis for damages to be paid by the man who kills him.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FESS. I hope if the way is clear that Congress may do something to speed up the States in their duty.

Mr. LEVER. Mr. Chairman, I rise to oppose the amendment. I recognize, of course, that the sheep industry suffers greatly on account of worthless dogs. Some gentleman made the statement the other day that there are two things which are militating against sheep raising in this country. One is a parasite and the other is the dog, and whoever made the statement spoke with authority. But I do not feel that this is the way to get at this problem. I should much rather——

Mr. MONDELL. Will the gentleman yield?

Mr. LEVER. I have only two minutes. I would much rather consider the suggestion of the gentleman from Wyoming as to putting a tax upon dogs.

Mr. MONDELL. Let us get a little information from the department to help along.

Mr. LEVER. I do not think there is any need for the information. I think any man who knows anything about the sheep industry of the country at all has pretty accurate and pretty full information as to the depredations of the dog upon sheep, and the information that you would develop would probably not be of very much value to the country. If Congress is prepared to act, it has the necessary information. I feel as my friend from Ohio [Mr. FESS] does, that this is naturally a State and not a national proposition. The same gentleman who told about the parasites and dogs also said that he had made it his business to confer with a great many members of the State legislatures, especially in the South, and he found them all enthusiastically in favor of handling the dog problem very drastically if Congress would, but the State legislatures were not willing to tackle the problem because it becomes a very vital political thing when it interferes with man's best friend, his dog. But be that as it may, I do not feel that the expenditure here proposed would bring to the Government a commensurate return, and I hope the amendment will be voted down.

The CHAIRMAN. The time of the gentleman has expired. Does the gentleman withdraw the point of order?

Mr. LEVER. I do not think it is subject to a point of order.

The CHAIRMAN. The question is on the amendment proposed by the gentleman from Wyoming.

The question was taken, and the Chair announced the noes seemed to have it.

Upon a division (demanded by Mr. MONDELL) there were—ayes 21, noes 16.

Mr. LEVER. Mr. Chairman, I am bound to ask for tellers on that.

Tellers were refused.

So the amendment was agreed to.

Mr. WALSH. Mr. Chairman, I move to strike out the last word. Can the chairman of the Committee on Agriculture furnish any statement as to the amount of the expenditure last year for the destruction of coyotes and the number of animals destroyed?

Mr. LEVER. I will say to the gentleman from Massachusetts that the amount carried in this bill is exactly the same amount as that carried in the present year's appropriation bill. We had information before the committee as to the number of animals destroyed by prairie dogs, coyotes, wolves, bear, and the like. For instance, I find here there was destroyed 11,000 gray wolves, something like 53,000 predatory wild animals of all descriptions, and that they turned into the Treasury from the skins of the animals killed something like $55,000 during last year. We did have a rather full explanation of this item, but as to just how many coyotes were killed I do not remember.

Mr. WALSH. But the committee was satisfied that this work was not only beneficial but that the Government was reimbursed to some extent on account of the expenditure that was made?

Mr. LEVER. Yes. The statement was made before the committee, which was startling to me—how accurate it is I do not know—that there was a yearly loss from the prairie dog of $250,000,000.

Mr. WALSH. That is not the coyote?

Mr. LEVER. That is not the coyote; no.

The Clerk read as follows:

For all necessary expenses for enforcing the provisions of the act approved March 4, 1913 (37 Stat. L., 847, 848), relating to the protection of migratory game and insectivorous birds, and for cooperation with local authorities in the protection of migratory birds, and for necessary investigations connected therewith, $50,000.

Mr. MILLER of Minnesota. Mr. Chairman——

Mr. COX. Mr. Chairman, I move to strike out the last word. I just want to ask the chairman of the committee a question. Has the Supreme Court decided those appeals yet?

Mr. LEVER. I do not think that it has.

Mr. COX. As I recall it, they at least had a hearing on it and postponed it for further argument.

Mr. LEVER. I think the gentleman's recollection is correct.

Mr. MILLER of Minnesota. Mr. Chairman, I was looking for that paragraph in the bill which the Clerk has just been reading and in which an appropriation was made covering the subject of migratory birds.

Mr. LEVER. The Clerk has just read it. It is on page 60, lines 4 to 11, inclusive.

Mr. MILLER of Minnesota. I would like to ask the gentleman in charge of the bill, the gentleman from South Carolina [Mr. LEVER], if, in view of the fact that a special act is now being considered, and an appropriation carried in the act covering the subject of migratory birds, it is not advisable that this should be eliminated?

Mr. LEVER. I think not, for the reason——

Mr. MILLER of Minnesota. Of course, the section by which this appropriation is being made is to be repealed by this new act.

Mr. LEVER. I appreciate that.

Mr. MILLER of Minnesota. May I inquire if the gentleman would be inclined to make a point of order if we inserted that proposed act right in here in lieu of this paragraph?

Mr. LEVER. That act, as I understand it, is an enabling act, involving the treaty between this country and Canada, and as a protection to the Committee on Foreign Affairs, I would feel compelled to make a point of order.

Mr. MILLER of Minnesota. The Committee on Foreign Affairs, I am assured, would be agreeable to inserting that.

Mr. LEVER. Not having conferred with the members of the committee, I feel I would be doing them an injustice by allowing it.

Mr. MILLER of Minnesota. May I inquire of the gentleman from South Carolina if he has acquainted himself with the provisions of the proposed act?

Mr. LEVER. I will say to the gentleman that I have been so very busy that I have not. I have read about it in the newspapers, and that is about all.

Mr. MILLER of Minnesota. Is it true that the act cited here, approved March 4, 1913, has been efficacious in accomplishing the object and intent Congress had when it passed it?

Mr. LEVER. The statement was made before the committee that there has been a very large increase in the number of waterfowl in this country, due to the stoppage of spring shooting, and that the act was efficacious in the direction of the purposes sought to be accomplished by it.

Mr. MILLER of Minnesota. That is, it was moving in the right direction?

Mr. LEVER. Moving in the right direction; yes.

Mr. MILLER of Minnesota. Has the gentleman any information before his committee to the effect that the act ought to be amended if the real object Congress had is to be accomplished?

Mr. LEVER. While we have no recent testimony to that effect, I think some suggestions for amendment have been made.

Mr. MILLER of Minnesota. Did the gentleman's committee have any hearing on this particular paragraph?

Mr. LEVER. Oh, yes.

Mr. MILLER of Minnesota. That is, representatives of the Department of Agriculture appeared and gave information relative to it?

Mr. LEVER. We had a representative of the Biological Survey before the committee and examined him on every item in the bill.

Mr. MILLER of Minnesota. Did he or did he not recommend a change in that law?

Mr. LEVER. No; not in the hearings on this particular bill. If he did, it escapes my recollection at this moment.

Mr. MILLER of Minnesota. Have we appropriated $50,000 each year since 1913 for this purpose?

Mr. LEVER. Yes.

Mr. MILLER of Minnesota. That is, we have used up $250,000, then?

Mr. LEVER. Yes. I think it is only fair to say that the appropriation is smaller in comparison to the work that could be accomplished, even under the present act.

Mr. MILLER of Minnesota. Has the gentleman's committee been informed of any difficulties experienced in attempting to enforce this by certain States and certain jurisdictions refusing to comply with the terms of this law?

Mr. LEVER. I do not recall any such statement before the committee this year. I seem to have a recollection that there was some difficulty a few years ago. I think the general sentiment of the people is becoming more and more favorable to this kind of legislation and this act.

Mr. MILLER of Minnesota. I think that statement is entirely correct. But, as a matter of fact, is not the gentleman aware that certain amendments to this law are necessary if it is really to be effective?

Mr. LEVER. Not speaking for the committee at all, because the membership of my committee is divided on this proposition, but for myself only, I answer yes.

Mr. MILLER of Minnesota. Well, I will say to the gentleman that from my own point of view I think it is useless to appropriate this sum of $50,000 year after year unless we make a change in the law.

Mr. LEVER. I do not agree to that proposition.

Mr. MILLER of Minnesota. I do not imagine that the gentleman does.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MILLER of Minnesota. May I have five minutes more?

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. LEVER. I ask unanimous consent that the debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, is the gentleman informed as to how much of this appropriation is expended?

Mr. MILLER of Minnesota. It is all expended. I think the gentleman from South Carolina can confirm that.

Mr. LEVER. Yes; it is all expended.

Mr. MILLER of Minnesota. The reason why I object, Mr. Chairman, to this provision going in year after year without change in the law is this: The constitutionality of this law has been questioned in several jurisdictions. I understand the decisions have not been uniform respecting the question whether it is constitutional or not. But aside from that, this law in itself does not contain provisions enabling those charged with its enforcement actually to enforce it.

What do I mean by that? The control of hunting and fishing is one of the police powers of a jurisdiction or a State. The police power is one of the difficult things to enforce, because it is against the habits and the propensities of individuals in the community; that is, of certain of them, at least. It is for the public health and morals of the community that the police power resides in a State.

Now, one of the things that we are all familiar with from our childhood up is this: Some men will go out with a fishing rod and catch fish in a respectable way and come home with a reasonable number, and supply his family, and enjoy the sport, and incidentally reduce the cost of living. But aside from those there are certain ones that will go out and get all they can and sell them or throw them around and destroy them. We all know that is a fact.

In respect to game it is equally so, and perhaps more so. Ducks are migratory birds, and there are also various other kinds of migratory fowl and migratory game. There are scoundrels in the hunting business just as there are scoundrels in any other line of sport or interest.

One of the most difficult things we are called upon to deal with is the pothunter, the man who breaks the law and kills and destroys and wastes. In my own experience I found two policemen who had gotten a week's leave and had gone up into the woods of northern Minnesota, out 50 miles from the railway, and had found a bunch of seven big moose in a swamp, and they killed those seven, and could not carry away one, and left them all there to rot. They ought to have been protectors of the law, of course, instead of its violators. That is an isolated instance, but there are many, many more of them.

The trouble with this law as it stands is this: There is no power resident in the Department of Agriculture or its agents to enforce its terms, and a man can laugh at an agent of the Department of Agriculture, and can kill all the game he wants to, and make all the breaches of the law he cares to, and is absolutely free and independent of arrest. They can not reach him at all, and they do not reach him. The only place where they do reach him is in a community which in itself has game laws and game protection, and there the violators of this law are punished, because there are agents of game administration in those communities who see to it that they are punished. The result of this is that some of the Northern States have splendid game laws and give ample protection to the game. There are some States in the middle belt that are not exactly game States, but the migratory birds coming from the north to the south and going from the south to the north pass over those States and for a time stop-over in those Central States where there are no adequate laws for the protection of game, and where the pothunters dwell, and this bill does not stop them.

Mr. PLATT. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Minnesota. Yes.

Mr. PLATT. Has the gentleman read the hearings where Dr. Nelson, of the Biological Survey, tells what has been accomplished in the protection of migratory birds and game in quite a number of States, largely through the operation of this law? He gives a list of 24 States.

Mr. MILLER of Minnesota. Yes. That has had a good effect. I have had the pleasure of listening to Dr. Nelson many times when he was before our committee and cooperated with him when we were drafting a law that was adopted by the Committee on Foreign Affairs.

Mr. PLATT. Can the gentleman tell us how soon that bill is to come before the House?

Mr. MILLER of Minnesota. It is on the calendar now. We should be glad to call it up at any minute, but we can not do so until our committee is reached. We should be glad to incorporate it here.

Mr. PLATT. I shall be glad to vote for it whenever I get the opportunity, and I hope the Committee on Foreign Affairs may be able to secure a special rule from the Committee on Rules to bring it before the House in the near future. It is an important measure and ought not to be longer delayed.

The CHAIRMAN. The time of the gentleman has expired. All time has expired. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For wagons, motor trucks, bicycles, horses, harness, and maintenance of the same, $500.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph just read. In this service are there at present any motor trucks which require maintenance? I notice in this item just read the committee have inserted as new language the words "motor trucks."

Mr. LEVER. Yes; they have one motor truck.

Mr. STAFFORD. Then this item is merely to provide for its upkeep?

Mr. LEVER. Yes.

Mr. STAFFORD. I withdraw the reservation.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. I ask unanimous consent to modify the amendment which I offered, to be inserted on page 45, after line 11, by changing the last line, so that instead of reading—

Any moneys received on account of such material shall be deposited in the Treasury as miscellaneous receipts—

It shall read—

Any moneys received on account of such material shall be deposited in the Treasury as provided by existing law.

The CHAIRMAN. The gentleman asks unanimous consent to modify the amendment which he proposes, which was passed over to be called up later. Is there objection?

Mr. STAFFORD. Subject to the reservation of the point of order.

Mr. JOHNSON of Washington. Certainly.

The CHAIRMAN. The Chair hears no objection to the request.

Mr. JOHNSON of Washington. This perfects the amendment and puts it in the form in which it will come up for final consideration.

Mr. McLAUGHLIN of Michigan. Does this refer to the proceeds of the sales of timber?

Mr. JOHNSON of Washington. Yes.

Mr. McLAUGHLIN of Michigan. Why should not such proceeds be regarded as receipts of the Forest Service?

Mr. JOHNSON of Washington. Exactly; and the amendment as first introduced provided that the proceeds should be deposited in the Treasury as miscellaneous receipts. We are now perfecting it so that it shall be "as provided by existing law," which is the law covering the forest-reserve receipts. I wanted to have the amendment perfected in the RECORD, so that it will appear in the form in which it will be considered.

Mr. FORDNEY. The law already prescribes where the money shall go.

The CHAIRMAN. This paragraph was passed over with this amendment to be called up later, and the Chair understands the gentleman from Washington simply asks leave to modify that amendment as indicated by him. Without objection, it is so ordered, and the Chair hears none.

Mr. LEVER. And the point of order is still reserved.

The CHAIRMAN. The point of order is still reserved.

Mr. JOHNSON of Washington. Now shall I read the paragraph as modified?

The CHAIRMAN. The Chair will hold that when this amendment is called up the Chair will direct the Clerk to read it as the gentleman now proposes it.

Mr. JOHNSON of Washington. I thank the Chair. The amendment as now modified reads as follows:

And hereafter, during the existing state of war, the Secretary of Agriculture is authorized to sell without advertisement to any individual, firm, association, or corporation, at a fair value to be determined by him, national-forest timber which he shall find is to be used for war purposes; and he is also authorized, under regulations to be prescribed by him, to permit the War Department to take from the national forests such timber as may be needed in the prosecution of the war. The Secretary of War, under regulations to be prescribed by him, is hereby authorized to sell or otherwise dispose of any of the material manufactured from such timber which is not suitable for war purposes. Any moneys received on account of such material shall be deposited in the Treasury as provided by existing law.

The Clerk read as follows:

For purchase of manuscripts, traveling expenses, electrotypes, illustrations, and other expenses not otherwise provided for, $3,000.

Mr. FESS. Mr. Chairman, I move to strike out the last word. I should like to have the judgment of the chairman of the committee on the general value of these various bulletins, as to whether we have published a good many that are out of date, that have no particular value, and whether we have a greater demand for certain classes, a demand so great that we are not capable of satisfying it?

Mr. LEVER. Our information is that on account of war conditions and the campaign for increased production of food, and garden work, and the like of that, the publication work of the department this year has increased enormously. We are also informed that the publications are bending themselves in the direction of furnishing information that will be valuable in this emergency. I think as a general proposition that the information work of the Department of Agriculture is exceedingly valuable.

Mr. FESS. Has the chairman of the committee any suggestion as to how to call the attention of the various farming interests to any particular bulletins? I make this inquiry in the belief that we do not secure a maximum benefit from these published findings of investigators.

Mr. LEVER. Some years ago, when I found that I had any bulletin which I supposed would be of special interest to my own constituents, I adopted the plan of having the newspapers announce that I would be glad to furnish to any of my constituents copies of the bulletin.

Mr. FESS. I think the information I have received from my own office confirms the chairman's judgment as to the bending of our energies in certain directions. If it would please the chairman, I would like to give him the results of the investigation from my own office.

Mr. LEVER. I should be very glad to have that.

Mr. FESS. Bulletins on cooking are first in the list of calls from the office, and on gardening especially the number here enumerated is second; poultry raising, with special reference to two at least, have had a tremendous demand from our particular section. Then, a general classification indicates foodstuffs first, hog raising second, cattle raising, and plant industry seems to be the order. I asked my secretary to call up the Department of Agriculture and get an estimate from that department as to this same matter. I rather think this demand from our office is about what is demanded throughout the country. I take it, for example, that that is in response to the demand produced by the war. The question especially I wanted to raise is whether we are spending any great amount of money for bulletins that are really of no value.

Mr. LEVER. I do not think so. I try to read most of the farm bulletins as they are issued, and while some of them are of no particular interest to me because the problems discussed are of no special interest, still they are of interest to some classes of people. I do not think we are wasting money on them.

Mr. FESS. There are some bulletins that we can not supply the demand for.

Mr. LEVER. That is true.

Mr. FESS. If possible, there ought to be an increase in the number of certain bulletins that we can not now supply.

Mr. LEVER. I want to say to the gentleman that the appropriation for the supply of the bulletins is not carried in this bill. That is carried in the sundry civil bill, and they have an available appropriation of $500,000. I recall that I moved to increase the amount in the bill by $50,000.

Mr. FESS. I beg the gentleman's pardon, I thought we were carrying it under this item of publications.

Mr. LEVER. No; this is the item for the division which prepares the bulletins.

Mr. FESS. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

Salaries, library, Department of Agriculture: One librarian, $2,000; 1 clerk, class 3; 1 clerk, class 2; 5 clerks, class 1; 3 clerks, at $1,080 each; 3 clerks, at $1,020 each; 4 clerks, at $1,000 each; 6 clerks, at $900 each; 1 clerk, $840; 1 junior library assistant, messenger, or messenger boy, $720; 1 junior library assistant or messenger boy, $660; 3 junior library assistants or messenger boys, at $600 each; 1 messenger, messenger boy, or laborer, $480; 2 charwomen, at $480 each; in all, $32,160.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. While the last paragraph was being read it occurred to me that quite a large clerical force was being provided for this library. I have not counted the exact number of clerks that are herein provided, but they run up to more than 20. What is the need of having such a large clerical force in a department library? I know there are other departments that have libraries of their own which do not maintain anywhere near the clerical force provided for in this paragraph.

Mr. LEVER. I will say that there is no change in this item.

Mr. STAFFORD. I am quite aware of that.

Mr. LEVER. The fact of the matter is the committee did not cross-examine the librarian, who happens to be a lady, because there was no change in this item either in the amount in the lump-sum roll or the statutory roll.

Mr. STAFFORD. Are there any clerks appropriated for out of the lump sum in addition to those on the statutory roll?

Mr. LEVER. No; there could not be unless they were temporary.

Mr. STAFFORD. Here we have 25 clerks other than the librarian, and the salaries range from $1,600 down, most of them over $1,000, for a mere departmental library. When the Committee on Appropriations had the question of a library for the Department of Labor, in which there were five clerks, it struck the members of the committee as being too large a force for the maintenance and operation of that department library. But here we find 25 clerks.

Mr. LEVER. The gentleman knows that the Department of Agriculture has the most expensive agricultural library in the world, and probably one of the largest departmental libraries in the Government service.

Mr. STAFFORD. Take the library of the Surgeon General's office in the War Department, which is the largest medical library in the world, and yet there is no such force of clerks there.

Mr. LEVER. How many clerks are there in that force?

Mr STAFFORD. I have not the number in mind. They have high-paid officials like translators, and the librarian receives a larger salary, but nothing near the clerical force that is provided for here. How many volumes are there in the Agricultural library?

Mr. LEVER. I can not tell offhand. We had the information once, but I can not recall it.

Mr. STAFFORD. I am bringing this to the attention of the chairman, and if he has not the information now I hope next year he will make some investigation of this large clerical force, which seems to me abnormally large for a department library, and be able to give us some information.

Mr. LEVER. We had the librarian before us a year or two ago and subjected her to an examination and had full information, but I have not it here at this time.

Mr. STAFFORD. The gentleman does not recall the testimony as to the necessity of this clerical force?

Mr. LEVER. No; but there has been no change in it.

The Clerk read as follows:

General expenses, library: For books of reference, technical and scientific books, papers, and periodicals, and for expenses incurred in completing imperfect series; for the employment of additional assistants in the city of Washington and elsewhere; for official traveling expenses, and for library fixtures, library cards, supplies, and for all other necessary expenses, $18,000.

Total for library, $50,160.

Mr. BORLAND. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 65, at the end of line 11, add the following:

"No part of any amount herein appropriated shall be used to pay salaries or for personal services in any department, bureau, or office in the District of Columbia which does not, subject to the provisions and exceptions of section 7 of the legislative, executive, and judicial appropriation act approved March 15, 1898, require eight hours of labor each day."

Mr. LEVER. Mr. Chairman, I reserve the point of order on that. Let me suggest to the gentleman that his amendment would come in the bill more properly later on. This is the library here, and the gentleman would inject this proposition into the very body of the bill.

Mr. BORLAND. I will say to the gentleman that I think this is an appropriate place. We have gotten down now to the point of miscellaneous expenses—stationery, blank books, and all that sort of thing. I assume it would come in here as appropriately as covering the clerical employees that preceded it, just as much so as it would anywhere else, but I have no choice as to where it comes in.

Mr. LEVER. We have yet to pass on the States Relation Service and the Bureau of Markets and a number of other things carrying statutory salaries. I think it would be better at the end of the bill. I make that suggestion to the gentleman.

Mr. MONDELL. I suggest to the gentleman from South Carolina that this is a particularly good time to rise. The gentleman from Missouri [Mr. BORLAND] no doubt has some new and fresh and interesting observations to make on this important subject, and he can make them better when the committee reconvenes.

Mr. BORLAND. Mr. Chairman, I withdraw the amendment for the time being.

The Clerk read as follows:

Rent of buildings, Department of Agriculture: For rent of buildings and parts of buildings in the District of Columbia for use of the various bureaus, divisions, and offices of the Department of Agriculture, $158,689.

Mr. RUBEY. Mr. Chairman, I ask unanimous consent to return to page 45 to take up a paragraph that went out on a point of order, in order that I may offer a substitute for it.

Mr. STAFFORD. What is it?

Mr. RUBEY. The paragraph in regard to the pay for traveling expenses in the Forest Service.

Mr. STAFFORD. Mr. Chairman, I think it would be better to make that request at the convening of the next session. The gentleman who made the point of order is not present in the Chamber at this time.

Mr. RUBEY. I have an idea of getting the amendment in the RECORD, and then we could rise, and that would give opportunity to see what it is, and we could act upon it to-morrow.

Mr. MONDELL. I have no objection to that.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to return to page 45 of the bill; that he be permitted to offer an amendment to the section where lines 12 to 17 were stricken out on a point of order. Is there objection?

Mr. MONDELL. Mr. Chairman, I have no objection to returning to that paragraph for that purpose, but I do think this is not the hour, with this very limited attendance, to do that.

Mr. RUBEY. We will not press the amendment to-night. It is not my intention to do that.

Mr. MONDELL. If the committee rose, the matter might be presented to-morrow.

Mr. RUBEY. I just wanted to get it in the RECORD, so that we can proceed with it to-morrow.

Mr. LEVER. I do not think the gentleman from Wyoming understands. It is not the intention of the gentleman from Missouri to press the amendment to-night. He desires to have permission to return and have it printed in the RECORD as pending.

Mr. MONDELL. Does the gentleman from South Carolina expect to rise then?

Mr. LEVER. As soon as the gentleman from Wisconsin [Mr. STAFFORD] is through. I believe he desires to ask me some questions. To protect everyone, I shall reserve the point of order on the proposed amendment of the gentleman from Missouri myself.

The CHAIRMAN. The Chair will state the request of the gentleman. The gentleman from Missouri asks unanimous consent to return to page 45, and that he be permitted to offer an amendment and have it pending to the bill, and the gentleman from South Carolina reserves all points of order against the amendment. Is there objection? [After a pause.] The Chair hears none.

Mr. RUBEY. Mr. Chairman, I offer this amendment as a separate paragraph in lieu of that stricken out.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Mr. RUBEY offers the following as a new paragraph in lieu of the one stricken out, on page 45, lines 12 to 17, inclusive: Whenever the Secretary of Agriculture shall determine after investigation that the expenses of travel can be reduced thereby he may, in lieu of actual traveling expenses, under such regulations as he may prescribe, authorize the payment of not to exceed 2 cents per mile for a motorcycle or 6 cents per mile for an automobile, used for necessary travel on official business in the Forest Service.

Mr. LEVER and Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the amendment.

Mr. MONDELL. Mr. Chairman, pending the gentleman's request, I ask unanimous consent that I may revise and extend my remarks on the last amendment offered by me.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. STAFFORD. Mr. Chairman, I rise to ascertain information from the chairman as to whether the Department of Agriculture is being pressed for additional space for quarters by reason of war activities. That subject is a very live one in the Committee on Appropriations, which is considering quarters for all the departments and various Government establishments other than the Agricultural Department, and I thought it was proper at this time to obtain some general information as to the condition in the Agricultural Department.

Mr. LEVER. Mr. Chairman, my colleague on the committee, the gentleman from Mississippi [Mr. CANDLER], has made a very full investigation of the whole matter, and I will ask him to answer the question.

Mr. STAFFORD. I am most concerned as to what additional quarters will be needed by reason of increased activities in the Department of Agriculture by reason of the war.

Mr. CANDLER of Mississippi. I will state to the gentleman that there is considerable additional space that appears to be absolutely necessary by reason of the extension of their activities growing out of the war. The Secretary himself furnished quite an extensive statement with reference to the matter.

The necessity for these additional quarters appears to be absolutely necessary. He says:

In my letter to you last January, printed in the CONGRESSIONAL RECORD of January 6, 1917, I referred briefly to the growth of the Department of Agriculture in recent years. I stated that for the fiscal year 1908 (in which year the two new laboratory buildings, known as the east and west wings, were completed and occupied) the total appropriations to the department were $13,037,802, of which $12,595,502 was actually disbursed. For the fiscal year 1917 the total appropriations to the department were $36,128,852, or nearly three times the disbursements in 1908. By the food-production act (Public, No. 40, 65th Cong.) approved August 10, 1917, an additional sum of $11,346,400 was appropriated for work devolved upon this department. Without additional clerical and supervisory employees in Washington these new lines of work can not be carried on and a place for them to work must be provided. Under great and increasing difficulties due to the demand for Government offices in Washington, we have secured a portion of the additional space needed, but we need more for the regular work of the department under the agricultural appropriation act, without regard to any additional projects which may be authorized under emergency legislation.

Mr. STAFFORD. Will the gentleman give in concrete form the additional space that will be needed by the Agricultural Department during the ensuing fiscal year for its additional work and the present work?

Mr. CANDLER of Mississippi. If the gentleman will permit, I would suggest that I have an extensive statement here in reference to it, and I will ask that it be inserted in the RECORD, so that we may have the benefit of it by to-morrow morning. That will give in detail the full information which the gentleman desires.

Mr. STAFFORD. Is the statement very extensive? I do not wish to burden the RECORD with a large number of tabulations.

Mr. CANDLER of Mississippi. It is not very extensive.

Mr. Chairman, I ask unanimous consent to print in the RECORD a statement in reference to the rents in the Agricultural Department.

The CHAIRMAN. The gentleman from Mississippi asks leave to extend his remarks in the RECORD, as indicated by him. Is there objection?

There was no objection.

The statement is as follows:

DEPARTMENT OF AGRICULTURE,
Washington, January 24, 1918.

Hon. E. S. CANDLER,
House of Representatives.

DEAR MR. CANDLER: With reference to the space rented by the Department of Agriculture in the District of Columbia and the proposed increase in the appropriation for rent in the Agricultural appropriation act, I inclose a complete statement of buildings and parts of buildings rented, showing the present situation in detail (Exhibit A). This statement shows the annual rate to be paid under the leases but does not in all cases represent the amount actually paid in this fiscal year, since some of the leases were made after the fiscal year had run for some months, as shown by the column headed "date of first lease."

Last year, in advocating an increase in the rent appropriation, I referred to the department's desire to secure in this neighborhood where it would be close to the Secretary's office, a new building which would house the Forest Service (now at 930 F Street NW.) and provide room for needed expansion of other branches. In dealing with the matter I eliminated from consideration as sites for a new rented building the three squares immediately to the south of our main building, upon which Congress may at some future time extend the Government's own buildings, and required that the building be located east of Twelfth Street SW, where it would not interfere with any known plans for Government building. The two builders who submitted plans for a new building stated that they could not secure the necessary land east of Twelfth Street at a price which would enable them to erect a building and rent it to the department at a rate per square foot which we could afford to pay. The project therefore fell through and we have been obliged to rent such buildings uptown as we were able to find.

I may also state that at the time I wrote you on this subject last year (see CONGRESSIONAL RECORD of Jan. 6, 1917) we were renting 12,410 square feet in the Munsey Building, for the Bureau of Markets, paying therefor $14,000 per annum. At the request of the Council of National Defense we abandoned these quarters to the council on May 1, 1917, renting in lieu thereof the Busch Building at 710 E Street NW., which had just been abandoned by the Bureau of Mines. The rental of the Busch Building is $12,000 per annum for 36,159 (gross) square feet, so that we profited by the exchange in amount of floor space occupied. By rearranging quarters in the building at 1358 B Street SW., occupied by the Bureau of Animal Industry, we were enabled to bring the Bureau of Markets offices nearer together and also to rent a small new building which had been erected at Linworth Place and B Street SW., by a Washington bank, but which was never used for bank purposes.

With the passage of the food-production act (Public No. 40, 65th Cong.), carrying $11,346,400, new and urgent tasks were laid upon the department and more space was imperatively needed. In particular, the work of the States Relations Service and the Bureau of Markets was largely increased, making necessary a large expansion in the Washington force of these bureaus. States Relations Service administers that portion of the act which provides for increasing food production and eliminating waste and promoting conservation of food by educational and demonstrational methods through county, district, and urban agents and others, under an appropriation of $4,348,400. This service has increased its Washington force by 135 employees. The Bureau of Markets has added nearly 1,200 employees to its Washington staff; that bureau having to conduct among other thing the food surveys provided for in section 8 of the act, under an appropriation of $2,522,000. The Bureau of Entomology has also required additional employees, the food production act providing $441,000 for new work in the control and eradication of insect and plant diseases injurious to agriculture.

Regardless of new lines of work authorized and directed by the food-production act, the department's needs for space remain as urgent as ever. All quarters are crowded, and we have even been driven to partitioning off the ends of corridors in the east and west wings for office rooms. The Bureau of Chemistry in particular is much in need of additional space, it having no more room now than it had four years ago. The Bureau of Crop Estimates is overcrowded, and more space is needed for its actual current work. This is true also of the Bureau of Animal Industry, States Relations Service, and the Bureau of Markets. The estimates for additional space required, as made by the bureaus of the department, have been sharply scrutinized and freely pruned. In response to an inquiry from the chairman of the Committee on Appropriations I have estimated the department's probable requirements in this direction at 30,000 square feet, and this represents what we believe to be no more than actual needs. At the present uncertain and increasing prices demanded for office space in Washington it is by no means certain that the $15,000 increase asked for in the Agricultural appropriation bill will provide the amount estimated as necessary.

By virtue of authority given in the last urgent deficiency act (Public, No. 64, 65th Cong.) $15,000 of the appropriation for miscellaneous items in the food-production act (Public, No. 40, 65th Cong.) was made available for the payment of rent in the District of Columbia. By section 8 of this act (stimulating agriculture) the moneys appropriated are available only until June 30, 1918. The $15,000 increase recommended in the appropriation for rents in the Agricultural appropriation bill will do little more than provide for quarters already under rental if the authority to pay rent from the appropriation under the food-production act is not continued. It is impossible to forecast with exactness what the situation may be with regard to the department's needs for space in the future, but it is certain that we need and shall need additional quarters.

As you are, of course, aware, the situation in Washington with regard to quarters for Government offices is extremely difficult and complicated. While this department has been reasonably successful in securing a portion of its needed additional space at rentals which are not exorbitant (see checked items in Exhibit A), the demand for space by nearly all branches of the Government in Washington has sharply limited the available space and tempted owners of property to exact or try to exact higher prices. The department is opposed, of course, to paying exorbitant rents, and in the future, as in the past, will hold to its policy of keeping rents down to the lowest possible figure, even at the risk of taking over rather undesirable quarters. As examples of this, I may cite the fact that we have rented in this neighborhood an abandoned lunch room (approximately 3,000 square feet) at $1,000 per annum, and have under negotiation at this time the rental of an old dwelling house (about 2,800 square feet) at $45 per month. But the available supply of such buildings is limited by the increasing demand for houses in Washington, and we can not depend upon them for future needs. I recommend, therefore, that the increase of $15,000 in the appropriation for rents in the District of Columbia, carried in my estimates for the fiscal year 1919, be allowed in the Agricultural appropriation bill, to provide for departmental needs under that bill, without reference to any additional duties of an emergency nature which may be laid upon it by other legislation.

The highest rate per square foot paid by this department in Washington—except for one small room in the Munsey Building—is 86.4 cents per square foot. In this connection it is of interest to note the prices which the Bureau of Markets has been compelled to pay for office quarters in other cities for the Federal grain supervision work and other projects, as shown in the attached table (Exhibit B).

In my letter to you last January, printed in the CONGRESSIONAL RECORD of January 6, 1917, I referred briefly to the growth of the Department of Agriculture in recent years. I stated that for the fiscal year 1908 (in which year the two new laboratory buildings known as the east and west wings were completed and occupied) the total appropriations to the department were $13,037,802, of which $12,595,502 was actually disbursed. For the fiscal year 1917 the total appropriations to the department were $36,128,852, or nearly three times the disbursements in 1908. By the food-production act (Public, No. 40, 65th Cong.) approved August 10, 1917, an additional sum of $11,346,400 was appropriated for work devolved upon this department. Without additional clerical and supervisory employees in Washington these new lines of work can not be carried on and a place for them to work must be provided. Under great and increasing difficulties, due to the demand for Government offices in Washington, we have secured a portion of the additional space needed, but we need more for the regular work of the department under the Agricultural appropriation act without regard to any additional projects which may be authorized under emergency legislation.

Very truly, yours,

D. F. HOUSTON,
Secretary.

THE SECRETARY OF AGRICULTURE,
Washington, January 24, 1918.

Hon. E. S. CANDLER,
House of Representatives.

DEAR MR. CANDLER: The inclosed memorandum from the chief clerk may be of interest to you in connection with the Secretary's letter regarding the rental of buildings for the Department of Agriculture. You will note that we now pay $18,000 a year for the building occupied by the Forest Service, and that the lessors of the building have notified the department that if the Forest Service desires to remain in their present quarters it will have to be at an annual rental of $34,000.

Very truly, yours,

F. R. HARRISON,
Assistant to the Secretary.

MEMORANDUM WITH REGARD TO THE QUARTERS OCCUPIED BY THE FOREST SERVICE, UNITED STATES DEPARTMENT OF AGRICULTURE, IN THE ATLANTIC BUILDING, 930 F STREET NW.

With the exception of two stores and a barber shop on the first floor, the Forest Service occupies the whole of this building. The department's option of renewal on the lease expires with June 30, 1918, the end of the current fiscal year. Since July 1, 1915, the department has paid for these quarters $18,000 a year. The building is of the type known as "slow burning," not of modern construction, and its usefulness to the Forest Service has lately been reduced by the erection of a theater which closes several windows on the western side. The net available floor space in the building used by the Forest Service is 34,171 square feet, excluding halls.

The lessors of the building (the Atlantic Building Co.) have informed the department, in a letter dated December 28, 1917, that if the Forest Service "desires to remain in their present quarters, it will have to be at an annual rental of $34,000." This is an increase of $16,000, or 89 per cent over the rental now paid. With the present demand for quarters to house the offices of the Government in Washington, it will be extremely difficult, if not impossible, to find other quarters for the Forest Service, even at a much higher rental than the present rate of $18,000 per annum. This is cited to illustrate the difficulties the department experiences in attempting to provide office space for its bureaus.

R. M. REESE, *Chief Clerk.*

The Clerk read as follows:

States Relations Service.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CRISP, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 9054, the Agricultural appropriation bill, and had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. PAIGE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

LEAVE OF ABSENCE.

Mr. TALBOTT, by unanimous consent, was granted leave of absence indefinitely, on account of illness.

"GARABED" PATENT.

Mr. CROSSER, from the Committee on Patents, submitted the conference report on House joint resolution 174, "for the purpose of promoting efficiency, for the utilization of the resources of the United States, for lessening the expenses of the war, and restoring the losses caused by the war, by providing for the employment of a discovery or invention called 'Garabed,' claiming to make possible the utilization of free energy," for printing under the rules.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 16 minutes p. m.) the House adjourned until to-morrow, Wednesday, January 30, 1918, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, a letter from the Secretary of the Navy, transmitting revised draft of a proposed bill to regulate the pay of retired chief warrant officers and warrant officers on active duty (H. Doc. No. 871) was taken from the Speaker's table, referred to the Committee on Naval Affairs, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. ALEXANDER, from the Committee on the Merchant Marine and Fisheries, to which was referred the bill (S. 3387) to authorize and empower the President to create military zones around shipyards where vessels are under construction for the United States, reported the same with amendment, accompanied by a report (No. 272), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. ALEXANDER, from the Committee on the Merchant Marine and Fisheries, to which was referred the bill (S. 2469) to authorize the change of name of the steamship *Caldera* to *A. T. Kinney*, reported the same without amendment, accompanied by a report (No. 273), which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. DENT: A bill (H. R. 9352) to amend an act entitled "An act providing for an Assistant Secretary of War," approved March 5, 1890, and for other purposes; to the Committee on Military Affairs.

By Mr. CARY: A bill (H. R. 9353) to amend the Army appropriation bill; to the Committee on Military Affairs.

By Mr. CARAWAY: A bill (H. R. 9354) to amend the practice and procedure in Federal courts, and for other purposes; to the Committee on the Judiciary.

By Mr. FOSTER: Resolution (H. Res. 258) to pay to Adah B. Sauer, widow of Charles L. Sauer, late messenger on the soldiers' roll of the House, a sum equal to six months' salary; to the Committee on Accounts.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURROUGHS: A bill (H. R. 9355) granting an increase of pension to Harvey M. D. Hopkins; to the Committee on Invalid Pensions.

By Mr. CLARK of Missouri: A bill (H. R. 9356) granting an increase of pension to Jason L. Boyd; to the Committee on Invalid Pensions.

By Mr. DALLINGER: A bill (H. R. 9357) for the relief of John A. Gauley; to the Committee on Claims.

By Mr. GANDY: A bill (H. R. 9358) granting a pension to Elmer Wagar; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9359) granting a pension to John Baker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9360) granting a pension to George W. Martin; to the Committee on Pensions.

By Mr. JOHNSON of South Dakota: A bill (H. R. 9361) granting a pension to Herbert L. Ellsworth; to the Committee on Pensions.

By Mr. KINCHELOE: A bill H. R. 9362) granting an increase of pension to Robert T. Ridings; to the Committee on Pensions.

By Mr. LANGLEY: A bill (H. R. 9363) granting a pension to Robert McCarty; to the Committee on Pensions.

By Mr. LOBECK: A bill (H. R. 9364) granting an increase of pension to John J. Bruner; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9365) granting an increase of pension to Lewis Speic; to the Committee on Pensions.

Also, a bill (H. R. 9366) granting an increase of pension to Henry Barchan; to the Committee on Invalid Pensions.

By Mr. PHELAN: A bill (H. R. 9367) granting an increase of pension to David N. Landers; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9368) granting an increase of pension to John J. Byrne; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9369) granting a pension to Charles M. Walker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9370) granting a pension to Joseph P. West; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9371) granting an increase of pension to Samuel E. Blair; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9372) granting a pension to Daniel D. Brothers; to the Committee on Pensions.

Also, a bill (H. R. 9373) granting an increase of pension to Freeman W. Waitt; to the Committee on Pensions.

Also, a bill (H. R. 9374) granting a pension to Thomas Dunn; to the Committee on Pensions.

Also, a bill (H. R. 9375) granting a pension to Benjamin Laurence; to the Committee on Pensions.

Also, a bill (H. R. 9376) granting a pension to Bartholomew F. O'Connor; to the Committee on Pensions.

By Mr. POWERS: A bill (H. R. 9377) granting a pension to William J. Lawless; to the Committee on Invalid pensions.

By Mr. RUBEY: A bill (H. R. 9378) granting an increase of pension to T. J. Rowlett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9379) granting an increase of pension to Joseph Hellems; to the Committee on Invalid Pensions.

By Mr. RUSSELL: A bill (H. R. 9380) granting an increase of pension to William G. Files; to the Committee on Invalid Pensions.

By Mr. SCOTT of Michigan: A bill (H. R. 9381) granting an increase of pension to John Beattie; to the Committee on Pensions.

By Mr. SELLS: A bill (H. R. 9382) granting an increase of pension to Dennis H. Hunt; to the Committee on Pensions.

By Mr. TAGUE: A bill (H. R. 9383) for the relief of Maud M. Sterling; to the Committee on Claims.

Also, a bill (H. R. 9384) for the relief of Rena Sterling; to the Committee on Claims.

Also, a bill (H. R. 9385) for the relief of Agnes M. Dempsey; to the Committee on Claims.

By Mr. VOLSTEAD: A bill (H. R. 9386) granting a pension to Agnes O'Brien; to the Committee on Pensions.

By Mr. WHITE of Maine: A bill (H. R. 9387) granting a pension to Minnie K. Martin; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ANTHONY: Petitions of druggists of Leavenworth and Marshall Counties, Kans., transmitted by Harry Dick, of Lawrence, Kans., in support of House bill 5531; to the Committee on Military Affairs.

By Mr. CALDWELL: Memorial of Elmhurst Men's Christian and Civic League of New York City, favoring war emergency prohibition bill; to the Committee on the Judiciary.

Also, petition of the Froebel League of New York, favoring maintenance of the kindergarten division in the Bureau of Education; to the Committee on Appropriations.

Also, petition of Central Labor Union of Brooklyn and Queens, of Brooklyn, N. Y., favoring passage of House bill 7356 relative to increase in pay of Government employees; to the Committee on Appropriations.

By Mr. DALE of New York: Petition of George W. Sturtevant, consulting engineer, Paradise-Verde project, favoring passage of Senate bill 758 relative to financing, etc., of irrigation and drainage projects; to the Committee on Agriculture.

Also, petition of the Froebel League of New York, favoring appropriation for maintenance of the Kindergarten Division in Bureau of Education; to the Committee on Appropriations.

Also, petition of Central Labor Union of Brooklyn and Queens, favoring passage of House bill 7356, for increase in pay of Federal civil employees; to the Committee on Appropriations.

Also, resolutions of the College Hall Library Club, Sherman, Tex., and of the Tyrone (Pa.) Chamber of Commerce, urging the repeal of that part of the war-revenue act dealing with second-class postal rates; also, a letter from Hogan & Son, New York City, protesting against such repeal; to the Committee on Ways and Means.

By Mr. DENISON: Petition of James A. Mitchell, Butler, Ill., praying for increased rate of pay for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of rural letter carriers at Dongola, Ill., praying for increase in salaries of rural carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Harold L. Reese, Jonesboro, Ill., praying for increased rate of pay for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Charles E. Foster, of Cache, Ill., praying for increased rate of pay for rural letter carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Harvey D. Tinsley, of Mulkeytown, Ill., praying for increased rate of pay for rural carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Mr. Amos C. Harvey, of Thompsonville, Ill., praying for increased rate of pay for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Henry R. Hatfield, of Ava, Ill., praying for increase of rural carrier salaries; to the Committee on the Post Office and Post Roads.

Also, petition of John M. Stanfield, of Christopher, Ill., praying for increase in salaries of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Warren J. Mellière, of Prairie du Rocher, Ill., praying for increase of salaries for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Thomas H. Reid, H. T. Marshall, Joseph Weir, and H. S. Heitmann, praying for an increase of salary for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of F. P. Anderson, of Pinckneyville, Ill., praying for increase of salaries for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of C. E. Malan, of Pinckneyville, Ill., praying for increase of salaries of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Louis P. Ahlers, of Pinckneyville, Ill., praying for increase of salaries of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of William Owens, of Pinckneyville, Ill., praying for increase in salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Samuel A. Leemon, of Sparta, Ill., praying for increase in rate of pay for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Charles L. Hileman, of Anna, Ill., praying for increased rate of pay for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Harley R. Blick, of Anna, Ill., praying for an increase of salaries for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Louis M. Boren, of Alto Pass, Ill., praying for increase of salary for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Samuel Griggs, of Creal Springs, Ill., praying for increase of salary for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Harry Payne, of Benton, Ill., praying for increase of salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Ernest B. Hampton, of Benton, Ill., praying for increase in salary for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of C. T. Eddleman, of Dongola, Ill., praying for increase of salary for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Jodie Bell, of Pulaski, Ill., praying for increase in salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Edgar D. Gordon, of Ava, Ill., praying for an increase of pay for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Frank Gandy, Ullin, Ill., praying for increase in salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of George W. Creed, Benton, Ill., praying for increase of salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Samuel G. Williamson, Ava, Ill., praying for increase of salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Oliver I. Underwood, Carbondale, Ill., praying for increase of salary for rural mail carriers; to the Committee on the Post Office and Post Roads.

Also, petition of Charles N. Grey, praying for increase of salary for rural mail carriers for Pinckneyville, Ill.; to the Committee on the Post Office and Post Roads.

Also, petition of Ernest Brooks, Cobden, Ill., praying for increase in salary of rural mail carriers; to the Committee on the Post Office and Post Roads.

By Mr. FULLER of Illinois: Memorial of the Tyrone (Pa.) Chamber of Commerce, for the repeal of the second-class postal provisions of the war-revenue act; to the Committee on Ways and Means.

Also, petitions of rural-mail carriers of the twelfth district of Illinois, for increased compensation; to the Committee on the Post Office and Post Roads.

By Mr. GRAHAM of Pennsylvania: Petition of Norris C. Stroud, Philadelphia, Pa., urging legislation to develop the water-power resources of the country; to the Special Committee on Water Power.

By Mr. JOHNSON of Washington: Resolutions adopted by Meridian Grange, No. 265, Kent, Wash., urging that the sale of Government securities at prices below par be made a treasonable offense; to the Committee on the Judiciary.

By Mr. KIESS of Pennsylvania: Evidence in support of House bill 8228, granting increased pension to Henry Loveland; to the Committee on Invalid Pensions.

Also, evidence in support of House bill 8523, granting increased pension to Thomas F. Regan, alias George C. Bennett; to the Committee on Invalid Pensions.

By Mr. MOON: Papers to accompany House bill 9341, for the relief of Jesse C. Eldridge; to the Committee on Invalid Pensions.

By Mr. MORIN: Three hundred citizens of the fifteenth ward of Pittsburgh, Pa., believing that war prohibition would be the means of conserving large quantities of foodstuffs, urge the immediate enactment of national prohibition; to the Committee on the Judiciary.

By Mr. STINESS: Petition of war council of the Providence Chamber of Commerce, urging passage of the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

By Mr. TAGUE: Petition of Union Label Trades Department of the American Federation of Labor, on revenue law; to the Committee on Ways and Means.

Also, petition of N. E. Power Co., Worcester, Mass., on universal military training; to the Committee on Military Affairs.

Also, petition of Trade Association of South Boston Business Men, on present coal situation; to the Committee on Agriculture.

Also, petition of Dorchester Retail Merchants' Committee, Dorchester Board of Trade, Boston, Mass., on present coal situation; to the Committee on Agriculture.

Also, petition of Colgate & Co., on daylight saving; to the Committee on Interstate and Foreign Commerce.

By Mr. WALTON: Resolutions adopted by the citizens of Roswell, N. Mex., protesting against the creation of a war council; to the Committee on Military Affairs.

SENATE.

WEDNESDAY, *January 30, 1918.*

Rev. Hugh T. Stevenson, of the city of Washington, delivered the following prayer:

Almighty and eternal God, Thou in whom we live, move, and have our being, as a Nation and as individuals we turn to thank Thee, O Thou God of Washington, Lincoln, McKinley, and our fathers, that in every hour of our Nation's crisis Thou hast heard and answered the prayers of our people and hath led us in time of storm and stress to success. Once more we come to Thee as the shadow of death hath entered the ranks of the membership of the Senate and ask Thee in the name of our risen Lord to give unto the membership of this Senate of the presence of the Holy Spirit that they may be comforted in their personal loss; and what we ask for them we beseech Thee to grant especially to the members of the bereaved family, the wife and children and those who looked to the Senator from New Jersey as a guide in the affairs of life. We beseech Thee not only to remember them, but we ask Thee to be with the homes where to-day throughout the Nation there are anxious thoughts and anxious hearts. Sustain and strengthen them. Help them by Thy presence that they may rejoice that one of their own has been offered upon the altar of freedom for Thy glory; and be with those who are called to go down into the valley of the shadow of death.

We ask Thee to be with the men of our Army and of our Navy where they are on land or on the infested sea or in the air. Watch over, sustain, and strengthen them. Grant that in the hour of battle they may be conscious of Thy presence. Be with them in the hour of struggle in France and in the camp where they may be in this land, as representatives of Thee and of the Nation, that they may have that righteousness and that spirit which exalteth a people.

We ask especially that Thy spirit may be granted unto every Government employee, to the courts, to Members of the House, the Senate, the Cabinet, and the President of our country, that under the leadership of Thy Holy Spirit we may be guided in this hour as a Nation to glorify and honor Thee. To this end help us as a people to lay aside every weight and the sin that doth so easily beset us. May a spirit of unselfishness enter into the service for humanity that the principles of democracy and of liberty and of international justice may be preserved, and, finally, based upon the eternal truths of Thy revealed word, that there may come a permanent and perpetual peace. To this end grant that Thy direction shall be given unto the Senate in this hour and to our Nation throughout all coming days. In the name and to the glory of our risen Lord we ask it. Amen.

The Secretary proceeded to read the Journal of the proceedings of Monday last, when, on request of Mr. JAMES and by unanimous consent, the further reading was dispensed with and the Journal was approved.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 9160) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (H. R. 195) providing for the sale of the coal and asphalt deposits in the segregated mineral land in the Choctaw and Chickasaw Nations, Okla., and it was thereupon signed by the Vice President.

MILITARY SERVICE OF ALIENS.

The VICE PRESIDENT. The Chair lays before the Senate the following letter from the Secretary of State, which will be read.

The Secretary read as follows:

THE SECRETARY OF STATE,
Washington, January 29, 1918.

MY DEAR MR. VICE PRESIDENT: Inasmuch as the Senate, on July 31 (calendar day, August 1), 1917, resolved that the President be requested to enter into agreements with the European nations engaged in war against the central powers of Europe authorizing and empowering the United States to apply the provisions of the draft act of May 18, 1917, to citizens or subjects of such nations domiciled in the United States, I deem it proper to make the following report on the progress of negotiations looking to the conclusion of such agreements.

As soon as a suitable proposal could be formulated in conjunction with the War Department, it was submitted to the cobelligerents of the United States as a basis for diplomatic negotiations. As negotiations proceeded with the European nations, unforeseen difficulties interposed themselves, as, for example, the revolution in Russia and the German drive in Italy, which made it necessary for the time being to press more strongly negotiations in other quarters. For this reason, and also on account of the fact that the laws and conditions in Great Britain and Canada were more nearly like those in the United States, negotiations proceeded more rapidly with those countries. Moreover, in the interest of obtaining agreements with the European nations as nearly uniform as possible for reasons of efficient administration in the United States, it was deemed best to reach an agreement, if possible, with some country which might be used as a model for the agreements with the other countries.

It is with pleasure, therefore, that I have to report that at the present time we are in agreement with Great Britain and with Canada as to the terms of separate conscription conventions which now, but for a few verbal changes, await the signature of the representatives of the Governments concerned before being sent to the Senate.

In brief these conventions, which are in effect practically alike, give to persons under the convention the option to return to their own country for military service within a certain limited period. After the expiration of this period, such persons are subject to military service under the laws and regulations of the country in which they choose to remain, provided that for British and Canadians in the United States the ages for military service shall be 20 to 40 years, both inclusive, and in respect to Americans in Great Britain and Canada the ages for military service shall be limited to those of the draft act of May 18, 1917.

These conventions also give the right to the contracting parties to exempt their citizens or subjects from military service abroad in case it is regarded as necessary or desirable. The remaining provisions of the convention are of less importance and need not be mentioned here.

I have no objection to this letter being made public, if you so desire.

Very sincerely, yours, ROBERT LANSING.

Mr. STONE. Mr. President, while the Secretary of State says he has no objection to this matter being made public, it has been made public without ascertaining whether there was any objection. I think the usual course, with all due respect to the Chair, is to refer the communication to the Committee on Foreign Relations. It has been read, and I ask that the communication may be referred to that committee.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and it is so referred.

CRIPPLED SOLDIERS AND SAILORS.

The VICE PRESIDENT laid before the Senate a communication from the vice chairman of the Federal Board for Vocational Education, transmitting, in response to a resolution of the 28th instant, a preliminary study by the Federal board entitled "Vocational rehabilitation and placement of disabled soldiers and sailors" (S. Doc. No. 166), which, with the accompanying paper, was referred to the Committee on Education and Labor and ordered to be printed.

He also laid before the Senate a communication from the vice chairman of the Federal Board of Vocational Education, transmitting, in response to a resolution of the 28th instant, a study of the Federal board entitled "Rehabilitation of disabled soldiers and sailors and teacher training for occupational therapy" (S. Doc. No. 167), which, with the accompanying papers, was referred to the Committee on Education and Labor and ordered to be printed.

AMERICAN INSTRUCTORS OF THE DEAF.

The VICE PRESIDENT laid before the Senate a communication from the president of the Columbia Institution for the Deaf, transmitting, pursuant to law, the proceedings of the twenty-first meeting of the Convention of American Instructors of the Deaf, which, with the accompanying papers, was referred to the Committee on Printing.

WASHINGTON & OLD DOMINION RAILWAY (H. DOC. NO. 887).

The VICE PRESIDENT laid before the Senate the annual report of the Washington & Old Dominion Railway for the year ended December 31, 1917, which was referred to the Committee on the District of Columbia and ordered to be printed.

SENATOR FROM IDAHO.

Mr. BORAH. Mr. President, I present the certificate of appointment of my colleague, Mr. NUGENT, and I ask that it be read and filed.

The VICE PRESIDENT. It will be read.

The Secretary read as follows:

Moses Alexander, governor of the State of Idaho.

To all to whom these presents shall come, greeting:

Know ye that, reposing special confidence in the integrity, diligence, and discretion of JOHN F. NUGENT, of Boise, Idaho, I have appointed and do hereby commission him United States Senator, representing the State of Idaho, and do authorize and empower him to execute and fulfill the duties of said office according to law, and to have and to hold the same with all the rights and emoluments thereunto legally appertaining unto him the said JOHN F. NUGENT for the term commencing the 22d day of January, 1918, and ending with the election and qualification of a successor.

In testimony whereof I have hereunto set my hand and caused to be affixed the great seal of the State of Idaho, done at Boise, the capital of Idaho, this 22d day of January, in the year of our Lord one thousand nine hundred and eighteen, and of the independence of the United States of America the one hundred and forty-second.

By the governor:

M. ALEXANDER,
[SEAL.] W. T. DOUGHERTY,
Secretary of State.

The VICE PRESIDENT. The credentials will be placed on file.

Mr. BORAH. Mr. President, Mr. NUGENT is in the Chamber and ready to take the oath of office.

The VICE PRESIDENT. If there be no objection, the newly appointed Senator will be conducted to the desk for that purpose.

Mr. NUGENT was escorted to the Vice President's desk by Mr. BORAH; and the oath prescribed by law having been administered to him, he took his seat in the Senate.

COMMITTEE SERVICE.

Mr. MARTIN. Mr. President, I send to the desk an order assigning the junior Senator from Idaho [Mr. NUGENT] to certain committees, and I ask for its present consideration.

The order was read and agreed to, as follows:

Ordered, That Senator NUGENT be appointed to the following committees: Fisheries (chairman), Immigration, Indian Affairs, Revision of the Laws of the United States, Territories.

DEATH OF MAJ. A. P. GARDNER.

The VICE PRESIDENT. The Chair lays before the Senate the following communication, which will be read.

The Secretary read as follows:

JANUARY 21, 1918.

DEAR MR. BAKER: Will you convey to the Vice President and the Members of the Senate of the United States my deeply grateful thanks for the resolutions passed by them on the death of Maj. Gardner. I am sensible of the honor done to my husband's memory and value this expression of it very highly.

Yours, sincerely, CONSTANCE GARDNER.

HOUSE BILL REFERRED.

H. R. 9160. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war was read twice by its title and referred to the Committee on Pensions.

DEATH OF SENATOR WILLIAM HUGHES.

Mr. FRELINGHUYSEN. Mr. President, it is with a feeling of profound sorrow that I have to announce to the Senate the death of my colleague, Senator HUGHES. I shall ask the Senate at some future time to set aside a day when proper tribute may be paid in recognition of his services to his State and to the country.

I send to the desk the following resolutions and ask for their adoption.

The resolutions (S. Res. 192) were read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with profound sorrow of the death of the Hon. WILLIAM HUGHES, late a Senator from the State of New Jersey.

Resolved, That a committee of 15 Senators be appointed by the Vice President to take order for superintending the funeral of Mr. HUGHES, to be held in the city of Paterson, N. J.

Resolved, That the Secretary communicate these resolutions to the House of Representatives.

Under the second resolution the Vice President appointed the Senator from New Jersey [Mr. FRELINGHUYSEN], the Senator from Kentucky [Mr. JAMES], the Senator from North Carolina [Mr. SIMMONS], the Senator from Mississippi [Mr. WILLIAMS], the Senator from Arizona [Mr. SMITH], the Senator from Nevada [Mr. PITTMAN], the Senator from New Hampshire [Mr. HOLLIS], the Senator from Colorado [Mr. THOMAS], the Senator from California [Mr. PHELAN], the Senator from Utah [Mr. SMOOT], the Senator from North Dakota [Mr. MCCUMBER], the Senator from Washington [Mr. POINDEXTER], the Senator from Michigan [Mr. TOWNSEND], the Senator from Indiana [Mr. NEW], and the Senator from New York [Mr. CALDER] the committee on the part of the Senate.

Mr. FRELINGHUYSEN. Mr. President, I move, in solemn respect to the memory of the deceased Senator, that the Senate do now adjourn.

The motion was unanimously agreed to; and (at 12 o'clock and 15 minutes p. m.) the Senate adjourned until to-morrow, Thursday, January 31, 1918, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *January 30, 1918.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Our Father who art in heaven, grant us, we pray Thee, the light of Thy wisdom and the strength of Thy will this day, that we may fix our heart upon no object, nor put our hand to any work, upon which we can not ask Thy blessing at its close; that we may—

> Do noble things, not dream them all day long,
> And so make life, death, and that vast forever
> one grand, sweet song—

in imitation of the Master. Amen.

The Journal of the proceedings of yesterday was read and approved.

CALENDAR WEDNESDAY.

The SPEAKER. This is Calendar Wednesday. The Clerk will call the roster of committees.

The Clerk called the Committee on Irrigation of Arid Lands.

Mr. TAYLOR of Colorado. Mr. Speaker, the Committee on the Irrigation of Arid Lands has only one bill on the calendar, and it is the sentiment of the committee that we should make some alterations in this bill before asking the House to consider it. Therefore the committee will waive its right this morning and will not call up the bill.

The SPEAKER. The Clerk will call the next one.

ENLISTMENT OF ALIENS.

The Clerk called the Committee on Immigration and Naturalization.

Mr. BURNETT. Mr. Speaker, I am directed by the Committee on Immigration and Naturalization to call up the bill (H. R. 5667) to provide for the deportation of certain aliens, and for other purposes.

Mr. FLOOD. Mr. Speaker, may I ask the gentleman a question?

Mr. BURNETT. Yes.

Mr. FLOOD. I would like to ask the gentleman if the subject matter of that bill is the same as that of the treaties that the State Department has been negotiating with our allied friends in reference to their subjects being enrolled in this country?

Mr. BURNETT. In reply to that question, Mr. Speaker, I had a conference with the very able Solicitor of the State Department about a week ago, and he informed me that they had negotiations pending, and had had for some time, looking to the conscription of aliens, an agreement with the cobelligerent countries at war with the central powers for the conscription by our Government of aliens from those cobelligerent countries. At that time he had made some progress, and I notice in the press this morning a statement by Mr. Rogers that they have perhaps negotiated an agreement with Great Britain and Canada.

The subject matter of this bill would be covered to a great extent by those negotiations; but this bill goes a great deal further in some respects, because it forbids the entrance into this country of those who are subject to military duty in those belligerent countries. This bill in its first section provides that no alien who is eligible to naturalization and who is a subject or citizen of a country that is engaged in war with the central powers shall ever become a naturalized citizen of this country; that is, if he is subject to the draft. It further provides that unless they withdraw their claims for exemption from the draft—those who have made it or those who claim exemption from the draft hereafter—they shall be deported as soon as practicable.

Now, I do not know to what extent the treaties that the State Department contemplates go in regard to those propositions.

Mr. FLOOD. If the gentleman will yield to me for a few moments, I will tell him what the agreement is with Great Britain and Canada. I received a letter from the Secretary of State just a few moments ago in which he makes a statement in reference to the treaties concluded with Great Britain and Canada. The latter part of the letter outlines the provisions. The Secretary says, in part:

> It is with pleasure, therefore, that I have to report that at the present time we are in agreement with Great Britain and with Canada as to the terms of separate conscription conventions, which, but for a few verbal changes, now await the signature of the representatives of the governments concerned before being sent to the Senate.
>
> In brief, these conventions, which are in effect practically alike, give to persons under the convention the option to return to their own country for military service within a certain limited period. After the expiration of this period such persons are subject to military service under the laws and regulations of the country in which they choose to remain, provided that for British and Canadians in the United States the ages for military service shall be 20 to 40 years, both inclusive, and in respect to Americans in Great Britain and Canada the ages for military service shall be limited to those of the draft act of May 18, 1917.
>
> These conventions also give the right to the contracting parties to exempt their citizens or subjects from military service abroad in case it is regarded as necessary or desirable. The remaining provisions of the convention are of less importance and need not be mentioned here.

I just wanted to make this statement to the gentleman from Alabama. I was called up by Mr. Woolsey, Solicitor of the State Department, a few moments ago, and he stated that not only had agreements between Great Britain and Canada been reached, but our Government was almost in agreement with France and Italy. Conventions with those countries have practically been reached, and if we undertake to legislate on the subject at this time it would, he thought, interfere with the negotiations, and in consequence we could not effect as satisfactory conventions with Italy and France.

Mr. CAMPBELL of Kansas. Mr. Speaker, may I inquire of the gentleman as to whether the State Department regards the treaty as more effective than the passage of the bill in accomplishing the desired purpose for both the citizens of this country and of the country that is affected?

Mr. FLOOD. The State Department regards the treaty as thoroughly effective, and believes it would not create irritation between this country and those countries with whom we are associated in this war.

Mr. CAMPBELL of Kansas. Is it believed that the treaties would reach more people than would the legislation proposed?

Mr. FLOOD. It would reach all of the subjects of those countries now in this country.

Mr. CAMPBELL of Kansas. It would reach all their subjects?

Mr. FLOOD. Yes.

Mr. CAMPBELL of Kansas. How would it affect our citizens in the other countries?

Mr. FLOOD. It gives them the same right as to our citizens in their countries that we would have with respect to their citizens in this country.

Mr. CAMPBELL of Kansas. While the legislation we enact would not touch our own citizens in those countries?

Mr. FLOOD. No. Of course, we could only legislate concerning ourselves.

Mr. FESS. Mr. Speaker, will the gentleman yield?

Mr. FLOOD. I yield.

Mr. FESS. Do I understand that this legislation at this stage would interrupt diplomatic matters now under consideration to the extent that we might be defeated in the very thing that the legislation now looks to?

Mr. FLOOD. Yes. That statement was made to me by the Solicitor for the State Department not an hour ago.

Mr. FESS. I have been in favor of this legislation, I will say to the gentleman.

Mr. FLOOD. I would say also that I have been very heartily in favor of this legislation.

Mr. FESS. May we have assurances that treaty relations will be closed without unnecessary delay of time?

Mr. FLOOD. Certainly. There will be no unnecessary delay. The agreements have been concluded with Great Britain and with Canada, and they should be concluded with France and Italy in a short time.

Mr. WALSH. Will the gentleman yield?

Mr. FLOOD. Yes.

Mr. WALSH. Is the agreement between this country and Great Britain now in effect?

Mr. FLOOD. No; it is not in effect, because the Senate has not ratified it, but it should be in effect in a few days.

Mr. WALSH. Will the gentleman state the ages between which citizens of the United States now resident in these other countries will be given the option of returning to this country from France and Great Britain or entering the military service there?

Mr. FLOOD. Between the ages fixed in our draft act of May, 1917—21 and 31 years.

Mr. WALSH. But that does not apply to the citizens of those countries who are resident here?

Mr. FLOOD. No.

Mr. WALSH. As to citizens of those countries resident here, what are the age limits?

Mr. FLOOD. Between 20 and 40.

Mr. SLAYDEN. Will the gentleman yield for a question?

Mr. FLOOD. Yes.

Mr. SLAYDEN. Do I understand the gentleman from Virginia to say that he wants action delayed on this bill which the Committee on Immigration has brought in, because treaties are being made at this time between Great Britain and the United States and between other countries and the United States, and that that with Great Britain has been concluded?

Mr. FLOOD. I stated that.

Mr. SLAYDEN. Is the British treaty in any way dependent upon the others? Do they go together?

Mr. FLOOD. They do not go together, but the British treaty is to be taken as a model for the others.

Mr. JOHNSON of Washington. It ought to be stated that a separate treaty had to be made with the Dominion of Canada.

Mr. FLOOD. Yes.

Mr. JOHNSON of Washington. Because that is in effect a separate government, making its own laws.

Mr. FLOOD. Yes; they have made two treaties—one with Great Britain and one with Canada—but they are exactly similar, and they are to be taken as the guide for the others, which are in process of being agreed upon right now. The State Department called me up and asked me to see the chairman of the Committee on Immigration and Naturalization and request him to let this matter go over to-day, saying that it was of the utmost importance that the department should not be hampered in its negotiations with France, Italy, and other nations by the discussion or enactment of this bill.

Mr. KINKAID. Will the gentleman yield for a question?

Mr. FLOOD. I yield to the gentleman.

Mr. KINKAID. Do the provisions of the pending bill conform to the provisions of these treaties?

Mr. FLOOD. I could not answer that question.

Mr. KINKAID. If the bill does not conform to the treaty agreements so far made, and to those not made which are in contemplation, would the effect of the passage of this bill be to revoke the authority of our representatives in the treaty making with France and Italy?

Mr. FLOOD. I will say to the gentleman that the bill in the House covers exactly the same subject that the treaty covers. I do not think it would revoke the treaty.

Mr. SHERLEY. If the gentleman will yield, I can answer that.

Mr. KINKAID. Would it have the effect of revoking the authority of the treaty-making representatives of the United States?

Mr. FLOOD. I think not; but the statement was made that if this legislation progresses to-day it will greatly embarrass the representatives of the United States in bringing about the treaties with France and Italy.

Mr. KINKAID. It would be embarrassing in a diplomatic way?

Mr. FLOOD. Yes.

Mr. SHERLEY. An act of Congress in conflict with a treaty previously made repeals that treaty to the extent of the conflict. A treaty dealing with matters properly within the treaty-making power made subsequent to an act of Congress would repeal the act of Congress to the extent that it would be in conflict with that act.

Mr. KINKAID. We will agree on that.

Mr. SHERLEY. My first statement is not a matter of theory. That exact question has been decided by the Supreme Court of the United States.

Mr. KINKAID. We will agree on that. I was simply inquiring as to the diplomatic feature.

Mr. FLOOD. I so understood the gentleman, and was simply answering his inquiry as I understood it.

Mr. JOHNSON of Washington. I wanted to say that I undertook to make some inquiries of the State Department this morning, and was informed that a letter had been sent to Congress——

Mr. FLOOD. I have that letter.

Mr. JOHNSON of Washington. I think in addition to the gentleman's letter there is a letter sent to the other body, which would have been placed in the RECORD yesterday if the Senate had been in session, and the Members of the House could have read it in the RECORD this morning; but the Senate was not in session yesterday. I believe that letter differs from the one which the gentleman from Virginia [Mr. FLOOD] has, and throws considerable light on this subject, and states the position of the State Department fully; and I doubt if this body would be warranted in going ahead without receiving that statement from the Secretary of State.

Mr. FLOOD. I fully agree with the gentleman.

Mr. ROGERS. Will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from Massachusetts.

Mr. ROGERS. Is it not a fact that the State Department confidently expects that there will be no longer any great delay in negotiating similar treaties with practically all the other cobelligerents, including France and Italy, which are numerically the most important in this connection?

Mr. FLOOD. That is the confident hope and expectation.

Mr. PARKER of New Jersey. Will the gentleman yield for a question?

The SPEAKER. The Chair will state that all this talk is out of order. The whole thing is out of order. If any gentleman wants to get the floor——

Mr. PARKER of New Jersey. I ask unanimous consent to ask a question of the gentleman.

Mr. BURNETT. Mr. Speaker, in order to relieve that irregularity, I am perfectly willing that the gentleman from Virginia [Mr. FLOOD] may make this statement, and I ask unanimous consent that he may.

The SPEAKER. For how long?

Mr. BURNETT. For 10 minutes.

The SPEAKER. The gentleman from Alabama asks unanimous consent that the gentleman from Virginia [Mr. FLOOD] have 10 minutes in which to express his opinion about this bill. Is there objection?

There was no objection.

Mr. PARKER of New Jersey. Will the gentleman permit a question?

Mr. FLOOD. I will.

Mr. PARKER of New Jersey. It has occurred to me that treaties have nothing to do with naturalization; they have with deportations; and I had therefore prepared a bill which, I think, is not subject to objection, which provides that any person claiming exemption because of his being a foreigner shall not be admitted to citizenship. And I apply that to neutrals as well. I do not think a man who is here and does not want to do the duties of a citizen ought to ask to become a citizen. It has been my purpose, if the other bill came up, on account of the objection of the State Department, to move the substitution with some such provision which I will be glad to hand to the gentleman from Virginia for his information.

Mr. FLOOD. I thank the gentleman.

Mr. PARKER of New Jersey. I want to say also that we are so much worried in my own home town, where there are hosts of aliens, by their claim for exemption from the draft and registration because they are aliens that some measure has got to be taken to prevent their laughing at the United States.

Mr. FLOOD. That is just what the State Department is about to accomplish.

Mr. PARKER of New Jersey. But there are aliens from countries that are not in the war. There are neutrals not in the war. I do not think that they ought to claim that they are not citizens of the United States and then afterwards claim the privilege of becoming citizens.

Mr. FLOOD. It does seem to me that when the State Department has been working on a matter of this kind for six or seven months, and this bill has been on the calendar for six months, held up for the purpose of permitting the State Department to go on with these negotiations, that its passage should not be insisted on now. We have concluded the negotiations with some of the nations associated with us in this war and are about to conclude negotiations with the other two most important nations. They will, in the course of time, conclude negotiations with all of them. I do not think this ought to be insisted upon when our representatives at this stage of the negotiations communicates to the House the fact that a discussion of this legislation to-day will embarrass them and probably destroy the effect of the work already accomplished. I do not think that it is an unreasonable request to ask that this measure be passed by.

Mr. GALLIVAN. Will the gentleman yield?

Mr. FLOOD. Yes.

Mr. GALLIVAN. Was not this the same story told to this House last September when another bill similar in purport to this one was up for consideration? Does not the gentleman recall that we were assured that the State Department was about to conclude its arrangement with other nations, and that when Congress met on the first Monday in December the whole thing would be adjusted?

Mr. FLOOD. I am not aware that the State Department ever announced to the House that it was about to conclude negotiations with any nation. The matter was postponed for the same reason that a postponement is being asked now, namely, that negotiations were being conducted, and now they have concluded negotiations with two of the most important nations, and are about to conclude the agreements with others, the reasons for postponement are stronger than ever. The matter was postponed because they were pressing the negotiations. There were interruptions; Russia broke down and that interrupted the negotiations before they came to a head with representatives of that country.

Mr. GALLIVAN. Is the gentleman able to say to the House whether all of the negotiations will be completed before the second draft is ordered?

Mr. FLOOD. On February 15? The negotiations with Great Britain and Canada should be, and I believe with some others, but of course I do not make the statement with any degree of certainty.

Mr. GALLIVAN. Will the gentleman state to the House whether or not in the next draft aliens who were exempt from the first draft will be placed at the head of the list in the second draft?

Mr. FLOOD. Oh, I do not know about that.

Mr. RAGSDALE. Will the gentleman yield?

Mr. FLOOD. Yes.

Mr. RAGSDALE. As a matter of fact, is it not a fact that with the opposition that has developed here and in the Senate it is not probable that relief could not be given by this as quickly as through the State Department, and that we could get more expeditious results through the work of the State Department than in trying to put this through Congress?

Mr. BURNETT. I think that is an incorrect hypothesis.

Mr. FLOOD. I will say that I am heartily in favor of the bill if it can be accomplished, but I think the negotiation of the treaties is better. We are about to reach that end and I think it will be unwise to interfere with the negotiations at this time. I agree with the gentleman from South Carolina [Mr. RAGSDALE].

Mr. GOODWIN of Arkansas. Will the gentleman yield?

Mr. FLOOD. I will.

Mr. GOODWIN of Arkansas. Is it not a fact that the American representative left on Friday for Ottawa to get the signatures of the Canadian representatives?

Mr. FLOOD. I have been so informed.

Mr. DENISON. Will the gentleman yield?

Mr. FLOOD. I will yield to the gentleman.

Mr. DENISON. I understood the gentleman to state that this might interrupt negotiations with other countries.

Mr. FLOOD. The Solicitor of the State Department stated that it would greatly interfere with the negotiations.

Mr. DENISON. Does not the gentleman think that if we go ahead and pass legislation it might lead to legislation of a similar nature by those Governments for themselves?

Mr. FLOOD. I should think it would.

Mr. DENISON. And it might not be as favorable to our citizens as we could get by treaties?

Mr. FLOOD. It undoubtedly would not be as favorable.

Mr. FESS. Will the gentleman yield?

Mr. FLOOD. I will yield to the gentleman from Ohio.

Mr. FESS. If we pass this legislation, which I am in favor of if the way was clear, we are doing it without consultation with other countries, and there is a possibility that it might seem to be an offense offered to them, especially if at the moment we do it we are having negotiations in progress. So there is some danger of defeating the very thing that we are trying to reach.

Mr. FLOOD. There is no doubt about that; no doubt the gentleman is right.

Mr. FESS. With that point in view, although very much in favor of the bill, I hesitate to vote for it at this time.

Mr. WALSH. Will the gentleman yield?

Mr. FLOOD. Yes.

Mr. WALSH. Has the gentleman any information as to whether or not it is the purpose to delay the postponement of the second draft, so called, until after some arrangement is entered into with foreign nations?

Mr. FLOOD. I have heard of no such arrangement. I know that the State Department and the War Department have been in consultation about that matter, but I have heard of no such arrangement.

Mr. WALSH. Is there any conflict or confusion arising out of the fact that perhaps some of these subjects of foreign nations are registered under our draft law and may have decided to become subject to the draft and enter our service?

Mr. FLOOD. I do not catch the gentleman's idea.

Mr. WALSH. I want to inquire if in the gentleman's opinion any confusion or conflict may arise from the fact that these aliens residing in this country have all been registered, between the ages of 21 and 31, and that there may be aliens above the age of 31 in this country who have not registered but who may desire to waive their foreign citizenship and enter our military service?

Mr. FLOOD. I think that situation is provided for in this agreement with Great Britain.

Mr. WALSH. Does it provide for registering citizens above that age?

Mr. FLOOD. Up to 40 years of age.

Mr. WALSH. So that a supplementary registration will have to take place.

Mr. FLOOD. Of aliens above 31—I should think so.

Mr. SABATH. Mr. Speaker, will the gentleman yield?

Mr. FLOOD. Yes.

Mr. SABATH. The Foreign Affairs Committee, of which the gentleman is chairman, has reported a bill upon the subject taking care of the so-called slackers and subjecting them in a way to the selective draft. That bill is now reported, and provides also for other things.

Mr. FLOOD. To which bill does the gentleman refer?

Mr. SABATH. I mean the bill reported from the Committee on Foreign Affairs, which excludes from the operation of the alien-enemy act certain classes which we know are friendly to the United States, and which also provides for the naturalization of 76,000 of these aliens who have volunteered into the service and who are now in the service, and which bill has other provisions on this question. Do I understand that the State Department is also objecting to the consideration of that bill at this time?

Mr. FLOOD. That is a very different proposition. That is a proposition dealing with alien enemies.

Mr. SABATH. Yes.

Mr. FLOOD. This is a proposition dealing with alien friends and neutrals.

Mr. SABATH. But would not that bill take care of the slackers in a form that would not be objectionable to the foreign governments?

Mr. FLOOD. I think not. I think the bill the gentleman has in mind deals only with alien enemies, and that all of the provisions of it refer to alien enemies and would not be in conflict at all with the bill under consideration.

Mr. RAGSDALE. But is it not a fact that the State Department is in favor of that bill?

Mr. FLOOD. Yes. Mr. Polk, the Counselor for the State Department, appeared before the Committee on Foreign Affairs and so stated.

Mr. KINCHELOE. Mr. Speaker, will the gentleman yield?

Mr. FLOOD. Yes.

Mr. KINCHELOE. Presuming the fact that within a short while all these treaties with our allies will have been completed and put in effect, what will be the status of the bill that is now ready to come before the House?

Mr. FLOOD. It seems to me the wise thing to do with it would be to modify it so its provisions would not cover those matters covered by the treaty.

Mr. KINCHELOE. Will the treaty practically cover the defect that this bill is trying now to remedy?

Mr. FLOOD. The treaty does not go as far as the bill. This bill has some provisions in it not covered by the treaty.

Mr. OLNEY. These treaties concern only the cobelligerent nations?

Mr. FLOOD. Yes.

Mr. OLNEY. Is it not a fact that the State Department considers it pretty risky business to attempt to conscript alien enemies, and is it not also a fact that the State Department considers it undesirable to attempt to conscript the aliens of neutral countries, because if we adopt legislation like that what could prevent Mexico and Spain and Sweden, friendly countries to us, from conscripting our citizens in those countries into the military service?

Mr. FLOOD. I have not time to go into the questions suggested by the gentleman from Massachusetts.

Our able and efficient Secretary of State has for months been negotiating with those with whom we are associated in this war to bring about a satisfactory agreement with reference to this subject. As soon as a suitable proposal could be formulated in conjunction with the War Department it was submitted to the cobelligerents of the United States as a basis for diplomatic negotiations. As negotiations proceeded with the European nations unforeseen difficulties arose, as, for example, the revolution of Russia and the German drive in Italy, which made it necessary for the time being to press more strongly negotiations in other quarters. For this reason, and also on account of the fact that the laws and conditions in Great Britain and Canada were more nearly like those in the United States, negotiations proceeded more rapidly with those countries. Moreover, in the interest of obtaining agreements with the European nations as nearly uniform as possible, for reasons of efficient administration in the United States, it was deemed best to reach an agreement, if possible, with some country which might be used as a model for the agreement with other countries.

The agreements with Great Britain and Canada have been completed. Those with France and Italy are in process of conclusion. Gentlemen in charge of these negotiations feel that any legislation on the subject, or the passage of this bill by this House, would impede these negotiations and render greater the difficulties of bringing them to successful termination.

I hope, therefore, this bill will not be taken up at this time.

Mr. BURNETT. This bill does not conscript anyone. The remarks of the gentleman from Massachusetts [Mr. OLNEY] are not applicable, because this bill does not conscript anyone.

Mr. STAFFORD. Does it not provide that if the alien neutral does not enlist, he shall be absolutely deported at the conclusion of the war? If that is going to be the policy of this Government——

Mr. BURNETT. Oh, no; not an alien neutral.

Mr. STAFFORD. I was under the impression that it did apply to an alien neutral.

Mr. BURNETT. That is not the purpose at all. We do not attempt any such thing.

Mr. STAFFORD. I would like to ask the chairman of the Committee on Foreign Affairs whether, in his conferences with officials of the State Department, they have considered the complications that might arise in the enforcement of this first section, which requires those aliens who have not enlisted to be deported at the conclusion of the war?

Mr. FLOOD. No; I did not discuss that with anyone.

The SPEAKER. The time of the gentleman from Virginia has expired.

SENATE BILL AND JOINT RESOLUTION REFERRED.

Under clause 2, Rule XXIV, Senate bill and joint resolution of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 3448. An act granting the consent of Congress to the village of East Dundee and the village of West Dundee to construct a bridge across the Fox River; to the Committee on Interstate and Foreign Commerce.

S. J. Res. 125. Joint resolution authorizing the Joint Committee on the Library to provide for the restoration and completion of the historical frieze in the Rotunda of the Capitol; to the Committee on the Library.

ORDER OF BUSINESS.

Mr. FORDNEY. I ask unanimous consent that to-morrow, after the reading of the Journal and the disposition of business on the Speaker's table, I be permitted to address the House for 10 minutes.

The SPEAKER. The gentleman from Michigan asks unanimous consent that to-morrow, after the reading of the Journal and the disposition of business on the Speaker's table, he be permitted to address the House for not to exceed 10 minutes, not to interfere with conference reports and privileged matters. Is there objection?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, its enrolling clerk, announced that the Senate had passed the following resolutions:

Resolved, That the Senate has heard with profound sorrow of the death of the Hon. WILLIAM HUGHES, late a Senator from the State of New Jersey.

Resolved, That a committee of 15 Senators be appointed by the Vice President to take order for superintending the funeral of Mr. HUGHES, to be held in the city of Paterson, N. J.

Resolved, That the Secretary communicate these resolutions to the House of Representatives.

Resolved, That as a further mark of respect to the memory of deceased, the Senate do now adjourn.

And that in compliance with the foregoing resolutions the Vice President had appointed as said committee Mr. FRELINGHUYSEN, Mr. JAMES, Mr. PHELAN, Mr. HOLLIS, Mr. POINDEXTER, Mr. NEW, Mr. SMOOT, Mr. MCCUMBER, Mr. SMITH of Arizona, Mr. WILLIAMS, Mr. PITTMAN, Mr. SIMMONS, Mr. THOMAS, Mr. TOWNSEND, and Mr. CALDER.

DEATH OF SENATOR HUGHES, OF NEW JERSEY.

Mr. EAGAN. Mr. Speaker, it is my painful duty to announce to this House the death of the senior Senator from New Jersey, Hon. WILLIAM HUGHES, for many years a distinguished Member of this House. At a future date I shall ask that a day be set aside on which to pay tribute to his character and distinguished public services. I send to the Clerk's desk a resolution and ask its immediate consideration.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 239.

Resolved, That the House has heard with profound sorrow of the death of Hon. WILLIAM HUGHES, a Senator of the United States from the State of New Jersey.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased Senator.

Resolved, That a committee of 15 members be appointed on the part of the House to join the committee appointed on the part of the Senate to attend the funeral.

The SPEAKER. The Chair announces the following committee, which the Clerk will report.

The Clerk read as follows:

Mr. EAGAN, Mr. BROWNING, Mr. BACHARACH, Mr. SCULLY, Mr. HUTCHINSON, Mr. CAPSTICK, Mr. RAMSEY, Mr. DRUKKER, Mr. GRAY of New Jersey, Mr. PARKER of New Jersey, Mr. LEHLBACH, Mr. HAMILL, Mr. RIORDAN, Mr. TILLMAN, and Mr. BURNETT.

The SPEAKER. The Clerk will complete the reading of the resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect, the House do now adjourn.

The SPEAKER. Is there objection to the consideration of the resolution?

There was no objection.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

ADJOURNMENT.

Accordingly (at 12 o'clock and 37 minutes p. m.) the House adjourned until to-morrow, Thursday, January 31, 1918, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Navy, requesting consideration of Navy Department's draft of bill in lieu of H. R. 8980 (H. Doc. No. 873); to the Committee on Naval Affairs and ordered to be printed.

2. A letter from the Secretary of the Treasury, transmitting copy of communication from the Secretary of War submitting a proposed clause of legislation for inclusion in the urgent deficiency bill, reappropriating certain 1918 balances (H. Doc. No. 874); to the Committee on Appropriations and ordered to be printed.

3. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers of the United States Army, together with a copy of a report from Mr. J. W. Sackett, assistant engineer in charge on preliminary examination of Canaveral Harbor, Fla. (H. Doc. No. 875); to the Committee on River and Harbors and ordered to be printed.

4. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers of the United States Army submitting a statement showing the name of each civilian engineer employed between July 1, 1916, and June 30, 1917, in the work of improving rivers and harbors (H. Doc. No. 876); to the Committee on Rivers and Harbors and ordered to be printed.

5. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Flora L. Hovey *v.* The United States (H. Doc. No. 877); to the Committee on War Claims and ordered to be printed.

6. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Henry C. Crosthwait, Lyman L. Crosthwait, and George A. Crosthwait, heirs of William Y. Crosthwait, deceased, *v.* The United States (H. Doc. No. 878); to the Committee on War Claims and ordered to be printed.

7. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Mabel

Henderson and Mary H. Fletcher, daughters of William P. Henderson, deceased, *v.* The United States (H. Doc. No. 879); to the Committee on War Claims and ordered to be printed.

8. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of A. H. Shoun, executor of the estate of Andrew J. Brown, deceased, *v.* The United States (H. Doc. No. 880); to the Committee on War Claims and ordered to be printed.

9. A letter from the chief clerk of the Court of Claims, transmitting a copy of the finding of the court in the case of John T. Gunn *v.* The United States (H. Doc. No. 881); to the Committee on War Claims and ordered to be printed.

10. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Addie P. Jones, widow of D. Lloyd Jones, deceased, *v.* The United States (H. Doc. No. 882); to the Committee on War Claims and ordered to be printed.

11. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Enoch Smith, administrator of the estate of Harrison Fields, deceased, *v.* The United States (H. Doc. No. 883); to the Committee on War Claims and ordered to be printed.

12. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Mabel Cushman Hitt, daughter of William H. W. Cushman, deceased, *v.* The United States (H. Doc. No. 884); to the Committee on War Claims and ordered to be printed.

13. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of J. H. Reed, administrator of the estate of John B. Reed, deceased, *v.* The United States (H. Doc. No. 885); to the Committee on War Claims and ordered to be printed.

14. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the Court in the case of Milton Giles, Charles P. Giles, and Aldana C. Burr, children and heirs of Ezekiel Giles, deceased, *v.* The United States (H. Doc. No. 886); to the Committee on War Claims and ordered to be printed.

15. A letter from the President of the Washington & Old Dominion Railway, transmitting report of the Washington & Old Dominion Railway for the 12 months ending December 31, 1917, in compliance with requirements of section 10, act of Congress June 30, 1896 (H. Doc. No. 887); to the Committee on the District of Columbia and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. PARK: A bill (H. R. 9388) to authorize the President of the United States to advance officers on the retired list, now on active duty, who were wounded in battle in the service of the United States; to the Committee on Military Affairs.

By Mr. HICKS: A bill (H. R. 9389) to amend sections 10 and 37 of the act entitled "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916; to the Committee on Military Affairs.

By Mr. PADGETT: A bill (H. R. 9390) to promote the efficiency of the Navy, and for other purposes; to the Committee on Naval Affairs.

By Mr. BRITTEN: A bill (H. R. 9391) for the relief of retired officers of the United States Navy; to the Committee on Naval Affairs.

By Mr. SMITH of Michigan: A bill (H. R. 9392) making appropriation for payment of balances due by readjustment of salaries of postmasters under existing law; to the Committee on Claims.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALEXANDER: A bill (H. R. 9393) granting an increase of pension to James F. Larimore; to the Committee on Invalid Pensions.

By Mr. BRUMBAUGH: A bill (H. R. 9394) to correct the military record of William C. Wilson; to the Committee on Military Affairs.

By Mr. CONNELLY of Kansas: A bill (H. R. 9395) granting an increase of pension to Phoebe Riley; to the Committee on Invalid Pensions.

By Mr. KEHOE: A bill (H. R. 9396) granting a pension to Oma B. Richardson; to the Committee on Pensions.

By Mr. MOORES of Indiana: A bill (H. R. 9397) granting an increase of pension to Marcellus Teeters; to the Committee on Invalid Pensions.

By Mr. NOLAN: A bill (H. R. 9398) granting a pension to Katherine Cotter; to the Committee on Pensions.

By Mr. PLATT: A bill (H. R. 9399) granting a pension to Hanna Wilson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9400) granting a pension to Sidney W. Ackerman; to the Committee on Pensions.

By Mr. SHERWOOD: A bill (H. R. 9401) granting an increase of pension to Robert W. Griffin; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. DALE of New York: Petition of the Oneida & Western Railroad Co., asking for just treatment of short-line railroads; to the Committee on Interstate and Foreign Commerce.

Also, petition of Evan O'Neill Kane, M. D., of Kane, Pa., suggesting a Federal dog tax to raise revenue for war wounded and alleviate food shortage; to the Committee on Agriculture.

By Mr. FULLER of Illinois: Petition of the Oneida & Western Railroad Co., asking equal treatment of the short-line railroads; to the Committee on Interstate and Foreign Commerce.

Also, petition of the Cordage Manufacturers' Association, relating to the manufacture and prices of manila hemp; to the Committee on Insular Affairs.

Also, petition of the Illinois Audubon Society, protesting against permission for grazing in the national parks and shooting privileges in the bird reservations; to the Committee on Public Lands.

Also, petition of Colgate & Co., for the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

Also, memorial of the College Hall Library Club, asking repeal of the increased postage rates on periodicals; to the Committee on Ways and Means.

By Mr. HADLEY: Resolution of the Meridian Grange, No. 265, Kent, Wash., requesting a law making it a treasonable offense for anyone to purchase, or attempt to purchase, securities of the United States at less than par; to the Committee on the Judiciary.

By Mr. RAKER: Petition of A. Berryessa, 748 Pacific Building, San Francisco, Cal., indorsement of bill providing for increase in the pay of civilian employees in the United States and the District of Columbia; to the Committee on Appropriations.

Also, resolution adopted by the Farmers' Educational & Cooperative Union of America, protesting against universal military training, by A. C. Davis, secretary, Gravette, Ark.; to the Committee on Military Affairs.

Petition of Colgate & Co., perfume makers, New York City, indorsement of daylight-saving plan; to the Committee on Interstate and Foreign Commerce.

Also, resolution of the Union Label Trades Department of the American Federation of Labor, favoring amendment to war-revenue law eliminating section dealing with second-class postage; to the Committee on Ways and Means.

By Mr. STRONG: Statements showing cost of operation and petitions for increase of pay from rural mail carriers in the twenty-seventh congressional district of Pennsylvania; to the Committee on the Post Office and Post Roads.

SENATE.

THURSDAY, *January 31, 1918.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we come before Thee day by day for Thy guidance that we may understand life with its great meaning and purpose, with its deep tragedy, in the light that Thou canst give to us. Our hearts are saddened as one by one our comrades in service drop out of the ranks of the living and are called to their reward beyond. We bless Thee for the association of everyone who has been faithful to the ideals of our great country and who has lived to promote the interests of the people. We pray that we may turn our hearts toward God, and may Thy guidance feel the touch of God upon our lives. May we so live that when we come to join that innumerable company passing out of the realms of light and day we may go with a consciousness of having done our best to serve our country and our God. For Christ's sake. Amen.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. VARDAMAN and by unanimous consent, the further reading was dispensed with and the Journal was approved.

REPORT OF THE COMPTROLLER OF THE CURRENCY (H. DOC. NO. 602).

The VICE PRESIDENT laid before the Senate the annual report of the Comptroller of the Currency for the year ended October 31, 1917, which was referred to the Committee on Banking and Currency.

CHESAPEAKE & POTOMAC TELEPHONE CO. (H. DOC. NO. 888).

The VICE PRESIDENT laid before the Senate the annual report of the Chesapeake & Potomac Telephone Co. for the year 1917, which was referred to the Committee on the District of Columbia and ordered to be printed.

GEORGETOWN GAS LIGHT CO.

The VICE PRESIDENT laid before the Senate the annual report of the Georgetown Gas Light Co. for the year 1917, which was referred to the Committee on the District of Columbia and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate on the joint resolution (H. J. Res. 174) for the purpose of promoting efficiency, for the utilization of the resources and industries of the United States, for lessening the expenses of the war, and restoring the loss caused by the war by providing for the employment of a discovery or invention called the "Garabed," claiming to make possible the utilization of free energy.

The message also announced that the House had passed a concurrent resolution providing for the printing of 500,000 extra copies of the Income Tax Primer, prepared by the Bureau of Internal Revenue, etc., in which it requested the concurrence of the Senate.

The message further transmitted to the Senate resolutions on the death of Hon. WILLIAM HUGHES, late a Senator of the United States from the State of New Jersey.

PETITIONS AND MEMORIALS.

Mr. McCUMBER. I present a resolution from a farmer's committee in my State, which I ask may be printed in the RECORD and referred to the Committee on Agriculture and Forestry.

There being no objection, the resolution was referred to the Committee on Agriculture and Forestry and ordered to be printed in the RECORD, as follows:

Resolution adopted by the Farm Managers' Association at the ninth annual meeting at Fargo, N. Dak., January 16, 1918.

Resolved, That whereas the present labor situation is apt to seriously affect crop production, and whereas it is essential that as much as possible of our skilled farm labor be retained; that if a deferred classification can not be obtained, at least the call should be postponed until the crop is planted.

We would call attention to the fact that farm work is not specialized or simplified into a single line, but that a skilled farm laborer must be competent in many different lines; and that it takes a longer experience to qualify a man for skilled farm work than for factory work. No amount of book learning or instruction can take the place of actual experience at farm labor.

It is necessary to have this skilled labor as leaders in order to make use of untrained labor at all. There are no skilled farmers available if those now on the farms are taken, and if we lose the skilled labor no amount of unskilled labor can take their place or keep up production.

In live-stock raising the use of unskilled labor will result in such waste and loss as will make the maintenance of the live-stock industry impossible.

The farmer claims no exemption for his boys for their own sake or for his own business profits, but simply that necessary production be maintained. We would urge that county and district boards acquaint themselves most fully with the conditions above mentioned and with the facts in each case, and that where the facts prove a man to be a skilled farm laborer that he be classified as such.

It is within our knowledge that several boards seem to consider all farmers as common labor and have ignored the skilled quality of this labor entirely.

J. C. HOKE,
Ellendale, N. Dak.
W. W. BROWN,
Amenia, N. Dak.
F. R. JOHNSON,
Casselton, N. Dak.

Mr. JONES of Washington. I have a telegram from the Seattle Chamber of Commerce and Commercial Club of Washington, urging that a further extension of time be granted for making out returns under the income-tax law. I move that it be referred to the Committee on Finance.

The motion was agreed to.

Mr. JONES of Washington presented a resolution adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, favoring Federal ownership and control of packing plants, which was referred to the Committee on Manufactures.

He also presented a resolution adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, favoring Federal control of railroads, which was referred to the Committee on Interstate Commerce.

He also presented a memorial of Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, remonstrating against any change in the farm-loan act, which was referred to the Committee on Banking and Currency.

He also presented a resolution adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, requesting Senators to use their influence in securing the desired seed wheat for homesteaders located on the south half of the Colville Indian Reservation, in that State, which was referred to the Committee on Agriculture and Forestry.

He also presented a memorial adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, remonstrating against the repeal of the oleomargarine law, which was referred to the Committee on Agriculture and Forestry.

He also presented a resolution adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, favoring the payment of the income tax by Members of Congress, which was referred to the Committee on Finance.

He also presented a resolution adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, favoring a tax on all unused land, which was referred to the Committee on Finance.

He also presented a resolution adopted by Okanogan County Pomona Grange, No. 22, Patrons of Husbandry, of Washington, favoring the closing of all unnecessary business establishments during the war, which was referred to the Committee on Military Affairs.

Mr. VARDAMAN. Mr. President, I send to the desk a resolution adopted by the citizens of Indianola, Sunflower County, Miss., expressing confidence in the President in his conduct of the war and the manner of managing the fuel situation, and so forth. I ask that it may be printed in the RECORD without reading.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the citizens of Indianola and Sunflower County, Miss., in mass meeting assembled at Indianola on January 28, 1918, desire to express to President Wilson and the administration in the present crisis with the Imperial German Government our supreme confidence in the management and conduct of the war and preparations therefor by the President, it being the sense of this body that the critics of the President and his Cabinet should be most severely condemned, because we feel that criticism at such a time as this is most detrimental to the Nation's interests; that the criticisms recently made are born of partisanship and a desire to further political interests of the critics, all of which motives we most heartily condemn. This is not a time for criticism, but a time for action and support, and it is the unqualified duty of every citizen to uphold the administration rather than inject strife and partisanship: Now, therefore, be it

Resolved, That we hereby express our sincere faith and confidence in the administration and in the ability of President Wilson as Commander in Chief of the Army and Navy and his Cabinet to direct and manage the whole situation in the present emergency.

W. B. MARTIN, *Chairman.*
W. M. LOCKHART, *Secretary.*

Mr. TILLMAN. I have a telegram which I received several days ago, and which is now somewhat out of date, but the peculiar conditions obtaining in the Senate, as every one knows, prevented my presenting the telegram earlier. I now ask to have it read for the information of the Senate.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

CHARLESTON, S. C., *January 26, 1918.*

Hon. B. R. TILLMAN,
The Senate, Washington, D. C.:

Traffic congestion in ice-bound northern ports seriously handicapping war measures while southern ports are comparatively idle. We respectfully call this to your attention, urging that you personally lend every effort to equitable diversion of this traffic through southern ports; freight rates to be readjusted where necessary to this end.

CHARLESTON CHAMBER OF COMMERCE.

Mr. PHELAN presented a petition of the California Cattlemen's Association, of San Francisco, Cal., praying that the park lands of the public domain in that State be thrown open for the use of the cattlemen of California, which was referred to the Committee on Public Lands.

He also presented a petition of the Salmon Packers of Alaska, the Alaska Fishermen's Union, and other affiliated organizations, praying for the establishment of a Government hospital in the Bristol Bay region, Alaska, which was referred to the Committee on Territories.

Mr. THOMAS. Mr. President, I have here two telegrams, one from the governor of my State and the other from the superintendent of public instruction, with regard to the pending so-called Susan B. Anthony amendment. I ask to have the telegrams inserted in the RECORD without reading.

There being no objection, the telegrams were ordered to be inserted in the RECORD, as follows:

DENVER, COLO., *January 23, 1918.*

Hon. CHARLES S. THOMAS,
United States Senate, Washington, D. C.:

Woman suffrage has been very beneficial to the State of Colorado and its citizenship. I think it a just and wise move to extend the right of suffrage to the women of the Nation.

JULIUS C. GUNTER,
Governor of Colorado.

—

DENVER, COLO., *January 22, 1918.*

Hon. CHARLES S. THOMAS,
United States Senate, Washington, D. C.:

We, the members of the State administration of Colorado, desire to testify to our firm and increasing belief in the justice and expediency of woman suffrage. We urge the passage of the Federal amendment enfranchising women, basing this stand upon every consideration of righteousness, patriotism, and efficiency.

Mary C. C. Bradford, superintendent of public instruction of Colorado; James R. Noland, treasurer of State of Colorado; R. H. Higgins, treasurer of State of Colorado; Charles H. Luckenby, auditor of State of Colorado; Leslie E. Hubbard, attorney general of Colorado.

Mr. GALLINGER presented the petition of E. E. Bowles, secretary of the farmers' committee of the California Development Board, of San Francisco, Cal., praying for the importation of Chinese farmers into this country during the war, which was referred to the Committee on Agriculture and Forestry.

Mr. HARDING presented a petition of sundry citizens of Ohio, praying for the repeal of the tax on margarines, which was referred to the Committee on Finance.

He also presented a memorial of the Farmers' Alliance, of Florida, Ohio, remonstrating against the sale of intoxicating liquors to our soldiers in France, which was referred to the Committee on Military Affairs.

He also presented a resolution adopted by the Army Boys in Blue of the State of Ohio, favoring an increase of pension of veterans of the Civil War, which was referred to the Committee on Pensions.

He also presented a petition of sundry inmates of the National Military Home, of Dayton, Ohio, praying for the repair, preservation, care, and future maintenance of the brig *Niagara*, which was referred to the Committee on Naval Affairs.

Mr. KNOX presented a petition of sundry citizens of Erie, Pa., praying for the repair, preservation, care, and future maintenance of the brig *Niagara*, which was referred to the Committee on Naval Affairs.

He also presented a petition of sundry citizens of Oakmont, Pa., and a petition of sundry citizens of Pittsburgh, Pa., praying for the adoption of an amendment to the Constitution to prohibit polygamy, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Pennsylvania, praying for the submission of a Federal suffrage amendment to the legislatures of the several States, which were ordered to lie on the table.

Mr. MYERS presented a petition of sundry citizens of the State of Montana, praying for an appropriation for the payment of one-half of the appraised value of Fort Peck Indian lands, which was referred to the Committee on Indian Affairs.

He also presented a petition of sundry citizens of the State of Montana, praying for an opening to settlement of the Fort Belknap Indian Reservation in that State, which was referred to the Committee on Indian Affairs.

He also presented a petition of sundry citizens of the State of Montana, praying for the establishment on the lower Milk River reclamation project a farm unit of 160 acres, which was referred to the Committee on Irrigation and Reclamation of Arid Lands.

Mr. GRONNA. Mr. President, I have here a letter from the secretary of the Farm Managers' Association of North Dakota, and also resolutions adopted by the members of that association. As I understand my colleague has introduced a similar resolution, I do not ask that it be printed, but I ask that the letter be printed in the RECORD and referred to the Committee on Agriculture and Forestry.

There being no objection, the letter and resolution were referred to the Committee on Agriculture and Forestry, and the letter was ordered to be printed in the RECORD, as follows:

FARM MANAGERS' ASSOCIATION,
January 23, 1918.

Hon. A. J. GRONNA,
United States Senate, Washington, D. C.

DEAR SIR: At the ninth annual meeting of the Farm Managers' Association, held in Fargo, N. Dak., on Wednesday, January 16, 1918, the program consisted of a discussion of the ways and means of maintaining or increasing the production of food products. It was recognized that the one big problem of farm managers at the present time is to help win the war, and it seems to be quite generally understood by people in all walks of life that the production of an adequate supply of food is necessary to the Nation and our allies in the successful prosecution of the war. The principal topics discussed at the Fargo meeting were the means of increasing crop yields, the handling of the seed situation, the place of live stock in increased food production, and the ways and means of relieving the shortage of farm labor.

In discussing the labor problem it was brought out that men and boys who are inexperienced in farm work can not take the place of skilled farm laborers in the handling of the large pieces of machinery that are in use on the farms in this region, in the care of live stock, and in the performance of other operations requiring skill that can be obtained only by years of experience.

In view of the urgent necessity of keeping the skilled farm labor on the farms to maintain production of food products, a committee was appointed to prepare resolutions to be submitted to exemption boards asking them to give careful consideration in claims for deferred classification of skilled farm laborers.

I am inclosing herewith a copy of the resolution that was adopted by the Farm Managers' Association at their annual meeting. It was voted that a copy of this resolution be transmitted to the county and district exemption boards, to State commissioners of labor, the United States Department of Agriculture, and to the United States Senators and Congressmen.

Very truly, yours, R. C. DONEGHUE,
Secretary.

Mr. RANSDELL. Mr. President, I send to the desk resolutions adopted at a meeting of the Louisiana Branch of the National Woman's Party thanking the President for having recommended the passage of the Susan B. Anthony amendment and urging Senators to support that amendment, which I ask may be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

[Resolutions adopted at meeting held under auspices of the National Woman's Party, at New Orleans, La., this 22d day of January, 1918.]

Resolved, That this meeting extend thanks to President Wilson for having spoken to his party recommending the passage of the Susan B. Anthony amendment, thereby insuring a two-thirds majority in the House, and that he be urged to recommend its passage by the United States Senate, to the end that we may be as victorious in the upper House as in the lower.

Resolved, That the two Senators from the State of Louisiana be urged to do all in their power to make the national suffrage amendment a party measure, so that the women may feel that our country's plea for democracy abroad is made a vital issue here at home.

Resolved, That this resolution be sent to the President; to the Vice President; to Majority Leader Senator THOMAS MARTIN; to Minority Leader Senator JACOB GALLINGER; to Senator JONES of New Mexico, chairman of the Woman Suffrage Committee; to Senator ROBERT F. BROUSSARD; and to Senator JOSEPH E. RANSDELL, with the request that it be read into the CONGRESSIONAL RECORD.

MRS. M. L. GRAHAM-BANKSTON,
Chairman Louisiana Branch of the National Woman's Party.
MRS. RANDOLPH LYONS,
Louisiana Secretary.

Mr. NELSON presented a resolution, adopted by the Minnesota Branch of the National Woman's Party of St. Paul, Minn., favoring the submission of a Federal suffrage amendment to the legislatures of the several States, which was ordered to lie on the table.

Mr. HALE presented a petition of sundry citizens of the State of Maine, praying for the continuance of the present rate of postage on second-class mail matter, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of the State of Maine, praying for an allowance to rural letter carriers for maintenance of equipment, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of the State of Maine, praying for Government ownership and control of coal mines and railroads, which was referred to the Committee on Interstate Commerce.

He also presented a petition of sundry citizens of the State of Maine, praying for the creation of a civil service court of appeals, which was referred to the Committee on Civil Service and Retrenchment.

PERSONAL EXPLANATION.

Mr. STONE. Mr. President, I rise to a question of personal privilege.

The VICE PRESIDENT. The Senator will state it.

Mr. STONE. I will state the question of privilege. On Monday of last week—January 21—I addressed the Senate on the

subject of "Politics in the war." With respect to that address different news agencies and correspondents sent out more or less broadcast diversified accounts of the speech and of alleged events—especially preceding events—connected with it. It is with especial reference to the report of these "alleged preceding" events connected with the speech referred to that I rise now to address myself as a matter of privilege. Statements were made, having no foundation in fact, calculated, if not intended, to disparage and break the force of what I said on the occasion alluded to, and as the manifest purpose was to discredit me I feel justified in correcting these published misstatements. It will take me but a few moments to dispose of it.

Mr. President, I would have done this earlier except for the fact that at the conclusion of the debate in the Senate on Monday of last week an adjournment was taken until the Thursday following. That day was consumed for the most part by the speech of the senior Senator from Oregon [Mr. CHAMBERLAIN] in the reply he made to the criticism of the President of the speech the Senator had made some days before in New York. At the conclusion of that speech the Senate took an adjournment until Monday of this week. After a very few moments' session on that day an adjournment was taken until yesterday, when, because of the lamentable death reported to the Senate at that time of Senator HUGHES, of New Jersey, an adjournment was taken until to-day. So this is the first practical opportunity I have had for rising to the point of privilege which I now present to the Senate.

On the day following my speech to the Senate on the subject mentioned Mr. Albert W. Fox, a daily space writer of the Washington Post, stated in his article of that date that the speech I had made was not taken seriously at the White House and in no way had the support of the administration, and by his article sought to create the impression that the speech was condemned by those in and around the White House.

Also, a Washington dispatch appeared in the New York World of Tuesday, January 22, in which the following appeared:

Senator CULBERSON and other Democrats tried to dissuade him [STONE] from delivering it [the speech]. He [STONE] insisted on arraigning the Republicans as playing politics in the war in an effort to take hold of the Government.

Also, an Associated Press dispatch of January 21 to the St. Louis Post-Dispatch, sent out on the day the speech was delivered, contains the following:

Many Democratic leaders, including Postmaster General Burleson, conferred with Senator STONE to-day, seeking to dissuade him from delivering his speech.

I could multiply such quotations indefinitely, but this is sufficient, for if I multiplied them they would be to the same effect. It is about these mi-statements of fact, which are intended in some way to reflect on me, that I desire to speak very briefly.

First, I speak first of the article in the Washington Post, printed under the name of Mr. Fox, in which he undertook to state with precision the attitude of the White House officials with respect to my speech. As to their attitude I can not speak, and would not if I could, but I undertake to say authoritatively that Mr. Albert W. Fox had no authority whatsoever to speak for them. His effusion was altogether without knowledge and wholly gratuitous. I am definitely informed that Mr. Fox had not been within the executive offices for two months before he wrote the article upon which I am commenting, was not there on the day he wrote it, and I doubt if he has been there since. To use an expressive vulgarism, he was simply "talking through his hat." He desired to have the public believe that what he said was true, and so he wrote and published it, without caring whether it was true or false.

Second. The statement I have quoted to the effect that Postmaster General Burleson visited me in the forenoon just preceding the delivery of my address to protest or advise against its delivery is unqualifiedly false in substance and effect. It is true that General Burleson came to my committee rooms on the morning referred to and discussed with me some matters of mutual concern. It is not necessary that I should repeat either the subject or the substance of our conference. It is sufficient for me to say that General Burleson did not on that occasion or at any other time ever speak a word to me in any way suggesting or advising against the delivery of the speech he then knew I intended to make in the Senate on that date. The story is purely a baseless fabrication.

Third. The story that Senator CULBERSON—and I see the honorable Senator present—and numerous other so-called Democratic Senate leaders ought to induce me to forego the delivery of the speech is also false. Senator CULBERSON never spoke to me on the subject in his life. Only one Senator ever spoke to me personally about the speech prior to it's delivery who in any way seemed to doubt the wisdom of making it. That one Senator, whose name I withhold, for whom I entertain not only a high opinion but a most affectionate regard, did express to me a doubt as to the timeliness of making a speech that might be characterized by some as partisan. At that time he did not know what the speech was to be. He heard the speech for the first time when I made it, and at its conclusion this Senator personally expressed to me his approval of it.

Mr. President what I have said is sufficient to show the character of the stories sent out by the different newsmen, and which were published more or less widely throughout the country. These stories are untrue in fact and also unfair, because manifestly they were intended to discount and discredit my address before the country. I have felt that I ought as a matter of justice to myself to brand these falsehoods as they deserve. I am unhappily conscious that my definite denial of these stories which I have now made may never go beyond the walls of this Chamber and the pages of the CONGRESSIONAL RECORD. I apprehend that while the wrong was exploited, the correction will be buried. Nevertheless I will put the truth in the RECORD.

In this connection it might not be amiss to call the attention of my newspaper friends to the letter of Thomas Jefferson to Mr. Norville, which I read in the Senate sometime since, and to express the hope that they will not in this day and generation justify the well-merited criticisms which Mr. Jefferson made of newspapers of his day and generation. Because of their exceptional opportunity to influence public opinion rightfully or wrongfully, for good or evil, I hold that the newspaper editor and reporter should be influenced by the highest considerations of justice, and that truth should be even more sacred to them, if possible, than to any other class of men.

THE FUEL SITUATION.

Mr. SMITH of Michigan. Mr. President, I have some petitions and memorials regarding the fuel situation which I desire to present.

I wish to say, if the Chair will indulge me, that the most expensive coal purchase in the United States last Monday was purchased in my home city of Grand Rapids, where 6 tons of coal cost over $22,000. The consumption capacity of the city of Grand Rapids, Mich., with 135,000 people, is 3,000 tons of coal a day. Last Monday 37 of the leading furniture industries of that city, and the leading furniture center in the world, were closed down by order of the Fuel Administration to save 6 tons of coal that could be carried upon two wagons. It would have taken, by a very careful and painstaking review among our factories, 6 tons of coal more to have operated 37 factories in the city of Grand Rapids last Monday than it took to close them down, and nearly 8,000 workmen were put into the streets on that day, and their wages wasted by Government order. That is a high price to pay for coal in the United States; a tremendous sacrifice for labor to make in order to humor a caprice, a mere caprice. If that is wisdom, I do not understand it. No, Mr. President, it is reckless indifference to individual liberty and the rights of citizenship.

I rise in my capacity as a Senator to protest against the sacrifice of labor and of business to the whims of a Fuel Administrator who will not see his error. Think of it, sir! Thirty-seven great furniture-manufacturing plants closed down a whole day to save 6 tons of coal! And in the nine idle days that are to follow, if this order stands, 54 tons of coal—scarcely a carload—will be saved and over $250,000 in wages to workmen lost.

If we can not make ourselves heard at the Fuel Administrator's office and the weakness of their untenable position can not be demonstrated to them, then I rise in my right as a Senator in this Chamber and make my protest here, with the hope that it may find its way into the heart and mind of men charged with that special responsibility.

On the same day in Detroit great manufacturing establishments, including the Dodge Bros., making munitions of war for the Government, with a full supply of coal on hand, had their force dissipated 70 per cent by that order, and a very essential element in the making of cannon for our Army was arrested and that important work unnecessarily delayed by the Fuel Administrator.

Senators, it is not right; it is neither sensible nor patriotic. I know of communities in my State where woodworking institutions furnish the entire community with fuel, yet they were closed down, although they did not use an ounce of coal. Not a community in Michigan which does not feel the injustice of this order.

Dodge Bros. have ample coal. They bought 100,000 tons last February and had it delivered. There is no question of congestion there. From their coal pile they have supplied 3,000 families in Detroit who have been permitted to come and take

this coal to warm themselves. But yet that institution, which equipped a special plant to make ordnance costing millions of dollars, covering nearly 20 acres of ground space, had to shut down, its force turned into the streets, and our preparations for war delayed because of a wholesale and thoughtless order, which did not save an ounce of coal or relieve congestion anywhere. Sir, I protest against this course. I protest against it in the name of the loyal people of Michigan.

The memorials presented by Mr. SMITH of Michigan were as follows:

DETROIT, MICH., *January 30, 1918.*

Senator WILLIAM ALDEN SMITH,
Washington, D. C.:

Unless pressure is brought to bear on Fuel Administration to get fuel to Detroit all factories in town will be closed. There are approximately 25 will be closed this week. Why can not order be issued closing all saloons, theaters, pool rooms, bowling alleys, and other nonessentials permanently until situation is relieved? Workmen of town getting very much wrought up, and will bring about very bad condition. We have fuel only enough until Friday, with no prospect of getting more, and have many Government orders. Wish you would use your full influence to bring about betterment of our condition

O. S. OVERTON-BOWEN PRODUCE CORPORATION.

DETROIT, MICH., *January 30, 1918.*

Senator WILLIAM ALDEN SMITH,
Washington:

For past 10 days we have been operating 10 large apartment buildings on 24 hour supplies of coal. Our source of supply is now being cut off; this is due partially to cars consigned to us having been confiscated in Ohio, and also to the fact that very little coal is being shipped into Detroit. Our immediate shortage effects 600 families. We must have immediate relief or our apartment buildings will be closed and tenants forced to find other quarters or freeze.

HENNAN REAL ESTATE EXCHANGE.

Mr. SMITH of Georgia subsequently said: Mr. President, I wish to supplement what was said by the Senator from Michigan [Mr. SMITH] by calling attention to the fact that on Monday the hydroelectric plants practically all over the United States closed down, or, at least, the industries operated through hydroelectricity were compelled to close.

I wish to illustrate the practical effect of this action by referring to the city in my State which has the largest number of mills operated by power furnished by hydroelectric plants. In Columbus, Ga., there are 12 mills; there are between seven and ten thousand operatives who work in these mills; the mills are largely employed in producing material for the Government, some not directly for the Government, but they are producing to a large extent cloth for contractors who are furnishing clothing for the soldiers.

These mills, though stopped, were compelled to use coal to protect their sprinkler systems and to provide their fire-extinguishing plants. They would have required no additional coal, if operated, to warm the employees, for the additional heat coming from the operation of their electrical machines would have furnished all the heat required for the buildings when added to that which they did use, though closed down. So these mills could have operated without burning a pound of additional coal inside the mills.

The seven to ten thousand employees were sent home. In their houses they burned much more coal than would have been used had they been in the mills. So that the immediate result of closing these mills was an increased consumption of coal last Monday in the city of Columbus, Ga., with loss of work to between seven and ten thousand employees and a loss to the Government, a loss in our national strength, in the conduct of the war, of products needed to conduct the war.

But this is not all, Mr. President. The three months when the water supply is ample in the southeastern States are January, February, and March. Later along in the year the water power is not sufficient and the electrical currents for the operation of the mills must be supplemented by the use of coal in addition to the water power. The water passed over the dam last Monday and is gone. It will continue to pass over the dam these other Mondays, if the mills are not operated, and will be wasted.

I heard one of the leading men engaged in these industries from that section state, in the presence of Dr. Garfield on yesterday, that the coal that would be required to produce the power which would be wasted on these Mondays would amount to 150,000 tons, and if this waste takes place now the coal must be burned later along to make up the loss.

These mills are behind on their contracts with the Government. It is as important that the thin clothing should be ready for summer as that the warm clothing should have been ready in the fall, and stopping these mills will hinder a production so essential for the protection of the health of the American Army.

Mr. President, these facts were fully presented to Dr. Garfield yesterday, and I wish to say for him that I do not think he contemplated that his local agents would actually stop hydroelectric plants. They had been requested to ask that they stop. They had been advised to make an appeal to their patriotism to stop; but in my State the fuel agents went further and threatened criminal prosecutions if the mills were not stopped.

Mr. BORAH. Mr. President, I do not know that I exactly understand the position of the Senator. Do I understand him to say that he is of the opinion that Dr. Garfield did not intend that these people should shut down?

Mr. SMITH of Georgia. No; I did not say that. I said that he did not intend that his local agents should say that they were obliged to shut down. He only expected his local agents to appeal to their patriotism to shut down.

Mr. BORAH. Well, assuming that they were patriotic men, that would be about the same thing as compelling them to shut down.

Mr. SMITH of Georgia. Unless they saw that it was more patriotic to operate and furnish the soldiers what they needed and the Government what it needed than to comply with a view of patriotism suggested by one who perhaps was not as familiar with the facts as they were.

Mr. HARDWICK. Mr. President, will my colleague yield to me?

Mr. SMITH of Georgia. Certainly.

Mr. HARDWICK. I have had this same question up with Dr. Garfield, and he does not contend that under the law he has any authority to close the hydroelectric plants; but he did say that he had made the request in every State, and he made it, he said, on account of transportation. He said that that was the real trouble—that the railroads could not transport the stuff that the mills made.

Mr. SMITH of Georgia. I believe Dr. Garfield will advise his agents that they had no authority to stop the hydroelectric plants. I was before him yesterday with millmen from the South. We discussed the subject before him yesterday. I have here his letter, expressly declaring that he had no authority and did not undertake to stop these plants. It was signed several days ago. I have advised all mill operators that this letter was in my possession, signed by him, and that he had not withdrawn it. I hope that he will not only instruct his local agents not to make any threats against plants operating with hydroelectricity but that he will go further and concede that the service of their country requires that they operate, and that it is the part of patriotism to continue operations in order that we may be prepared to meet the call which soon will be made on us for spring and summer clothing for the Army and Navy and for other supplies.

APPOINTMENT OF INSPECTOR OF EXPLOSIVES.

Mr. SMITH of Arizona. Mr. President, inasmuch as I may be called away, I rise to a matter not exactly in the nature of personal privilege, though I might take the floor so claiming if I desired to do so. I regret that the Senator from Pennsylvania [Mr. PENROSE] is not present. I should be willing to await his coming if I did not myself expect shortly to leave the city.

On page 1091 of the RECORD a statement made by the Senator from Pennsylvania in my absence contained the following language:

> I had curiosity to find out who had been appointed, and I discovered in Pennsylvania that a gentleman who had been engaged in the honorable occupation of selling Hire's root beer at retail was the inspector of explosives, and admitted that he did not know a thing about it, but if there was any hard work connected with it he would not take it. The Senator from Arizona—

The Senator from Pennsylvania was alluding to me, for I was stading in front of his desk at the time the question of the confirmation of inspectors of munitions came up in executive session—

> The Senator from Arizona was extremely solicitous to have his inspector acted on immediately, and I discovered from several hundred letters from the State of Arizona that he was a cigar maker.

I wonder if the first statement of the Senator was as unreliable as his second. *Hundreds of letters from Arizona!* By what peculiar affinity did the Senator from Pennsylvania find more people to make a misstatement in a few days through the mail than I have found in 37 years of life amongst them?

The fact is that the gentleman himself, Mr. Shaw, wrote a letter to the Senator from Pennsylvania, which has not been read on this floor but which I will ask the Secretary to read, and I shall ask the attention of the Senate to it, as it shows the carefulness with which the Senator from Pennsylvania states the truth when he has a political question in his mind. I mean nothing against the Senator personally, but he is so saturated with political prejudice that it is impossible for him to deal fairly when such a question is involved. With the exception of some matter which I should not care to have printed in the

RECORD without first showing it to the Senator from Pennsylvania, I ask that the letter be read in justification of Mr. Shaw as well as for my reasons in recommending him.

Before the Secretary commences reading, however, I should like to say that I made no request of the Senator from Pennsylvania or of anyone else that the nomination of this particular man, Mr. Shaw, as explosive inspector of Arizona, should be immediately confirmed. Mine was a mere pleasant allusion. The Senator said they all needed money, and I said, "Then, if they are in that fix, by all means let them all be confirmed at once." Then he said that I was extremely anxious to have this particular man confirmed, inferring that I was afraid the fact might get out, as he had stated it from the hundreds of letters which he had received from people in Arizona to the effect stated by him in his speech. Not one of those letters told the truth about it, and I think the Senate will pardon me for having a slight doubt as to the vast number of misstatements received by the Senator on a matter so unimportant. I now ask the Secretary to read the letter.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

PHOENIX, ARIZ., *January 22, 1918.*

Hon. BOIES PENROSE,
United States Senate, Washington, D. C.

DEAR SIR: Associated Press news gives an account of your attack in the United States Senate yesterday on the Federal explosives inspectors, and it is stating it mildly indeed to say that I am surprised that any man * * * should make the charge you did against the United States inspector for the State of Arizona without first ascertaining the facts.

For your information, I am not now and never have been a cigar maker, although at one time I owned a large block of stock in a cigar manufacturing plant which furnished labor to 40 or 50 families, and later owned a retail establishment which represented but a small portion of my holdings in Arizona, as since the act of Congress providing for the reclamation of the arid lands of the West by means of Government irrigation projects I have backed my faith by good American money and have reclaimed several hundred acres of land, a part of which have passed into other hands and are now among the best-producing ranches of this locality. I have also taken an active interest in the production and feeding of cattle for the eastern markets, and for your further enlightenment I was for a number of years in the managerial capacity of a large wholesale establishment which handled, among other commodities, explosives used in the mines and in the mining development of the State, in which I have been and am still heavily interested.

In conclusion, I am quite able and willing to make affidavits to substantiate these and any other claims I might make as to the part I have taken in the substantial development of my State, although this information is easily accessible to anyone who really wishes to investigate my activities in Arizona and elsewhere, rather than to seek by such paltry, partisan methods as yours in casting aspersions upon an honest trade, even though not mine, in what seems a desire on your part to embarrass the administration at this critical period in our national history.

Very truly, yours,

_____,
United States Inspector of Explosives,
State of Arizona.

Mr. SMITH of Arizona. Mr. President, perhaps there would have been reason for a still further assault by the Senator from Pennsylvania if he had known that this cigar maker, as he calls him, was also selected from the largest county in the State of Arizona as one of the delegates to the National Convention at Baltimore. He is a man who had the right to be free from the aspersions of any Senator on this floor. The Senator from Pennsylvania could easily have ascertained, by seeing me and my colleague, the facts before he put such a statement as that made by him in the RECORD. I wish simply to let my friends at home and the people generally know that I have made my protest against this very unjust and unjustifiable assault against a friend of mine whom I had recommended for office and in whose honor, integrity, and fitness I have full confidence.

AFFAIRS IN RUSSIA.

Mr. CALDER. Mr. President, preliminary to making a request for unanimous consent to have an article printed in the RECORD, I ask the indulgence of the Senate for a moment or two to explain the nature of the article.

Mr. President, at this time when a great many persons are expressing the gloomiest thoughts regarding the cessation of hostilities on the Russian front, and a wave of hostile criticisms of the Russians is sweeping over the country, I would like to draw the attention of the Senate to a view of that situation, to which most of us, unhappily, have been strangers. The view I am about to present is likely to become accepted as time passes as the real judgment upon the Russian revolution of last November, when what are known as the bolsheviki came into the ascendency.

First, Mr. President, I desire to speak of a man who has been in Russia, and who, to my mind, has rendered great aid to his country—a man who stands in the forefront of American business and finance, who dropped all of his personal affairs and went to Russia, where he worked, giving closer attention to the interests of Russia and the allies than, I venture to say, he ever gave to anything else in his whole career. I refer to Col. William B. Thompson, a director of the Federal Reserve Bank of New York, who was in command of the American Red Cross mission in Russia. He had already contributed a quarter of a million dollars to the fund of the war council of the Red Cross, which covered the bulk of the expenses of the mission to Russia. Col. Thompson was four months in Petrograd. During that time he sensed fully the meaning of the Russian revolution. He saw the assistance that the Russians needed in their struggle for a stable government, and he saw the utmost importance of combating the well-organized German propaganda which had already knocked Russia to pieces as a cohesive fighting force and threatened to bring that country and Germany together as friends, if not as allies, right in the middle of the war. As the matter was of a pressing character, Col. Thompson found that it would not permit of delay. But it was impossible to convey by cable any idea of his vision regarding this intricate and complicated situation so that it would be appreciated and acted upon by the Government at Washington. In this emergency Col. Thompson played the part of a great American in combating the German propaganda. He came back to this country a short time ago to tell the story in order that the situation might be better understood and more intelligently handled. It was a story in effect that the hated bolsheviki leaders, who had been proclaimed as paid German spies, would not make a separate peace with Germany unless the attitude of countries formerly in alliance with Russia forced them to do so, and that the Russian democracy, under the leadership of the maximalists, was the greatest enemy the Kaiser had. In other words, the Russian democracy, alongside of Germany and Austria, were setting the populations of those two countries on fire with the spirit of democracy and the fervor of anti-Kaiserism; that Austria was already yielding to the propaganda from Russia, and that Germany had been smitten, so to speak, so hard by its own boomerang that in time a democratic upheaval in that country would compel the German general staff to yield its attitude of annexations and world domination.

One evening last week Col. Thompson was entertained at dinner by the Rocky Mountain Club of New York in celebration of his return. It just happened that this dinner was the first anniversary of the conception of a movement led by him to turn over to the starving children of Belgium the fund which the club had for the erection of a new clubhouse and which Col. Thompson headed with a personal subscription of $100,000. This fund came to be known as the Hoover Rocky Mountain Club Fund for Relief in Belgium. Thus briefly and inadequately I have tried to give, by describing his acts, a rough picture of the man who, surrounded by his friends, delivered his message about Russia, which I now desire to give to the Senate.

I ask that Col. Thompson's address be printed in the RECORD, and I earnestly urge that every Member of the Senate read it carefully. It presents a knowledge of present conditions in Russia, and a vision of its future possessed by few men in this country.

Mr. STONE. Mr. President, before the Senator takes his seat, will he permit me to interrupt him?

Mr. CALDER. Certainly.

Mr. STONE. I have read the address to which the Senator refers, delivered by Col. Thompson, and I am greatly gratified that the Senator from New York has asked that it may be printed in the RECORD. It is one of the most interesting contributions to the current history of the war, especially that part of it relating to Russia, I have seen. I received a copy of this speech and read it with great interest. I have spoken of it to two or three Senators who had not seen it, and read it to one of them in my committee room, and he was greatly impressed by it, as I was. My only object now, aside from seconding the request of the Senator from New York, is, as far as I can, to call the attention of Senators to this remarkable address—I think it is remarkable—in order that those who have not read it shall not neglect the opportunity of doing so when it appears in the RECORD.

Mr. CALDER. Mr. President, I want to thank the Senator for his comment upon this address. It struck me so forcibly that I was prompted to make this request of the Senate this morning.

Mr. OWEN. Mr. President, I should like to say to the Senator from New York that I also have read this address with great interest, and I think it ought to be made a part of the public record.

The VICE PRESIDENT. Is there objection to the request of the Senator from New York? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

RUSSIAN PROBLEMS.

I have returned to this country with some very strong ideas regarding Russia, and the duty of the United States and the allies to that stirring, and I am afraid you will think somewhat erratic, young democracy.

I come from a people now generally known as the Bolsheviki, who just now are extremely unpopular in the American press. They are held up as assistant Germans and are being donounced for having deserted the allies and throwing their influence on the side of the Kaiser. I am afraid the American people are slow to realize one of the greatest facts in the war at this time. The Bolsheviki at the present moment are a tremendous factor in making the central powers of Europe realize that they can never win this war; that they will be forced to a basis of a reasonable and a lasting peace.

The newspapers that are denouncing the Bolsheviki just now are printing columns about a revolution in Austria-Hungary, a revolution based upon immediate peace with no annexations and no indemnities. This Austro-Hungarian revolution was inspired by the Russian Bolsheviki. The importance of this revolution should not be ignored. The example and efforts of the Russian democracy are setting the central powers on fire. The most damaging enemy Germany has is the Russian democracy alongside of it, preaching to the German common people and to the German soldiers the same doctrine of democratic peace. Stranger things have happened than that a lasting peace, without the realization of any of Germany's despotic war aims, may be at this very time in the making.

When I arrived in Russia last July I found the country almost prostrate through demoralization caused by unopposed German propaganda. German propaganda had brought about a strike through all Russia three days before the declaration of war in 1914. German intrigue and propaganda had so surrounded the Czar that a separate peace was almost impending last March.

FOOD RIOTS PART OF PLOT.

Food had been cut off deliberately from Petrograd and other cities in order to cause bread riots and strikes, with the cold intention on the part of the German and Russian autocracies of using these measures as an excuse for a separate peace. The Russian soldiers refused to fire on the hungry people, and the long-sought-for Russian revolution was realized with the abdication of the Czar. At the time I reached Petrograd that noble Russian patriot, Alexander Kerensky—and I am deliberate in calling him a noble man—was attempting a coalition government, a government representing the rich and the poor. The rich, however, were not satisfied to work with the poor.

German propaganda was busy tearing down. Allied haggling was unconsciously aiding, and this resulted in an attempt to place over Russia a man on horseback—Korniloff. To me it seems that a madder scheme was never conceived in the brain of man. It aroused to frenzy the great mass of Russians, who interpreted it as a return of the old order. Just at this time a Russian general, Gurko, who had been deprived of the command of the army for writing letters to the Czar, saying that he hoped to see him return to power, escaped to England and was received in audience by King George. When you who have not been to Russia are puzzling your brains over the Bolsheviki and wondering why they should be so extreme and so opposed to the property-owning classes, it would be useful for you to remember these things, which will explain why the workingmen and peasants are in absolute control in Russia and passionately devoted to making their freedom secure. The terrorism under which the limited property-owning class is living in Russia is slight compared with the terrorism in which the workingman and the peasant lives in contemplating a return of the power of the old régime.

RUSSIANS REAL PATRIOTS.

We talk about patriots in this country, but we do not know what patriotism is until we see in Russia examples of what I should call the patriotism of mankind. While in Russia I met some real patriots. There I met men and women who for the benefit of their fellows had spent three-quarters of their lives in prisons and chain gangs. There I met the heads of the revolutionary groups who for 50 years and more had been risking their all for Russian freedom—Madam Breshkovsky, Mr. Tchaikovsky (Shaykovsky), and Mr. Lazaroff. Think of Breshkovsky, the Grandmother of the Revolution, 74 years old, a prisoner and an exile for 34 years, still working night and day with might and main for the benefit of her fellow Russians.

This group surrounded Kerensky, who believed in working out the social problem by the Russian labor classes in conjunction with the property-owning classes. Then, again, I saw the workings of another group, equally patriotic, who believed that ultimate freedom and the possession of the land could only be worked out by the workingmen and the peasants. I can easily see how Marie Spiridovna, now a leading figure in Russian life, believes that freedom is only to be realized by a government of workingmen alone. The Russian revolution, only a few months ago, released this young woman, now only in the thirties, from 15 years' solitary confinement in a Siberian prison.

I will say right here that, if at any time during my travels I was a witness of deeds of wanton destruction and violence, it was not in Russia. If at any time I was subjected to any discourtesy or incivility, it was not in Russia. If at any time I was in danger, it was not in Russia.

COUNTRY NEEDS HELP.

Yet Russia is a good deal disorganized these days, and needs our help. There have been revolution and attempted revolution, one coming on the heels of another. There has been considerable civil strife in one section of the country or another, but the reports always appear much more dreadful than the facts really are. Russia is happy in her trials, because Russia has found something which her sons, and their fathers and grandfathers and great-grandfathers have been striving for. Russia has found freedom. Russia is a democracy. It is a democracy which comes as near being representative of the soil as it would be possible to find anywhere. It has mud on its boots, hair on its face, and the love of freedom in its heart.

Russia is a government of the workingmen and the soldiers, of the peasants and the mechanics. It is a democracy which is striving for the uplift of the great masses. The one great desire of perhaps 94 per cent of Russia's 189,000,000 people is to have peace; to have land which they can control and call their own; to have a part in the industrial life of the country, and feel that they own a part of it; to live lives of order, unrestrained by any czar or dictator; to acquire education; and to improve their condition. This is the impulse which has stirred the Russian people long before and ever since they overthrew the Czar.

When I say that they want peace, I do not say that they want a separate peace. Democratic Russia, in my opinion, will never make a separate peace with autocratic Germany. The present Government has not ordered the soldiers away from the trenches. On the contrary, it is filling the places of deserters with new soldiers recruited from the Red Guard. The Russian democracy wants peace, as we in America want peace, as they want peace in France and England and Italy. They want a peace with a democratic Germany and not with an autocratic Germany.

PEOPLE NOT VENGEFUL.

I have been deeply impressed with the effect of the new-found liberty upon the great masses of the Russian people. It did not turn them into a vengeful horde, bent on wholesale massacre and bloodshed, the newspaper reports in most part to the contrary notwithstanding. As a matter of fact, it did not change them very much, except that from a sad, brave, protesting people they became a glad, amiable, but rather bewildered people. They attained liberty, and naturally it is taking some time for them to work out the system of government under which they will live. They are a kindly people, and as a nation they have very high ideals.

It was the Russian democracy which gave to the world the cry that there should be no annexations and no indemnities. That is a cry which should have been appreciated earlier in America, and should have resulted in the unswerving sympathy of America being extended to the Russian democracy. It was the democracy of Russia which injected into this war the cry, "No secret treaties!" It was the democracy of Russia which gave to the world the principle of self-determination by small nationalities, which President Wilson has crystallized in his message and which will form the basis for the freedom of the world. In the face of declarations like these from the Russian democracy there has been a torrent of abuse from some of the Russian upper classes and from the American press, which, I am sorry to say, apparently does not comprehend some of the most important and fundamental elements of the Russian situation.

Attempts have been made to stop all supplies going to Russia from the United States. Advice was given for all allied representatives to withdraw. If this advice had been followed, it would have tended to put Russia into the arms of Germany. Do you realize what this would have meant? The German general staff in time would dominate Russia socially, commercially, and politically. All Asia would be Germanized, and Germany would realize her ambitions on the Pacific similar to those which she entertained on the Atlantic.

GROPING FOR LIGHT.

We are sending our youngest and our best blood to the trenches, and we owe them the best diplomatic advice and service that we can possibly obtain.

I urge strongly that we do not relax our efforts to help the Russians. We should not grow impatient because of their attempts to put into practice what we might regard as wild theories. We should always remember our own shortcomings while our Government was in the making. Some of the things which we have introduced into our Government and which have worked out satisfactorily would have been regarded as wild populism 30 years ago.

The Russians are groping for light. The revolution and the experiments in government are the natural outbursts of untrained men organizing freedom on their own lines. Many of the laws of the old autocracy must be changed in Russia. They were made for the vested interests in which the common people had no part. In the legislative cataclysm many things will be attempted to be later discarded. It must be remembered that prior to the revolution upward of 160,000,000 human beings were in a condition not much better than serfdom. Our negro slaves before the Civil War were better cared for, as most of them had good masters who lived on the soil. On the other hand, in Russia most of the masters lived away from the land, ofttimes at Berlin, Paris, and Monte Carlo. What I saw in Russia has impressed my mind with the necessity for cooperation between employer and employee. First, Russia had an Extreme Right under the Czar exploiting labor as it was never exploited outside of the Congo. Then we had Kerensky, endeavoring to unite labor and capital in a government. Capital was arrogant, and did not want to let labor have a voice. Kerensky fell. Now the government is all labor.

GREAT FORCES IN MOTION.

Great forces are moving in every country. I would like to urge my friends to ponder seriously the problems which we shall have to meet at the conclusion of the war; indeed, perhaps before the war is ended. If we are wise, we will prepare for the time, which should soon come, when genuine capital and genuine labor, if both are wise, will be sitting around the office table and in the Halls of Congress settling great questions at issue between them.

We must stop to consider whether we have not delegated the law-making power, so far as it relates to capital and labor, too much to paid attorneys. No one will accuse me of underrating the usefulness of lawyers. They can be used too much, however, and if there has grown up a system of legislation by proxy in this country, then it can and should be ended. With lawyers representing labor and capital in Congress and in our legislatures, both labor and capital get what might be termed "the absent treatment," and that is not a good thing for either.

Many of my friends who are in this room to-night were pioneers of the far West when civilization was being carved out of the wilderness. They had no government except as they made it. We know that miners' law, sometimes reinforced by the vigilance committee, was good law. This law was made by the workingmen. Our problems then were partly those that Russia has to-day, only her's are a thousandfold greater.

The men in the western country were the makers of their country, and it is a country of which the Rocky Mountain Club may well be proud. These men would not have hesitated very long about extending recognition and giving the fullest help and sympathy to the workingmen's government of Russia, because in 1849 and the years following we had out there bolsheviki governments made out of the raw material, and mighty good governments, too. What happened in Montana, Colorado, Wyoming, Idaho, and California is now in progress in Russia. Remember that a republic probably much greater than ours is in the making on the other side of the world, my friends, and it is such a republic as the German autocracy can not have very long next door and survive. Democratic Russia means democratic Germany, and democratic Germany means peace lasting and complete for the world. That is why at this moment the example of Russian democracy finds expression in revolution in Austria-Hungary and continuous agitation in Germany against the aims of the German general staff.

NO CAUSE FOR ALARM.

Do not be alarmed as to the future of Russia. Some of my newspaper friends are taking frantic alarm that the Russian national debt may be repudiated. Well, it hasn't been repudiated yet, and I very much doubt whether the Russia that is emerging from this turmoil will ever repudiate any obligation, even though it may have been incurred in trying to hold the Czar on his throne. All we need is a great patience, and a great fairness, and a great sympathy. Russia will soon learn that capital and labor must go hand in hand. Russia's vast resources must be developed for the benefit of the Russian people. That will be realized by the Russians quite as rapidly as we are realizing that the employers of labor must cooperate with labor to bring about the best possible results. The freedom of Russia was as inevitable as the natural laws governing the rotation of the earth. The uniting of all forces in Russia in a democratic social system is just as inevitable.

They say, "The Russian democracy is red!" Yes; full of good, red blood—but you'll find it isn't yellow!

Mark my words, if the present program of the Bolsheviki, the common people of Russia, is not successful in aiding the common people of Austria and Germany to break down their autocracies, the Russian soldiers will be fighting again.

WAR WITH GERMANY.

Mr. McCUMBER. Mr. President, I am about to ask that a very brief editorial, taken from the Washington Post of yesterday, may be read into the RECORD. It is upon a most important subject—or, rather, upon two very important subjects—and I think it very appropriate to call attention to two statements made by Secretary Baker before the committee in the investigation which we had the other day. The first of these statements is as follows:

And I am telling you no secret when I say that ships are the crux of this problem, and every time we can use French industrial resources instead of making and sending our own products, we are doing it.

And again:

Our problem was and is to get over and get at the enemy.

And a further statement:

Now, instead of having 50,000 or 100,000 men in France in 1917, we have many more than that in France; and instead of 500,000 men whom we could ship to France if we could find any way to do it in 1918, we will have more than 500,000 men in France early in 1918; and we have available, if the transportation facilities are available to us—and the prospect is not unpromising—1,500,000 who in 1918 can be shipped to France.

In connection with that, Mr. President, I wish to call attention to one little statement in this editorial:

That is the testimony of the Government's witnesses before the Senate Committee on Commerce. Riveters who drove 375 rivets per day before the war are now driving 150 to 200 a day, and can not be induced to drive more. They get bigger pay, and so find no reason for working hard. On the Pacific coast the Government is paying a bonus to workmen in shipyards to induce them to work six days a week.

Another little bit of testimony which I may properly recall to the Senate at this time is a statement made by one of the Government engineers of the character of work that is now being done, or was being done, at our cantonments and other places, in which he declares that we are not receiving more than from 5 to 10 per cent of the accomplishment that we should secure in our labor.

Now, these are becoming mighty important propositions; and while we are asking the people to starve themselves and asking them to save upon coal and freeze themselves, I think it is about time that we ask every American citizen to do an honest day's work for a good honest pay for his Government during the time of this great conflict, and there ought to be some means to require every man capable of doing work, between the ages of 18 and 62, whether it is physical or mental, to perform some kind of service for his country.

I think that the little editorial will awaken us to a realization of some of our duties along this line. I ask that it may be read.

The VICE PRESIDENT. Is there objection?

Mr. SMITH of Arizona. Mr. President, I will make no objection to the printing in the RECORD of the editorial, as requested by the Senator from North Dakota, but I do wish to give notice, as far as I can on behalf of the Printing Committee, that I am going to object to the printing of statements not made on the floor, and I do not know but that we might go a little further and even keep some of those out.

Mr. HARDWICK. The Senator does not object to the printing of this editorial?

Mr. SMITH of Arizona. I do not. I appreciate the propriety of the Senator's request to print the editorial of which he speaks, and I disclaim any criticism of him, but I merely give notice that it is the sentiment of the Printing Committee that we should stop the practice of placing in the RECORD matter not read upon the floor of the Senate.

Mr. GALLINGER. Mr. President, that sounds familiar to me. I commenced that effort 20 years ago, and 10 years ago the senior Senator from Utah [Mr. SMOOT] joined me, and we have been struggling along that line ever since, and nothing has been accomplished. Possibly the Senator from Arizona may solve the problem when it has been absolutely impossible for some of the rest of us to bring about a solution.

The VICE PRESIDENT. Without objection, the Secretary will read the editorial.

Mr. HARDWICK. I did not understand that the request was that the editorial be read.

The VICE PRESIDENT. Yes; it was.

Mr. HARDWICK. I thought the request was that it go in the RECORD without reading.

The VICE PRESIDENT. Is there objection to the reading of the editorial?

Mr. HARDWICK. Yes; I object to the reading.

The VICE PRESIDENT. The question is, Shall the editorial be read? [Putting the question.]

Mr. HARDWICK. I will not insist upon my objection.

The VICE PRESIDENT. It is carried, and the Secretary will read the editorial.

The Secretary read as follows:

[From the Washingon Post, Jan. 30, 1918.]

THAT ALL-IMPORTANT WORD "IF."

"We have available to be shipped to France, if the transportation facilities are available to us, and the prospect is not unpromising, 1,500,000, who in 1918 can be shipped to France." These are the words with which the Secretary of War seeks to reassure the people of the United States. He said also: "I am revealing no secret when I say that ships is the crux of our problem."

An ominous, overshadowing "if" looms ahead of the United States in carrying on the war.

If ships are available, the United States can send 1,500,000 to France during 1918. If ships are available, food can be provided for the allied nations which will enable them to continue the war. If ships are available, munitions can be sent to England and France to enable them to keep their armies in the field.

In the face of this all-important qualification the Secretary of War officially predicts a resumption of submarine activity, directed particularly against vessels trying to cross the Atlantic from the United States.

At present there are about 145,000 men at work building ships of all kinds. It is calculated that one man can turn out 1 ton of shipping per month. That would mean 145,000 tons with 145,000 men, if there were no labor unrest and inefficiency, but as a matter of fact the present output is 35 per cent less than 145,000 tons per month. That is the testimony of the Government's witnesses before the Senate Committee on Commerce. Riveters who drove 375 rivets per day before the war are now driving 150 to 200 a day, and can not be induced to drive more. They get bigger pay, and so find no reason for working hard. On the Pacific coast the Government is paying a bonus to workmen in shipyards to induce them to work six days a week.

The shipyards in most places are working only one shift in 24 hours. Shipbuilders say it is difficult to get good results in night work, but additional shifts could be put on if there were workmen available. But there is no housing for additional workmen if they should apply for work, although the Shipping Board has been aware since last spring that the United States was in need of ships.

A number of steel mills have closed down for lack of fuel and other reasons. The production is below normal instead of being far above normal. If more steel could be produced and houses could be provided for more workmen who would actually work, 500,000 workmen producing as much per man as before the war could turn out 6,000,000 tons of shipping in 1918 and enable the Government to send 1,500,000 men and necessary supplies and food across the ocean.

The chances are so strongly against this achievement in 1918 that the Senate committee very properly looks about for some other factor that may help to save the situation. The only feasible method of increasing shipping seems to be by the construction of concrete ships. The committee has taken testimony which affords hope of accomplishment. The building industry of the country is practically idle and can be turned largely to concrete shipbuilding. Unskilled labor can be used, and this is available without any housing problem. Most of the work would be done by machinery—the American way. Concrete ships of large size are an experiment, but good-sized vessels have been built, and structurally they seem to be sound and seaworthy. They yield to strain and stress, just as steel yields, without injury. There is a greater weight to be considered, but this is not a fatal objection; a heavy ship is better than no ship.

If the United States must resort to concrete for ship material in order to accomplish its aims in 1918, let it do so quickly, without halting and waiting for investigations and reports by scientific commissions. If the suggestion regarding concrete affords any prospect of securing additional seaworthy ships, it should be adopted forthwith, without regard to cost or the appearance of the ships. Call it an experiment or what you will; it is no greater experiment than the other experiments of this war.

Mr. HARDWICK. Mr. President, I rise to a question of order. During the transaction of morning business speeches can be made only by unanimous consent.

The VICE PRESIDENT. That is true.

Mr. HARDWICK. And articles can be read only by unanimous consent.

The VICE PRESIDENT. No; articles can be read by a majority vote.

Mr. HARDWICK. Undoubtedly during the progress of a speech, but a speech can not be continued except by unanimous consent. However, that is neither here nor there. I do not except to the ruling of the Chair, although I think it was erroneous, but I desire to give notice that hereafter during the transaction of the morning business and until it is concluded I shall object to any Senator making any remarks until we finish that order. I put it in this way so that it can not be personal.

I have enjoyed all the remarks that have been made this morning; I have no objection to any of them; but I think as a matter of practice we ought to stand by our rules and conclude the routine business and then make all the speeches we want to make, if time permits.

STATEMENTS OF SECRETARY OF WAR.

Mr. JAMES. I ask unanimous consent to have printed in the RECORD a speech made by Secretary Baker before the Military Affairs Committee on last Monday.

Mr. GALLINGER. Does the Senator mean a speech?

Mr. JAMES. Yes, sir; the speech.

Mr. GALLINGER. It was a matter of testimony, was it not?

Mr. JAMES. It was a speech. The Senator may call it testimony. I do not care what technical name is given to it, but I refer to the speech, or whatever it might be called.

Mr. GALLINGER. I find in the printed record of the committee the original statement made by the Secretary of War before that committee. If the second statement made by the Secretary of War is to be printed in the RECORD, it seems to me that it is quite fair that I should ask that his first statement be likewise printed.

Mr. JAMES. I have not the slightest objection to that. All I want is that this speech which he made in response to certain statements and charges and misinformation should be given as wide a circulation as the charges made against him were given. It appears to me that that is perfectly fair. If the Senator has some additional information that the country ought to have, I have not the slightest objection to that being printed in the RECORD.

Mr. GALLINGER. Of course, this is not a speech. It is the testimony of the Secretary of War given before that committee. He gave his original statement and now he has made another statement. It seems to me if we are going to print any portion of it we ought to print both.

Mr. JAMES. I am perfectly willing to have both printed. The Senator can make a request, however, for printing the original statement. I will merely say to him I have no objection to that being printed, but the request I made is that the speech of the Secretary of War made before the Committee on Military Affairs last Monday shall be printed in the RECORD.

Mr. GALLINGER. I will frankly say in response to the suggestion of the Senator that it is hardly necessary to print in the RECORD either statement or any part of this testimony. It is going to be printed by the committee. The first statement made by the Secretary of War has been printed by the committee, and his additional statement, I presume, will be printed in the near future, if it has not already been printed. It will be available to every Senator, and can be sent out under his frank if he wants to flood the country with it. But to put it in the RECORD, where very few people will ever see it or read it, I think is simply burdening the RECORD with material that might well be kept out of it.

Mr. JAMES. I think we burden the RECORD with a great many very much more unimportant matters than the speech of the Secretary of War.

Mr. HARDWICK. Mr. President, I rise to a point of order.

The VICE PRESIDENT. The Senator from Georgia will state it.

Mr. HARDWICK. I demand the regular order.

The VICE PRESIDENT. This is not routine morning business, and the Chair sustains the objection. It is not the presentation of a petition or a memorial or any other subject embraced in the rule.

Mr. JAMES. I merely ask unanimous consent.

Mr. HARDWICK. I am not objecting to the request, but I do not want discussion.

Mr. SMOOT. I will ask the Senator from Kentucky to have it referred to the Committee on Printing.

Mr. JAMES. Oh, Mr. President, that is highly technical, it seems to me, when the Secretary of War——

Mr. SMOOT. It is not highly technical with me, and is generally the course pursued.

The VICE PRESIDENT. The trouble is that Senators ask the Chair to enforce the rule and then they violate the rule themselves. This is not a part of morning business.

Mr. JAMES. I have not violated any rule.

The VICE PRESIDENT. It is not the Senator from Kentucky. An objection was made by the Senator from Georgia to the discussion of this question, and he has a right to object to a discussion of it during the morning hour.

Mr. JAMES. The Senator from Georgia withdrew that objection.

Mr. HARDWICK. No.

Mr. OVERMAN. The Senator from Kentucky asked for unanimous consent.

Mr. JAMES. That is what I have done. I have asked for unanimous consent.

The VICE PRESIDENT. Is there objection to the printing of the statement in the RECORD?

Mr. GALLINGER. Mr. President, I wish to enlarge that request, and I ask that the testimony that the Secretary of War gave in the first instance be also printed.

The VICE PRESIDENT. Is there any objection?

Mr. SMOOT. I wish to ask both Senators if they will not agree to have the testimony referred to the Committee on Printing. I do not want to object to the printing of either.

Mr. JAMES. No, Mr. President——

Mr. SMOOT. Then if the Senator will not agree to that course I could object.

Mr. JAMES. Certainly it is the Senator's right if he wants to object to putting in the RECORD the reply of the Secretary of War of his country in a crisis like this information which the whole country ought to have. He is asking that something shall be done that has not been required when other speeches have been asked to be printed of other men in less important places and at less important times, and he can object if he desires to do it.

Mr. HARDWICK. The regular order!

The VICE PRESIDENT. Is there objection?

Mr. SMOOT. If the Senator from Kentucky is allowed to make a statement, I think the Senator from Utah also should be allowed to answer the statement.

The VICE PRESIDENT. I do not think he has made a statement.

Mr. SMOOT. I think he has.

The VICE PRESIDENT. Is there objection? Let us observe the rule.

Mr. SMOOT. I do not object.

The VICE PRESIDENT. Then both documents will go into the RECORD.

The matter referred to is as follows:

INVESTIGATION OF THE WAR DEPARTMENT.

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C., Monday, January 28, 1918.

The committee met, pursuant to call, at 10.30 o'clock a. m., in room 226, Senate Office Building, Senator GEORGE E. CHAMBERLAIN presiding.

Present: Senators CHAMBERLAIN (chairman), HITCHCOCK, FLETCHER, MYERS, THOMAS, SHEPPARD, BECKHAM, KIRBY, REED, MCKELLAR, WARREN, WEEKS, WADSWORTH, SUTHERLAND, NEW, and FRELINGHUYSEN.

The CHAIRMAN. The committee will please come to order.

Gentlemen of the committee, we have met this morning to hear the Secretary of War, in compliance with his request that he be permitted to make a statement to the committee. The Secretary is here, and we shall be very glad to hear from him.

Mr. Secretary, before you commence, may I ask you whether the statement you desire to make now is supplementary to the one you have already made, whether it is entirely new matter, or whether you desire to correct any statements in your former statement?

Secretary BAKER. It is a comprehensive statement, covering the whole conduct of the war, Senator.

The CHAIRMAN. Then, Mr. Secretary, we will be pleased to hear from you in such way as you desire to present the matter. I think it would be very much better if the Secretary might be permitted to make the statement without interruption. Would you prefer that?

Secretary BAKER. Yes.

The CHAIRMAN. And any questions the committee desire to ask might be asked after the Secretary finishes his statement. You may proceed, Mr. Secretary.

STATEMENT OF HON. NEWTON D. BAKER, SECRETARY OF WAR—RESUMED.

Secretary BAKER. Mr. Chairman and gentlemen of the committee, I am, of course, grateful to the committee for permission to make a comprehensive statement at this time. For one reason and another the impression has gone out into the country, to some extent at least, that the War Department has fallen down in addressing itself to the task of conducting this war. I want to address myself to that question.

There are several reasons why I should ask you to hear me on that question: In the first place, the country is entitled to know whether that is a fact; and in knowing whether it is a fact the country is entitled to know what this war is, what its problems are, and what steps have been taken to meet these problems.

In the second place, I have a deep sense of obligation to the officers of the Army and to the civilians who have from the beginning of this difficulty labored in a way which certainly, in my experience, has never been equaled, with devotion, self-sacrifice, zeal, spending sleepless nights and tireless days in an effort to bring the organization of this great Army and its use in a military enterprise up most rapidly and effectively.

I have seen strong and grizzled men of the Army turn away from my desk to hide tears when they were asked to stay in this country and do organization work here instead of going to France, where the glory of their profession lay, and yet I have never known one of them to hesitate for a second to obey the order, nor has there been any lack of quality in the work which any of them has done by reason of his natural ambition to be on the field of battle rather than in an administrative task; and of the great company of civilians, Mr. Chairman, who have come to Washington from all over the United States, laying down their private business, sometimes accepting salaries which office boys at other places enjoy, sometimes having no salary at all—men of the largest experience and of the greatest talent in business have come to Washington, put up with the inadequate conditions which the city now affords because of its congested condition, and have worked in season and out of season on this undertaking.

It would be a tragical thing if this tremendous effort, this wholly unprecedented sacrifice made by men were, in fact, to turn out to deserve the comment that it had fallen down.

I have not the least doubt that such currency as that feeling has gotten is due in large part to the tremendous impatience of the American people to do this great thing greatly. Every one of you, and every one of us, wants to demonstrate the thing which we know to be true—that our country is great and strong, and in a cause like this will hit like a man at the adversary which has attacked us. And always there is between the beginning of preparation and the final demonstration of its success a period of questioning, when everybody, you and I and everybody else, goes through searchings of heart to find out whether all has been done that could have been or that ought to have been done; whether anything remains that can be done. And we look back over the past and realize that there have been delays and that there have been shortcomings; that there have been things which might have been done better. In so great an enterprise it is impossible for frankness not to find those things.

But our effort is to learn from them not to repeat; to strengthen where there needs strengthening; to supplement where there needs supplementing; and, by bringing two things together, our very best effort and the confidence of the country back of that effort, to make our enemies finally feel the strength that is really American.

Now, I want to say at the outset, Mr. Chairman, that I have no bias in favor of individuals. The issue of this is far too large for any prejudice or favoritism to any individual, and when I discuss, if I shall discuss individuals by name, whether it be Gen. Crozier or Gen. Sharpe, or if I refer to myself, I want it understood that the appearance of any one of us in the casualty list any morning is a negligible matter as contrasted with the success of this enterprise, and I am not here either to defend individuals, including myself, nor am I here to deny delays, mistakes, shortcomings, or false starts; but I think I can say with confidence that where those things have appeared we have sought the remedy; that in many places we have applied the remedy, and the largest purpose I have in being here is to urge what I do not need to urge, that your committee, that the Members of the Senate and the Members of the House, that every citizen in this country, official and unofficial, from the highest to the lowest, realize that this is their enterprise, not quite so much as it is mine in the sense of responsibility, but their enterprise, and to ask from you and from them every suggestion, every criticism, every constructive thought that occurs to any of you, and I ask you, when shortcomings are pointed out to you, whether they be well founded or whether they be not well founded, that you will instantly convey them to me, so that by the processes which the department has I may search out where blame is to be attached, where remedies are to be applied, and where strengthening and improvement of the organization is possible.

Mr. Chairman, you made an address in the Senate. It was at the conclusion of an investigation of two divisions of the War Department, I think, the Ordnance and the Quartermaster Departments. In that investigation some shortcomings had been brought to the attention of the committee; some delays. They fall readily under two or three heads; they were in the midst of very large and involved transactions, and yet, by reason of the effort of the committee to trace those things to their ultimate cause and to get their proper leadings and bearings, it may not be unfair to say that they assumed a disproportionate aspect and appearance in relation to what has actually been going on in this war and in the War Department. And if I may venture, with very great respect to the chairman and to the committee, to suggest it, it seemed to me at the time I read that speech that perhaps the feeling I would have about it was this: That without the intention of the chairman and without anybody's intention, its effect might be to have the country feel that the particular difficulties and delays referred to by the chairman were characteristic rather than exceptional, and I want, therefore, to address myself to those incidents which were pointed out by the chairman in his address to the Senate, and see whether I can not, with his permission and with great deference to him and the committee, place them in a light which will show that rather than being characteristic they are in fact instances of shortcomings, but only instances, and that the general thing to which they bear a relation is not to be inferred to be characterized by those instances.

If I may say one personal word, and one only, for it is the only one I want to say, I should like to say that for some reason, which I do not understand, when I appeared before your committee in these hearings with the intention of being frank, weighed down, as I have been ever since I have been Secretary of War, by accumulating difficulties in that department, for I became Secretary of War on the night that Villa crossed the border and raided Columbus, and the department has been an active department ever since, and there has been no hour since then when I have not felt that the responsibilities which rested upon me were of the very gravest kind, and when I have not wondered constantly where I might find the strength to meet those responsibilities, and yet for some reason, with that sense of my duty and my task, and with the utmost desire to aid this committee to develop all that it wanted to know and all that there was, I seem yet to have left, at least upon the minds of some members of the committee, a feeling that I was fencing and defending the actions of my subordinates when that was not my intention.

I have brought down here to-day, Mr. Chairman, no hurriedly gathered data with regard to divisions of the War Department and its activity which you have not as yet inquired into. I am here, if I can, to make a compendious statement of this whole situation, and if there be, as doubtless will be and ought to be, other phases of the War Department's work which your committee desires to go into, I trust you will go into it thoroughly, and when you have covered any shortcoming or defect I need not tell you that if you bring it to my attention I will do all I can, and that speedily and without fear or favor of person, to correct, adjust, and improve it.

The chairman of the committee read to the Senate two letters dealing with instances of neglect of the dead. They are pathetic letters. They arouse every instinct of resentment and indignation that a man can have. I had not seen those letters before. At once, upon hearing of them, I wrote to the chairman of the committee and asked for the names of the writers of those letters and the camps in which those incidents were reported to have taken place. I wanted, and I want now, to follow those through to the very end to find out who was guilty of this inhuman treatment, to find out who was responsible for the conditions complained of there, in order that I may punish those who are guilty. The chairman has felt that those letters came to him in a confidential way and has suggested that he will endeavor to have himself relieved from that confidence so that I can ultimately get those names and redress the wrong. They are two instances. I have had others. I have not had those two, but it may interest the committee to know that with a million men, more than a million men in arms in this country, with great hospital establishments in all these camps, with hospitals established in many other camps than those which are directly devoted to the National Army, the National Guard, and the Regular Army, the number of complaints is relatively small, perhaps some dozen and a half, and in each instance when the complaint came, if it dealt with a question of shortage of supplies or some mere material shortage, it has been referred to the Surgeon General of the Army in order that instant corrective steps might be taken; but where it involved a breakdown in the human element, where it showed that some man failed who was intrusted with responsibility as to the life and welfare and safe custody of another individual, where it was that sort of thing, the remedy has been always to refer it to the Inspector General of the Army for immediate inspection, with the recommendation as to a course of action to be taken which would not only be corrective, but punitive where fault lay.

I have before me here the report of the Inspector General on the cases with which he has had to deal. Many of them provide

that complaints which, at the outset, looked serious were not, in fact, serious. Some of them show that the situation was serious, and remedies and courses of discipline are suggested. I have, for instance, a case somewhat similar to the one which the chairman had, the report of the shipping of a body of a soldier nude. In this case the soldier was killed at the Toronto flying field, his clothing was removed, his body was wrapped in a winding sheet, and it was received at the home of his parents thus unclothed. Immediate inquiry was made and it was discovered that that flying unit was under the control of a major of the Royal Flying Corps of the British Army; that he followed the British custom of removing the clothes of the deceased and returning them in a separate parcel. The undertaker there employed to deal with this body dealt with it as the English do and the Canadians do, as their custom is. Immediate instructions were issued that there should be an American officer at that camp and that the American practice should prevail should such a catastrophe happen again.

I have here a case of neglect of a patient, not leading to a fatal result, at Camp Wheeler. The Inspector General found upon inquiry—it seems it did lead to a fatal result; at least the patient died. The Inspector General went through it in a judicial way and came to the conclusion that the conditions did not actually justify the complaint, but that in the bitterness of her distress the wife of this soldier felt that something more might have been done if she could have had her soldier home with her, and her complaints were based upon that sort of distressed imagination, in the judgment of the Inspector General, which we are all familiar with. In that particular case no further remedy was suggested than that care and consideration should be had in dealing with the relatives.

The first case of all which came to my personal attention came from Plattsburg, where a complaint was made of the mistreatment of a soldier by a surgeon. I sent immediately for the record; I examined it personally; and I came to the conclusion that that particular civilian, a man called in from civil life when the emergency arose and the rapid expansion of the Medical Corps was needed, that he had failed to understand his responsibility, and I therefore dismissed him from the Army.

There are other cases, however. Without going over them I would say they amounted perhaps to a dozen altogether, and there are no others of the grave character of those I have cited; the whole record, of course, is at the disposal of the committee, if it desires it. There are two cases to which I do want to refer in a little more detail.

Before I do that perhaps it would not be unwise to read to the committee an order of June 15, with regard to the treatment of the bodies of the dead, issued from the Quartermaster General of the Army to the department quartermasters in the Army.

(The order referred to is here printed in full, as follows:)

Subject: Embalming and preparing remains for interment or shipment, fiscal year 1918.

1. In order to comply with the requirements of paragraphs 87 and 167, Army Regulations, so far as they relate to the disposition of the remains of officers and enlisted men of the Army active list who may die at camps of organization and other places in your department at a distance from regularly established military posts, informal bids should be invited where practicable and contracts entered into with local undertakers or other competent persons for services in the preparation of the remains for interment or shipment during the fiscal year ending June 30, 1918.

2. These bids should cover the cost of embalming and shaving each body, the embalming to be performed in such manner as to insure perfect preservation; the cost of each casket or coffin without metal-lined shipping case, but with name plate (to be used when remains are interred at the post), and the cost of each metal-lined casket, with name plate and shipping case (to be used when remains are shipped). Wherever practicable Government caskets will be used with an ordinary shipping case, and when Government coffins are used in the shipment of remains they should be inclosed in a metal-lined shipping case. For local interment, however, the Government coffin should be used.

3. Where the expenses permitted by paragraph 167, Army Regulations, are exceeded, it will be necessary for this office to obtain the approval of the Secretary of War to cover the excess.

By authority of the Quartermaster General.

D. L. BRAINARD,
Colonel, Quartermaster Corps.

AUGUST 30, 1917.

From: Quartermaster General.
To: The Department Quartermaster, Eastern Department, Governor's Island, N. Y.
Subject: Preparing remains for shipment, fiscal year 1918.

1. Your attention is invited to the instructions of this office of June 15, 1917, copy herewith, on the subject of entering into contract or obtaining bids for the preparation of remains for shipment or for local interment of officers and enlisted men who may die at cantonments, camps or organizations, etc., within the limits of your department for the current fiscal year, with request that report be submitted showing what action has been taken in the matter.

By authority of the Quartermaster General.

H. R. LEMLY,
Captain, United States Army, retired.

Similar letters sent to other department quartermasters.

Secretary BAKER. In order that you may realize, Mr. Chairman, that I am trying to be thorough in this matter, I will say that there are still in the hands of the Inspector General nine cases which are being investigated; three allege general bad conditions in hospital service; two inefficient medical treatment; another complaint is as to careless preparation for burial; two complaints of neglect by surgeons; and the last one is a simulation of illness with the connivance of a surgeon. I cite those, not that they are as yet demonstrated to be true, but as complaints that have come to the department and have been put into the hands of that officer of the Army who, by reason of the fact that he bears no relation to any other branch or bureau of the service, is intrusted with the investigation of every complaint of this character, and they are now being investigated by men trained in that faculty and for the purpose of recommendation.

There are two cases which illustrate, in my judgment, the attitude of the department on this subject. The first is that of Lieut. Charles W. Cole, charged with neglect of patients at the base hospital at Camp Beauregard, La. He was court-martialed and sentenced to be dismissed from the service. The other case is that of Lieut. John G. Dwyer, charged with neglect of patients, court-martialed and sentenced to be dismissed from the Army. Those cases present this kind of state of facts: These medical officers were in their hospital; in the one case an ambulance drove up and a man was brought in claiming to be sick. The doctor made a hasty examination, looked at him, felt his pulse, or something of that kind, and ordered him back. He said that he was not sick. Substantially, that is the state of facts as to both of these cases. In other words, the doctor does not do the things he was to have done; he did not examine the patient and diagnose his difficulty in either of these cases, and the result was that in both of them severe illness developed and in both of them death resulted.

When those letters came to me I had them reviewed by the Judge Advocate General, to see what further could be done; a court-martial, organized in accordance with the laws of the Army and of the land, had sat upon these cases and apportioned the punishment as dismissal from the Army. But when the Judge Advocate General reviewed it for me he came to the conclusion that that sort of neglect rose much higher, or went much deeper, and recommended that both of those cases be sent back to the courts-martial which had tried them and that such imprisonment as could be added under the statutes of this country for that kind of neglect should be added to the penalty of dismissal.

I have here the letters, dated, respectively, so far as the Judge Advocate General's investigation is concerned—perhaps the letter I wrote on the subject will cover the details of the cases accurately. I therefore file and put into the record two letters, written, respectively, on the 8th and 9th of January, in which the action taken was the firm action of the department turning its face against that sort of callous disregard of the illnesses and interests of the soldiers, and I want the country to know that though we have gone out and gotten doctors out of civil life, though we have taken them necessarily because of the numbers of doctors in this country trained in hospital management and in group treatment of cases of men is limited, I want the country to know that the lives and welfare and the illnesses of these soldiers are a responsibility which I will not permit to be dodged or handled in any cavalier fashion, and that the attitude of the department is one of punishment where guilt is involved.

The CHAIRMAN. May I ask, Mr. Secretary, if you are appending with that the report upon the condition at Camp Funston and the recommendation for investigation of the Medical Corps that accompanies that report from the Judge Advocate General's office to you?

Mr. BAKER. I will be very glad to do it.

The CHAIRMAN. I wish you would put that in the record with your statement in regard to the cases; also, the communication sending back the record in Lieut. Dwyer's case and in Lieut. Cole's case.

Mr. BAKER. That is what I am going to put in.

The CHAIRMAN. You have not the other?

Mr. BAKER. I have here, Senator, the letter of the War Department to the commanding general, Eighty-ninth Division, at Camp Funston; I have the letter of the War Department, signed by the Secretary to the commanding general of the Thirty-ninth Division at Camp Beauregard. What in addition to that do you want?

The CHAIRMAN. I desire to have the report of the Judge Advocate General's office to you on these cases.

Secretary BAKER. Yes, sir.

The CHAIRMAN. And have them go in with your statement.

Secretary BAKER. They will go in with this statement.

(The report referred to is here printed in full, as follows:)

WAR DEPARTMENT,
OFFICE OF THE JUDGE ADVOCATE GENERAL,
Washington, December 28, 1917.

Memorandum for The Adjutant General.

Subject: Investigation of conditions surrounding and treatment of sick at Camp Funston, Kans., and conduct and efficiency of certain members of the Medical Corps on duty there.

1. This office has just completed a review of the record of trial by general court-martial of First Lieut. John G. Dwyer, Medical Officers' Reserve Corps, Camp Funston, Kans., which occurred on November 27, 1917. The court sentenced the accused to be dismissed. The sentence was approved by the reviewing authority, and was forwarded to the President under the forty-eighth article of war for his action thereon. This office, after a careful review of the record, recommended that the President return the record to the reviewing authority, with directions to reconvene the court and return to it the record for reconsideration, to the end that the court have opportunity to impose a sentence adequate to the offenses of the accused.

The evidence taken in the trial of Lieut. Dwyer seems to indicate the existence of conditions at Camp Funston, in connection with the treatment given to soldiers who are sick, showing a lack of diligence and sense of responsibility on the part of some members of the Medical Corps, and a lack of skill and competency on the part of others, which this office feels should be called to your attention, to the end that an appropriate investigation be made. The situation may be discussed in these phases: (a) The specific case upon which Lieut. Dwyer was tried; (b) the attitude of other members of the Medical Corps with respect to the conduct of Lieut. Dwyer; (c) the conditions which seemed to obtain at Camp Funston with respect to the examination and care of sick soldiers.

2. The specific case upon which Lieut. Dwyer was tried: Lieut. Dwyer was tried for violation of the ninety-sixth article of war. There were two specifications thereunder. First, that on October 17, 1917, while on duty as surgeon of the regimental infirmary, Fourth Training Unit, One hundred and sixty-fourth Brigade, he grossly neglected to perform his duty in failing to examine Pvt. Christie L. Gherring, Seventy-third Company of said brigade, who was placed on sick report by his company commander; second, that at the same time he grossly neglected to perform his duty in failing to administer proper treatment to Pvt. Gherring.

Lieut. Dwyer was found guilty of both specifications and the charge, and was sentenced to dismissal. The sentence was approved by the reviewing authority, and transmitted to the President for action pursuant to the forty-eighth article of war.

The following facts were established beyond reasonable dispute. Pvt. Gherring was placed on sick report on the morning of October 17, 1917, by his company commander and sent to the infirmary in charge of a noncommissioned officer. At that time it was apparent to four or five nonmedical witnesses who testified upon the trial that he was a very sick man. He was weak, partially delirious, staggered when he walked, and was assisted to the infirmary and into the presence of the examining surgeon. He was then sick, probably mortally so, with pneumonia, and died on October 21. Lieut. Dwyer, the examining surgeon in charge of the infirmary at the time, apparently made no examination of Pvt. Gherring except to require him to remove his hat and walk across the room, which the soldier did, staggering as he walked. He was then marked for double or extra duty and sent away. The noncommissioned officer who took him to the infirmary, and took him away after being so marked by the examining surgeon, did not put him on double or extra duty, or any duty, but put him to bed in his quarters. No medical attention was given the man until the next evening, when he was carried to the hospital on a cot, his company commander writing a formal letter demanding that he be given proper medical treatment. It appears that the man was in about the same condition when he was sent to the hospital on the evening of the 18th as when he was assisted to the infirmary for examination on the morning of the 17th of October.

Before an examination of Gherring, or any of the other men on sick report who were brought to the infirmary by the sergeant who brought Gherring there, Lieut. Dwyer expressed the opinion that the men were stalling or faking, although this was before the men had come into his presence or had been subjected to even a visual inspection.

3. Attitude of other members of the Medical Corps: The record presents no reasonable excuse for the failure on the part of Lieut. Dwyer to make some sort of examination of Gherring when the latter was brought to the infirmary on the morning of October 17. His condition was apparent to his company commander and to the noncommissioned officers of his command. His whole physical appearance and conduct were such as to attract the attention of nonmedical observers, and it is manifest that Gherring was then suffering from an advanced stage of pneumonia. He was placed on sick report by his company commander and assisted to the infirmary by a noncommissioned officer. Despite these surrounding circumstances, Lieut. Dwyer and his assistants did not detect the condition of Gherring, failed to make even a most casual examination to ascertain whether or not he was sick, and, instead of giving him medical treatment, directed that he be given double or extra duty, evidently by way of punishment—a direction which the accused had no authority whatever to give and which, through the humane impulses and the better sense of a noncommissioned officer, was disregarded. Notwithstanding these facts, every member of the Medical Corps called to testify in the case sought by theory and inference to excuse and justify the action and conduct of Lieut. Dwyer. The morale of the men in the ranks must, to a measurable degree at least, depend upon their confidence in the disposition and competency of the Medical Corps to give them adequate care and treatment when sick or wounded; and it is difficult to perceive how that confidence could be more effectively undermined and shaken than by the members of that corps seeking to prove that the conduct of Lieut. Dwyer in the case of Pvt. Gherring measured up to their conception of the standard of care and skill that men in the ranks may reasonably expect at their hands. There is some suggestion in the testimony that Gherring was a man of little force, perhaps somewhat below the normal in intelligence, possibly without active friendships because he had been but recently transferred to the Seventy-third Company; and that the indifference of the surgeons was somewhat accentuated by these facts. If true, they do not palliate or excuse. It must be understood that no man in the ranks is so obscure or of so little consequence that he can not require and receive, promptly, and willingly, to minister to his sickness or to his wounds, the highest professional skill in the military service.

4. Conditions which seem to exist at Camp Funston with respect to the examination and care of sick soldiers.—There is much in the record of the trial of Lieut. Dwyer which indicates the existence of general conditions that should be remedied. Capt. Louis Whistler, of the Seventy-third Company, to which Gherring belonged, testified in substance that he did not send Gherring back to the infirmary again on October 17, or on the morning of the 18th, because he was practically in the same condition that he was when first sent up and marked for double or extra duty; that he had knowledge of others who had been marked for double duty by the attending surgeon, no matter what their ailments were; that it was his experience that if a man was sent to the infirmary and marked for duty, regardless of his condition, and shortly thereafter sent up again, he would be again marked for duty and returned, and the impression to be gained from the evidence is that, in the latter case, the action of the surgeon would be pro forma. There is some evidence, also, to the effect that the brigade commander had issued a memorandum directing that, where a man was marked for duty, and in the opinion of his company commander the man was sick, the company commander should make a thorough investigation and send him back to the infirmary if he thought it advisable. This memorandum must have been issued as a result of conditions, in connection with the care and treatment of the sick, which challenged the attention of the brigade commander. Capt. Whistler states that he had complained to his unit commander of the treatment his men were receiving at the hands of the medical officers, and that other company commanders had done likewise.

Second Lieut. Gord P. Way testified in substance that when the sick were sent to the infirmary for treatment, Lieut. Dwyer and a couple of other surgeons were grub to them; that these surgeons regarded themselves strictly as line officers and required of the sick men that they stand at attention all the time and strictly observe military discipline while in the infirmary.

It seems that Pvt. Gherring was sent to the hospital on the evening of October 18 and placed in a ward of which Capt. Harry L. Chambers, Medical Officers' Reserve Corps, had charge. It should be kept in mind that Gherring died two or three days later. There is some evidence that this officer made an examination of Gherring on the evening he came to the hospital, although this is somewhat doubtful, as he testified largely from entries upon a record card. Although in charge of the ward, and although testifying that he made a physical examination, he finally gives this evidence:

"Q. What we want, Doctor, is his condition at the time he came to the hospital, and his health during the time that he was there.—A. I remember very little about that. What I have heard is about all I can say."

The whole testimony of Capt. Chambers impresses one with the conviction that he had a very vague opinion of the condition of Gherring when the latter came to the hospital, or at any time thereafter; that he did not know, except from hearsay, of what the man died; and the evidence does not show that at any time after the examination of Gherring was made on the evening of October 18—if, indeed, anything more than a most casual examination was then made—any physician saw him or administered any medical treatment.

It seems that when Gherring was carried on a cot to the hospital on the evening of October 18, he was first seen by Lieut. Egan, a surgeon and member of the Medical Corps. Having in mind the condition in which Gherring must have been at that time, and the advanced stage of his disease, the following evidence given by Second Lieut. Way, of the Seventy-third Company, and which is undisputed, would seem to indicate a lack of any sense of responsibility, of skill, or both:

"Q. What was done then?—A. We carried him to the hospital on a cot.

"Q. And he was received there?—A. Yes, sir.

"Q. What disposition was made of him? What happened over there?—A. I took him in to Lieut. Eger (Egan), I believe, who examined him; felt his pulse, and asked him several questions. He seemed to think he was crazy—that is, out of his head—and had never been right. He answered all of the questions as rationally as he could, and finally he asked him if he wanted to stay there or go back to the barracks, and he answered with as much force as he could: 'I don't care what you do with me.' A detail of enlisted men from the hospital carried him upstairs, and the lieutenants said that he had influenza, and that they would try to get rid of him for us. He said that all the line officers could do was that they had instructions to drill these men until they dropped or came up there with some other trouble before they would receive them

"Q. Did he state that as his instructions from the surgeon in command of that infirmary?—A. As I understood it, it was the instruction of all medical officers."

The manner in which sick report is taken at the infirmary each morning indicates lack of order or organization, and a system—or rather lack of system—which must inevitably lead to mistakes of the gravest character. Evidence was offered upon the trial of Lieut. Dwyer, on behalf of the defense, tending to show that as many as 300 men might come in on sick report during the forenoon. One of the members of the Medical Corps testified that usually the surgeon in charge would sit at the door and look at the men as they came in, take their sick books or reports, and pass them along without any physical examination whatever, and that at some other stage during the progress of the men through the infirmary—which, apparently, was quite rapid—the assistant surgeon or surgeons might ask the men a few questions, or occasionally take the pulse or temperature, but in most instances would do none of these things. There is also evidence that the general attitude of the surgeons was to regard the men as stalling or faking, and to mark many, if not most of them, for double or extra duty, presumably by way of punishment, and to discourage the men from coming to the infirmary for treatment, or, perhaps, as an easy means of making a diagnosis, upon the theory that if a man was able to do extra or double duty he was not sick, and if he succumbed to the extra burden placed upon him, he was sick.

5. A careful examination of the whole record creates a very unfavorable impression regarding the medical and hospital organization, facilities, care, and treatment of those who were unfortunate enough to be sick. There are indicated conditions which may constitute a menace to the health, and tend to undermine the morale of the men, if permitted to continue unchanged and unrebuked. The record likewise discloses a practice on the part of the examining surgeons of marking for double or extra duty men on sick report. Such a direction or order must be regarded in the nature of a punishment, and is beyond the authority of a surgeon, and, indeed, would be an abuse of his authority.

6. Upon consideration of the whole matter it is recommended (a) that there be published to the service an order or direction that a surgeon has no authority to direct that a person placed on sick report

shall be put on extra or double duty, or do more than indicate whether such person should receive medical treatment or is fit for duty; and that any such order or direction would constitute an excess of and abuse of authority; and (b) that a rigid investigation be made of the conditions obtaining in the medical staff of the Eighty-ninth Division, with a view to correcting the faults resulting from lack of organization, inadequate help or hospital facilities; and with a further view to proper disciplinary action in cases where this may be found necessary, and the summary elimination from the service of such medical officers as are unfit for the high responsibilities they have assumed.

S. T. ANSELL,
Acting Judge Advocate General.

[First indorsement.]

WAR DEPARTMENT,
JUDGE ADVOCATE GENERAL'S OFFICE,
January 8, 1918.

To the COMMANDING GENERAL,
Eighty-ninth Division, Camp Funston, Kans.

1. In the within case of First Lieut. John G. Dwyer, M. C. R. C., the President directs that you reconvene the court-martial for a reconsideration of its sentence and return to the court the record, together with this indorsement.

2. The accused was tried for violation of the ninety-sixth article of war, the specifications in substance alleging that he was on duty as surgeon of the regimental infirmary, fourth training unit, One hundred and sixty-fourth Brigade, on October 17, 1917; that it was his duty to examine Pvt. Christie L. Gherring, of the Seventy-fourth Company of said brigade, who had been properly reported on sick report; and that he failed and grossly neglected to perform such duty; and that at the same time it was his duty to administer treatment to Pvt. Gherring; and that he did fail and grossly neglect to perform such duty. He was found guilty of these offenses and sentenced to be dismissed the service. The evidence establishes that Pvt. Gherring was sick on the morning of October 17; that to the most casual observation of the unpracticed eye of the several nonmedical witnesses who testified there was palpable physical evidence in his appearance that he was sick; that he was assisted to the infirmary and into the presence of the accused; that he was weak, staggered as he walked, half delirious, and in an advanced stage of pneumonia. The accused was in charge of the infirmary and it was his duty to make an examination of Gherring and administer to him proper medical treatment. He apparently made no examination of him except to request him to take off his hat and walk across the room, which the soldier did, staggering as he walked. The accused then marked him for double or extra duty and sent him away. The noncommissioned officer who took the sick man to the infirmary and took him away after he had been marked for double or extra duty by the accused did not put him on duty, but put him to bed in his quarters. The direction double or extra duty, was evidently given by way of punishment for coming to the hospital for treatment. It is a direction which the accused had no authority whatsoever to give and which, through the humane impulses and better sense of a noncommissioned officer, was disregarded. Gherring received no medical treatment whatever until some time during the following evening, when he was carried to the base hospital on a cot, his company commander sending a formal demand that he be given proper medical treatment. There is nothing to show that he received proper or adequate medical care or treatment after he reached the hospital. He died of pneumonia on October 21.

3. There is a suggestion in the record that Gherring was a man of little force, perhaps below the average intelligence, possibly without active friendships, because he had been but recently transferred to the Seventy-third Company, and that the indifference of the surgeon was somewhat accentuated by these facts. If all this be true, it does not serve to palliate but to condemn. It must be understood that no man in the ranks is so obscure or of so little consequence that he can not require and receive, to administer to his sickness or wounds, the highest professional skill in the military service.

4. The fact that the members of the court, which convicted Lieut. Dwyer of failing and grossly neglecting to examine Pvt. Gherring and to administer to him proper medical treatment, joined in a recommendation for clemency to the reviewing authority indicates that they failed to appreciate the seriousness of the offense of which Lieut. Dwyer stood convicted. Here is the bald situation presented by the record: Pvt. Gherring, seriously ill with pneumonia on the evening of October 17, 1917, was placed on sick report and sent to the infirmary for medical treatment. Lieut. Dwyer was in charge of the infirmary and it was his legal duty to examine and administer proper medical treatment. He failed to do so. The sick man got no medical treatment whatever until either the late evening of the next day or the morning of the 19th. He died on October 21. It is reasonably probable that his death was accelerated by, and it is not at all improbable that it was the result of, neglect on the part of the accused or other medical officers to give him proper treatment. Civil society regards conduct of this kind as constituting a very serious offense. It is a well-settled and a humane principle that if the law requires a person to do an act and he neglects his duty so as to cause or to accelerate the death of another, he is guilty of involuntary manslaughter. This principle finds frequent recognition in the adjudicated cases. In Reg. *v.* Senior (1 Q. B., 283) the defendant was indicted for failure to provide medical attention for his infant child, who was seriously ill, and the child died because of such lack of attention. There was a conviction for manslaughter which was sustained. In another English case (Reg. *v.* Instan, 17 Cox C. C., 602) a young woman was indicted for manslaughter for failure to provide proper medical attention and other necessaries for her aunt, an elderly woman, resulting in the death of the latter. The aunt was seriously ill at the time and probably would have died from her ailment, but the neglect visited upon her by her niece accelerated her death. There was a conviction for manslaughter which was sustained. The same principle has been recognized by the American courts. Territory *v.* Manton, 8 Mont., 95; 19 Pacific, 287; Clark's Criminal Law, 2d edition, p. 209; Westrup *v.* Commonwealth, 29 Ky., 1; Rep. 519; 123 Ky., 95; 93 S. W., 646; 6 L. R. A., N. S., 685; Commonwealth *v.* Pierce, 138 Mass., 165; 52 A. R., 264; and Johnson *v.* State, 66 On. St., 59; 61 L. R. A., 277.)

5. Attention is called to these cases for the purpose of indicating the seriousness with which an offense such as the accused is shown to have committed is regarded by the civil courts. No reason is seen why a military court should place a lighter estimate upon neglect which leads to or accelerates death than do the civil tribunals, and yet the charge filed, the findings of the court, and the recommendation to clemency lead to the belief that this is what the officer who prepared the charge and the court which tried the case actually have done. The accused might properly have been charged under the ninety-third article of war and the specifications amplified by alleging that death was caused by the neglect. Indeed, there appears from the whole record that throughout the proceedings a grave misapprehension existed as to the seriousness of the offense disclosed by the evidence. The ninety-sixth article of war, under which the charge and specifications were laid, confers upon the court discretion as to the punishment to be imposed. A sentence of dismissal, unaccompanied by a period of confinement, seems wholly inadequate for the offense of which the accused was convicted, and the record is returned for reconsideration in the light of these views.

By direction of the President.

NEWTON D. BAKER,
Secretary of War.

Encl.

AEC-WLA-A. G. 201—Cole, Lieut. Chas. W. 1st Ind.

WAR DEPARTMENT, *January 9, 1918.*

To the COMMANDING GENERAL THIRTY-NINTH DIVISION,
Camp Beauregard, La.:

1. In the within case of First Lieut. Charles W. Cole, Medical Reserve Corps, the President directs that you reconvene the court-martial for a reconsideration of its sentence, and return to the court the record, together with this indorsement.

2. The accused was tried for violation of the ninety-sixth article of war. The first specification charges, in substance, that on November 18, 1917, he was on duty as officer of the day at the base hospital, Camp Beauregard, La.; that it was his duty to receive and admit patients transferred to said hospital for treatment, and that he did willfully neglect to admit and receive nine enlisted men transferred to said hospital from the regimental infirmary, One hundred and fifty-sixth Infantry. The second specification charges that at the same time and place, it was his duty to examine all patients transferred to said hospital for treatment, and that he did willfully neglect to examine the said enlisted men, and, without examination, did direct them to be reconveyed to the regimental infirmary, causing patients to suffer unnecessary exposure, to the detriment and prejudice of their health and lives. The third specification charges that, at the same time and place, he did willfully keep the ambulances containing these patients waiting for an hour, more or less, in front of the hospital, before he appeared to give directions as to the disposition of the patients. He was found guilty of specifications 1 and 2, not guilty of specification 3, and guilty of the charge. He was sentenced to be dismissed from the service, and this sentence was approved by the commanding general of the thirty ninth division and forwarded for the action of the President pursuant to the forty-eighth article of war.

3. It is established by the evidence that the accused was on duty as alleged, that measles were prevalent in the camp, and that orders had been issued by competent authority that all cases attended with complications, such as high temperature, capillary bronchitis, acute bronchitis, bronchial pneumonia, and the like should be transferred to the base hospital. On the afternoon of November 18 the nine men in question were diagnosed by Maj. Herbert C. Cole, the surgeon of the One hundred and fifty-sixth Infantry, as suffering from measles with complication of acute bronchitis, and ordered transferred to the base hospital. The infirmary of the One hundred and fifty-sixth Infantry was about 2½ miles from the base hospital. Several of the men were transferred in a motor ambulance, and the others in two mule-drawn ambulances. There was sent with an enlisted man, who went over in the motor ambulance, a communication from Maj. Cole addressed to the commanding officer of the base hospital, requesting the admission of the nine men, and in this communication the name, organization, and diagnosis of each man appeared. The road between the infirmary and the hospital was rough. The day was cold, dark, and a drizzling rain was falling. The motor ambulance arrived at the hospital about 4 in the afternoon, approximately three-quarters of an hour ahead of the other ambulance. The enlisted man in charge of it immediately reported the arrival of the patients in the motor ambulance, and took steps to bring to the attention of the accused, who was the officer of the day at the hospital, the communication from the surgeon of the One hundred and fifty-sixth Infantry.

The evidence tends to show that from three-quarters of an hour to an hour elapsed before the accused appeared to give directions as to the disposition of the patients. In the meantime these patients were outside in the ambulance. All of the men were sick. Two of the men in the motor ambulance were very sick, and one of them was so delirious that it was difficult to restrain him and prevent him disturbing or doing injury to the other patients. The accused finally came out to the motor ambulance, felt the pulse of one or two of the men, made no other examination whatever, and refused to receive them at the hospital. The soldier in charge of the motor ambulance protested that the men were sick, and called attention to the fact that one of the men was very sick, was delirious, and that there was difficulty in restraining him. The accused provided a tape or rope and suggested or directed that the patient be tied up. At this time the mule-drawn ambulances were just arriving. The accused did not go to these ambulances or attempt to make any examination of any of the sick men therein. One of the men accompanying one of these ambulances reported the situation to the surgeon of the One hundred and fifty-sixth Infantry, and, having received instructions to insist upon the admission of the men, or at least those who were very sick, into the base hospital, sent word to the accused to this effect. His attention was not obtained regarding this request for some time, when he reiterated his refusal. The ambulances then returned to the One hundred and fifty-sixth Infantry, when four of the men were transferred to the field hospital, and, because of inadequate facilities, it was necessary to care for the others in their tents.

The base hospital had a maximum capacity of about 500 patients. At this time there were in the hospital about 350 patients undergoing treatment, and while not fully equipped, the hospital had beds and bedding for a considerable number of patients in addition to those there undergoing treatment. The sick men transferred to the base hospital on November 18 from the One hundred and fifty-sixth Infantry could have been cared for. The diagnosis of each man justified and required their admission for treatment at that place. The most casual investigation, if made, must have disclosed that at least two of the men were dangerously ill, and that, with respect to one of them, bronchial pneumonia had so far advanced as to bring about a condition of pronounced delirium. Considering these facts, the condition of the weather, and the knowledge of the accused, which he must have had, that there were not adequate facilities for proper treatment in the tents of these men or at the field hospital, his conduct was

wholly inexcusable, and showed a complete absence of those considerations of humanity and compassion that should characterize the treatment of our soldiers when severely ill or wounded.

From the time the men left the base hospital, upon the refusal of the accused to receive them, until they were returned to the One hundred and fifty-sixth Infantry, some to the field hospital and some to their tents, from one to two hours elapsed. They were thus exposed to the inclement weather for a period of from three to four hours, and were carried twice over a rough and broken road. Upon their return one of the men—the man who was delirious when at the base hospital seeking admission—was in such condition that death was imminent, and it was necessary to administer oxygen, digitaline, and strychnine to stimulate his vital functions. He died a few days later. Another man was also found to be in a very serious condition, undoubtedly greatly aggravated by the exposure, and he likewise died. It is reasonably probable that the death of each of these men was accelerated, if not, indeed, caused, by the willful and inexcusable neglect of the accused.

The facts that the members of the court which convicted Lieut. Cole of the charges contained in specifications 1 and 2 simply imposed a sentence of dismissal, and that the reviewing authority approved this sentence, indicate that they failed to appreciate the seriousness of the offense of which the accused stood convicted. Civil society regards conduct of this kind as constituting a very grave offense. It is a well-settled and humane principle that if the law requires a person to do an act and he neglects his duty so as to cause, or to accelerate, the death of another, he is guilty of involuntary manslaughter. If such neglect is willful, he is guilty of murder. This principle finds frequent recognition in the adjudicated cases. In Reg. v. Senior (1 lb., 283) the defendant was indicted for failure to provide medical attention for his infant child, who was seriously ill, and the child died for lack thereof. The offender was convicted of manslaughter. In another English case (Reg. v. Instan, 17 Cox C. C., 602) a young woman was indicted for manslaughter for failure to provide medical attention and other necessaries for her aunt, an elderly woman, resulting in the death of the latter. The aunt was seriously ill at the time and probably would have died from her ailment, but the neglect visited upon her by her niece accelerated her death. There was a conviction for manslaughter. The same principle has been recognized by the American courts. (Territory v. Manton, 8 Mont., 95; 19 Pac., 387; Clark's Criminal Law, 2d edition, p. 209; Westrup v. Commonwealth, 29 Ky. Law Rep., 519; 123 Ky., 95; 93 S. W., 646; 6 L. R. A., N. S., 685; Commonwealth v. Pierce, 138 Mass., 165; 52 Am. Rep., 254; Johnson v. State, 66 Ohio State, 59; 61 L. R. A., 277.)

5. Attention is called to these cases for the purpose of indicating the seriousness with which an offense such as the accused is shown to have committed is regarded by the civil courts. No reason is seen why military courts should place a lighter estimate upon the neglect which leads to or accelerates death than do the civil tribunals; and yet the charge filed and the findings and sentence of the court lead to the belief that this is what was actually done. The accused might properly have been charged under the ninety-third article of war and the specification amplified by an allegation that a death was caused or accelerated by his neglect. The whole record seems to disclose a grave misapprehension upon the part of the officer filing the charges and the court which tried the case as to the seriousness of the offense which the evidence seems to establish. The ninety-sixth article of war, under which the charge and specifications were laid, confers upon the court discretion as to the punishment to be imposed. A sentence of dismissal, unaccompanied by a period of confinement, seems wholly inadequate for the offense of which the accused was convicted, and the record is returned for reconsideration, in the light of these views.

By direction of the President.

NEWTON D. BAKER,
Secretary of War.

Encl.

—

201 Cole, C. W. (Offrs.), 2d Ind.

WAR DEPARTMENT, J. A. G. O.,
January 23, 1918.

TO THE ADJUTANT GENERAL:

1. Recommending that the commanding general of the Thirty-ninth Division be instructed to delay convening of court-martial mentioned in telegram in reference until such time as this may be done without risk to the health of his command.

HERBERT A. WHITE,
For the Judge Advocate General.

Secretary BAKER. Now, in addition to that, Mr. Chairman, I may perhaps be permitted to say a word or two about what has been done by the War Department through the Surgeon General's office in this matter. When the illness broke out in the camps I sent the Surgeon General in person to inspect those conditions, and when he made his reports, the reports came to me involving criticism of various kinds as to congestion, the causes of illness, I handed them in person to the newspapers. I thought it important that the country should know exactly the conditions and exactly the causes, for two reasons. In the first place, I wanted no concealment; and, in the second place, I wanted the help of the country in correcting those conditions.

In addition to that I wrote a memorandum to the Chief of Staff, that, in my judgment, the Surgeon General's office ought to organize a system of continuous and constant inspection, for while there is a medical officer representing the Surgeon General's office in every one of these camps, and while the commanding general in each of these camps is chargeable with responsibility for general conditions in his camp, I wanted to add this additional, perhaps, that the Surgeon General's office itself would organize a continuing system of inspection from day to day of these conditions. I instructed the Inspector General, who has inspectors going from camp to camp, that he should especially charge his inspectors to examine into and report upon the conditions in the hospitals, and I telegraphed to a very great hospital expert, Dr. John A. Hornsby—I did not know at the time that he was in the medical service of the Army—I happened to have had some previous contact with him when I was superintending the building of a city hospital in Cleveland, and learned at that time of his great experience in all matters of hospital management and construction. I telegraphed him to come to Washington in order that I might select him as the personal inspector to go, without relation to any other part of the War Department, from camp to camp and hospital to hospital and make directly to me recommendations with regard to improvements necessary.

When Dr. Hornsby came to Washington he came in a uniform, showing that the Surgeon General's office had already drafted in his talents and had already assigned him to the task which I intended he should perform, and it just happens that I have here in my hand at this moment a telegram from Dr. Hornsby with regard to the conditions at Camp Pike, which is one of the camps which have been under comment.

The telegram is as follows:

CAMP PIKE, ARK., *January 23, 1918.*

SURGEON GENERAL ARMY,
Mills Building, Washington, D. C.:

Conditions at Camp Pike greatly improved. Morbidity lower, types milder. Ample accommodations for all sick. Convalescents and mild cases housed well in unoccupied barracks. Roots—

That is, Camp Logan H. Roots—

has taken 200 cases and will be ready for 500 at once. No pressing need now. Leave here for Washington Thursday night to report, unless otherwise ordered. Address care Col. Thornburg.

JOHN A. HORNSBY.

I shall not, Mr. Chairman, read individual cases, although I have a great number of letters and messages from men who have gone to hospitals and found the conditions good, for the reason that is what they ought to be, and it adds nothing to the case to say that this man or this woman, this father or this mother has gone to a hospital and found a boy well cared for; that is what ought to be the universal rule. And yet I have a letter this morning, which I received yesterday, which I think I will read into the record, because it is from a woman of national fame, a woman who for the last four months has gone from camp to camp in the United States writing about them and printing her writings in public magazines and weeklies, who has done me the favor and honor to come a number of times to me personally to report upon these things she has seen and found. It is a letter from Mrs. Mary Roberts Rinehart. As a matter of fact, I gave Mrs. Rinehart, as I now recall it, a letter which would admit her into any camp and enable her to inspect.

(Mrs. Rinehart's letter referred to is here printed in full, as follows:)

NEW YORK, *January 26, 1918.*

To the Hon. NEWTON D. BAKER,
Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: I have just been reading that tragic letter from an unknown father read by Senator CHAMBERLAIN during the present senatorial investigation. Its sincerity can not be questioned. As a mother, and as the mother of a soldier, I feel, as everyone must, the deepest grief and sympathy with the parents of that dead boy.

Like every other mother in the country I want these cases known. I want to be assured that they will be known. I want drastic punishment applied to any man, of no matter what rank, who is found guilty of negligence in the care, physical or moral, of our boys. And I want immediate remedy of conditions that require remedy.

But I do feel that some step should be taken to reassure our women just now. It is only fair to them. It is cruel to allow every mother in the country to judge the medical care that will be given to her boy while in the service because here and there, in the chaos of our readjustment, men have been given responsibilities they are unable or unwilling to fulfill. That we have such men is more than a national misfortune. That they have been placed in positions of trust is a national calamity. But the mothers of the country should know in fairness to themselves that the number of such inefficients is small. We will not rest, we women, until they have all been removed. But that, I know, will be at once. It must be at once.

I have a son in an Army cantonment. He enlisted as a private. He would receive, if he became ill, exactly the same treatment as any other enlisted man in our new Army. And I should have not only no hesitation in placing him in the cantonment hospital, but I should do it with absolute confidence. As a matter of fact, he has already spent a few days there with an infected knee, and received the best of care.

I know something about hospitals. I took a nurse's training as a girl. I married a member of my hospital staff, and I have been for many years constantly in touch with hospitals. During the first year of the war I visited the hospitals of France and England. Since we went into war I have, with the avowed intention of seeing for the women of America that our boys are to be well cared for in every possible way, visited many training camps and camp hospitals.

There are conditions to be remedied. As I reported to you very recently, the failure of supplies has been a serious matter. There are not enough women nurses. The quarters of both nurses and doctors must be enlarged in many cases. The percentage of serious illness has been low in the cantonments—I am not speaking of the camps—but the percentage of mild contagions, which always occur when men are brought together in the mass, and of heavy colds and bronchitis, has been high. The result of sending men with heavy colds for a few days into the hospital has resulted in rather higher figures than the seriousness of the situation would otherwise justify.

Of cruelty and indifference I have found nothing. On the contrary, I have found the medical staffs of the hospitals both efficient and humane. When it is remembered that the medical men of these National Army hospitals are volunteers who have cheerfully relinquished the

results of years of labor to give their services to the country; that they are of the best we have, as all volunteers are; that they are willingly undergoing deprivation and hardship to take care of our boys, it is wrong that the country at large should so misjudge them. The best specialists of the country have placed themselves at the disposal of the Army Medical Department, and ninety-nine out of a hundred men in the drafted Army are receiving better care than they could afford under the best circumstances at home.

Nursing is on the same high plane. Again we find volunteers highly skilled and carefully trained women who have taken the small pay and the discomforts of Army life that they may serve where they are most needed.

Wards are large and airy. Beds are comfortable. I have found exquisite cleanliness everywhere. Moreover, I have found cheerfulness. Food is good and plentiful. I have examined storerooms and kitchens and watched the diets being served under the direction of a woman dietician.

I do not like the orderly system. There should be more trained nurses. At present the wards where there are no serious cases are managed by a ward master, an enlisted man. And with the best intention in the world he is not always efficient. The lack of nurses is a serious one and could be remedied probably by an appeal to nurses to volunteer. But here again is the serious question of the ill at home, the same which faces the medical profession and the civilian hospitals.

One hospital I know well. It is typical of other cantonment hospitals; it is under the same Army Medical Department direction as the others, and it is only right to assume that conditions there are representative. The same rules govern all these hospitals. The same sums are spent on them. The same system is followed. The food is the same, the supplies, the medical staff, the nurses.

And I have never seen a better war hospital than the one at Camp Sherman. I will go further and say that in its operating rooms, its X-ray department, its eye and ear department, its nose and throat department, its dental department—in short, in its facilities for caring for every emergency and every weakness—it will bear comparison with any civilian hospital

And what is true of the base hospital at Camp Sherman is true of the others

I have watched the development of the war hospital system from the beginning when I saw it first on paper in the office of the Surgeon General, up to two weeks ago. I watched because it was a vital matter to me. I had a husband and a son in the service. I am like the other women of this country. I would be content with nothing less than the best. And I feel that we are on the way to the best.

It has not come yet, although at the present moment I would willingly trust any member of my family in such emergency in any one of our base hospitals. We need more supplies; we need more nurses and enlarged quarters for them. Sixty, or even 80, nurses divided into shifts of eight hours each is totally insufficient for a thousand men. We even need more physicians and surgeons. Although the staffs are very large, the medical department in each hospital is working to its maximum.

But what we need as a Nation is something more than this—we need knowledge and reassurance. There is no need in this country for discontented resignation. I would suggest that a committee of representative and unprejudiced citizens from the nearest city visit each of these base hospitals and thoroughly inspect it; and that they publish in their local papers the exact results of their investigations. Let them go alone to talk with the patients, the nurses, the doctors, the ward masters. And let them tell exactly what they find.

The women of the country must know the facts. They have the right to know them. It is not fair to let them believe, as many of them now do, that the great and humane American people are not caring for the men who are to fight to save them. We are preparing against the inevitable losses of war. It is not fair to let any of us believe that there is useless death, and we are wasting lives we would die to save.

And it is not true.

Faithfully, yours, MARY ROBERTS RINEHART.

There was no suggestion of remedy in that letter which does not have my instant approval. In addition to all the things which Mrs. Rinehart suggests—and few are novel—are the things which I have already described to you as being done; and I point out to the committee that from the very beginning of this war the heads of the medical profession—the very masters of that profession—have been in constant contact with the Surgeon General. He has formed around him a staff the like of which probably does not exist on the face of the earth for devising hospitals, devising an organization, and supervising its perfection; and when one considers that the casual and usual doctor, here and there, whose attention has been devoted to the treatment of individual cases under home conditions, under the necessities of this situation, has been thrown into a great organization, where he is compelled to deal with hospital conditions and groups of men and sanitation on a large scale. While it may be, and is, deeply to be regretted that there should even be the necessity of improvement, yet in the direction of this great medical staff of men the zeal and loyalty and patriotism and efficiency of the medical profession are all at work rapidly improving it, and the improvement already wrought is very great.

We are not alone, Mr. Chairman. Our country is not alone in meeting these difficulties. No army was ever assembled, nor can any be, which does not bring men together who theretofore have been exposed to communicable diseases to which they are not immune; and the most which can be done is to meet these conditions with every device and suggestion which science and care can devise, and that, in my frank judgment, is the aim of the Surgeon General, and in the doing of this he has the unqualified support, and he knows he has, of every officer in the War Department, from the Secretary down.

Mr. Chairman, the second set of difficulties which you discussed with regard to the War Department were those affecting the supply of ordnance. In my previous hearing before the committee we went into that with great fullness. Clearly there are things about the supply of munitions of war about which men's minds may differ. Not merely the relative excellence of certain weapons, but the extent to which speed of procurement should be sacrificed for excellence of performance when procured, are questions of judgment, and their solution lies in the best instructed distinction one can secure.

The first question of that kind which arose affected the selection of a rifle for the Army, one involving the caliber of the rifle. The situation was that the English were using a rifle with a rimmed cartridge of one caliber, and the French were using a rifle with a rimmed cartridge of another caliber. We in America had admittedly the best rifle so far developed in any military service, the Springfield, using a rimless cartridge, and we had in stock of those weapons something like 600,000—in stock and in the hands of troops. This was early in the spring, although my recollection does not permit me to fix a definite date. The question had been investigated prior to that time in order that there might be a summary view of the possibilities of rapid procurement of various types of rifles, and finally the choice of a weapon was decided in my office, as near as my recollection holds, at night, at about 11 o'clock, and there were present in that conference Gen. Crozier, the Chief of Ordnance; Gen. Scott, the Chief of Staff; Gen. Bliss, the Assistant Chief of Staff; Gen. Kuhn, the Chief of the Army War College; and one or two other officers associated with the War College, the Ordnance Department experts on the subject of rifles, and Gen. Pershing.

At that time Gen. Pershing had been selected as the commander in chief of our forces ultimately to be dispatched to France, and as he was to command the Army and was to use the forces it seemed an especially fortunate circumstance that he should be in Washington at that time and able to participate in that conference.

Senator NEW. Can you give the date, Mr. Secretary?

Secretary BAKER. I can not give the date, Senator; but it must have been very shortly before Gen. Pershing went abroad. I should say about the 1st of June. I am not certain of that. Perhaps Senator WARREN could tell that.

Senator WARREN. The last of May.

Secretary BAKER. Perhaps it was a week before he went abroad. He was here altogether, I think, some 8 or 10 days studying the whole condition in the War College preparatory to his going away.

We did not know then, as I shall illustrate a little later to the committee, whether our Army was to fight with the French or with the English. The mode of our military operations was not determined. The excellence of our weapon was so well known that just before the outbreak of this war the British Government had decided to remodel its weapon and rearm its army, and they were on the point of manufacturing a modification of their own Enfield rifle, which would use a rimless cartridge and thus obviate the possibility of jamming in the weapon, and make it a better weapon. It was only the sudden outbreak of war that compelled the immediate need of equipment supplementing that which they had, and fearing the confusion of using a new weapon in conjunction with their old weapon, and trying pari passu to rearm their army, they decided to adhere to their Enfield rifle.

That conference considered every aspect of this question, and it was finally decided to use our own Springfield rifle and to procure a modification of the Enfield which would allow it to be chambered for American ammunition, in order to get the advantage of the large and organized manufacturing facilities already built up in this country for the production of the Enfield; and that decision, made that night, had the unanimous concurrence of every person in the conference. The master of ordnance and production, the Chief of the Army War College, with his technical advisers and experts, the Chief of Staff and his assistants, and the commanding general of the expeditionary forces, whose army and its usefulness were at stake, were present.

When we undertook to remodel the Enfield rifle it was discovered, although there were three plants in this country manufacturing it, the bolt from one factory would not fit the rifle from another factory. Instantly the question arose of procuring interchangeability in the rifles produced.

At the outset it was thought that some eight or nine interchangeable parts would be enough. Later it seemed advisable to increase that number. Senator, I am not dealing with an accurate number when I say eight or nine.

Senator NEW. Seven, I think.

Secretary BAKER. Seven, perhaps. But it was decided that a larger degree of interchangeability was required, and the purpose of that was in order that when these rifles got to France and are used under battle conditions, if a man finds himself with a defective weapon, and alongside him is another defective weapon, he can, if the emergency requires it, take out of one defective weapon a perfect part and replace a defective part in his own weapon and be equipped, and in order to enable us to repair rapidly rifles rendered inefficient in service, so that a constant supply of these weapons will be ready at the front.

There was some delay in designing with the particularity necessary—tolerances of a thousandth of an inch, in some instances—specifications for this remodeled Enfield, and that delay led to this: That when our troops actually were assembled in the camps it was some time before they were fully armed with rifles. At the outset they had very few rifles; there was a distribution of Krags and obsolescent weapons, in order that they might drill with them, but it was some time before they were adequately supplied with the remodeled Enfield rifle.

That was foreseen. Gen. Leonard Wood came to my office—I have forgotten when, but it was early—and suggested to me the advisability of instantly calling out a larger army. I said, "But, General, we have not the clothes and we have not the weapons for them." He said, "I know that, Mr. Secretary, and they need many things before they need the rifles. They need to learn to live together, get used to camp conditions; they need the elemental discipline of camp life; they need to be taught to keep step; they need to know the subordinations of the Army, and it will take some time to give them that preliminary instruction."

He pointed out to me that in England the so-called Kitchener army drilled for months, as he said, in their civilian clothes, with top hats and using a stick for arms. I said to him, "General, I agree with you that it is important to have our Army equipped rapidly so that a prolonged period of training may be given to them; but we will call out first the Regular Army and then we will call out the National Guard, build it up to war strength." But with the draft Army, they would have an additional period of training in the field by reason of the fact that the Army can not be shipped abroad in bulk suddenly. It was necessary to attempt to forecast the amount of time needed for training, and it was deemed wise to put the men in the camps in order that they might learn this matter of camp discipline, camp sanitation, the elements and essentials of the soldiers' life a little in advance of their being fully tried with arms.

I have here a statement of the rifles which were supplied to the camps at the outset. At the beginning there were Krags in the cantonments. Senator CHAMBERLAIN, in his speech to the Senate, speaks of the weapons in the possession of the department at that time as a motley selection—and I have no feeling about the phrase. The fact is that what we had was about 600,000 Springfields and something over 100,000 Krags. Also this is true: That in the greatest military establishment in the world, in the German Army, when they call out raw recruits they give them an obsolete rifle as a practice rifle until they learn to take care of it, before they actually put a service rifle in their hands. And so, as a mere drilling and training weapon, the Krag was not an improper weapon for them to have.

I do not undertake to say, gentlemen, that that question was decided infallibly. It might have been better to have bought English Enfields enough to put one in the hands of every man. But it was decided thoughtfully, and it was decided considerately and conscientiously, and now the result is that every man in this country who is intended to carry a rifle in any of our military camps has a rifle, and it is a better rifle than would have been gotten if we had adopted any one of the existing types at the time.

And this additional thing is true, that although we have gotten soldiers to Europe much more rapidly than it was originally imagined we either would or could, every soldier who has gone to Europe certainly had a modern, excellent rifle, and he has had it long enough before going into action with it to learn how to use it, to practice with it either there or here. The same observation is true of every soldier who will go to Europe.

May I say now a word about machine guns?

The machine gun, of course, is a highly technical weapon. It is in the record of testimony before your committee that up to April of the present year no Lewis gun had been made and tested to demonstrate its usability for American ammunition. The machine-gun problem is complicated by two factors, first, the question of manufacture, and, second, a difference in theory as to the use of machine guns.

When this war broke out Great Britain was manufacturing the Vickers-Maxim, a heavy, water-cooled gun. She wanted a lighter type of gun and adopted as her lighter type the Lewis, and manufactured it on a very large scale in England.

The French, however, have not used the Lewis, or any corresponding weapon as a land-operating gun in any large numbers, the French theory being that it is better to have a very light gun shot from the hip or the shoulder, like the Chauchat, and the heavy type of gun shot from a tripod or carriage like the Hotchkiss. So that something depended upon the troops with which we were to fight, the theory of combat which we were to adopt, as to which type of machine gun we should select.

There was in existence a board which had been appointed nearly a half year before—certainly some months before—to test all the machine guns there were, both those which were previously known in use and those which were not, in order that we might select the best types. The existence of that board did not delay for one second the selection or the procurement of additional machine guns. There was a test made by the Navy, I think, in April, as a result of which it was shown that the Lewis gun had been perfected to use American ammunition. There was an ordnance officer of the Army present at that test, and on the basis of that test immediate orders were given to the Savage Arms Co. to procure Lewis guns, and now we have this situation, that large orders of Lewis guns have been given.

But from Europe we learned from Gen. Pershing that he does not desire Lewis guns for use on land. The divisions of marines—I am not using "divisions" technically—the regiments of marines which went from this country with our military force as a part of it were armed with Lewis guns. They have been retired from service, the guns, and those regiments have been rearmed with Chauchat rifles and Hotchkiss machine guns just as our other land forces there are.

Under the studies made by the experts of Gen. Pershing's staff and under their direction and advice to us, we are instructed to retain Lewis guns for use in aircraft, and to press forward as rapidly as we can the manufacture of light and heavy Browning guns and Vickers-Maxim guns, for which a very large order was outstanding almost immediately after an appropriation by Congress a year ago to press those forward, so that we have the situation in regard to machine guns that the kind of weapon which Gen. Pershing and his staff want is the kind which was developed as the result of that board's inquiry, and the particular weapon which is said to have made so great a success with the British and doubtless has made a great success with them is one which is determined by our experts to be appropriate for air service and not desired for land-operating troops.

In the meantime, in order that the whole story may be told, it is in testimony before your committee that the French Government is able to supply us with Chauchat rifles, or light guns, and Hotchkiss guns, or heavy guns, for the divisions and troops which we can this year send abroad.

We have, then, the machine-gun situation reduced to this: That we ordered every Lewis gun we could get; we encouraged them to enlarge their manufacturing facilities. They still have not enlarged them as much as we have urged them to and contracted with them to enlarge them. The supply of their guns is going through in larger numbers, and in the meantime the making of the necessary machine tools and jigs and dies for the production of light and heavy Brownings and expediting the production of Vickers-Maxims is going forward, and our army abroad is provided with guns of the type adapted to the mode of warfare which they have elected to use, and our supply which is to supplement that is of the same type and of the kind desiderd by them.

Something has been said about our army in this country not having machine guns here to practice with. They have not had as many as we desired them to have, and yet I have had from camp commanders many letters, which I shall not stop to read, saying that they have not been held back by the absence of those weapons, because the rifle ranges were not ready; and for one reason or another they were not ready to go forward with them, and yet I am sure if they had had machine guns at the camps in larger quantities they would have been able to have some machine-gun practice ere this in most of the camps.

Yet I have had a table here, or statement, from the Acting Chief of Ordnance as to the machine guns which have actually been distributed in the camps in this country.

Senator HITCHCOCK. Are the dates given, Mr. Secretary?

Secretary BAKER. Well, I will read three paragraphs, Senator, which will answer that question:

The distribution of machine guns to the National Guard camps have been as follows: Thirty Colt machine guns to each camp, 65 Lewis machine guns, 45 Chauchat automatic rifles. Distribution of machine guns to the National Army cantonments: Fifty Colt guns each, 65 Lewis machine guns, 45 Chauchat rifles to each camp.

In addition to those mentioned 10 Lewis guns have been issued to each Regular Cavalry regiment and 10 Chauchat rifles to each Regular Infantry regiment. Practically all of the above were shipped before the troops were ready for them—that is, about November 1.

Now, freely, that is not an adequate supply, but it is some machine guns which the machine-gun companies may practice with, learn the mechanism and mechanics of these arms, and the supply will be forthcoming as the result of this quantity manufacturing which has been arranged for.

Senator MYERS. It does not state, Mr. Secretary, that these guns were sent to each camp?

Secretary BAKER. Yes, sir; it says so; to each camp.

Senator HITCHCOCK. But not all of them before November 1, Mr. Secretary.

Secretary BAKER. The statement made by Gen. Wheeler is that practically all of the above were shipped before troops were ready for them; that is, about November 1.

Senator MYERS. Shipped?

Secretary BAKER. Yes.

Senator WADSWORTH. Does that include the 1,200 machine guns that we found in the testimony were in storage?

Secretary BAKER. Obviously not. Those have since been shipped.

Senator WADSWORTH. In other words, Mr. Secretary, one-half of the number of Lewis machine guns mentioned there were not shipped to the camps until January?

Secretary BAKER. That seems to be so, sir.

Senator WADSWORTH. And the expression "almost all" is scarcely accurate?

Secretary BAKER. Well, if I have been guilty of the least inaccuracy I trust it will be called to my attention.

Senator WADSWORTH. I understood it was the language of the letter.

Senator MYERS. I suggest that the Secretary is reading what another officer has written to him; he is not using his language.

Secretary BAKER. That is so, Senator; and yet the evidence which is before the committee shows that there was some 1,200 machine guns which had not been distributed at the time of my appearance before the committee, which was in January, and those guns have since been distributed. But my recollection about that—and I speak only from refreshed recollection—is that at the time I reported to you about that I learned and told you that those guns had not been in stock very long, but were quite recently delivered—less than a month in stock.

Senator REED. Since we have broken in with an interruption, I only asked to get an expression in the first instance, or have an expression repeated, so that I would understand it, and that has led to these questions; but may I not ask one further question?

Secretary BAKER. Certainly, Senator.

Senator REED. The statement is made there that these guns reached the camps before they were needed; substantially, that is the expression.

Secretary BAKER. Substantially, that—before they were ready for them.

Senator REED. By that do you understand that Gen. Wheeler means that the troops required a preliminary training before they could use the guns?

Secretary BAKER. Yes, sir.

Senator REED. Or does he mean that the men were not mobilized in the camps?

Secretary BAKER. No; I think he means this, Senator, that in many of the camps the mobilization had not completely taken place. The selection of men for machine-gun companies had not been fully made. In many of them there were machine-gun companies—National Guard and Regular Army—that the erection of ranges where this shooting could take place had not been completed.

Senator REED. One thing further: A statement there is made that these guns were shipped; it does not say they had arrived.

Secretary BAKER. No, sir.

Senator REED. Do you have any information as to when they did arrive?

Secretary BAKER. I have not got information with me. There were doubtless delays in shipment because of the general congestion and delay in the country.

Senator WARREN. Mr. Secretary, what is the special advantage of sending machine guns of the Lewis type to our training camps to be used when our Army has determined not to use that sort of a gun in actual fighting, but the Chauchat gun and the other gun?

Secretary BAKER. Senator, in view of the fact that automatic rifles and machine guns are highly technical and complicated pieces of mechanism, I think it would be a distinct advantage to the troops if they could learn to use the Lewis gun, even though they were not ultimately to use it. I think it would be a distinct advantage to have them learn that, and I think they could acquire more rapidly the mechanism and use of the very much smaller Browning and Chauchat, based upon their knowledge of the Lewis, which is not itself a complicated weapon.

So that I may concur with the suggestion originally made, I think, by Senator HITCHCOCK, that it would be desirable to have all of those guns distributed which it is possible to have distributed.

Now, Mr. Chairman, one other item: That deals with cannon. There is the statement before this committee—the statement made by Gen. Crozier on that subject. I refer to it only because it contains some documents to which I want to refer.

Gen. Crozier called your attention to the fact that, beginning in 1906, and, as I recall his statement about it, continuously from 1906 down, Gen. Crozier has argued to committees—to the Fortifications Committee, the Military Affairs Committee—as to the length of time it takes to make heavy cannon.

I have no criticism to make of the response of the Congress to his representations. Congress did what it seemed wise at the time to do, and I have not the least doubt that if I had been a member of this committee or any committee of Congress I would have been just as likely as they were to take the view which they took of those recommendations. And yet continuously from 1906 the expert of the Army on that question was saying to the Secretary of War and to the Congress—and the Secretaries of War have changed, both in person and in political affiliation, if that amounts to anything, several times since those original recommendations were made—Gen. Crozier was saying to you and to us that it takes a long time to make artillery; that artillery is getting to be a weapon of increasing importance; and urging that there be ample production for a more rapid completion of the program laid down in the Treat Board report.

Gen. Grozier said in 1912, for instance—or somebody asked him this question:

> It takes a long time to manufacture these field guns?—A. Yes.
> Q. How long does it take?—A. I do not think we could count on getting a battery delivered in less than a year from the time the order was given. I do not mean to say that it would take a year for each battery, but deliveries would not begin until a year after the order was given.
> Q. It is very important, then, to have them on hand?—A. Yes; it is the slowest manufactured of any of the fighting material we need.

I shall not recall further, or read further, the statements of the general. They are set up by extracts from his testimony, his reports, and his letters to you and to me, and to my predecessors, in his own statement; but they show that Gen. Crozier realized the slowness with which that sort of arm could be produced, and was constantly urging that ampler production be made of it. And yet, even Gen. Crozier could not have realized, and it did not lie in anybody's imagination to realize, the importance which artillery has assumed in this war. The wars prior to this have been evolutions of large forces over great areas. This finally got down to a bitterly contested line, with the massing of heavy guns on both sides, and even the French did not realize it in this war until after it had started.

I have a letter before me from Mr. Tardieu, and perhaps I may be permitted to read it. It is written to Mr. Baruch and not to me. You will find here a few figures and further information concerning what I told you the other day. When war began France had at her disposal guns of artillery caliber about 89 millimeters, or 3.8 inches, but of these only 140 were quick-firing; that is, really adapted to modern warfare; 272 only of these guns, with their personnel, were organized in regiments and consequently available on the battle field. The balance were located in fortresses and fixed emplacements. There was first a period during which the activity of our war ministry on heavy artillery was limited to the equipment and formation into batteries of heavy fortress artillery. It was an error, as modern warfare requires quick-firing, heavy artillery; but, as everybody was convinced of the short duration of the war, it was wrongly thought that it was not necessary to start with the manufacture of quick-firing, modern ordnance.

It has been seen later that this policy is wrong; although one ought not to forget that our most important industrial regions were occupied by the enemy. The orders placed for heavy, quick-firing ordnance have been scheduled as follows.

I shall not read that schedule, but I will read the dates when France, the very seat of the conflict, with her enemy at her throat, with the demonstration of the character of warfare now being adopted, that it was the massing of heavy artillery that was ultimately to determine the integrity of the Hindenburg line—with that before her mind's eye, France gave orders for heavy, quick-firing artillery in September and December, 1914, and January, April, September, October, and December, 1915, and in January, 1916, and the largest order she gave on

any of those dates, except one, was the latest order, in January, 1916, after the war had progressed substantially a year and a half.

Senator HITCHCOCK. Was that after she had her ministry of munitions, Mr. Secretary?

Secretary BAKER. I can not answer that, Senator; I do not know. Well, there was our situation: We had a limited amount of artillery. The first step taken by the War Department was to attempt to speed up the artillery which we already had in process of manufacture. Here again, however, we come in conflict or come into contact with two theories of the use of artillery. The French use very large quantities of the 75-millimeter type. Their barrage is made by enormous quantities of 75-millimeter fire. The British had a field howitzer of larger caliber for that effect.

There are two distinct theories of the use of artillery on that front. The British prefer theirs; the French prefer theirs. We did not know then the relative merits of either. We had reports from our observers; we had expert opinions, but now we were down to the place where we had to choose for ourselves—not from speculative and philosophical judgment as to the relative excellence of two military theories, but we had to select arms for an army that was going to fight for its life.

As I shall show in a moment, our attempt to do that was by sending over to France the ablest men we had, to determine it on the ground in consultation with men who were making and using these relative types of weapons; but in the meantime we allowed no hindrance to be proposed in attempting to speed up the production of our classical types of weapons.

But very early, perhaps in June, it was estimated to us that the French had so far accelerated their industry in order to procure their initial supply, that the wastage of their use would not consume or occupy fully their industrial capacity, and that therefore it would be possible for them to supply such troops as we could get to France, within limits, with artillery of their manufacture and of the kind they were using. That question was very actively taken up at once. Mr. Tardieu was here. He had for eight months, I think he said in his letter, been connected with munitions production in France; he knew the subject. Gen. Crozier and he had many conferences about it, and on the 14th of July, or perhaps the 13th, an agreement was reached whereby the French Government undertook to supply us with quantities of the two principal pieces used, according to their theory of artillery use, namely, the 75-millimeter field guns and the 155-millimeter rapid-fire howitzers. Mr. Tardieu wrote at that time an announcement which was to tell the French people what had been done. It appears in translation in Gen. Crozier's testimony.

Mr. Tardieu said:

> The negotiations taken up for the first time at the end of May between M. Andre Tardieu, the French High Commissioner, and M. Ganne, chief of war munitions of the high commission, and Gen. Crozier, chief of ordnance, was characterized by two ideas. On the one hand the American Government wished to adopt the quickest solution in order to realize in the shortest time the complete armament of its forces; and on the other hand with great foresight they attached particular importance to realizing for the American and French Armies called to fight on the same battle fields uniformity of munitions of such great importance from a tactical point of view.

I shall not read the statement in full, but the paragraph which I shall now read I think is significant:

> The dominant note of the agreement lies in the proof it gives of the unshakable resolution of the American Government to achieve in the shortest time the maximum of military strength, and on the other hand it proves the active and intimate cooperation existing beween the United States and France.

I leave out the next statement.

> The Secretary of War and Gen. Crozier, Chief of Ordnance of the American Government, have given proof in this case of the broadest spirit of comprehension and decision and has succeeded in a few weeks in securing for the American troops artillery of the first order.

Now, at the time this statement was made, it was the confident expectation of everybody in this country that the sending of troops in large numbers to France was a thing in the somewhat remote future. That was in July. We were sending troops, but the sending of armies rapidly had not then been as fully worked out as it has since become.

Senator REED. Will it interrupt you if I ask a question?

Secretary BAKER. No, Senator; certainly not.

Senator REED. If I understand you, the view that the War Department took was this: That France had been obliged, in order to supply her own forces rapidly, to build factories of greater capacity than she needed, after once her troops had been supplied?

Secretary BAKER. That is true, sir.

Senator REED. And that you thought it was better—and when I say "you" I mean the War Department—to utilize those factories which had already been created than to wait to build factories?

Secretary BAKER. Yes, sir.

Senator REED. That was the view?

Secretary BAKER. That was the view—and better for two reasons, Senator, and probably three reasons; but better for the reason that their facilities were already in quantity production. It takes a long time to get quantity production. In the second place, it saved tonnage, and I am telling no secret when I say to you gentlemen of the Senate that the crux of this problem is the tonnage problem, and every time we can get by the use of organized and going French industry anything on that side instead of making it on this side and sending it we are advancing the common cause by that amount.

Senator REED. Has it been any disadvantage to France? Has it been any deprivation to France?

Secretary BAKER. Senator, I am coming to that in a minute. Categorically, I believe it has not been. I believe it is a very great advantage to France. Mr. Tardieu, in his statement, says that it is a great advantage to French industry, because it enables those men who are organized in that industry to keep on with the thing they are familiar with instead of being dismissed and try to start over in some other war industry.

Senator REED. In a word, if you thought that there was a factory in France capable of producing these weapons, and capable of producing them at the moment, it was not necessary to build a factory on this side to do the same thing that could be done over there?

Secretary BAKER. In part that is so, Senator. We thought that if there were factories in France capable of building these weapons, and actually building them, we thought they ought to go ahead building them as rapidly as they could, and in the meantime our own capacity on this side ought to be built up so we could supplement that effort; and if anything happened to their ability to keep on delivering, we would have our own sources of supply developed. That is exactly what we have done. But just a word more on this subject:

There is in the testimony before this committee a telegram from Gen. Bliss. It is perfectly well known to the members of the committee that when the so-called House mission went abroad Gen. Bliss, Chief of Staff, representing the Army, and Admiral Benson, representing the Navy, were members of that mission. Their task was to find out by conference with the French and British and Italians, and their military experts, an answer to this question: How can America contribute most to the early winning of this war?

One of the answers to that question which they brought back, and telegraphed it before they came, was that the more rapid expedition of troops to Europe was a part of the answer, and they asked at once of their associates in conference, "What about further supplies of artillery and artillery ammunition?" And there, in the high military councils of those two nations, the matter was discussed, and it was agreed that both Great Britain and France had surplus ordnance, surplus ordnance ammunition, and surplus ordnance ammunition capacity; that Great Britain was in exactly the same state that France was. In order rapidly to equip her great army she had built up quantity production to such an extent that the wastage of war and the necessary augmentation of ordnance and ordnance ammunition would not exhaust her capacity, and therefore it was agreed by these international military experts that—

The representatives of Great Britain and France—

This is a telegram from Gen. Bliss in December—

> state that their production of artillery, field, medium, and heavy, is now established on so large a scale that they are able to equip completely all American divisions as they arrive in France during the year 1918 with the best make of British and French guns and howitzers. With a view, therefore, to expedite and facilitate the equipment of the American armies in France, and, second, to securing the maximum ultimate development of the munitions supply with the minimum strain upon available tonnage, the representatives of Great Britain and France propose that the field, medium, and heavy artillery be supplied during 1918 and as long after as may be found convenient from British and French gun factories.

I have seen, gentlemen, in the newspapers, statements that this taking of ammunition from France is putting her to a greater effort than she ought to undertake. I say to you that Gen. Joffre and his associates who were here—Mr. Tardieu, the French high commissioner, the British representative, Gen. Bridges, and his associates, when they were here in that mission I don't remember whether I spoke with Lord Northcliffe on this subject or not—but all of the persons who have come to this country with any knowledge on that subject, and Gen. Bliss, who went to Europe to study that subject on the ground, bring me the confident and positive assurance that we are not only not taking from France and Great Britain things which they need, but that we are helping them to maintain their processes; that we are using the facilities which they have organized in order to meet a need; that we are saving tonnage; that we are expediting

the arming of our own forces; and that we are making a properly coordinated and cooperative effort of a military character with our allies in this war by this process.

Senator McKELLAR. The proposition came from the British and French themselves?

Secretary BAKER. Came originally from the French, then from the British. And yet we have not stopped there. We have organized increased capacity in this country, looking ahead. The schedule of deliveries of artillery in this country which is before your committee and which I will be very glad to leave with the committee for examination, I should not like to have appear as a part of this public statement, but the committee may have it. I read figures which it will not hurt to read.

This shows the production of mobile artillery, it shows our procurements from France, prospective procurements from France, and covers the year 1918. At the outset, in the month of January, out of the 75 mm. field pieces, we get 620 from France, and there have been turned out of our own factories only 84. In April our own production has risen to 231, and the French has dwindled to 73. In succeeding months the number increases until in the month of December, 1918, our own production of that piece is forecasted to be 433 pieces.

I have here on this table the figures for 3-inch antiaircraft guns, 4.7 guns of American manufacture, 155 mm. howitzers, of United States manufacture, beginning with one in January, 1918—only nine months after the declaration of war. So far as this matter is concerned, involving so much time, by the testimony of all experts, it is rising steadily and rapidly, the production of this large piece, to a maximum of 300 per month in December, 1918. That is the howitzer. The gun is manufactured in the same way in this country with rising production on our own part, original procurement from the French and diminishing supplies from them. The 8, 9.2, and 9.5 inch howitzers of American manufacture and those procured in England are all shown on this chart.

I think, gentlemen, that it is fair to say—and if there be a possibility that I am wrong about it I should like to have it called to my attention, so that I can make no statement here which is not wholly borne out by the facts—that the American Army in France now and to be there, large as it now is and larger as it is to be, is provided with artillery of the types they want for the uses to which they are to put it, and as rapidly as they can use it; and that our own stream of manufacture to supplement that is inaugurated, in process, and deliveries of some pieces already begun, with, so far as industrial forecast can be relied upon, a rising and steadily increasing stream of American production.

Senator SUTHERLAND. Mr. Secretary, is the 75 mm. gun which you expect to produce the French gun, or is it the American?

Secretary BAKER. It is the 3-inch American gun.

Senator SUTHERLAND. Have you developed a completely satisfactory 3-inch American gun?

Secretary BAKER. Yes, sir.

Senator SUTHERLAND. To take the place of the other?

Secretary BAKER. Yes, sir.

Senator REED. With recoil and everything fully developed and satisfactory?

Secretary BAKER. Yes, sir; our 3-inch fieldpiece is regarded as an excellent piece, and is substantially of the same caliber as the French 75.

Senator WADSWORTH. You do not mean to give the impression that we are making 3-inch fieldpieces?

Secretary BAKER. We are making in this country the 75. I beg your pardon, Senator SUTHERLAND, we are using the French 75.

Senator REED. Is that the complete French gun, with the recoil and all the parts?

Secretary BAKER. I do not know that. Perhaps Senator WADSWORTH does know from the testimony. My impression is we are continuing to make the 3-inch gun and in addition to that are getting, according to the French model, the 75 made in this country; but I may be wrong about that.

Senator WADSWORTH. My recollection is that for the time being we have stopped making 3-inch guns and are making the French 75's.

Secretary BAKER. That may be so.

Senator WADSWORTH. At any rate, Gen. Crozier gave us to distinctly understand that the important production would be the French 75's.

Secretary BAKER. In this country?

Senator WADSWORTH. In this country.

Secretary BAKER. Yes.

Senator WADSWORTH. And that our 3-inch guns that we now have are to be used for training in this country.

Secretary BAKER. Senator SUTHERLAND can get the exact facts from Gen. Crozier's statement, because it was supplied exactly from the records.

Senator REED. This table only deals with the 75's, and then there was one column set aside for the antiaircraft.

Secretary BAKER. That is the antiaircraft gun, with a different mount.

Senator REED. There is no field gun shown here as the 75.

Secretary BAKER. I see. In addition to what I have said, gentlemen, I read what is already before you—a statement made by Mr. Tardieu in a letter to Gen. Crozier. This was a letter of December 21:

> Even in such mere technical conditions as these it takes time to realize such a program, to organize manufactures, and to have men to direct them. You will take less time than we did in France, where the output of field guns was not adequate to our needs before the end of 1916.

Now, if I may supplement that with one or two other figures from this same report of Gen. Crozier:

> The British Government in this country placed orders for ammunition and ordnance of all kinds totaling $1,308,000,000, extending from about the middle of August, 1914, to the middle of July, 1917, or over a period of about three years. In comparison with this our own Ordnance Department has placed orders for 63,000,000 shells—

I leave the odd figures out—

> of a total value approximately of a billions dollars, between the middle of May and the middle of December, 1917, or over a period of seven months. In comparison with the total munitions and ordnance purchases of the British Government in this country in the period of about three years, of $1,308,000,000, the Ordnance Department has placed contracts for a total of $1,500,000,000 in seven months.

Senator REED. Mr. Secretary, is the comparison there between what Great Britain ordered in this country and what we have produced, or between what Great Britain ordered and produced?

Secretary BAKER. It is only what Great Britain ordered in this country, Senator. What she was making at home is, of course, left out of that amount.

Senator REED. How does it help us to compare, in an effort to show that we have been doing enough, what we are producing a total with what Great Britain may have ordered in this country, when we leave out of account what Great Britain may have ordered in other countries?

Secretary BAKER. It does not help you, Senator, except to this extent——

Senator REED. I only want to get the import of the figures.

Secretary BAKER. This is what I claim for it: When this war broke out Great Britain was not prepared for it. She immediately began not only to organize her own industries, but to use every facility in a neutral country which she could lay her hands on to produce ordnance and ordnance ammunition.

She had, as you know, Mr. Stettinius as a representative here, an American representing her, and he has won deservedly a great reputation because of the masterly way in which he evoked in this country agencies rapidly for the creation of ordnance and ordnance ammunition.

When Great Britain was placing those orders she was placing all she could place. What she wanted was ordnance and ordnance ammunition in large quantities and in a hurry. So, it is fair to assume that, in addition to her own capacity for manufacture, she was getting from us at least the major part of what we were deemed capable of producing at the same time.

I do not mean to say that that is a necessary concession, but everybody knows the urgency of Great Britain's need, and everybody who kept track of it at the time knows that the factories in this country which had made plows, and factories which had made cash registers, and factories which had made adding machines, and factories devoted to all sorts of standard industrial uses of one sort and another, were gotten together under the spur of that impulse and devoted to the manufacture of ordnance and ordnance ammunition.

When we came into the field we came, it is true, into a field where some experience had been acquired by American manufacturers in the manufacture of ordnance and ordnance supplies, but we came into a field in part preempted and occupied by our allies, and our problem, so far as the Ordnance Department was concerned, was not merely to commandeer, right and left, the facilities in this country for the manufacture of ordnance and let the British and the French take care of themselves. They were fighting and on the fighting line, and our necessity was to intrude our program into theirs in such a way as not to weaken their strength while we were building up our own to bring to their assistance; so that our industrial problem, while obviously aided by the experience which our manufacturers have gotten in the manufacture of ordnance and ordnance supplies, was at least complicated by the fact that so very much of the very best talent in the country was already devoted to that and for uses which could not be diverted or suspended.

Senator FRELINGHUYSEN. Mr. Secretary, may I interrupt you?

Secretary BAKER. Certainly, sir.

Senator FRELINGHUYSEN. Is it not true that our shell capacity has been reduced from about 20,000,000 for a unit of time, I think it is one month, to 5,000,000 since our entrance into the war?

Secretary BAKER. I can not give you that answer; I do not know, Senator.

Senator FRELINGHUYSEN. You do not know?

Secretary BAKER. No, sir.

Senator FRELINGHUYSEN. Have you all the shell capacity that you need?

Secretary BAKER. I think we are still letting shell contracts.

Senator FRELINGHUYSEN. I understand it is reduced to about 25 per cent since our entrance in the war, and many of the plants have been dismantled.

Secretary BAKER. I can not answer that, sir; I do not know. It helps very little to give figures of this sort, and yet there is a story back of them, a story of driving, hard work. The Ordnance Department has averaged 20 contracts a day since our entrance into this war, involving a daily average of about $6,000,000.

Senator REED. Mr. Secretary, I do not want to interrupt, but it seems to me, if I understood the question of Senator FRELINGHUYSEN, that certainly you must be in position, or should be in position, to know whether our shell-producing capacity has been actually reduced to 25 per cent of what it was.

Secretary BAKER. Senator, I am in a position to get that.

Senator REED. How could that happen without your knowing it?

Secretary BAKER. Doubtless what must be at the base of the Senator's question is this: That some factories organized in this country and equipped with machinery for turning out shells were allowed to dismantle under contracts by which their machinery was to be sent to England when they got through, or something of that sort. If there has been reduction in shell-producing capacity it is to be accounted for in that fashion.

Senator FRELINGHUYSEN. The reason for my question was this: I was wondering whether the Ordnance Department had made any investigation as to their need of shells and the absorption of the capacity in this country. I understand that upon our entrance into the war we had a capacity four times as great as we have now, and that the War Department has allowed these shell factories, these large ammunition factories, to become dismantled and go out of business, and that the capacity has been reduced to about 25 per cent of what it was originally. I presumed that you would have the figures, or information of that kind.

Secretary BAKER. I have not the figures, Senator, but the question is, of course, a very pertinent one, and if the facts are as reported, the reason for it is equally important, and I will be very glad to procure that information for the committee.

Mr. Chairman, may I now turn aside to the third? I will now go into a comment which appeared in your address, Mr. Chairman, dealing with the supply of clothing under the Quartermaster General's Department. It is perfectly true, and I thought I agreed with you about it when I was before you before, that the supply of clothing was inadequate. If I did not then agree to that it was only because it was so obvious that an explicit statement of agreement did not arise out of the form in which the questions and answers were made.

I said to you, I feel quite sure, at that time that our initial rush needs were substantially provided for, and that reserves would rapidly accumulate; but I supplied to the committee all I could get—tabulated statements, with the exact number of garments short in every camp—and you accounted it a fault to me, Senator, when you asked me about Camp Sherman, and I telegraphed out there and got a message which was reassuring in character, and the next day got a correction which showed not so good a condition, and I sent it to you before it was cold from the telegraph wire.

I think you thought, Senator, that I was to blame for that. I wanted the Senator and the committee to have all I could get, and I sent it without reservation, as I shall do in the future in response to any request that the committee makes.

I have already said to you that at the outset we had the problem as to whether we should wait until we had an adequate supply of clothing or whether we should not.

In large part, I think the responsibility for that decision rests with me personally. The best information I could get then and the best information I have now is that it takes somewhere between 9 and 12 months to teach men who have not had previous experience to live in camps, to learn the discipline and life of a soldier, so that he can be safely sent into the kind of warfare we now have.

I did not then know, nor do I now know, nor can I know how rapidly it may be necessary for us to send men to France. I know how rapidly we have sent them. I know how many are there. I know what our present plan is to send them, but I do not know but that to-morrow—this has not happened—but I do not know but that to-morrow it might turn out that it would be wise to double the rate at which we are sending troops. There are now in the United States 16 National Guard camps, 16 National Army camps, filled with men who are ready to go if it is necessary. I have sacrificed something for that. I have not willingly sacrificed the health of anybody. I have not intended to sacrifice the comfort of anybody, but I have intended, if it was humanly possible, to be ready when the call came; and if I were to have delayed the calling out of these troops until the last button was on the last coat, and the call had come in November or December or January, "Send them and send them fast," and they were still at home waiting for tailors, I would have felt a crushing load of guilt and responsibility which, at least in comparison with what I do feel about having called them out, would have been incomparably greater.

And yet I was not callous about it. I asked those agencies with which we were dealing in this matter how fast we could expect these supplies. They gave me the forecast as to the future. They relied upon their estimate of production. I relied upon their estimate of production. Men who were called upon to take contracts for the production of cloth and the making of garments, not unnaturally perhaps, overestimated their capacity for production. Here and there some little labor difficulties—not many—the response of labor to this situation has been superb in the United States. Here and there difficulties of transportation and delays in getting supplies from one place to another, accumulating congestions upon the railroads, delaying manufacture and shipment from one place to another, unprecedented weather conditions in the United States, a winter the like of which none of us have seen since we were children.

These things did arise, and the result was that in many of these camps there were shortages of coats, there were shortages of overcoats, and perhaps in a minor degree of some other things, and at the very outset a shortage of blankets which was quickly supplied by going into the civilian market and buying comforters here and blankets there of a nonuniform type.

The reports I have now are, and the reports for some time have been, that the quantity of woolen underwear in the camps is adequate; that the quantity of heavy cotton khaki is adequate. For some weeks now we have had an adequate supply of overcoats. The supply of coats is approaching adequacy, and almost without exception—I say "almost," because I have not had time to read them all—but from every camp with which I have communicated in the last few days the report comes to me that where there are any shortages of coats, and that seems to be the principal item, that there is no such shortage as interferes either with the safety or comfort of the men; that adequate stocks of heavy woolen underwear and overcoats have protected the men against actual suffering by reason of the temporary deficiency in goods, but even the temporary deficiency in goods is for the most part supplied.

Suppose I had taken the other counsel. There were two alternatives. Either we could go into this war as nations go into wars, summon the countryside and assemble them into camps and work out their problems afterwards, which was one suggestion at the time, or we could wait until the last element of preparation had been made before summoning the men.

The unwisdom, I think, of either of those courses is obvious. What we tried to do, and the responsibility for it, I think, I must personally accept, because I was conscious of the grounds on which it lay—what we tried to do was to summon the men out as rapidly as they could be taken care of, with the best knowledge we could get of the capacity of the industry of this country, and it is not unknown to any member of this committee that when the draft Army came to be assembled, we delayed the calling out of the units of it sometimes a couple of weeks, sometimes more than that, in order that at each camp no men would be received who could not be taken care of, and the last element of the first 500,000 or 687,000 men selected by draft, the last element of those men intended, originally, to have come out in November or December, will not in fact report to the camps until the 15th of February, in order that this production may catch up and be adequate for their entertainment and protection when they come.

Now, one or two erroneous beliefs with regard to this subject, I think, are abroad.

Senator REED. Was there, Mr. Secretary, an order or a warning, or suggestion sent out to troops coming to camp that they should bring but little clothing with them?

Secretary BAKER. I think there was, Senator, a suggestion sent out that they should bring very little clothing, and when they got there they were directed to go into uniform and send their private clothing home.

Senator SUTHERLAND. Mr. Secretary, while you are on that subject, I was told Saturday by a colored preacher who had visited his son, a private at Camp Meade, just an hour from Washington, that none of the colored soldiers there had woolen underclothing. I asked him about the outer clothing, and he said a good many of the colored men were supplied with the cast-off clothing of the white soldiers, that he himself had supplied his son with the underclothing which he needed, and that they were very uncomfortable and suffered for the lack of woolen underclothing.

Secretary BAKER. Senator, I have no means of knowing of the accuracy of some part of that account, but I have a report from Gen. Nicholson, at Camp Meade.

Senator SUTHERLAND. I think some thirteen or fourteen hundred colored troops are at Camp Meade.

Secretary BAKER. I feel very sure that there must be some mistake about supplying any soldier with the cast-off clothing of others. I am quite certain that no distinction is made between white and colored troops in that matter, and I believe the fact to be that there is at Camp Meade a surplus of heavy woolen underwear for every soldier there.

Senator SUTHERLAND. I thought it was quite important to correct such a report, if it is current.

Secretary BAKER. It is important. As a matter of fact, I went to Camp Lee in person two months ago. There is a very large body of colored troops there, and the only shortage in uniforms I discovered by observation of these troops in review was that one white soldier did not have an overcoat on, and when I questioned him about it he said that he had left it in his tent; and some colored men wore denim trousers instead of woolen trousers, and that was explained to me by saying that there was an inadequacy in certain sizes of garments.

The last report I have on Camp Meade, Senator, apparently is dated the 26th, 27th, and 28th of December, and at that time the only shortages reported were coats, overcoats, and breeches, all of which were supplied by shipment from Baltimore on the 21 of January. There was no shortage at that time of underwear.

Senator REED. What was the extent of that shortage?

Secretary BAKER. I do not hesitate at all to give it to you, except that it deals with a situation in December, and the supply has been very rapid in January, and I do not want to give you a false impression about it.

Senator SUTHERLAND. Mr. Secretary, will you have somebody wire to ascertain the actual facts from the men themselves?

Secretary BAKER. With very great pleasure, Senator.

Senator SUTHERLAND. I would like to have that cleared up.

Secretary BAKER. I will do that with very great pleasure, Senator.

In some way the idea has gotten abroad that the uniform of the soldier is made of a mixture of wool and shoddy. I do not think it an unnatural thing that that idea should have gotten abroad, because I remember at the time that I appeared before the committee before, a young soldier came in to see Senator CHAMBERLAIN, an acquaintance, and Senator CHAMBERLAIN and I felt the uniform and we asked the date of the issue of his coat and the date of issue of his trousers, and we felt the two kinds of cloth, and both of us said, "The trousers are very much better than the coat. This coat, which has shoddy in it, evidently is not nearly so good as the trousers, which were made at the time when they did not have shoddy," and I think the Senator will remember that we agreed to that, that the two issues showed a difference in quality, and we attributed it to the shoddy.

The fact is that all of the uniform cloth of the Army of the United States is made of virgin wool. There is no shoddy in any of it. There has been introduced into the cloth used for overcoats and for blankets an admixture of reworked wool, but into the uniform cloth there is no shoddy, there is no reworked wool; it is all virgin wool. And in addition to that, when we went into this war the standard of Army quality for uniforms was that it should contain 75 per cent wool and 25 per cent cotton. That had been our standard for a long time; but the specification was changed, and the Army uniform cloth, every yard of it, bought for this war is virgin wool of the same weight it has always been, with a large increase in its strength in order to give it greater wearing qualities, and the reworked wool, or use of scraps, so-called shoddy, is limited to overcoats and blankets. I did not know that. I am like the committee. I did not know that until I received a letter, of which a copy was sent to Senator CHAMBERLAIN, from Mr. Eisenman to that effect, and I called him up this morning and asked him if I understood him correctly as to that being the fact, and he said it was the fact.

On that subject I want to read, if I may, a statement made by the greatest wool expert in America on that subject. My attention was called to it only this morning. It is from the issue of Commerce and Finance of January 23, 1918, and is written by Mr. William M. Wood, president of the American Woolen Co. Senator WEEKS knows that I am not stating it too strongly when I say that he is a man of very high authority in the wool world.

Senator WEEKS. He is the president of the largest wool manufacturing establishment in the United States.

Secretary BAKER. Yes. Mr. Wood says this:

> The recommendation of the manufacturers committee to the Council of National Defense looking to the utilization of reworked wool is, in my opinion, worthy of consideration and not to be disparaged, as it has been in some quarters. Reworked wool can be introduced into fabrics which are used for overcoats and blankets so as to improve rather than impair their usefulness.
>
> It gives a better fitting property to the cloth, makes a warmer, closer, tighter fabric, provided a judicious proportion is used.
>
> The manufacturers' committee, composed of patriotic and practical men, gave the Government their best judgment based on the knowledge and experience acquired through years of effort in practical manufacturing in recommending the judicious use of reworked wool.
>
> I am willing to venture the statement that in the construction of from 90 to 95 per cent of all the overcoatings made in the world, including some of the finest fabrics, there is used a measurable quantity of reworked wool or shoddy; so that the prejudice which appears to exist against the use of this kind of raw material is unfounded and unjust under modern conditions of manufacture.
>
> As confirming this, I may mention that all the heavier military cloth used for export in this country, under specifications given by their respective Governments, contains a large percentage of reworked wool.

So that I am correcting, if you shared it, a mistake which I shared with you. I had supposed that, on the recommendation of this committee of the American Woolen Manufacturers' Committee, a uniform cloth which had originally been virgin wool was reduced to first 65 and 35, and then 50–50, of virgin wool and reworked wool.

Senator REED. Does not that statement of Mr. Wood prove too much? If it is a fact that shoddy is better than wool, we ought to use it in the uniforms as well as in the overcoats.

Secretary BAKER. No; apparently not, Senator, and for this reason, if I am able to judge it at all. I do not know a great deal about it, and I probably should not venture an opinion, but according to Mr. Wood's own statement he limits the recommendation to blankets and overcoating material.

Senator REED. Well, he adds that it is used in some of the finest cloths.

Secretary BAKER. For overcoating.

Senator REED. Employed anywhere, and that it makes a closer and warmer garment. You have not time to stop and argue it.

Senator FRELINGHUYSEN. Mr. Secretary, I do not want to contradict you, but I want to read a statement of Col. Lindsley, chief inspector of the Quartermaster Department at Philadelphia.

The CHAIRMAN. Before the committee?

Senator FRELINGHUYSEN. Before the committee.

The CHAIRMAN. What page is it?

Senator FRELINGHUYSEN. Page 1332, part 3 [reading]—

> In the service cloth, the 16-ounce melton, what were the specifications of the Quartermaster General's Department of the United States Army prior to and at the entrance of the United States into the war?
>
> Col. LINDSLEY. That was 75 per cent wool, high three-eighths, and 25 per cent cotton, and the 16-ounce—

That is the uniform cloth, Mr. Secretary—

> that we have been getting since the outbreak of the war of the worsted has been mostly all worsted and is probably a superior cloth to the specification. The reason for that was the worsted mills could not make the 30-ounce overcoating. That had to be made on a woolen system in order to employ all of the looms, all of the mills, and keep them going and get the production that was necessary. We got this worsted cloth made on the worsted system instead of the woolen system.
>
> Senator FRELINGHUYSEN. Then you believe that as far as the service cloth is concerned we are getting as good a cloth, if not a better cloth, than we had before?
>
> Col. LINDSLEY. In the 16-ounce; yes, sir.
>
> Senator FRELINGHUYSEN. Does that universally apply to all cloth that is being procured at the present time?
>
> Col. LINDSLEY. No; we are getting some 16-ounce that has a worsted warp and a carded filling. One contract was placed with a cotton warp and a 50 per cent wool and a 50 per cent shoddy filling.

I think you will find, Mr. Secretary, if you will make further investigation, that there is a large quantity of cloth now under specification with the shoddy filling of the 16-ounce.

Secretary BAKER. Senator, I have before me—I should be very glad to have that testimony looked into and complete accuracy obtained, but I have before me here in print the specifications of the several kinds of cloth, the original specifications in 1916,

and the present specifications. If I can find out where this came from——

The CHAIRMAN. Mr. Secretary, pardon me. It is now near 1 o'clock, and you wanted to ascertain a little more definitely about the statements you are covering now, and we might take a recess until half past 2.

Senator WEEKS. How much more time do you wish to take, Mr. Secretary?

Secretary BAKER. I have one more matter I want to cover in detail. I should think it would take an hour or an hour and a half, perhaps.

The CHAIRMAN. Then we will take a recess.

Senator MCKELLAR. Before we adjourn, may I call the Secretary's attention to Mr. Eisenman's testimony, in which he says this in reference to the uniform:

Now, it is virtually all wool; I mean 90 per cent of our purchases of uniform cloths have been all wool up to date, including this morning, practically all-wool worsted fabrics.

So it means that if he states now that they are all virgin wool, there must be some mistake or discrepancy, at any rate, between this statement given on January 2, 1918, and the letter written this morning.

I just want to call your attention to that.

The CHAIRMAN. The committee will take a recess until 2 o'clock.

(Whereupon, at 12.45 o'clock p. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

The committee reassembled at 2 o'clock p. m.

The CHAIRMAN. The committee will please come to order.

Mr. Secretary, are you ready to proceed?

Secretary BAKER. Yes, Senator.

Since the adjournment, Senator, my secretary has discovered a letter which was in his hands, addressed to him, from the commanding general at Camp Meade, to which Senator SUTHERLAND referred. I do not see Senator SUTHERLAND present at the moment. This letter was written to Mr. Hayes in reference to a letter which was sent originally by some lady to Dr. Anna Shaw, and by her referred to Mr. Hayes for information, and he sent it to Gen. Nicholson.

Gen. Nicholson says this:

There has never been a time when the troops at this cantonment have not had at least three pieces of heavy winter underwear and an ample supply of heavy socks. There was a time when there was a scarcity of woolen uniforms, but from my observation and from the reports of the surgeon no suffering or hardship resulted from this condition. The food supply has been abundant and well prepared, and I venture to say in a great many cases of better quality and quantity than the men would have had at home.

The latter part of that, of course, is immaterial, but the particular point of Senator SUTHERLAND's inquiry was with regard to an adequate amount of underwear, and Gen. Nicholson's statement has been that there has not been a time that there were less than three suits of heavy winter underwear in camp.

I have also, since adjournment, been able to get from Gen. Wheeler a statement with regard to the ammunition of shell-making capacity of the country, which I desire to read. This, of course, was in reply to a hurried inquiry:

Referring to your inquiry of a few minutes ago, I may say that the shell-making capacity of the country is difficult to state in number of shell without giving calibers, but it is our best estimate that the shell-making capacity of the country for 75-millimeter and 3-inch shell has been increased about 50 per cent since the beginning of the war and that the shell-making capacity for sizes above 75-millimeter and 3-inch has been increased about 25 per cent in the same period. I am sending you inclosed herewith a carbon copy of a statement showing that the Ordnance Department now has under order in the United States 59,803,910, say 60,000,000, shells. All of these shells are to be delivered during the calendar year 1918.

I think it was Senator WADSWORTH who made that particular inquiry.

Senator WADSWORTH. No; it was Senator FRELINGHUYSEN.

Secretary BAKER. Perhaps when he returns it will be wise to call this memorandum to his attention.

Immediately at the adjournment, if the chairman will recall, I had been asked some questions as to the discrepancy in the testimony in regard to 16-ounce melton cloth, and the question was whether the statement made by Mr. Eisenman that that was entirely a virgin wool was accurate in view of the statement made by a colonel in the record, whose name has escaped me for a moment.

The CHAIRMAN. Col. Lindsley.

Senator MCKELLAR. And the statement was made by Mr. Eisenman previously.

Secretary BAKER. There msut have been some confusion in the mind of the witness as to the particular subject under inquiry when those statements were made, if they, with their context, had the meaning which we have all attributed to them when they are read. Mr. Julius Rosenwald, who has been at the head of purchase of this sort of supply or the accumulation of capacity for this sort of production, was in the room during the morning session, and came up to me at the conclusion of the statement to say that the previous statement on the subject, derived from the last statement of Mr. Eisenman, is absolutely accurate; that the 16-ounce melton is wholly virgin wool, and that in cloth of that weight reworked wool can not be profitably used. But that in cloths of greater weight, the kind used for overcoats and blankets, it can be used, so that, apparently, the last statement by Mr. Eisenman is a correct statement, and our 16-ounce melton uniform cloth is now made entirely of virgin wool, instead of, as before the war, 75 per cent wool and 25 per cent cotton, and is, for cloth of that weight, the best that can be produced.

In that general connection some question has been raised as to whether a heavier weight of cloth ought to have been supplied, in view of the fact that foreign armies use a heavier weight of cloth. I can add nothing to the testimony in the record on that subject. That testimony, as I understand it, is this, that we have retained the cloth specified for our Army for a long time, so far as weight is concerned; that by the injection of 100 per cent of virgin wool we have strengthened it and increased its warmth and wearing capacity; but whether or not a heavier cloth ought to be indicated is yet to be determined, and the status of that matter is this, that Gen. Pershing was requested to have his experts in Europe investigate that situation and report to us on or before the 1st of February whether he recommended any change in the uniform cloth. That report has not yet been made by Gen. Pershing and his staff, nor has any suggestion ever come from Gen. Pershing or his staff voluntarily that there should be any heavier cloth used in the making of our uniforms.

Senator WEEKS. You made that request of Gen. Pershing as a result of the hearing, did you not?

Secretary BAKER. I am not sure, Senator, whether it was or not. I think you asked Gen. Sharpe to do it, and he made it. I did not initiate that request.

Now that Senator FRELINGHUYSEN is present, I should like to again read the memorandum in regard to the shells, and I will ask the reporter not to include it in the record the second time. [Reading.]

Senator FRELINGHUYSEN. From the information I received, I am disposed to challenge that information.

Secretary BAKER. As I said to the committee when I first read it, it is a hurried memorandum, and I would be very glad to have a complete survey of the subject made and supply you whatever I find.

I want to make but one further observation on this general subject of the Quartermaster and Supply Department. I think it is not unfair for me to say that in the matter of provision of food no army ever assembled anywhere was fed as regularly, as well, as nutritiously, as appetizingly as this Army. I think you gentlemen of the committee, and surely the men in the War Department, will agree that while there have been complaints about other things, that the almost unanimous testimony so far as I know, and the unanimous testimony of this Army, is that its food has been of the highest quality; that there has been no suggestion of defective quality or insufficiency in the quantity; that its preparation has been of the highest character; and, generally, the very great problem of food supply for this vast and hastily organized group of men has been carried out with most extraordinary success.

There is one other subject about which I want to speak in some detail, but I think I can do it briefly.

The CHAIRMAN. Take all the time you wish, Mr. Secretary.

Secretary BAKER. I thank you, Senator. I have spoken longer to-day than I have ever spoken in my life in one day, and I am anxious, if I can, to come to a conclusion.

There is some question as to the selection of cantonment sites, as to the healthfulness of the sites selected, and it has been suggested that the Surgeon General was not consulted with regard to the selection of sites.

The War College Division of the General Staff made a study of the mode of training of the Army. The date of that is May 4, and the questions they considered at that time were, first:

Shall the Army be assembled in regimental camps or brigade camps or division camps?

They finally determined that it should be in division camps. They then drew up a memorandum covering several pages as to the mode of selecting and organizing those camps. The paper I have before me is the original, signed by Gen. Joseph E. Kuhn, president of the Army War College. This report recommended that the department commanders should be charged with the duty of making such selections for the troops to be raised or trained within their respective departments, and that they

should appoint boards of officers to investigate and report upon the available camp sites.

Third, the number of such boards in each department should be left to the discretion of the several department commanders. Each board should be composed of two experienced officers of the line, one of whom should, when practicable, be the division commander concerned or his representative, one of the Quartermaster's Department, one officer of the Medical Corps, and a district engineer. The requisite number of district engineers, selected for their knowledge of local conditions, should be placed under the orders of each department commander for detail on these boards.

The fourth paragraph gives a catalogue of the considerations which should guide the department commander and the boards appointed by him in the selection of these sites. I read only two or three pertinent ones. They should be of sufficient capacity to accommodate a command without crowding, have an adequate water supply, both for the men and animals to be encamped thereon. They should be immune from floods and inundations. The surroundings should be healthful. There were other desirable features recommended—absence of insect pests, as disease carriers; infrequent interruptions to training by inclement weather—a long and carefully prepared schedule.

That was sent to each department commander. The principal places where these camps were to be selected were the Department of the Southeast, the Central Department, and the Southern Department. There had been just transferred, shortly before that, to the Department of the Southeast the senior major general of the Army, Gen. Wood, himself a medical officer originally, a man who had originated the training-camp idea and put it into practice at Plattsburg until it was a demonstrated success, a man who, perhaps, more than any other man in the Army by common consent would have been recognized as the best equipped man to select camp sites and inaugurate a system of training camps.

In the Central Department there was Gen. Barry, if I remember correctly, next in order—perhaps Gen. Franklin Bell was his senior.

Senator WARREN. He is third; Bell is second.

Secretary BAKER. Among the ranking major generals in the Army, a man with experience not only in this country but in our insular possessions, a lifelong soldier, a man accustomed to the encampment of soldiers and the environment which ought to surround them.

In the Southern Department—I forget who was in command. It was of less importance, because it had a larger part of the order, and camp sites had practically been selected, so far as that department was concerned.

They were directed to select for recommendation the department camp sites. I am not referring to anything that is not perfectly known to everybody that lives in Washington, but from the day that it was known that camp sites would be selected Washington was filled to overflowing with representative bodies of citizens from States and cities desiring that consideration should be given to this site or to that site, pressing the advantages of particular locations on us as to their accessibility by railroad or otherwise; the character of their climate, the character of their soil, and I think I am stating what is known to everyone in this room when I say that universally and the unvarying answer was that those camp sites were regarded as of so grave importance, and the proper selection was of so much importance, that an actual board which could visit and compare on the ground the relative conditions was the reliance of the department, and I am stating what the record shows when I say that the camp sites actually selected were in every instance recommended by the department commander, his action being based on a board's action, the board containing in every instance, so far as my knowledge goes, the senior medical officer of his department, and only in one instance was the question raised as to whether or not a camp site, tentatively selected, was in itself a healthful place; that question was raised, and when it was raised I asked the Surgeon General of the Army to select the most eminent and competent sanitarian in his department and send him to make a personal inspection of the site; he came back and reported that the site was a sanitary and healthful site, and it was not until that report had been made that that site was finally decided upon.

Senator WEEKS. Was that Camp Funston?

Secretary BAKER. It was not. I am perfectly willing to tell what the camp was. The camp was at Louisville, Camp Zachary Taylor. Somebody raised the question whether that was a healthful location.

The records of the department in addition showed that upon the selection of these sites the Surgeon General's Office was notified of their selection. I am not raising any issue with the Surgeon General. I share the high opinion of his eminent talents and his great past service and capacity for future service which this committee entertains, and yet I want to have it perfectly understood that in the selection of these sites his representative was a member of every board, and if any question ever arose with regard to the propriety of a site in process of selection that question was investigated under his direction by my order until they were satisfied as to the propriety of the selection.

And now with regard to the building of cantonments and the air space. The plans for the barracks and hospitals and buildings at these camps were referred to the Surgeon General's Office and by him approved. I do not remember the allotments of floor space they made, but they were approved, and the buildings were in the process of construction when there came a meeting, I think, of the American Medical Association, and at that meeting a committee was appointed to consider the question of the sanitary conditions and character of barrack buildings for soldiers. That committee came to Washington and conferred with the Surgeon General, as was entirely helpful and loyal and proper for them to do. That committee insisted upon a larger allowance, a larger square foot of floor space and cubical contents for the soldier. In deference to their advice, the Surgeon General requested that a larger allowance be made. At the time that request was made, however, many barrack buildings had been constructed, the whole system of plans had been made with his previous approval, and the work was going on. I therefore asked Gen. Gorgas to see me with that committee, and I saw them in my office and discussed the question with them then. I do not remember all of the persons who were present, but I remember some of them. There was Gen. Gorgas, Dr. Mayo, Dr. Welch, of Johns Hopkins Hospital—I do not recall others, but there must have been perhaps half a dozen or eight of them, of great distinction in the medical profession, including Dr. Franklin Martin, of Chicago, who was chairman of the medical section of the Council of National Defense.

We raised the question of how much floor space the men ought to have and they suggested that 50 feet was the proper allowance. Then it was explained to them that the barracks were in process of construction and they were asked whether they felt that the matter was so vital that it was wise to stop building the buildings we were then building and start over again on reformed plans, and they said no, they did not think so. They thought the thing for us to do was to take the minimum which they suggested as an ideal toward which we should build and that we should ask Congress to permit us to spend more money putting additions to these barrack buildings and ultimately get up to this allowance, but they would not recommend that we stop building the barracks at that place in order to make the enlargements which they suggested.

That is more or less unimportant except as it leads up to another subject. I said, then, "Gentlemen, we have now discussed cantonments, permanent barracks, more or less permanent wooden barracks. Now, let us talk about the camps, because a large part of these soldiers are going to be in canvas tents."

Somebody said, and it was evidently accepted as the general opinion, that that subject need give us no trouble. They said, "Tents are automatically ventilated; there will be no trouble from them. We wish—we believe it would have been wiser or better, safer—to have all the men in tents instead of having them in camps, because the tent is a smaller unit, which brings fewer men together in one place; it is automatically ventilated, and we think you need not look forward to any of the problems arising from congestion from the tent camps." I recalled that to Gen. Gorgas's attention the other day, and he remembered it and said that was still his opinion.

Now, the fact is that the more serious health difficulties have broken out in the camps that were in tents, and the health conditions in the cantonments, where the gravest concern was felt, have been better than those where it was felt that we had perfect assurance.

I cite that not merely to show that expert opinion may not arrive at the correct solution of a difficult problem, but I want you to have the environment of that problem. Shortly after that conference it turned out that we were going to reorganize all of our divisions, making a larger company by the consolidation of other companies, make a larger regiment, and it became possible in the various camps to use several buildings, each of which had originally been planned to hold one company, to use two buildings to hold one of these larger companies not having so many men in it. So that from the beginning, so far as the cantonments are concerned, there has not been less than the

minimum desired by this committee and Gen. Gorgas of assignable floor space and cubical contents.

For instance, the approved capacity of 500 cubic feet as a basis applied to the 16 cantonments produces these results: At Camp Devens, at Ayer, Mass., on the basis of 500 cubic feet per man, there is room for 34,476 men. The greatest number ever there was 34,800, about 300 too many.

Now, in every other one of the 16 camps the capacity of the 500 cubic-feet basis is greater than the maximum number who have ever been there. At Camp Upton, 39,111 capacity; maximum number, 29,000 (I read only the first figures). Camp Dixon capacity, 39,800; maximum number, 20,800; Camp Meade capacity, 38,500; maximum number, 32,000. And so on clear through the entire list, with the solitary exception of Camp Devens, where the capacity, on the basis of 500 cubic feet per man, was exceeded as the only one, and that only by something over 200 men at a particular time.

The CHAIRMAN. Right in that connection, can you state what it was at Camp Bowie?

Secretary BAKER. Yes, sir; Camp Bowie is a National Guard camp, Senator, and is therefore a canvas camp and not a cantonment. But I have something on that subject here. You cited, I believe, Senator, Camp Bowie in your speech. On September 23 the commanding general at Camp Bowie reported to the War Department by telegram that he had sufficient tentage on hand to accommodate 26,088 men on the basis of 8 men to the tent. On that date the strength of the command at Camp Bowie was 17,000 enlisted men. On October 2 the Secretary of War directed the Quartermaster General of the Army to ship 215 large pyramidal tents to Camp Bowie. This shipment was made by express, and these tents were to make up the number required to provide accommodations for the drafted men that were added to Camp Bowie by telegram of October 10. The telegram of October 10 directed the commanding general at Camp Bowie to call for only such members of the total drafted men authorized as he could accommodate in his camp.

Regarding the number of men to be put in a camp, the records of the War Department show that on the 15th of October the War College issued recommendations as to the manner of handling supplies in camps and cantonments, in which the following occurs:

> Heavy tentage for the National Guard, unless otherwise ordered, and State organizations which are to be mobilized at State mobilization camps will be shipped direct to training camps, to be there apportioned out according to the needs of all the organizations by division or camp commanders on the basis of one large pyramidal tent to 12 men until the total supply of tentage available is increased, when distribution will be made at the rate of one tent to 9 men.

That recommendation, our records show, had the concurrence of the Surgeon General. That is from the War College minutes. Later, when the Surgeon General was making his inspection of the various camps, the number of men per tent was reduced from 9 to 5, as indicated in the action taken on December 1 in the case of Camp Sevier.

Similar action was taken on the recommendation of the Surgeon General at the other camps visited by him. So that what actually happened, gentlemen, was that we gathered in from the country young men who had not before been brought into contact with community living. They were young men from the sparsely settled parts of the country. They were attacked by measles, of which one of the ordinary consequences apparently in adults is pneumonia. Now, I am not a physician; I would simply be repeating what other people say to me if I undertook to detail any opinions on the subject of pneumonia or measles, and I do not want to minimize the fact that in all human likelihood the prevalence of pneumonia in some places and of bronchial colds which lead to pneumonia, perhaps even the spread of measles, were caused by too many men being in a tent at one time and facilitated by the shortage of clothes of the kind that I have previously described. And yet Gen. Gorgas told me, as I have no doubt he told your committee, that the worst epidemic of pneumonia he ever had to deal with was at the Panama Canal, where there was not any question of shortage of clothes or change of climate.

Senator HITCHCOCK. It was a question of congestion, however—overcrowding.

Secretary BAKER. I did not pursue that inquiry, but it was not a question of shortage of clothes or change of climate.

Senator HITCHCOCK. He stated it was overcrowding?

Secretary BAKER. But I do extract from this record this, as I think evidenced by it, that our original expectation was that the men in the tents would be safe; that practically the only thing we had to consider there was the convenience of the men in getting around their tents; and then it was soon discovered that the boys, by tying up tight the flaps of the tents and excluding the outside air, were circumventing that outside ventilation, which had been counted upon so surely to prevent them from the evil effects of congested conditions. Just as soon as that was discovered by the Surgeon General, instantly it was suggested that the point of occupation of these tents should be much lighter, additional tentage went in as rapidly as could be sent in by express, and those conditions were improved.

Senator HITCHCOCK. It is quite likely, I think, Mr. Secretary, that the tents would have been more sanitary and safer and the young men would not have closed them up so tightly if they had adequate clothing and blankets.

Secretary BAKER. I think that entirely possible, Senator. I had not realized the blanket question was involved, but it may well have been.

There was a shortage of blankets, the mills of the country could not produce them rapidly enough, and in some places, Camp Devens, for instance—I happen to recall that as I speak—a very large number of quilts were bought in the near-by stores and cities to supplement and eke out the supply of blankets until a full supply was possible, and it may well be if the boys had blankets enough to cover themselves completely they would not have made the tents so nearly air-tight.

The point I want to make about it, if I may make it with propriety, is this: That the place where we least expected trouble is the place where it came, and it is not only the place where I expected it least, but it is where the greatest and most competent medical experts of America, addressing their minds to that problem, coming all the way from New York, or wherever else their meeting was, to confer with the Surgeon General on the subject, least expected this trouble to arise.

Senator WEEKS. Do you mind if I interrupt at this point?

Secretary BAKER. Not at all, sir.

Senator WEEKS. Is not that largely due to the fact of insufficient hospital facilities at the National Guard camps?

Secretary BAKER. I do not think so.

Senator WEEKS. The Surgeon General has testified that the construction of hospitals was not undertaken until after those men were in camp, and that they are not completed yet; that there is not steam heat in some of those hospitals even to-day. Now, is not that degree of sickness in those camps largely traceable to the fact that they could not be properly provided for in hospitals?

Secretary BAKER. I say yes, Senator, to your inquiry, and then make this addition to it: Of course, the men get sick first and then go to the hospital. There was no anticipated need for anything like the hospital facilities at the National Guard camps which developed, and yet the hospitals, when recommended by the Surgeon General, were authorized to be built.

The Surgeon General, at the outset, asked about hospital facilities at the National Guard camps, and it was then thought that since the men would be in those camps, a less length of time than the men in the cantonments, and as the cantonments would be used by succeeding groups of men to be trained, that there was not so much need for making permanent hospital facilities at the National Guard camps as at the cantonments.

That view, however, was changed, and the Surgeon General's recommendation for hospitals at the National Guard camps was approved and the same kind and size of hospital, the same character of facility, was then directed to be put up at the National Guard camps, and is either erected or is being erected at all of them. Gen. Gorgas, I believe—I have not seen his testimony—but Gen. Gorgas said to me that he, himself, approved the idea of erecting these National Guard hospitals without permanent installation of flowing water, without permanent sewage facilities, because at the outset it was believed that they were to be more temporary, but when it was discovered that they were to be more permanent, then he recommended that it be changed to a permanent installation of plumbing and water supply, and that was then ordered to be done.

Senator WEEKS. Perhaps the Surgeon General changed his mind, or misunderstood. He testified to this committee that the first thing that should have been erected at these camps or cantonments was the hospital; that necessarily men changing their locality, having new climate, and new surroundings, and different kind of food would be somewhat upset by it, and that the hospitals should have been ready when the men went to the camps or cantonments.

Secretary BAKER. Of course, I perfectly agree to that, Senator; and yet, I think, it is important to remember that what we are dealing with is the base hospital in each instance, and not the regimental hospital.

Senator WEEKS. I understand.

Secretary BAKER. There were scattered through all of these camps, the regimental hospitals, which, under normal circumstances, would be regarded as adequate to take care of minor

illnesses of the men, places to which they could retire with a cold or a slight injury, or something of that kind, and this provision of base hospitals was for the more severe cases. Of course, the fact is that we were overtaken by epidemic conditions before the base hospitals were ready in the National Guard camps, and it was necessary to evacuate some of those hospitals, take the patients to other places, and when the Surgeon General went around and made his investigation and discovered that condition, just as soon as adverse health conditions arose at Camp Wheeler, and in those other southern camps, when that situation arose, the Surgeon General's recommendation for the transfer of patients was instantly ordered and every recommendation he made was complied with.

It was at that time after his return from this inspection that Gen. Gorgas suggseted to me in conversation—I have no doubt he has so testified, I have not seen his testimony—but it was at that time that Gen. Gorgas suggested to me the wisdom of having a detention hospital so that new men coming to the camp could be put in there for observation for the normal period of incubation of the common contagious diseases, so that there would not be in the future the chance of newly drafted men or newly raised levies bringing in from the outside contagious disease and spreading it through an assembled force.

The CHAIRMAN. When did he return, Mr. Secretary?

Secretary BAKER. Senator, I can not answer that. It was within a day or two of the time when these health reports were handed out. It must have been some time toward the middle of December, but I can not give you the date. But it was on his return from that visit of personal inspection at which time he was accompanied, as I am informed, by eminent civilian physicians—it was at that time that he recommended the installation of these observation hospital buildings, and it was not earlier than that.

Senator WADSWORTH. May I interrupt with just one question on that same point?

Secretary BAKER. Certainly, Senator Wadsworth.

Senator WADSWORTH. With regard to the cantonments, of course it was not anticipated that the men would be taken away, or moved from the cantonments for several months to come, and that they were of a permanent or comparatively permanent character.

Secretary BAKER. Yes.

Senator WADSWORTH. What was the reason for the decision to postpone the building of base hospitals at the cantonments until after the cantonments themselves were largely completed and the men had arrived?

Secretary BAKER. I do not think that was ever so determined.

Senator WADSWORTH. Gen. Gorgas gave the committee to distinctly understand that the base hospitals at the cantonments were postponed.

Secretary BAKER. So far as I know, that was never determined. I think this is true. I have heard this said, that in some of the camps the contractors decided to build first one group of buildings and then another group of buildings, and then another. While in other camps the contractor decided to build all of his buildings contemporaneously, with the result that in some of the camps 75 per cent of all the buildings were done before the other 25 were started, and in other camps all of the buildings were started and were all 75 per cent done, but none of them completed at a given time. That apparently was the judgment of the contractor as to the most rapid way of doing his work, and evidently concurred in by the construction quartermaster who was on the ground and in charge of it. That may have led to the postponement in some instances of the building of the base hospitals.

Senator WADSWORTH. Gen. Gorgas described it as a general condition.

Secretary BAKER. I do not know the facts.

Senator WADSWORTH. And he indicated to the committee that it was somewhat in opposition to his advice.

Secretary BAKER. I do not know any recommendation that he ever made on that point, nor do I know the fact.

Senator FRELINGHUYSEN. I have the order here, Mr. Secretary, simply delayed from June 25 to July 16, awaiting appropriations from Congress—with your indorsement on there. Cantonment hospitals. I do not know whether those are the regimental hospitals or the base hospitals.

Secretary BAKER. This is evidently supplementary, Senator. These hospitals cost very much more than this. I should think this was supplementary. I do not recall having seen that before.

Now, gentlemen, if I may turn aside from these details, I have been dealing with what has seemed to me to be the details of delay. I hope I have not seemed to deny their existence. I have tried to add to your information by showing you exactly what they are, so far as I can learn them. I do not want to add any color of prophecy with regard to when they will be completely removed. I think you know, as a matter of fact, from the experts at the heads of these departments, just what the outlook is with regard to each particular kind of thing, and so I turn aside to the plan of the war. I have understood that Senator CHAMBERLAIN felt that there was not a plan for this war. I do not know how far the members of the committee feel that way; I do not know how far the country feels that way; but I want, if I can, to say to you that there is a plan; that it is the only plan under the circumstances.

Senator REED. I want, before you take up a large subject, if I may be permitted to do so——

Secretary BAKER (interposing). Certainly, Senator REED.

Senator REED (continuing). To ask you about one matter, because I think it has relation to these details that you have been talking of rather than the larger subject which you are about to enter upon. I am asking it in no spirit of antagonism, but to get the fact, just whatever it may be. An article appeared in the papers of yesterday, the first part of the article being to the effect that newspaper men will no longer be allowed, and that men will no longer be allowed to do newspaper work when they are a part of the Military Establishment. It is followed by the statement:

> The War Department adds, however, that no objection is held to the publication of a soldier's private correspondence with his consent, providing the letters are sent through the regular censorship machinery. Military censors are at the same time ordered to delete criticism of superiors, or of policy, scandal of any sort, injurious reports concerning comrades, or anything likely to arouse controversy.

The order concludes:

> The object of this order is to satisfy, so far as compatible with protection of military interests, the natural desire of the people to keep in touch with their soldier representatives.

The particular article I have read is from the Washington Post, and I simply want to inquire, because I think the article is susceptible of two or three different constructions—whether an order has been issued which forbids a soldier to write home to his own people and tell them the personal discomforts that he may be subjected to, and if his letter has to go through a censor, and if the censor has been ordered to strike out or delete any complaints by a soldier as to his condition.

Secretary BAKER. No, Senator; no such order.

Senator REED. That is not the meaning?

Secretary BAKER. No such order and no such meaning.

Senator REED. I hoped that that was true; but if you happen to have the time to read this article you will see that it is so written that it is hard to tell. There is nothing, then, in the regulations that forbids a soldier writing back to his people, for instance, and saying that he is suffering from a lack of clothing or lack of proper food?

Secretary BAKER. Absolutely nothing.

Senator REED. His letter does not have to go through a censor?

Secretary BAKER. Absolutely not.

Senator REED. I am very glad to hear that.

Secretary BAKER. That order, as a matter of fact, Senator, was drawn to accomplish this purpose: Some newspapers in the country have desired to employ soldiers as special correspondents; and men who are on the outside and are reporters and correspondents for newspapers have not unnaturally felt that a man on the inside would have a very great advantage if he were authorized to be employed as a reporter; and, in addition to that, if a soldier is being paid by some other employer than the United States to act as reporter or correspondent in the camp he has a divided allegiance. And yet we wanted to free every soldier in the Army to write home to his home newspaper, acting as a voluntary correspondent, writing letters which were intended to be printed; and in order to safeguard the soldiers and prevent their inadvertently violating the military regulation we have provided an office of inspection, or censoring, so that things that would be destructive of discipline, as a thoughtless boy might very possibly write home something about a tent mate, or something of that kind, which would produce feelings of irritations and jealousy and that sort of thing; and in order to prevent that kind of consequence an officer will be appointed to supervise their letters.

The CHAIRMAN. All their letters?

Secretary BAKER. Oh, not at all, sir. Only those that are written by the soldiers for the purpose of publication; only that.

Senator REED. That is entirely proper. I thought perhaps that was the correct description, but I wanted to be sure.

Secretary BAKER. Now, gentlemen, about the plan of the war. It will be remembered that this war broke out in August, 1914. We went into it in April, 1917, so that for two and one-half

years, or more than two and one-half years, the war had been going on. It was not as though war had broken out between the United States and some country, each of them prior to that time having been at peace with one another and with everybody else, so that an immediate plan should be made in the United States for conducting war against its adversary; but we were coming into a war which had been going on for two and one-half years, in which the greatest military experts, all the inventive genius, all of the industrial capacity of those greatest countries in the world had for two and one-half years been solving the problem of what kind of war it was to be and where it was to be waged.

It was not a thing for us to decide where our theater of war should be. The theater of war was France. It was not for us to decide our line of communications. Our line of communications was across 3,000 miles of ocean, one end of it infested with submarines. It was not for us to decide whether we would have the maneuvering of large bodies of troops in the open. There lay the antagonists on opposite sides of "no man's land" in the trenches at a death grapple with one another. Our antagonist was on the other side of that line and our problem was and is to get over there and get him.

It was not the problem of doing it our way and letting everybody else take care of himself. In the first place, we were going to fight in France, not on our own soil, and not on our adversary's soil, and therefore at the very beginning it was obvious that the thing we had to do was not to map out an ideal plan of campaign, not to have the War College, with its speculative studies of Napoleon and everybody else, map out the theoretically best way to get at some other country, but it was the problem of studying the then existing situation and bringing the financial, the industrial, and the military strength of the United States into cooperation with that of Great Britain and France in the most immediate and effective way.

That problem could not be decided here. I fancy in this audience there are men who have been in the trenches. The altogether unprecedented character of that problem is the thing which every returning visitor tells us can not be described in words, can not be put down in reports; it is a thing so different from anything else that ever went on in the world, so vast in its desolation, so extraordinary in its uniqueness, that it must be seen and studied on the ground in order to be comprehended at all.

It is easily imaginable that we might have perfected an Army over here and carried it across the ocean and found it wholly unadapted to its task, and it might well have been that the Army that we sent over was just the one thing that they did not need, and that some other thing which we might have supplied would have been the thing essential to their success.

So that from the very beginning it was not a question of abstract speculation here, but a question of study there to find out where our shoulder to the wheel could be put.

They realized that. And so Great Britain sent over to us Mr. Balfour and Gen. Bridges and a staff of experts. They came over here and you saw Mr. Balfour in the Houses of Congress and at the White House and in public meetings at one place and another, but the group of experts whom they brought over with them you did not see much of, and yet they distributed themselves through the War Department, and their ordnance experts sat down with Gen. Crozier, their supply experts with Gen. Sharpe and his assistants, their strategists sat down with the Army War College, and all over this city there were these confidential groups exchanging information, telling how the thing was over there, what we could do, what they advised us to do, what experiences they had had in developing this, that, and the other implement or supply, how certain plans which one might naturally have evolved out of the past experience of the world had been tried there and found not to work at all.

They were exchanging information, giving us all that they thought was helpful. And then came Joffre, with his wonderful reputation and his great and charming personality, and he made a great figure here, and we welcomed him. It was a tremendous inspiration to see the hero of the Marne; but with him came this unobserved staff of 15 or 20 or 25 young men, the most brilliant in the French Army—strategists, mechanical experts, experts in arms, experts in supplies, experts in industry and manufacture—and they told us not merely the formal and military problems, but they brought over with them men who were in from the beginning, in their reorganizations of their industries, in their mobilization of their industrial plants, and we sat down with them in little groups, until finally we collated and collected and extracted all the information which they could give us from their respective countries. And every country which has been brought in the war has brought us that sort, or sent us that sort of staff of experts, and it has been necessary to compare notes and, with this as a basis, to form such an idea as might be formed of what was the thing for us to do over there.

But that was not enough. They admitted that it was impossible to draw that picture. They could describe to us and bring the specifications and drawings for a piece of artillery, but they could not tell us why the British the use of artillery was by the British preferred to that of the French. They could not picture to us a barrage of heavy howitzers as compared to a barrage of 75-millimeter guns. They could not picture to us the association of aircraft, balloons, and mobile aircraft with artillery uses. They could tell us about it, but even while they told us the story grew old. The one thing they told us from the very beginning to the end was that this war, of all others, was not a static thing; that our adversary was a versatile and agile adversary; that every day he revamped and changed his weapons of attack and his methods of defense; that the stories they were telling us were true when they left England and France, but an entirely different thing was probably taking place there now, and they told us of large supplies of weapons of one kind and another which they had developed in France and England, and which even before they got them in sufficient quantity manufactured to take them from the industrial plants to the front were superseded by new ideas and had to be thrown into the scrap heap.

They said to us: This is a moving picture; it is something that nobody can paint and give you an idea of. It is not a static thing.

Therefore it became necessary for us to have eyes there in instant and immediate communication with us, and we sent over to France Gen. Pershing, and we sent with him not merely a division of troops—to that I shall refer in a moment—but we sent with him perhaps I can say safely the major part of the trained, expert personnel of the Army. You know the size of the official corps of the Regular Army in this country when the war broke out. It was a pitiful handful of trained men, and yet it was necessary to divide them up and send over to France officers of the highest quality so that they would be at the front and see in the workshops and in the factories and in the war offices and in the armies where consultations would take place immediately back of the front, so that they could see the thing with their own eyes and send us back the details by cable every day of the changing character of this war.

Gen. Pershing's staff of experts and officers over there runs into the thousands, and they are busy every minute; and every day that the sun rises I get cablegrams from Gen. Pershing from 10 to 16 and 20 pages long filled with measurements and formulas and changes of a millimeter in size, great long specifications of changes in details of things which were agreed upon last week and changed this week, and need to be changed again next week so that what we are doing at this end is attempting by using the eyes of the Army there to keep up what they want us to do.

Already you will find in your further examination into some of the bureau work of the department, some of the divisions, when they come down, you will find that schedules which were agreed upon, weapons which were selected and which we had started to manufacture, have been so far discarded that people have forgotten the names of them, almost, and new things substituted in their place, and those forgotten and new things in their places.

So that if one gets the idea that this is the sort of war we used to have, or if he gets the idea that this is a static thing it is an entirely erroneous idea, and when you remember that we had to divide this little handful of officers that we had and send so large a part of them to France, and then think of those who remained at home, you will realize, I am sure, that those who remained here had the double duty, insufficient for either aspect of it in numbers—and they still have this double duty—they had to go forward with manufacture, work out industry and industrial relations; they had to see about supplies of raw materials and manufacture finished products, and make from day to day alterations and changes that had to be made, and they had to be ingenious with suggestions, to see whether they could devise on this side something which had not been thought of over there. They had to be hospitable to suggestions which came from the other side; they had to confer with the foreign officers who were here and were constantly being changed, so that men fresh from the front could be here to advise with us, and in addition to that every one of them had to be a university professor, going out into the life of the community and selecting men who had mechanical experience and knowledge and training, but not military mechanical experience and

knowledge and training, and adding to his original equipment the scientific training, that finishing touch which made him available for use as a military scientist.

As a consequence, this little group which stayed here have built the great special departments of the Army. The Ordnance Department, starting, I think, with 93 or 96 officers, has now, as I recall the figures, something like 3,000 officers. They have had to be trained; they have had to be specialized, and that has had to go on contemporaneously with this tremendous response to the changing conditions on the other side.

In the meantime, when we started into this war I think it was commonly thought throughout the country that our contribution at the outset might well be financial and industrial. The industries of this country were largely devoted at that time—the appropriate industries, and many converted industries were largely devoted—to the manufacture of war materials for our allies.

As I suggested this morning, when we went into that market we found it largely occupied, so that our problem was not going to a shoe factory and saying, "Make shoes for us," but it was going to a factory which never made shoes, because all the shoe factories were busy making shoes for people from whom we could not take them, and saying, "Learn how to make shoes in order that you may make them for us."

Now, of course, that is not true of shoes, but it is true of machine guns, it is true of other arms, it is true of ammunition, it is true of forging capacity, which was the greatest defect in the country, and all of this time we had not merely not to disturb the program of allied manufacture in this country, but we had not to cut off the supplies of raw material to our allies, and we had not to disturb the industry of this country to such an extent that products upon which they depended for the success of their military operations would be interfered with, both agricultural and commercial and industrial products.

At the outset the idea was that we would be a financial and an industrial assistance to our allies during the year 1918, and I think I probably can read from the Metropolitan Magazine for August a suggestion which will show what the current expectation of the country was. The editor of the Metropolitan Magazine was protesting against what he believed to be the intention of the Government at that time.

Senator WEEKS. Is that the one in which Mr. Roosevelt is associate editor?

Secretary BAKER. He is a contributing editor to this magazine. This magazine came out in August, 1917, and this editorial says:

> Since it is our war, we want to put everything into it so as to finish it in the shortest possible time, so that the world may be restored. To our mind the whole plan of the War Department has been flavored with a desire to hold off until the allies finish the war for us.

You see, the editor was dealing with what he supposed to be the intention of the War Department at that time, that we were holding off so far as actual military operations were concerned and letting the allies do the fighting.

What he says we should have done—and I ask your particular attention to it—is this:

> We should have strained every energy to have gotten 50,000 to 100,000 men to France this year.

That is, the year 1917. I tell no secret, but it is perfectly well known to everybody in this group that we have far exceeded what in August, 1917, was regarded as a program so ideal that the editor of this magazine refers to it as a thing which we ought to have strained every nerve in a vain but hopeless effort to accomplish.

The CHAIRMAN. You had more than that there then, did you not?

Secretary BAKER. In 1917?

The CHAIRMAN. Yes; in August, 1917?

Secretary BAKER. No, Senator.

And then the editor goes on:

> And by next year, 1918, we should have 500,000 men to send over, or any part of 500,000 men which we could ship.

Now, instead of having 50,000 or 100,000 men in France in 1917, we have many more men than that in France, and instead of having a half million men whom we could ship to France if we could find any way to do it in 1918, we will have more than one-half million men in France early in 1918; and we have available to be shipped to France, if the transportation facilities are available to us—and the prospect is not unpromising—we will have one and one-half million who in 1918 can be shipped to France.

Senator WEEKS. Do you know who wrote that editorial?

Secretary BAKER. I think it is attributed to Mr. Wiggin, the editor in chief of that magazine.

The CHAIRMAN. Why have you not felt it proper to let the public into your confidence with reference to these things that you are telling now?

Secretary BAKER. Senator, I confess I have hesitated and I still hesitate. I have here a statement from Field Marshal von Hindenburg, in which he is quoted as saying in a German newspaper, in contemptuous fashion of us, that we have advertised our preparations for this war in an unworthy manner.

The CHAIRMAN. Do you think for a moment, Secretary Baker, that there has been any time within the last year that the German secret service has not been fully advised as to everything we have done?

Secretary BAKER. Yes, Senator; I know. If I may rely upon the confidential information which we get from confidential sources, the German Government is still mystified as to the number of men we have in France, or have had there at any time.

The CHAIRMAN. I very much doubt that.

Secretary BAKER. They seem to have, and our newspapers tell us they have very accurate information as to what goes on immediately at the front, but I have not yet seen any suggestion from any of the most intimate and confidential sources that I can get that the German Government does actually know the number of men we have there.

Senator MYERS. Mr. Secretary, so far as you know, does the German Government advertise to the world all of the secrets of what it is doing in regard to its military movements and preparations?

Secretary BAKER. No, Senator.

Senator MYERS. Do the British or French?

Secretary BAKER. Neither the British nor the French.

The CHAIRMAN. Does the American Government?

Secretary BAKER. No, Senator. I am saying this now, because you have asked me why I have held back these facts until now. I am saying to you that you could not get from Great Britain at this minute—I do not know whether I could get the number of soldiers Great Britain has in France or at home. I could get an approximation; I could get whatever information might be deemed helpful to the immediate military object to be accomplished, but I could not get from Great Britain or France either one the actual number of troops they have at the front.

It may be that that precaution is unnecessary, and yet that is the precaution which military men have observed, and I have no further point to make in the matter of the number of troops there than to show, as I was showing when I read that extract, that our original intention was to make our military effort in 1918; and in August of 1917 a zealous advocate of immediate military activity laid down as the maximum obtainable program a thing which has since been multifold exceeded.

Why did we decide to send some troops to France in 1917? It is no secret. When Marshal Joffre came to this country from France, when the British mission came from England, they told us of a situation which we had not up to that time fully appreciated. There had been in France recently conducted before that an unsuccessful major offensive. The French people had suffered, oh, suffered in a way that not only our language is not adapted to describe, but our imagination can not conceive. The war is in their country. This wolf has not only been at their door, but he has been gnawing for two years and a half at their vitals, and when this unsuccessful offensive in France had gone on there was a spirit not of surrender, but of fate, about the French people, and this mighty military engine which they had seen prepared to overcome them for 40 years was at them, and their attitude was that no matter whether every Frenchman died in his tracks, as they were willing to do, or not, that it was an irresistible thing, and so they said to us, "Frankly, it will cheer us; it will cheer our people if you send over some of your troops."

We did send some troops.

At that place we had a choice. We could have sent over, as Great Britain did, our Regular Army, and in a very short preparation have put it into action and suffered exactly what Great Britain suffered with her contemptible little army, as it was called by their adversaries. Our Army would have given as good an account of itself as the British Army did, but it would have been destroyed like the British Army, and there would have been no nucleus on which to build this new army that was to come over a little later, and it was deemed wiser to send over a regular division, but not to send over our whole Regular Army at that time.

Then what happened was that that regular division went over and the people of France kissed the hems of their garments as they marched up the streets of Paris; the old veterans wounded

in this war, legless or armless, stumping along on crutches, perhaps, as they went up the streets of Paris with their arms around the necks of American soldiers. Not a single man in that division was unaccompanied by a veteran. America had gone to France, and the French people rose with a sense of gratitude and hopefulness that had never been in them before.

Of course, they welcomed the British, but their need was not so great when the British went. Of course, they welcomed the British, but there were ties between them and us which there had not been between them and the British, and so when our troops went there was an instant and spontaneous rise in the morale of the French, but an equally instant and spontaneous insistence that these soldiers who came from America should continue to come in an unbroken stream.

And so we made the election. We decided not to send the Regular Army as a whole, but to send Regular divisions and National Guard divisions, selected according to the state of their preparation, and keep back here some part of our trained force, in order that it might inoculate with its spirit and its training these raw levies which we were training, and one after another these divisions have gone over until in France there is a fighting army, an army trained in the essentials and in the beginnings of military discipline and practice and trained, seasoned fighters in this kind of a war on the actual battle fields where it is taking place.

Early in this war, when Joffre was here and when Balfour was here, they said to us, "It may take you some time to get over to us a great fighting army, but you are a great industrial country; our man power is fully engaged in our industries and in our military enterprises; send over artisans, special engineering regiments, and troops of a technical character," and, although it was not contemplated at the outset, and only a phrase in the emergency military legislation shows that the thing was thought of as a possibility, yet in a very short time we had organized engineering regiments of railroad men and sent them over there and were rebuilding behind the lines of the British and French the railroads which were being carried forward with their advance, reconstructing their broken engines and cars, building new railroads, both back of the French and British lines, and those regiments were of such quality that at the Cambrai assault, carried on by Gen. Byng, when the Germans made their counter attack, our engineer regiments threw down their picks and spades and carried their rifles into the battle and distinguished themselves by gallant action in the war itself.

Very early in this war Great Britain, through Balfour and his assistants, and France through Joffre, said to us, "Send us nurses and doctors." Why, before we were scarcely in the war American units, organized in advance and anticipation by the Red Cross, which was taken over into the service of the United States through the Surgeon General's office, were on the battle field, and there are tens of thousands of men in England and in France now who bless the mission of mercy upon which the first Americans appeared in France.

Our surgeons have set up hospitals immediately behind the lines. They have been made military in every sense of the word. They have not been especially fortunate in escaping attack from the air, and our early losses in this war were the losses of Red Cross nurses and doctors, and orderlies and attendants in hospitals, and ambulance drivers, who were sent over to assist our allies in these necessary services, thus not only rendering assistance but acquiring skill and knowledge of the circumstances and surroundings, so that when our own troops came in large numbers they could render like services to our own forces. But that was not enough. It was suggested that further groups of mechanics might be needed. Nay, we began to see that we were going to be over there in large force, and the question that then had to be answered was, How will we maintain an army in France? Special studies had to be made of that problem, and this is what they showed: They showed that the railroads and the facilities of France had during this war been kept in an excellent condition; far better than supposed possible under war conditions. And yet that those railroads were used to the maximum to take care of the needs of the French and the British themselves, and that when our Army became a great army it would be necessary for us to build back of our own line an independent line of communication.

In other words, France was a white sheet of paper, so far as we were concerned, and on that we had not only to "write" an army but we had to write the means of maintaining that army, and from the first time when a careful and scientific study of the opportunities of France to help us were made, from that hour until this we have been building in France facilities, instruments, agencies, just as many as we have here in the United States, and more—many of them of the same character. For instance, the French had naturally reserved the best ports in France for their own supply. The channel ports have been reserved for the British. When we came in it was necessary for us to have independent ports of entry in order that there might not be confusion and admixture of our supplies going through these ports of disembarkation with those of other nations. We were given several ports. As you perhaps recall, the ports of France are tidal ports, ports with deep water and tidal basins at high tides, with insufficient water for landing at the docks when the tide is out.

As a consequence, the construction of docks and wharves of tidal basins in ports of that kind is very much more difficult than where you have a deep-sea harbor and all you need to do is to erect a pile wharf. We have had to build docks; we have had to fabricate in this country and send over dock-handling machinery; we have had to send from this country even the piles to build the docks. We have had to have gantry cranes manufactured in this country and sent over to be erected on those docks; we have had to erect over there warehouses at the ports of disembarkation in order that these vast accumulations of stores and supplies which go over can be properly housed and cared for until they can be distributed into the interior.

We have had to take over and are in process of rebuilding and amplifying a railroad 600 miles long in order to carry our products from our ports of disembarkation to our general bases of operation. And all of that, gentlemen, has to be done, not only studied out, as a necessary thing to do, but when so studied out and reported here, the manufactories for those things have to be carried on in this country, and the things shipped over there—nails, cross-ties, spikes, fishplates, engines, cars, buildings. We have had to build ordnance depots and repair shops and great magazines of supply in the interior. All of that problem has been carrying forward step by step the plans for a single ordnance repair shop, which I saw some time ago, covering acres and acres of ground, designed over here, the ironwork fabricated over here, disassembled, put in ships and carried abroad to be reassembled over there.

We have had to build barracks over there for our soldiers, and in the meantime to billet them around in the French villages. Building barracks over there and building them here is a very different thing, gentlemen.

When we summoned the lumber industry of this country to produce the lumber to build our own cantonments, it came in a great and steady stream from all over the country, but when we talk about building barracks in France, it means this: It means to organize, as we have organized, regiments of foresters and sending them over into the forests of France, which they have assigned to us for our use, cutting down the trees, setting up sawmills, making the lumber of various sizes, transporting it to the places where it is to be used, and then finally using it.

We have had to go back to the planting of the corn in France in order that we might some time make a harvest. Our operations began in the forests of France, not in the lumber yards, as they did in this country.

That great staff under Gen. Pershing's direction, containing so many men from the American Army, enriched by captains of industry and masters of technical performance in this country, all of these large industrial operations under general direction, such as the railroad and dock buildings, under a former vice president and now a vice president, perhaps, of the Pennsylvania Railroad, Gen. Atterbury, and men of that quality and experience, summoned in to aid him—those are the men who are carrying forward these operations, which are quite as extensive as those which are carried on over here, and of far greater difficulty, because it means getting material by cable as to sizes and specifications, having it fabricated here, and sent across through these infested 3,000 miles of ocean, and then set up on that side.

Senator HITCHCOCK. Mr. Chairman, I will ask to be excused on account of an engagement. I assume the committee will continue to-morrow morning, probably.

The CHAIRMAN. Yes, sir.

Secretary BAKER. In addition to that, on the other side it has been necessary for us to build hospitals, and that is where the major need for hospitals may be. It has been necessary for the Surgeon General's staff to be divided in this fashion and to select supplies and procure materials, and to send over staffs of trained persons to supervise the construction of these hospitals and to man them and equip them.

All of that has gone on contemporaneously with the work which has been done in this country, and then, in order that another element may be added to this kaleidoscopic character which this war necessarily has, I call your attention to a thing which you already know. This war had a more or less set char-

acter until the Russian situation changed, as it has changed, in the last few months, when we had gotten more or less used to the situation created by the uncertainty as to Russia, there came the great Italian defeat which called for even greater changes in our plans, in many ways.

So that what might have been a perfectly acceptable plan as to major operations prior to the change in the Russian situation, or prior to the change in the Italian situation, had to be restudied instantly, and for that reason, among others, there is now organized, as you know, in France, pursuant to the suggestion of Mr. Lloyd-George, the Rapello Conference, or the supreme war council, and the United States is represented on that by the Chief of Staff of the American Army, and the major international arrangements in regard to the military are worked out there, while Gen. Pershing and his staff of experts are working out these other questions.

That is a picture of what has been going on over there, gentlemen. On this side much of that has had to be done, in addition to all the other things we have done; and I ask you to remember among the achievements on this side is the building of this Army, not of 50,000 or 100,000 or 500,000, but of substantially a million and one-half men.

And, now, let me be frank with you, and let your judgment be frank with me about this: Has any army in history ever, since the beginning of time, been so raised and cared for as this Army has? Can the picture be duplicated? We have raised this Army, taking the Regular Army and the National Guard, raising it to war strength, and supplementing it by the operation of a draft. And there are Senators in this room who said to me with grief when we proposed that that form of raising the soldiers should be had—they shook their heads and said, "Mr. Secretary, it can't be done; it is too sudden to address to the American people that mode of selecting soldiers." And yet, has any great enterprise within the knowledge of any man in this room ever been carried out with more unfailing justice, with more intelligent explanation and commendation to the good sense or patriotism of the American people, and has any great and revolutionary change in our mode of practice ever been accepted so splendidly as the operation of the selective-service system?

We have got those young men in camp, and they are surrounded from the day they left home until the day they come back to it, if in God's providence they can come back, with more agencies for their protection and comfort and health and happiness—physical, spiritual, and mental—than any army that ever went out on a field.

They are classified by a system under classification so that men who have mechanical instincts and training will be given mechanical opportunities in the Army. The "round" man is not sought to be put into the "square" place. The Young Men's Christian Association—the American people have subscribed liberally for the purpose—the Young Men's Christian Association, the Knights of Columbus, the Young Woman's Christian Association, the training-camp activities committee, the training camp athletic committee, have all been brought in—and the Red Cross—have all been brought to live with the soldiers; and by virtue of activities started in the War Department the communities which surround these camps have been instantly gotten away from the notion which used to prevail of a certain alienation between a civilian and soldier group, and these soldier boys in these camps have been adopted into the homes and hearts of the people among whom they live. No such relation has ever existed between an army and a civilian population as exists with regard to this.

And then, with your aid, the Army has been able to practically stamp out intemperance and vice among the soldiers by the establishment of zones, by the establishment of patrol systems of one kind and another, by the training of these young officers in these training camps, young men of experience and fine feeling and all that, we have gotten into this great Army the idea that it can be a strong and effective military army and still be free from things which have hitherto weakened and sapped the vitality and virility of armies.

I have gone from camp to camp among these cantonments, and my first question almost invariably is to the camp commander "What about your disciplinary problem?"

Old men in the army, men whose lives have been spent in it from their boyhood, and who have been all over the continental United States and through its insular possessions wherever our armies have been, who know the life of the soldier and the camp and the post, all say with one accord and no exception that they have never seen anything like this, that the disciplinary problems of the Army are reduced to a negligible quantity, and, instead of the melancholy and pathetic parade through the Secretary of War's office of court-martial after court-martial of men who have fallen down and yielded to temptation under these unusual circumstances which used to obtain, I have an infrequent case now of court-martial by reason of such weaknesses.

The CHAIRMAN. Mr. Secretary, would there be any impropriety in your preparing a little tabulated statement to go into the record showing the number of hospitals, whether under the Army or under the Red Cross, established in France, with the number of the personnel of each, and so with the Engineering Corps? In other words, covering the general statements you have made, concretely?

Secretary BAKER. Do you mean that you want the number of medical people in France?

The CHAIRMAN. No; I wanted the number of hospitals. You spoke of having them established—Red Cross institutions.

Secretary BAKER. The units which are French and British and our own?

The CHAIRMAN. Yes.

Secretary BAKER. Yes; I will be very glad to get that for you, sir.

The CHAIRMAN. And put it in the record.

(The statement referred to was handed to the chairman for the confidential information of the committee.)

Secretary BAKER. When Lord Northcliffe returned to England he was invited, as I recall it, by Lloyd-George to accept a position in his cabinet. He wrote a letter, which was printed in the papers, and in that he made this casual reference to the United States He spoke of his visit here, and spoke of our war preparations in this fashion:

> War preparations proceeding in the virile atmosphere of the United States and Canada with a fervor and enthusiasm little understood on this side of the Atlantic.

He was then in England. I happen to have a copy of a confidential instruction issued by the German Government in June, 1917, to the German press as to what course they should take in dealing with American matters, and they say:

> While the news about American war preparations, such as the organizing and outfitting of an army of 1,000,000 men strong, to reinforce the French-English front is looked upon in that form as bluff, the spreading of which may unfavorably affect the opinion of the German people, yet the fact must not be overlooked, on the other hand, that the United States, with the support of its capacity for material and industrial management, is arming itself for war with great energy and tenacity.

Your committee will have full opportunity and will doubtless go into those things. You will deal with the hospital situation, the Medical Corps, the Signal Corps; you will hear the wonderful work done by the Engineering Department of the Army; but when it is all told, Mr. Chairman, it will be a story which I am sure your committee will be glad to report to the Senate of the United States as being a tremendous response to a tremendous responsibility; and when you have made this investigation I know that the American people will feel, as I think they have a right to feel, that we are in this war to win it; that we are in it to hit and to hit hard; that we are in it to coordinate our strength with that of our associates; that the problem is not one of individual star playing, but of team play with these veterans and experienced persons under actual battle conditions; that more has been done, perhaps, than the country expected, more than the wisest in the country thought was possible to do.

In so far as I am personally concerned, I know what is ahead of us. I know what the American feeling about this war is. Everybody is impatient to do as much as we can. There will be no division of counsel; there will be all the criticism there ought to be upon shortcomings and failure; there will be, so far as the War Department is concerned, a continuing effort at self-improvement and a hospitality toward every suggestion for improvement that can come from the outside; but the net result is going to be that a united and confident American people, believing in themselves and in their institutions, are going to demand, and that at no late day, on European battle fields, in the face of veterans with whom they are proud to associate, that, veterans though they be, they can not excel us in achievement; and when the victory is won over there, Mr. Chairman, the credit which will come to American enterprise and to American determination and to American courage will be an honor to us, as the tenacity of purpose and splendid achievements of the British and French already shed great luster on the names of those great people.

The CHAIRMAN. Mr. Secretary, you have finished the statement?

Secretary BAKER. Yes, sir.

The CHAIRMAN. Mr. Secretary, I know that you must be tired. The committee has been very much impressed by your statement. They will probably want to ask you some ques-

rions, and, unless you prefer to go on now, we can adjourn until to-morrow morning and give you an opportunity to rest.

Secretary BAKER. Mr. Chairman, I would appreciate the rest. I would like to know, Mr. Chairman, if I may, on what subjects I will be questioned. If it is the matters which have been covered here, of course I do not care to know.

The CHAIRMAN. You have covered it pretty generally, and I do not know what questions the committee may want to ask. I do not think they have in mind any particular questions.

Secretary BAKER. Very well; then I will come in the morning, at your convenience.

Senator WEEKS. Mr. Chairman, may I make this suggestion? There are some matters that the committee wish to consider, connected with aviation, powder, and other chemical supplies—engineering. Would it not be desirable to inquire into those before the Secretary is asked to come again? It has been suggested that we are taking a good deal of the time of the Secretary and his subordinates, and we do not want to take any more than is necessary. I should think that it would be better for us to go over these other branches first.

The CHAIRMAN. Would you prefer that, Mr. Secretary?

Secretary BAKER. That seems wise to me, Senator, because the details of many of those large programs, of course, I do not know. But if you send for the heads of those divisions, they will bring here the most intimate details for you.

Senator WEEKS. There are a great many questions that I would like to ask the Secretary about some things he has discussed to-day, but it does not seem to me it is necessary to do it until we have examined into those branches and have gotten the technical information which the heads of those departments have.

The CHAIRMAN. If that would suit you just as well, Mr. Secretary——

Secretary BAKER. That is entirely satisfactory to me.

The CHAIRMAN. Then the committee will take a recess until to-morrow at 10.30, and then we will determine just what course we will pursue.

(Whereupon, at 3.50 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m. to-morrow, Tuesday, January 29, 1918.)

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C., Thursday, January 10, 1918.

The committee met at 10 o'clock a. m., pursuant to adjournment, Senator GEORGE E. CHAMBERLAIN presiding.

The CHAIRMAN. The committee will come to order.

Gentlemen of the committee, the Secretary of War is here at the request of the committee to make such statements as he desires to make and to answer such questions as members of the committee may desire to ask.

Mr. Secretary, I presume you would prefer to make your statement in your own way first and then answer such questions as may be asked afterwards?

Secretary BAKER. Yes, sir. I have a statement which I would like to make.

STATEMENT OF HON NEWTON D. BAKER, SECRETARY OF WAR.

Secretary BAKER. Mr. Chairman, I am glad to lay before the committee and the country certain facts with reference to the War Department's work. Not all of it is new to you, but it is well to have some underlying facts freshly in our minds at times when the consideration of details, however important in themselves, might otherwise obscure the real progress made in the central task.

The War Department is eager to profit by all helpful criticism, and I thank the committee for the inquiries which it has made and for the cooperation which it is giving and will give in making our preparation increasingly adequate and speedy.

On the 1st day of April, 1917, the Regular Army comprised 5,791 officers and 121,797 enlisted men; the National Guard in Federal service, approximately 3,733 officers and 76,713 enlisted men; and the Reserve, 4,000 enlisted men. There were also at that time approximately 2,573 officers in the Reserve, but as these were on inactive duty they can not properly be considered in estimating the strength of the Army of the United States at that time. On the 31st day of December, 1917, the Regular Army consisted of 10,250 officers and 475,000 enlisted men; the National Guard of 16,031 officers and 400,900 enlisted men; the National Army of 480,000 men; and the Reserve of 84,575 officers and 72,750 enlisted men. In other words, in nine months the increase has been from 9,524 officers to 110,856 officers; from 202,510 to 1,428,650 men.

During the war with Spain the Army of the United States at its maximum strength aggregated 272,000 men and officers. The Army now in the field and in training is, therefore, roughly, six times as great as the maximum number under arms in the Spanish-American War.

The total number already in the military service is one and one-half times as large as any force ever mobilized by this Nation.

A substantial part of our military forces was selected by the operation of a draft law, the execution of which has demonstrated both the economical and the efficient way of selecting soldiers. The law itself was drawn, its execution carried to a successful conclusion, and the theory of the law, novel to our people, explained and made popular, because of its demonstrated fairness both in plan and execution.

For the training of officers two series of training camps were held, from which about 45,000 officers were commissioned from civil life. This number is nearly eight times as great as the number of officers in the Regular Army on the 1st day of April.

For the training of these soldiers 16 cantonments have been built, costing $134,000,000, with an average profit to the contractors of 2.98 per cent.

These cantonments contain water and sewage facilities, refuse disposal plants, laundries, storehouses, barracks, exchanges, post offices, and practically all necessary conveniences, comforts, and safeguards for soldiers. The health of the men in training in them is beyond comparison better than that of any similar number of soldiers in our history.

The death rate in our forces in the United States, from mid-September to the end of December, averaged 7.5 per thousand, and is slightly less than would have been the death rate of men of the same age at home. In 1898 the death rate per thousand was 20.14, or nearly three times as great. Our death rate in the Army during the year 1916, just before the war, was 5 per thousand. Leaving out the deaths due to measles and its complications, our rate among all troops in the United States, since September 1, has been about 2 per thousand. These figures are properly comparable. The 5 per thousand for 1916 means for the whole year. The 2 per thousand for this year means that if the number of deaths since the 1st of September from all causes, exclusive of measles and its complications, should continue the same for the following eight months, our rate for the end of the year would be about 2 per thousand.

For the fiscal year 1915 Congress appropriated for the War Department $158,000,000; for the fiscal year 1916, $203,000,000; for the fiscal year 1917, $403,000,000; for the fiscal year 1918 $7,527,338,716. In other words, taking 1915 as a normal year, the appropriations for 1918 are nearly fifty times as great.

The regular appropriations made by Congress for all governmental purposes for the fiscal year 1915 were $720,000,000, or only one-tenth the 1918 appropriations for the War Department alone.

In 1914 the gross value of the products of all the industries of the United States was $24,000,000,000. The appropriations for 1918 for the War Department alone are substantially one-third of this sum.

The total operating revenues of all the railroads of the United States for the year 1917—freight, passenger, mail, express, and miscellaneous—was but slightly more than half the War Department's appropriation for the ensuing fiscal year.

Ordnance Department.

Of the total War Department appropriations for 1918, $3,200,000,000 was for the Ordnance Department. The value of the products of all iron and steel industries in the United States in 1914 was $900,000,000, or less than one-third of the amount to be expended by the Ordnance Department.

Of this gigantic sum the Ordnance Department has already placed contracts amounting to $1,677,000,000.

On the 1st day of April, 1917, the Ordnance Department consisted of 97 commissioned officers, occupying 15,000 square feet of office room in Washington. It now consists of 3,004 officers, occupying more than 14 acres of office floor space, and, in addition, has 26,120 enlisted personnel.

The expansion of this force has been carried on concurrently with the enormous business and industrial operations of the department. The force has been selected, trained, in part dispatched overseas. Because of inadequacy of office accommodations, it has been moved from time to time, one bureau having been obliged to move six times.

In addition to the selection and training of this new force, the making of these great contracts, and the follow up necessary in the manufacturing processes, a continuous study of new weapons and instrumentalities has been kept up, a constant contact kept with trained men abroad studying the operation of ordnance matériel in battle, and accordingly modifying designs and plans here by reason of observation and experience.

Many of the classes of ordnance matériel requiring to be designed, specifications drawn, and contracts let were wholly unfamiliar to our normal military practices. The trench-warfare matériel alone involves commitments of $282,000,000. Some of the contracts cover instruments so modern that our industries had to be adapted to their manufacture.

Many of the Ordnance Department's contracts involve increase of plant facilities or the construction of new plants, intricate systems of auditing and cost accounting, and constant inspection by inspectors who have had to be trained in specially established schools in order to add knowledge of ordnance requirements to their previous mechanical and technical training.

Quartermaster General's Department.

For the Quartermaster General's Department in 1918, $3,018,000,000 was appropriated, or a sum more than four times as great as the 1915 appropriation for all governmental purposes.

On the 1st day of April there were 347 officers in the Quartermaster Corps. On the 1st day of January, 1918, there was a total of 6,431 officers.

On the 1st day of January, 1918, nearly $2,000,000,000 of the appropriation had been obligated by contracts or disbursements.

This business involved accounting, determinations of standards, prices, quantities, the creation of new manufacturing facilities, the substitution of materials for insufficient supplies, diversions of labor, the erection of storage warehouses, and difficult and often embarrassing questions of land and water transportation.

In the woolen-goods section alone the cooperation of over 300 mills was involved, and the following items give some idea of the extensive character of the operations: There have been purchased over 19,000,000 blankets, 20,000,000 yards of overcoating, and over 30,000,000 yards each of shirting flannel and suiting, involving an expenditure of over $345,000,000. In cotton goods the department had contracted for 250,000,000 yards of various cotton cloths.

Further idea of the size of purchases in this department will be conveyed by the following figures:

Purchases to December 29, 1917.

Winter drawers	pairs	25,000,000
Winter undershirts		21,000,000
Woolen gloves	pairs	11,000,000
Wool lightweight stockings	do	31,000,000
Wool heavyweight stockings	do	21,000,000
Shoes purchased for delivery to Jan. 1	do	10,000,000
Shoes purchased for delivery Jan. 1–June 1	do	10,000,000
Cots		2,100,000

The Quartermaster General's Department in the supply section alone made 4,650 contracts, covering 142 different kinds of articles and aggregating a money value of $800,000,000.

Aviation Section, Signal Corps.

The Aviation Section of the Signal Corps on the 1st day of April, 1917, consisted of 65 officers and 1,120 men. On the 1st day of January, 1918, it consisted of 3,900 officers and 82,120 men.

This division of the War Department was charged by Congress with the expenditure of an appropriation aggregating for 1918, $744,000,000, or five times the 1915 appropriation for the entire War Department.

Engineer Department.

The Engineer Department, for which in 1917, $53,000,000 was appropriated, was charged by the 1918 appropriation with the expenditure of $390,000,000, or about 700 per cent increase.

There have been organized, trained, and equipped technical troops of foresters, stevedores, and railroad construction and operation men, aggregating about 120,000, many of whom have been operating in France for some months.

All of these departments have been obliged to construct various buildings, storehouses, railroads, barracks, repair shops, ordnance plants, terminal facilities, both abroad and at home, many of these being made necessary by the fact that the field of their operations is in two countries 3,000 mile apart.

Each division has been obliged to send officers to France, to receive officers from foreign countries to compare data and information, to review designs, and to design fresh supplies, and all this concurrently with its task of training and expanding its own organization.

The figures given above are selected almost at random as illustrative of the magnitude of the operations of the War Department. The following results have been achieved:

1. A large army is in the field and in training; so large that further increments to it can be adequately equipped and trained as rapidly as those already in training can be transported.

2. The Army has been enlisted and selected without serious dislocation of the industries of the country.

3. The training of the Army is proceeding rapidly, and its spirit is high. The subsistence of the Army has been above criticism; its initial clothing supply, temporarily inadequate, is now substantially complete, and reserves will rapidly accumulate. Arms of the most modern and effective kind, including artillery, machine guns, automatic rifles, and small arms, have been provided by manufacture or purchase for every soldier in France, and are available for every soldier who can be gotten to France in the year 1918.

4. A substantial army is already in France, where both men and officers have been additionally and specially trained and are ready for active service.

5. Independent lines of communication and supply and vast storage and other facilities are in process of construction in France.

6. Great programs for the manufacture of additional equipment and for the production of new instruments of war have been formulated.

7. No army of similar size in the history of the world has ever been raised, equipped, or trained so quickly. No such provision has ever been made for the comfort, health, and general well-being of an army. The health report for December, for a variety of reasons, became suddenly less favorable than for the preceding months; but the unfavorable conditions have been met and improvement is already apparent.

I state the foregoing conditions of the War Department's problem, and some of the results attained, for two purposes. In the first place, the American people are entitled to know of the splendid effectiveness with which they have been able to organize the man power and the material power of the Nation in a great cause; and, second, our army in France under Gen. Pershing and our allies are entitled to have the benefit resulting from the depression of the morale of their enemies which must come when the Germans realize that the American democracy has neither blundered nór hesitated, but has actually brought the full power of its men and resources into completely organized strength against their military machine.

I make this statement fully aware that there have been produced before the members of this committee some expressions of doubt, difference of opinion, and disapproval. The War Department has spent eight months hearing similar expressions, analyzing them, correcting the conditions out of which they grew, perfecting its organization to prevent their recurrence; and all the while driving on to the accomplishment of the main task.

My military associates and I appreciate the work which this committee has done and will value suggestions from the committee as a whole, from its individual members, and from every other patriotic citizen which will enable us to carry on this work more effectively and more rapidly.

In the foregoing statement there are two exceedingly significant figures, namely, that on the 1st day of April the Ordnance Department consisted of 97 officers and the Quartermaster General's Department of 347 officers, while they now, respectivly, comprise 3,004 and 6,431 officers. There was no ready trained body of men in the country who could have been selected suddenly to assume the highly technical and specialized work of these two divisions. Men of somewhat similar training had to be chosen, and the nucleus of officers already in those corps had not only to carry forward the expanding operations of their departments but be trainers and teachers to their new associates. As the work proceeded subdivision and resubdivision became possible.

On December 15 the questions of initial supply and organization of personnel had been substantially disposed of, and I was, therefore, in a position, as I had not been previously, to announce a general reorganization, already carefully studied, which accomplished the following results:

1. Created a war council, upon which Gen. Crozier, Gen. Sharpe, Gen. Weaver, Gen. Crowder, and the Chief of Staff had been designated to sit with the Secretary of War and the Assistant Secretary of War, and to which council men of capacity, either from the Army or from civil life, will be added from time to time. The purpose of the council is that its members, being free from the burdens of detail administration, can take a large supervisory view of all questions of organization and supply and give to the Government the highest value of their talents and experience.

2. Under Gen. Wheeler, with the advice of his military associates and of industrial experts, the machinery of the Ordnance Department is being thoroughly reorganized in preparation for the new phase of its work upon which it is now entering. Its several operations will be conducted under the direction either of officers already in the service who are now in a position to give their entire energies to their administration or by men especially chosen from civil life because of their experience and capacity.

3. The Quartermaster General's Department is in process of similar reorganization and subdivisioning under Gen. Goethals, who enjoys the unique experience of having worked out at the Panama Canal problems of transportation and supply of magnitude never until now approached in the history of our Government. Here also the efficiency of the department is being strengthened by the calling from civil life of men of the highest capacity to administrate certain of its great subdivisions.

A new view of the work of the Council of National Defense and of the War Industries Board is now possible.

The Council of National Defense is, of course, an advisory body without executive power. Its members have severally the powers of their respective departments. The purpose of the council, however, was a reconciliation of conflicts and a survey of the national needs and resources. This purpose it has served and is serving. The General Munitions Board and its successor, the War Industries Board, with their committees, were organized by the council for the following purposes:

1. Assign priorities as among the several departments of the Government and the allied Governments in their demands upon the industries of the country.
2. Advise as to supplies of materials and labor.
3. Advise on questions of price.
4. Secure industrial and labor cooperation.
5. Avoid enhancement of prices, confusion of industry, exhaustion of labor, and generally to prevent all avoidable evils which might result from the speed and magnitude of the new operations.

To these objects it was admirably adapted, and it has accomplished a great work. The things which have not happened are as impressive as the things which have happened when one recalls the possibilities involved.

We can now see the entire situation. The initial rush needs are substantially supplied. The technical corps have been expanded and reorganized upon industrial and efficient lines.

The coordination of ally needs with our own purchases has been effected. An agency exists to prevent conflicts and to adjust those which can not be prevented.

By the cooperation of all interests and all people in the country the Nation is now organized, and set to its task with unanimity of spirit and confidence in its powers. More has been done than anybody dared to believe possible. That there have been here and there errors of judgment and delays goes without saying; but I should be wanting in frankness were I to omit my own estimate of the real unselfishness and intelligence with which my associates, military and civilian, have applied themselves to this undertaking, and the results demonstrate the success of their efforts.

The CHAIRMAN. Mr. Secretary, the committee has been at work for several weeks, and it has gone into the methods adopted for proceeding with this work of preparation and the results obtained by two of the large bureaus of the Government—first, the Ordnance Department, and, second, the Quartermaster General's Department. Practically none of the other bureaus have so far been investigated.

There has been a great deal of testimony taken with reference to the Ordnance Department, and much complaint has been heard that mistakes were made in that department in the manufacture, or, rather, in the selection of the rifle that was to be used, and, second, in the output of machine guns—the adoption of a machine gun—and, third, with reference to the manufacture of heavy artillery, all of which has delayed the supplying of the Army actually in the field here and those to be sent abroad.

I suppose you have read this testimony, or glanced over it. What have you to say with reference to the methods that were adopted by the Ordnance Department?

Secretary BAKER. Mr. Chairman, I have not had the privilege of reading the testimony before the committee, except as it has appeared in the newspapers. I have tried to follow it as carefully there as I could.

The three subjects, of course, which you have mentioned would have to be considered separately.

First, with regard to rifles: The supply of rifles is, of course, now entirely adequate, and the accumulation of a reserve is going on very rapidly. When we went into the war we had the best rifle which had yet been devised in the world. That was by common admission true. Everybody agreed that the Springfield rifle was the best military rifle, and everybody agreed to this, that the rimless cartridge in small arms was a very desirable form of ammunition because of the tendency of all rim cartridges to jam in the gun, and the difficulty of having a perfectly operating mechanism with a rim cartridge.

Senator WEEKS. I do not wish to break in on the Secretary's testimony and I would not attempt to ask questions without going over it in detail, but I want to suggest that the statement made by the Secretary that everybody agrees that the Springfield rifle, excellent as it is, is the best rifle in the world, is very far from the fact. Also, there have been grave doubts about changing the form of ammunition expressed by those competent to pass upon that particular question.

Secretary BAKER. I can only say, with respect to the suggestion made by the Senator, that of course I can not pretend to have talked to everybody in the world; but I can say that those with whom I have talked, without dissent or exception, have agreed that the Springfield is the best rifle the world has ever had.

Senator WEEKS. I am referring only to the testimony before this committee.

Secretary BAKER. I am sorry, Senator Weeks, that I have not read all the testimony. I would have supposed that the difference of opinion would have been as to the wisdom of making a change in the type of ammunition used at this stage, rather than any question of the excellence of a gun using American ammunition.

Senator WEEKS. I did not intend to disparage the Springfield rifle, which is good enough for every purpose.

Secretary BAKER. All the information I had, apart from such testimony as may have been given here—and whatever weight that is entitled to I can not answer—was to the effect that the Springfield rifle and the rimless cartridge were the best.

Senator SUTHERLAND. Do the English authorities admit that as being the best?

Secretary BAKER. I can not say that I have any authoritative admission from the English authorities, but many British officers with whom I have talked have agreed that the rimless cartridge is the better type of ammunition. It is a fact which I think must lie in the evidence before this committee.

The CHAIRMAN. The only American manufactured gun in use in this country at the time was the Springfield rifle?

Secretary BAKER. It was.

The CHAIRMAN. And that gun was manufactured only by Government arsenals?

Secretary BAKER. Only by the Frankford and Rock Island Arsenals.

The CHAIRMAN. None of them was being manufactured by private concerns?

Secretary BAKER. None.

The CHAIRMAN. Do you remember what the number was in use by the National Guard?

Secretary BAKER. Something more than half a million. I said in use. I mean in use and in reserve.

The CHAIRMAN. But there were, in addition to that, used by the National Guard for practice purposes the old Krag-Jörgensen?

Secretary BAKER. Not at that time. The Krags were then in storage?

The CHAIRMAN. One of the criticisms that has been indulged in against the Ordnance Department has been that notwithstanding the fact that we were calling into the service a million and a half of young men, we abandoned the Springfield rifle, which was being manufactured by our own arsenals, and that we did not adopt the Enfield rifle, which was being used by the English forces and which was being manufactured in large numbers here. It took some time to change and to adopt a gun of our own along the lines of the Lee-Enfield rifle, and they were manufactured by a slower process.

Secretary BAKER. That is perfectly true.

The CHAIRMAN. A great deal of criticism has grown out of it because of the fact that the young men in the cantonments were without guns and are without them now.

Secretary BAKER. Not now, Mr. Chairman. They are now adequately supplied.

The CHAIRMAN. It has been done, then, within less than 30 days.

Secretary BAKER. Undoubtedly within the last 30 days.

Senator MCKELLAR. Gen. Crozier, as I remember it, testified that all those who need guns will not have them until February 15.

Secretary BAKER. I think he must have had in mind that the completion of the first draft would bring in substantially 100,000 more men; but I understand the fact to be—and it is more of less immaterial—that every man now in camp in this country who ought to have a rifle has a rifle.

The CHAIRMAN. You are sure of that, Mr. Secretary?

Secretary BAKER. I am not quite sure of it.

The CHAIRMAN. I think if you had reports from the cantonment commanders that they would not bear you out.

Secretary BAKER. I have no desire to stress the point, Mr. Chairman. I think it is relatively unimportant.

The CHAIRMAN. There is a grave difference of opinion, not only among Army men, but among civilians as well. It is contended that these young men should have had the rifles and the delay in furnishing them was caused by this change made by the Ordnance Department.

Secretary BAKER. I think the delay was caused by the change the Ordnance Department made. I personally approved the change. I think it acted rightly in so doing.

The CHAIRMAN. I am not so sure that the members of the committee are radically at variance with you on that. In the last analysis, the guns were not furnished these young men?

Secretary BAKER. That is true.

Senator MCKELLAR. Is it not a fact that two previous Congresses had made appropriations for the making of these jigs, tools, and dies, and that those appropriations were not used by the department?

Secretary BAKER. No, Senator; I do not recall that. I remember that when you were a member of the House Committee we had some talk about that.

Senator MCKELLAR. We appropriated an amount recommended as sufficient to make these changes in the tools, dies, and jigs.

Secretary BAKER. The committee took that question up with Gen. Crozier, and Gen. Crozier said, as I understand it, that the appropriation—while there was some discussion as to its being used for this particular purpose—was not specified for that, and in his opinion the most difficult thing to supply for the Army was automatic pistols, and the fact is that the pistol is the weapon we are short of at the present time.

The CHAIRMAN. Confining ourselves for the present moment to the rifle, there is serious criticism of the Ordnance Department to the effect that there is hesitation, or, I may say, alleged inefficiency, which has caused many delays. For instance, when it was determined to change the British gun—the Enfield gun—and adapt it to the American ammunition, the engineers who had charge of the manufacture and the big manufacturers got together and in order to hasten the output determined upon seven interchangeable parts, or about seven. They had been conducting their negotiations with some member of the Ordnance Department. There must have been a change in the personnel of the Ordnance Department, or the particular branch which had this matter in charge. I think Col. Thompson, who, I believe, is a very great ordnance man, took charge, and then after they commenced to manufacture these guns with seven interchangeable parts they went into consultation with Col. Thompson and changed it to 44 parts and later to 50 interchangeable parts, which again delayed the matter.

Secretary BAKER. I know that is substantially accurate. In view of the fact, however, that the supply of rifles is now much more largely interchangeable and is wholly adequate, really anticipating the country's needs, I think any loss of time which brought us larger interchangeability of parts was justified.

The CHAIRMAN. It goes only to the inefficiency, or alleged inefficiency, of the Ordnance Department?

Secretary BAKER. Senator, may I make comment on that?

The CHAIRMAN. Surely.

Secretary BAKER. It is not inefficiency to change one's mind and to get something better than you had previously determined upon. If the Ordnance Department had made up its mind upon its first hurried survey that there was not time to justify procuring interchangeability to a greater extent than seven parts, and later, upon fresh study, determined that there was time to secure larger interchangeability, that I should call efficiency rather than inefficiency.

The CHAIRMAN. With the war on us and with these young men called into the service, there was such an emergency that it did not call for the highest type of gun.

Secretary BAKER. Mr. Chairman, I respectfully dissent from that view. The war was not on us. The war was in Europe. We had more guns of the highest type that needed no respecification or redesign than could possibly be used on the highest percentage of allowance for wastage by all the troops that we could get to France in a year.

The CHAIRMAN. There is a very grave question about that among the military authorities. If you use the same basis that was used by the continental armies of Europe, we did not have enough to supply them.

Secretary BAKER. Exactly so. When we started in the war the percentage of wastage was estimated very high, but the use of other implements of war and the different character of this war, considering the evolution of large forces, has made the percentage of rifles per thousand men so much lower that the fact is that every European country has an enormous accumulation of reserve rifles in excess of what it expected to provide for its forces.

Senator WADSWORTH. Mr. Secretary, you stated that the war was not on us. It is a fact, however, is it not, that the war was on us to a sufficient extent to impel the Government to send troops to France as fast as they could get them, and in their haste, due to the lack of rifles, men went on board transports without having fired a rifle?

Secretary BAKER. Senator, there are truths in all the sentences you have uttered; but, putting them together, they do not picture the situation. I said the war was not on us in the sense that the enemy was not at our doors. He was 3,000 miles away. We had to send troops to where he was. We had an adequate supply of modern weapons for the troops that we could send. The fact that some troops went aboard the transports, as you say, who were not provided with rifles is true, and there will be some fresh men who still have to be trained, but the great body of men who went away were, of course, men who had fired rifles.

Senator WEEKS. I think it is all a matter of judgment. Some one had to determine, and you and the Chief of Ordnance came to a determination.

Secretary BAKER. The Chief of Ordnance came to me and explained his grounds, and I approved them.

Senator WEEKS. The very condition now in the Ordnance Department is explained by just what you have said. The fact that the war was not on us directly did not absolve us from any obligation to use the greatest haste possible in getting the armed men to the front; and the criticism has been made against the Ordnance Department—and it seems to me to have some reason behind it—that there has been too great a desire for technicality and too little "pep" in advancing the necessities of the Army from that bureau.

Secretary BAKER. May I make this comment? To secure interchangeability of parts for 50 of the parts of a weapon as universally used as a rifle is not a technicality; that is an enormous advantage. Everybody will admit that if we could have sent to Europe only Springfield rifles completely interchangeable in every part it would have been a great advantage. One of the difficulties in conducting large operations of the kind we are now conducting is the number of repair parts necessary to repair the implements of war. If you have to have 50 sets of repair parts that are not interchangeable, you accumulate the intricacies, complications, and confusions at the supply depots.

Senator WEEKS. Undoubtedly that is true, but we were faced by a condition, and one of the reasons why the English have made such enormous strides is that they have refrained from demanding extreme technicality and have taken what they could get. That is one of the reasons why the English could obtain such large supplies in this country, because they were not so very technical. Perhaps the Chief of Ordnance and yourself knew the situation better than others, but it does seem to me that the requirements should have compelled you to take advantage of every facility that was available to supply those things that could be supplied the quickest. There was at that time a manufacturing capacity in this country of 15,000 rifles a day. It was not taken advantage of, and it has not been taken advantage of; it is not being used to-day. We are only manufacturing at best 7,000 rifles. The question that arises in the minds of those who brought these matters to the attention of the military committee is whether sound judgment and proper activity has been shown in taking advantage of these methods of production which had been developed in this country.

Secretary BAKER. Senator, you realize this is a question of judgment. I ask permission to call your attention to the fact that the battle front was 3,000 miles away——

Senator WEEKS. I want to say that, to my mind, does not make any difference, practically, whether it was 10,000 miles away or 1 mile away. Our obligation was the same.

Secretary BAKER. Our obligation was the same; our obligation was to arm our men and make sure they were armed, trained, and adequately equipped as early as we could get them to the battle front. It does make a difference whether it is 1 mile or 10,000 miles. You can get your men 1 mile very quickly, but you can move them 10,000 miles but very slowly indeed. I insist that there was no reason for arming troops, in view of those facts, with an inadequate and improper weapon.

Senator WEEKS. It was a weapon used by millions of men on the other side.

Secretary BAKER. Because they could not do better at the time. The British Government, at the time this war started, had designed the Enfield rifle to shoot the rimless cartridge. However, because of existing conditions and necessities they threw away a design of a better weapon and took one which their

experts admitted was less efficient. That was because of the pressure of necessity.

Senator WEEKS. They could have easily replaced it by the weapon that we would have manufactured in this country.

Secretary BAKER. But that would have introduced intolerable confusion, where a single army would have two types of small arms and ammunition.

Senator WEEKS. Not at all. They could have discarded the rifle they were using and supplied themselves with a better weapon.

Secretary BAKER. You mean they could have rearmed the whole force in a single day?

Senator WEEKS. Not in a single day.

Secretary BAKER. If it had taken more than a day, there would have been parts of the army using different types of rifle.

The CHAIRMAN. This war was going on from August, 1914, to April 1, 1917, before we got into it. The Ordnance Department, through our military channels, must have kept in close touch with the European armies.

Secretary BAKER. Undoubtedly.

The CHAIRMAN. They knew what weapons were being used in small arms and heavy ordnance. What steps were taken for the purpose of developing the class of guns that America should use in case she became involved in the war?

Secretary BAKER. I do not know. Gen. Crozier would be able to answer that better than I can. I have no doubt they had in mind the Springfield rifle.

The CHAIRMAN. They knew we could not manufacture them in sufficient quantities. In other words, here was a great conflagration. Was the Ordnance Department, through that period of three years, when it could have been preparing, making plans and specifications for the development of proper guns?

Secretary BAKER. I should imagine not any more so than with respect to the Springfield rifle, which was the best gun.

Senator NEW. Mr. Secretary, you are acquainted with James W. Gerard?

Secretary BAKER. I know him slightly; I have met him.

Senator NEW. What official position did he occupy in May of 1916?

Secretary BAKER. He was ambassador to the German Empire, I suppose.

Senator NEW. Do you know that in May, 1916, Mr. Gerard, in his official capacity as ambassador of the United States to Germany, notified this country that Germany would renew and continue her policy of submarine warfare?

Secretary BAKER. Senator, I can not tell you whether I knew that at that time or not.

Senator NEW. It did not make any impression on you, if you do not know it?

Secretary BAKER. It is not a question of impression. Any information I had on that subject was of a confidential character.

Senator NEW. Mr. Gerard, on page 345 of his book, My Four Years in Germany, evidently with the consent of the administration—I can not think it would have been made public otherwise—says that in May of 1916 he gave the administration official notice to that effect. You say that fact was not made known to you?

Secretary BAKER. I did not say that. I said that any information I had on that subject was of a confidential character and of a kind that I could not discuss.

Senator NEW. Don't you think that would have been a pretty good time to have settled all technicalities as to the adoption of a rifle?

Secretary BAKER. Why, 10 years ago would have been a good time. All these questions ought to be settled as soon as they can be settled.

Senator NEW. I agree with you absolutely. Here was a case of an official notice being given by the ambassador of the Government to the administration. It would seem to me that that would at least form the basis of some definite steps on the part of the War Department.

Secretary BAKER. As I have said to you, with great deference, I can not discuss diplomatic relations between the German Empire and the United States, or the effect of those relations upon the War Department; but it is not to be forgotten that at the time to which you refer, and subsequently, this Government was relying upon very definite and positive assurances from the German Government that it would not do that thing.

Senator NEW. Here is the notice of our ambassador, and the word of the German Government was accepted as against his official advice. Was the word of the German Government deserving of more credit; was that it?

Secretary BAKER. I had no part in the weighing of those relative values, nor have I any opinion to express on it now. You are perfectly aware that after representations were made by this Government to the German Government as to the illegality of the ruthless submarine warfare, the German Government disavowed certain acts which had been theretofore performed by its commanders, and gave assurances upon which the Senate, the House, and the President himself relied.

Senator NEW. And nothing was done by the War Department at that time to prepare for eventualities?

Secretary BAKER. Quite the contrary, Senator. The War Department used every officer it had in a continuous study of the European war and in continuous perfection of the implements and devices, and it used every dollar which Congress appropriated to buy the necessary implements with the single and solitary exception of the machine gun, for which we had not spent much.

Senator NEW. No machine gun was adopted?

Secretary BAKER. That is not accurate, Senator. A machine gun had been adopted.

Senator NEW. Was anything done, Mr. Secretary, at that time to prepare the manufacturing energies of the country for the great strain and great tax upon its capacity?

Secretary BAKER. In August, 1916.

Senator NEW. In May of 1916, when this notice came from Mr. Gerard?

Secretary BAKER. Well, the Council of National Defense, of course, was then busy coordinating the industries of the country. If you refer to the Ordnance Department, assuming from that statement of Ambassador Gerard in 1916 that the United States would get into the European war, and you mean that the Ordnance Department did things based upon that assumption which it would otherwise not have done, I think it is safe to say that is not the fact.

Senator WADSWORTH. The Springfield rifle at that time was manufactured only in arsenals at Springfield, Mass., and Rock Island, Ill.?

Secretary BAKER. Yes, sir.

Senator WADSWORTH. At that time the Rock Island Arsenal, so far as the manufacture of this rifle was concerned, was closed down and not producing a single rifle, and the Springfield Arsenal was running very much below its capacity. The testimony before this committee shows that that condition continued for several months through 1916 after this warning came from Ambassador Gerard.

Secretary BAKER. That condition had nothing to do with Ambassador Gerard or with his warning. The condition was as you have stated it. After Congress made an appropriation for an increase in the supply of rifles I took the matter up with Gen. Crozier several times. We had under consideration the question of increasing the supply of Springfield rifles. As rapidly as expert mechanics could be secured they were employed, and two shifts were first instituted at Springfield, while the Rock Island Arsenal was opened. The difficulty which the Ordnance Department faced was in securing expert mechanics. At that time all these emergency plants and all the regular establishments in this country for the manufacture of rifles were working overtime on foreign orders—Russian, French, Italian, English—and the procurement of mechanics to fill up the supply of men who could make rifles at Springfield and Rock Island was difficult.

Senator KIRBY. Is there any reason for the War Department assuming that because an ambassador of the United States to a foreign country a year ahead thought there might be a declaration of war it should speed up and increase the output of ammunition?

Secretary BAKER. There is no reason, Senator, but I would like to have it perfectly understood that the 97 officers in the Ordnance Department, since I have known them, which is since about the 1st of March, 1916, have worked more hours than any set of men I have ever known in public or private employment.

Senator KIRBY. I was surprised that because some ambassador had a peculiar notion a year ahead as to what we should anticipate the year following, when there was really nothing to indicate it, the Ordnance Department should be expected to speed up on that account. I do not feel that the Ordnance Department should be blamed for not proceeding on account of that sort of thing.

Secretary BAKER. I do not understand that Ambassador Gerard claims to have said that to the Ordnance Department. I am perfectly willing to say that he did not.

Senator NEW. The *Lusitania* had been sunk at that time?

Secretary BAKER. Oh, yes, sir.

Senator NEW. And several other American vessels, and several vessels bearing American passengers had been sunk by German submarines?

Secretary BAKER. Yes, sir.

Senator NEW. That notice was based upon those facts, and what he gathered in Berlin from talks with the German Emperor, the German admiral, and the German chief of staff, and

others; so that characterizing it as a "peculiar nation" of the ambassador hardly disposes of it, I think, as frivolous.

Senator KIRBY. Relative to the supply of rifles, which seems now to be adequate, it is not contemplated, as I understand, by the officials in charge of the department that all these men that we are now supplying with rifles can be sent abroad shortly; in other words, they contemplate a period of training that may reach to the extent of a year with the rifles that we now have?

Secretary BAKER. That is perfectly accurate. I would like to complete that statement.

Senator KIRBY. I want to put that——

Secretary BAKER. Every man sent to Europe is adequately armed, every man can be adequately armed, and the supply of rifles was enough to train every man who has or can be sent to Europe with rifles; and I make one further observation about it, that eight months after Great Britain went into the war Kitchener's army was still drilling in top hats with walking sticks.

The CHAIRMAN. You have stated as a fact that all the young men that are now in training are adequately armed with rifles?

Secretary BAKER. I am referring to rifles.

The CHAIRMAN. I hope you will verify that statement by ascertaining on the ground.

Secretary BAKER. Senator, let me dispose of that, if I can. You have Gen. Crozier's statement before you of the number of rifles actually delivered. I have it here. The requirements of January 1 were 1,165,000; the total number actually delivered was 1,001,000, leaving 164,000 shortage. On February 15, according to the rate of deliveries now progressing, the requirements will be 1,240,000 and the deliveries will be 1,240,000. Now, if you add to the rifles already delivered and distributed the Krags, which are good enough for training weapons, and the old Springfields, which are obsolescent as actual operating weapons but good enough for training purposes—if you add those to the 1,001,000, I think you will so nearly come to 1,165,000 that it is safe to say that every man has a rifle that wants to have one.

Senator WADSWORTH. You would not say that the Krag-Jörgenson was a good rifle for training purposes when in fact there is no ammunition supplied?

Secretary BAKER. There is plenty of ammunition.

Senator WADSWORTH. Gen. Crozier so testified.

Secretary BAKER. That was not because we did not have it.

Senator WADSWORTH. Because it was unsafe?

Secretary BAKER. Not because, as I understood, it was unsafe, but because the rifle ranges at the camps had not been erected at the time.

Senator WADSWORTH. Gen. Crozier's testimony was very clear on that point, that it was deemed inadvisable to issue ammunition for the Krag-Jörgenson rifle, it being unsafe, due to its great age.

Secretary BAKER. I never heard that before.

Senator WADSWORTH. That was his testimony. It is a fact that the Krag-Jörgenson had no ammunition from the day it was issued to the troops, and has not now, so it is not an adequate training rifle.

Secretary BAKER. It may not have been an adequate training rifle in the matter of marksmanship, but have been a training rifle in the matter of carrying the rifle and training in the manual of arms.

Senator WADSWORTH. The prime purpose of a rifle is to shoot, is it not?

Secretary BAKER. That is one of the purposes.

Senator WADSWORTH. That is the primary purpose?

Secretary BAKER. Not even the primary purpose, necessarily; it has its bayonet purposes.

The CHAIRMAN. I hope you are entirely correct about that, but I think if you will look into it a little further you will find that is absolutely true on the per capita basis, dividing the number of guns on hand into the number of men you have; but I think you will find there are still cantonments where young men have not guns.

Secretary BAKER. I think that is so. We are not at variance about that.

The CHAIRMAN. Then there must be a lack in the distribution of them?

Secretary BAKER. Yes; they are slow in the distribution.

The CHAIRMAN. I think you will find some of these cantonments are lacking at least 50 per cent of the guns necessary to train with.

Secretary BAKER. I can not think that, but it may be. I have not the means of saying it is not.

The CHAIRMAN. I hope it has been cured, but that was the fact when we started in here, I think. The next thing there was serious complaint of, Mr. Secretary, assuming that the changes which have been made in the Lee Enfield rifle have been for the best interest of the Government, and having your explanation of the delays, the next serious criticism is in reference to the machine gun. Now, I guess it is a fact that there are practically no machine guns with the troops now in this country. When I say "practically none," they are wholly insufficient?

Secretary BAKER. It is a relatively small number.

The CHAIRMAN. It seems this controversy that was waged over the character of machine guns that should be adopted was not adjusted until in May, 1917, or possibly later than that. Many of the witnesses who have testified here feel that there was delay in that, an unnecessary delay. Here was the Lewis gun, that was being manufactured in very large quantities for the use of the British, who had seventy-odd thousand of them on the firing line; our troops were practically without machine guns, and it is felt by many, and so testified to, that the gun ought to have been manufactured, the one most readily capable of manufacture ought to have been put on the market for the training of the men, at least.

Secretary BAKER. Prior to April or after April?

The CHAIRMAN. Well, it could have been immediately after April; it could have been done before April.

Secretary BAKER. There was no delay after April.

The CHAIRMAN. Yes; there was, Mr. Secretary. The board did not meet until May, some time.

Secretary BAKER. The board had nothing to do with it. After April and long before Congress had—long before your committees had been able to deal with the estimates which the War Department had made on the subject of machine guns, the full capacity of making machine guns of the Savage Arms Co. was ordered to go forward with the manufacture. The delay was this: When I became Secretary of War I found several controversies, of which perhaps the longest continued and the most acrimonious and bitterly contested was the one affecting machine guns and involving, as it seemed at the outset, the relative merits of the Benét-Mercié gun and the Lewis gun, manufactured by the Savage Arms Co. It was conceded, and I think has never been denied, that of the heavy-type gun the Vickers-Maxim was the best. The program for supplying the Army of the United States—the Regular Army and the National Guard—at that time was 12,000 machine guns of the two types. That was the program of the War College and of the General Staff, and was regarded at the time as generous. Now, I found that the controversy. I went through it from top to bottom; I read every report which had ever been made; I read every criticism and comment, and all the literature of that controversy, and the net result of it was this, that the Lewis gun had never been presented to the department as a perfect weapon, chambered for American ammunition up to that time. Its inventor and its manufacturers claimed it could be perfected and chambered for American ammunition. It had been in the process of being perfected, but the boards of the department which had passed upon the excellence of this weapon had agreed that it was not yet sufficiently perfect, and as between it and the Benét-Mercié the Benét-Mercié was the better weapon. That was the state of the controversy at the time.

When Congress made an appropriation, I think, of some $12,000,000 for machine guns——

The CHAIRMAN. That was August 29, 1916.

Secretary BAKER. Gen. Crozier made a recommendation to me, which I happen not to have here, but which you have, involving the immediate purchase, as I recall it, at the outset, the use of all that money, or the major part of it, to buy the heavy Maxim water-cooled gun. I directed that one-half of that money be used for that purpose and that a board be assembled to pass upon the relative excellence not only of the Benét-Mercié, but of the Lewis chambered for American ammunition. As a result of the British experience, which had led to a great development in their gun, and to several other guns of which we had knowledge and that were in process of perfection, that board was appointed—I have forgotten when, but I testified fully as to the existence of the board before the House Committee on Military Affairs; told them why the board was appointed and what its functions were. As soon as it became apparent that we were in the war the board was asked to make a special report. They did make a special report, but at the time they made it the sum which had originally been appropriated was already under contract for every kind of machine gun we could get.

The board went on with its investigation. With the solitary exception of the Marlin and the old-fashioned Colt guns, we were using the full manufacturing capacity to make these guns while the board was experimenting and determining the excellence of newly devised weapons, and when the board made its report in July and brought in a report favoring the Browning

gun, that simply added two new weapons; it was not a question of replacing the Lewis gun, it was not a question of displacing any gun we could get, but adding two new weapons, one of the heavy and one of a light type. So the investigations of that board were concurrent with the utmost expedition in securing from existing manufacturing facilities in this country all the machine guns we could get.

Senator McKELLAR. I will call your attention to the fact that Gen. Crozier's testimony, as I recall it, was that an allotment of the $12,000,000 was made by the Ordnance Department in December, and that a contract was made thereafter at some time, I do not think it was stated when, for the Vickers gun, but that nothing was done except to wait on the board that had been appointed.

Secretary BAKER. That was true in December.

Senator McKELLAR. Well, that nothing was done between August and December.

Secretary BAKER. That is certainly true.

Senator McKELLAR. And it seemed to me, and I imagine to other members of the committee, that at such a time when we all knew that something was likely to occur to make guns necessary, that a delay like that was unreasonable.

Secretary BAKER. Well, it is a question of judgment. Here we had an appropriation and the expert opinion of the department was that the major portion of it should be used for the purchase of the heavy Vickers type of gun and a very small part of it used in buying the light type of guns. The recommendation of the experts was that that small part for light guns should be used by buying Colt guns, the revised model of the Colt gun, and the revised model of the Benét-Mercié gun. In the meantime, here were the Lewis guns, which had established a reputation in Europe, which were pressed very earnestly upon the department as a more modern implement, and there was not any recommendation that the Lewis gun should be bought. In order to bring that to a head and find out just which guns we ought to get, this board was appointed. At that time there seemed to be plenty of time for the board to consider all these things.

Senator McKELLAR. As I recall Gen. Crozier's testimony, it was substantially this: That on the 18th of August he made a recommendation to you, knowing that this $12,000,000, or thereabouts, was to be appropriated by Congress in that month, he made a recommendation to you that one-half of it be immediately expended in Vickers guns and that a board be immediately impaneled and decide the question, as I recall it, in September—it may have been as late as November—but that you recommended that would be postponed until the following May, about two months after the war began, and that the reason for that was that you wanted to have all of the inventors to have a fair chance of showing their guns. Right there it is my judgment that under those conditions, the conditions that then confronted our country, and with $12,000,000 already appropriated by the War Department, that we ought to have used a great deal more expedition in getting guns; and if a board had to be impaneled, it ought to have been impaneled earlier. It could have been impaneled in September or October just as well as in the following May. I merely make those statements so that I can have you reply with your views on that subject.

Secretary BAKER. I am very glad to, Senator.

Senator KIRBY. Does the question relate to the appropriation made before the declaration of war, the following——

Senator McKELLAR. August 29, 1916, $12,000,000.

Secretary BAKER. I thought I had Gen. Crozier's recommendation here. I do not seem to have it, but it is immaterial.

Senator McKELLAR. There was no disagreement about it, except your memory that it was the major portion of the recommendation and mine that it was one-half of it, so that is immaterial.

Secretary BAKER. It is relatively immaterial. Gen. Crozier's recommendation was that that sum should be spent, as I recall it, the major part, for Vickers guns, and that of the residue a part should be spent in buying Colt guns; or, at least, that was his then thought about it. The board was called; its time of deliberation was extended in deference to the Lewis gun, which at that time had not been chambered for American ammunition so as to work successfully. In order to give its manufacturers plenty of time I gave the board the power to extend the time of their tests so that that gun might be produced before it, and also the Browning gun, which was in process at the time. But the deliberations of that board never delayed for a second the buying of any machine guns after April, or after the beginning of April; never, for a second. It did delay the buying of machine guns and caused the exclusion of the Lewis gun prior to April.

Senator McKELLAR. In other words, it delayed it before April but not after?

Secretary BAKER. Yes, sir.

Senator McKELLAR. Well, it delayed it to this extent afterwards, that no contracts were made and no allotments of money were made after the 6th of April, after the war began, until after you determined on the Browning gun. This board determined on the Browning gun in May, which was about two months after war was declared, or June?

Secretary BAKER. Yes; it delayed buying Browning guns until the board reported in their favor. But while the board was considering its reports Lewis guns and the capacity of the Savage Arms Co. were under order, and Colt guns and every other kind of gun which was then possible to be manufactured was being manufactured, and no delay was caused by waiting for any report of the board.

Senator McKELLAR. Whatever may have been the argument, one way or the other, the fact remains that nine months after the war began, in the greater portion of our cantonments, those who had been designated to the machine-gun service in the Army have no machine guns with which to learn their business.

Secretary BAKER. I would not say they have none. They have relatively few.

Senator McKELLAR. I will call your attention to the testimony of Maj. Gen. Wright, of Camp Doniphan, I think, and of Maj. Gen. Greble, of the Bowie Camp, I think, in which they said they either had no guns at all, no machine guns at all, or a wholly inadequate supply, and that is our information from all of the camps except some National Guard camps, where they were supplied. Take, for instance, the one of Gen. Ryan, down in Carolina. Now, it seems to me—I speak only for myself—that with the great number of machine guns that were being manufactured in this country at the outbreak of the war and long before the outbreak of the war, that we should have had machine guns in the hands of those who were to use them long before this.

Secretary BAKER. Senator, I will ask you to remember, in that connection, two facts. The entire program for machine guns for the Regular Army and National Guard in the United States, the largest program that has ever been submitted to Congress by the General Staff, or approved by Congress prior to this war emergency, was 12,000 machine guns. The demand of the country now for machine guns, by reason of the development of the use of that weapon in this war, and hitherto unknown, is much more than 200,000 machine guns, and each one of them is a highly intricate piece of mechanism, which it requires a very long time to manufacture, even in quantity manufacture, and a much longer time to prepare for quantity manufacture.

Senator McKELLAR. Do not those two facts which you mention make it all the more important, or did they not make it all the more important, that the department should have gotten machine guns from any source, from any factory, in order that our men in the camps would not remain in the camps without guns to be trained? I want to say to you in all frankness that I am not a partisan of the Lewis gun or the anti-Lewis gun. I have no interest under heaven in any such matter.

Secretary BAKER. I understand that, Senator.

Senator McKELLAR. But my only idea is that under the surroundings, under the developments of the war, as everybody must have seen the great use of machine guns, that immediately upon their being any question about our getting into it, that the greatest energy should have been exerted to have secured some kind of machine guns, and whatever kind of guns we might have been able to secure, in order to train our men to use them.

Secretary BAKER. Senator, all such questions are necessarily decided as a question of extreme speed and excellence. Those two things are at variance. Let us assume that we could have gotten larger supplies of Lewis guns. That does not at all necessitate a judgment of the wisdom of so doing. As a matter of fact, the machine-rifle situation and the machine-gun situation is an expert military question.

There is what is known, first, as the machine rifle; second, the light machine gun; third, the heavy machine gun. The machine rifle is neither air cooled nor water cooled. The light machine gun, of the Lewis type, is an air-cooled weapon. The Colt, the Benét-Mercié, and some of the other light guns have no special cooling device. The Vickers-Maxim is a water-cooled gun. There is very active difference of opinion among military experts, first, as to the wisdom of water cooling as against air cooling, and, second, the weight of the gun which the individual soldier is to be equipped with. If it had been a matter of complete certainty that American troops in this con-

flict were to adopt the British theory of machine-gun practice, then in all likelihood a large number of the Lewis guns would have been valuable. That not being certain, the French practice differing from that, there was a robust question of difference of judgment as to the weight of guns to be used. As a matter of fact, some members of the United States Marine Corps, who had been sent to France fully armed with Lewis guns, have been disarmed of their Lewis guns by Gen. Pershing and rearmed with Chauchat automatic rifles, which are very much lighter, and Hotchkiss guns bought in France of the heavier type, and corresponding to the Vickers-Maxim, so that the actual supply of Lewis guns sent to France in the hands of troops who were fully armed with them is now in reserve stock again and those troops have been rearmed with the Chauchat light and the Hotchkiss heavy rifle, because the theory of training and rifle practice which Gen. Pershing adopted uses a lighter gun than the Lewis and a heavier gun than the Lewis. And if that obtains, if the military experts adhere to that, then the Lewis rifle will be used primarily for aircraft work and not at all for ground work with soldiers.

Senator McKELLAR. Again I assure you I am not interested in the Lewis gun or any other gun.

Secretary BAKER. I am simply illustrating, it is a different type of weapon.

Senator McKELLAR. Here is what seems to have been happening: This selection of a gun was delayed from August 29, when $12,000,000 was appropriated by Congress, until the following May before any gun was really adopted by our Government, and now, since last May, when it was adopted, up until to-day we have none of the guns yet made. In other words, you adopted a gun that was, we hope, the most excellent gun in the world, but it has never been tried in the field; it is a new gun, and we hope it will mean all you say. I know I devoutly hope it, but you have not even got that gun; you have not any of those guns.

Secretary BAKER. A few.

Senator McKELLAR. No; I think Gen. Crozier said the first delivery would be in March.

Secretary BAKER. The first quantity delivery. We have a few.

Senator McKELLAR. He said he had two, as I recall.

Secretary BAKER. Nine this morning.

Senator McKELLAR. That is some improvement; but I am afraid we would not make much headway with the Germans with nine guns.

Secretary BAKER. But, as a matter of fact, the quantity delivered starts like the acute end of a triangle, and spreads toward the base.

Senator McKELLAR. I am delighted to know that is so, because I think we ought to have the guns, and it does seem to me we have not used all the expedition that we should have used in order to have guns manufactured.

Secretary BAKER. I want to just insistently but respectfully repeat that the adoption of a machine gun by that board in May has nothing whatever to do with the supply of machine guns in the Army. We adopted the Browning gun in May, 1917, and we may adopt another the day after to-morrow. If somebody will invent a better one, we will adopt it as soon as its excellence is apparent.

Senator WEEKS. There is said to be a better one now.

Secretary BAKER. I am certainly glad to know of it, because we want our troops to have the best one, and I hope American ingenuity will devise a better one very speedily.

Senator FRELINGHUYSEN. I want to ask the Secretary whether any recommendation has come from Gen. Pershing for the abandonment of the Lewis gun for ground work?

Secretary BAKER. None, at least not in that specific form.

Senator FRELINGHUYSEN. You do not know whether, by reason of the fact that he has taken these Lewis guns away from the Marine Corps and is rearming them with the Chauchat and Hotchkiss, that he has abandoned the policy of using them as a ground arm?

Secretary BAKER. I do not know that, but what he has done is, he has felt it better to arm them with a gun lighter than the Lewis and a gun heavier than the Lewis and has used the Chauchat light and the Hotchkiss heavy rifle.

Senator WEEKS. Of course you know there are two types of Lewis guns, two weights, the lighter one being now manufactured by us?

Secretary BAKER. For aircraft; yes.

Senator FRELINGHUYSEN. Has the War Department inquired of Gen. Pershing as to the policy on the question of Lewis guns?

Secretary BAKER. The War Department, of course, is in daily communication with Gen. Pershing on all these subjects, but just what is the state of his present opinion, I do not know. But it would be immaterial, because Gen. Pershing's opinion may be changed from day to day; it may be one thing on Tuesday and may be another thing on Wednesday. The art of war is progressing. He may be for the Lewis gun to-day and may be against the Lewis gun to-morrow, and for it the next day.

Senator FRELINGHUYSEN. I presume there has been some anxiety on your part as to the type of arm Gen. Pershing desires?

Secretary BAKER. The main anxiety of the department is to supply Gen. Pershing with every kind and amount of arms he wants.

Senator WEEKS. Recurring to the question of ordnance, are you entirely satisfied with the progress that has been made by the department up to this time?

Secretary BAKER. Senator, I do not say the department might not have expedited some phases of its work.

Senator WEEKS. Of course the department and all departments in the Government have been doing a great amount of work and a great amount of good work. But what we are trying to find out is where we have failed and where we can jack up the service so as to do better.

Secretary BAKER. And with that inquiry, of course, I am deeply sympathetic.

Senator WEEKS. Where have we failed, in your opinion, as far as ordnance is concerned?

Secretary BAKER. I do not think I can answer your question; that is, I do not think I can pick out any place.

Senator WEEKS. I do not want to be petty about this, in the slightest degree, but take the question of the 9.5 gun. We have adopted the 9.5 gun. Everybody has been using the other form of weapon. Is that good judgment, generally speaking? Was there any good reason? Is it a little better gun?

Secretary BAKER. Let us analyze the facts. You say we have adopted a 9.5 gun. What we have actually done is this: We had a 9.5 gun which was an official part of the artillery program of the United States.

Senator WEEKS. But what we had was so little it was negligible.

Secretary BAKER. I am not disputing that. When this war emergency came we went forward with the manufacture of a gun which was already perfected as to its design—one that was under order—but we, at the same time, gave orders to all heavy ordnance makers in this country to make for us heavy guns of the British and French type, which they had in quantity manufactured at the time, so that we did not adhere to our standard weapon to the exclusion of getting all heavy ordnance we could of other types. In other words, my answer to your question is the fact that the 9.5 gun as an authorized part of our heavy artillery did not dissuade us from getting all of the 8-inch and 9.2-inch guns of the French—I think they are 9.2—and of the British which could be manufactured by us, by the Bethlehem Steel Co., and the Midvale Co., who were then manufacturing for the British.

Senator WARREN. Gen. Crozier has laid before the committee the artillery program, and there is not contained in his statement of that program any mention of a heavy gun other than the American 9.5.

Secretary BAKER. That must be an oversight, Senator, because I very distinctly recall——

Senator WARREN. Of approximate caliber, I mean.

Secretary BAKER. That must be an oversight, because I recall having talked with Gen. Crozier on the subject. He told me the 9.5 was then in manufacture, but as the Midvale Co. and the Bethlehem Steel Co. were actually manufacturing guns of about the same caliber for the British, he thought it wise for them to go forward with as much quantity manufacture as they could with duplicate English guns for us, which I approved of.

Senator WARREN. The point was brought out when Gen. Crozier was here that the French gun, of approximately 9.5 caliber, was so near the American 9.5 that it was decided and intended as to practically equal the 9.5 in efficiency; and that the ammunition, the shells rather, for the French 240-millimeter gun, which is about the equivalent of a 9.5, will be made in this country in quantity production, and it ought to have been better to have taken the French gun, the 240 mm., confessedly as good or nearly as good as the 9.5, and made use of the capacity of our plants in this country already operating to make the guns, and we would get all the designs of the gun from the French. Instead of that a 9.5 gun has been insisted upon by the Ordnance Department. It is like starting de novo, and we have to have a different shell for it; the ammunition is not interchangeable.

Secretary BAKER. I think you are misinformed about it. We are buying guns from the American manufacturers of the French design and caliber, and are getting, in addition to that, production of our own authorized and perfected type.

Senator WARREN. These very questions were asked Gen. Crozier, and he made no mention whatsoever of the purchase of any field gun above the caliber of 9 inches.

Secretary BAKER. Mr. Crowell, the Assistant Secretary of War, who is here, and who has had very special interest in this, assures me we are buying 8-inch guns, which is not part of our standard, and also the 9.2 gun. That is, the English gun, not the French gun.

Senator WARREN. I was speaking of the French gun; the 240-millimeter gun is almost exactly like the 9.5, but sufficiently different to preclude the use of the same ammunition in both.

Secretary BAKER. What did Gen. Crozier say about that when you asked him that question?

Senator WARREN. He intimated it might be wise to consider using the 240-millimeter gun, but said none was being made or purchased.

Senator WEEKS. What he said, Mr. Secretary, illustrates the very point I have made of overtechnicality. He said the 9.5 gun was a little better gun than any that were being manufactured——

Secretary BAKER. All I can say about that is Gen. Crozier is not fair to himself if that was the only answer he gave you.

Senator WEEKS. Of course, I am speaking from a recollection of nearly three weeks.

Secretary BAKER. He was not fair to himself, because Gen. Crozier and I discussed the middle heavy type of ordnance, and it was perfectly understood that the full quantity-productive capacity of the only two private ordnance plants in the country prepared to make that arm should be used, and to use French and British designs, rather than insist on our own type, but to go on with our own in addition.

Senator MCKELLAR. As I understand, you are making all the American guns of that type that could be made, and in order to arm and equip our Army at the earliest possible moment, you also ordered these other types?

Secretary BAKER. Exactly.

Senator MCKELLAR. Which I want to say I approve of most heartily. I think you were doing exactly right about it, but why did that not apply to machine guns?

Secretary BAKER. It did apply. We did exactly the same, just exactly. It is a perfect parallel.

Senator MCKELLAR. We did after so long a time, the trouble is, the difference was——

Secretary BAKER. Well, it was the same time, exactly the same time. Just as soon as there was prospect of the United States going into this, as soon as the United States went into the war, and the immediate arming of the enlarged forces was necessary, we got all the machine-gun people that could make them to make any kind they could make, and in addition to that we started this inquiry as to the relative excellence of new weapons, so that later others could include the latest improvements.

Senator WARREN. Mr. Secretary, will you and the Assistant Secretary refresh your memories on the question of the 240-millimeter gun?

Secretary BAKER. I shall be very glad to do it. I do not have it accurately in my mind. I remember my talks with Gen. Crozier about it.

Senator WEEKS. Are all the facilities for the manufacture of ammunition available in this country being used?

Secretary BAKER. No; not all of them, Senator.

Senator WEEKS. Are you getting all the ammunition you need?

Secretary BAKER. The deliveries of ammunition are beginning now in quantity production, very large orders have been placed, and adequate supplies of ammunition are easily in sight.

Senator WEEKS. What do you mean by "easily in sight"?

Secretary BAKER. I mean by the time we shall need them we shall have them; much before the time we shall need them.

Senator WEEKS. When do you think we shall need them?

Secretary BAKER. Under the arrangement which Gen. Crozier has described to you, there is no immediate need of American-made ammunition for heavy artillery in France.

Senator WEEKS. That leads me to ask you a question about that.

Secretary BAKER. But in spite of that, very large quantities have been ordered.

Senator WEEKS. Do you think the arrangement we have made with France is a safe one for us to rely on indefinitely?

Secretary BAKER. The arrangement is not only made with France but with England, and it seems to me that it is eminently safe to the extent it goes. It is for the year 1918.

Senator WEEKS. Speaking of ordnance and guns, what can be done to improve the situation as it exists now, to-day?

Secretary BAKER. Well, Senator, I can not at this moment put my mind on a thing in the Ordnance Department which I can suggest would be helped or improved by your activity, and only for the reason that the minute I find out anything that can be helped or improved, I help or improve it, so I am up to date with my own suggestions.

Senator WEEKS. What is the powder-supply situation?

Secretary BAKER. The powder supply, the situation is that we are using the full capacity of the Du Pont works; we are endeavoring to expand the other private works in the country, and are proceeding with the building of a Government establishment with a capacity of a million pounds a day.

Senator WEEKS. Are you using the full supply from the Du Pont works—their full capacity?

Secretary BAKER. We are not using their full supply, but the allies and ourselves are using it.

Senator WEEKS. It has been reported to this committee—I have not examined the reliability of the report myself—that their capacity was not being used to anything like its limit.

Secretary BAKER. I think that can not be accurate. I have understood we were using their maximum capacity.

Senator WEEKS. They still have contracts with the allies?

Secretary BAKER. Yes.

Senator WEEKS. When do they expire?

Secretary BAKER. I can not answer that, Senator.

Senator WEEKS. Most of those things are matters of public record, are they not?

Secretary BAKER. I assume they are; but I do not happen to know them.

Senator WEEKS. When will your plant for the manufacture of powder be ready for delivery?

Secretary BAKER. I can not answer that. It is a very large building operation. I should say six or eight months, as a time estimate.

Senator WEEKS. From now?

Secretary BAKER. Yes; from now; the 1st of January.

Senator WEEKS. Was that provided for in the last appropriation bill?

Secretary BAKER. The last appropriation bill provided a very large sum of money for explosives without providing mode for getting them.

Senator WEEKS. Is it contemplated for the Government to run that plant?

Secretary BAKER. Yes, sir.

Senator WEEKS. Do you think that appropriation was in such a form that you were justified in using it for building a plant?

Secretary BAKER. Legal opinion has been taken on that subject, and the appropriation has been held adequate for that mode of operation.

The CHAIRMAN. Mr. Secretary, what do you think about the policy, from an economic standpoint and from a military standpoint as well, of the Government going into the establishment of a plant for the manufacture of ammunition in this emergency? Is it not a fact that the development of the manufacture of powder is a very slow process and that it requires men of the very highest technical type to properly manufacture it?

Secretary BAKER. You have asked me two questions, Senator, and I am trying to separate them. Under the circumstances, I think it very much better to establish this plant and operate it than any other arrangement which I have been able to suggest. The manufacture of powder is a simple chemical process. There is no mystery about it. It is perfectly simple.

The CHAIRMAN. My reason for asking the question is based upon the complaints that have come to me, or suggestions which have come to me, and I have them in every shape from every angle of this investigation, and I only asked for information. It has come to me, for instance, that the Du Pont people, who are the largest people and most skillful manufacturers of powder in this country, offered to build these plants for the Government—at the Government's expense, of course, and that is what we are going to do—and to operate them and to manufacture powder with their skilled men and to charge the Government only such price for the output as the Government might fix, or without profit if the Government so determined.

Secretary BAKER. Senator, that is not accurate.

The CHAIRMAN. I want to get the facts about that in the record, because it has come to me from more than one direction.

Secretary BAKER. I am perfectly willing to state the facts. I should like to preface it, however, with this statement, that the understanding between the Du Pont Co. and the Government was a perfectly friendly understanding. There is no misunderstanding of any kind, and the Du Pont Co. is cooperating with the Government in the venture it is undertaking. The Du Pont Co., of course, is the largest military powder manufacturer in America—almost the only very large one. As the result of rather prolonged negotiations an arrangement was suggested with the Du Pont Co. by which they would undertake to build a smokeless-powder plant for the Government with the Govern-

ment's money and operate it for a year and a half. For the building of that plant the arrangement as suggested provided that they should receive the 15 per cent commission. That was divided into several items—6½ and 6½ and 1½. One and one-half per cent was to have been distributed by them as bonus to expedite the work, but the aggregate percentage of profit was 15 per cent. On the basis of $90,000,000 investment, that would have been $13,500,000, or some such figure.

Then they were to operate the plant for a year and a half, raising it to a maximum capacity of a million pounds a day, and for each pound of powder manufactured by them at a price under 49 cents, as I recall the figure—that may be a cent or two off—they were to receive a profit of 5 cents, and for each 5 cents which they reduced the price of powder below that 49 cents they were to receive 2½ cents additional profit, which would have made the gross profit to the Du Pont Co. under that contract as suggested somewhere between $20,000,000 and $40,000,000 for the year and a half work. That seemed to be more than it ought to be. I consulted the experts of the Army and the Navy with regard to powder manufacture. I consulted the wisest business men in the War Industries Board, and I discovered that the Army and the Navy are both making powder which by common consent is equal in quality and as low in cost as the Du Pont Co. can make it. Then, there is no mystery about the process; it is a question of business organization only, because of the large scale of the operation involved, and it seemed to me that under all the circumstances it would be wise to save so very large a compensation for undertaking this work.

Senator WEEKS. Were those the best terms offered?

Secretary BAKER. I had not quite finished, Senator. I suggested to the members of the Du Pont Co. that I thought the price was excessive, and they told me they were not very anxious to do the thing; that they, in fact, would rather be relieved of doing it, and that if the Government undertook it itself they would be very glad to turn over to the Government all the plans and designs they had in the matter, and later they said they would turn over all the plans and designs, and then the War Industries Board made a suggestion. They said they thought it would be a good thing to offer the Du Pont Co. $1,000,000 as a payment on account and undertake this work, and leave the remaining compensation, if any, to be determined by arbitrators, one appointed by the Du Pont Co., one appointed by the Government, and those two to select a third. I submitted that to the Du Pont Co. and it was rejected. Later—I forget just how it came about—they made a still further suggestion, which was they would undertake to build the plant and operate it, and that, at the conclusion of the operation, the total compensation to them should be determined by a board of arbiters, to be chosen, I think, in the same manner, to which board should be submitted all of the suggestions and proposed contracts which in the negotiations up to that time had been suggested by one or the other of the parties involved, which would have had the effect of making an indefinite obligation upon the Government to be determined by a board of arbiters, obviously proposed to be influenced by an explicit exposition to them of all the terms originally proposed by the Du Pont Co. They never at any time offered to do it without compensation, that I can recall.

Senator WEEKS. Were these negotiations conducted verbally or in writing?

Secretary BAKER. Both ways.

Senator WEEKS. Will you put in the record such correspondence as you have had with the Du Pont Co. relating to that subject?

Secretary BAKER. I am perfectly willing to do that. The only doubt in my mind is just how far that correspondence really exhibits the transactions, because I saw the members of the Du Pont Co. several times personally and talked with them.

Senator WEEKS. There is no reason why it should not go in the record, is there?

Secretary BAKER. I would be very glad to look it up, and if it is not so incomplete as not to tell the story I will submit it to you.

Senator WEEKS. If it tells the story completely, we shall be glad to have it.

Secretary BAKER. I shall be very glad to submit it.

Senator WARREN. I want to ask the Secretary if this new plant is located in conjunction with the old plant of some years ago?

Secretary BAKER. No; it is not. The new plant was not contemplated to be located in conjunction with the old plant; the old powder plant of the Government, at the so-called Picatinny Arsenal, is a relatively small plant, and Congress had provided a sum of money for building a new plant in order to remove from that location. This plant was projected to be in 10 units of 100,000 pounds capacity daily each, and two sites had been selected—one near Charleston, W. Va., and one near Nashville, Tenn.—and the proposed plan, as it now is, is to erect the first five units at Charleston, W. Va., and that work is now in progress.

Senator WARREN. I recall when this powder plant was instituted that the Du Pont Co. offered to furnish any plans, any information they had, or to loan us their experts to teach ours. I want to ask whether we had been able to educate many of the ordnance men in the art of making powder?

Secretary BAKER. Yes; the Ordnance Department now at Picatinney Arsenal and the Navy Department at Indianhead both make powder of identical quality and quite as favorable a price with that made by the Du Ponts. We have in the Army and the Navy highly trained and admittedly competent powder makers.

Senator WARREN. You have, then, a nucleus to start out in this large building and large institution?

Secretary BAKER. Yes.

Senator WARREN. As I remember, the Navy plant was some two or three years after the building of the Army plant, and, as I remember at the time, I knew that was the consideration in t Army plant; it was to reduce the price not by the quantity we made, but the information that could be gained by making it, and if we could make the quality that we could test all of that, we could buy our own, and that has been successful in reducing the price and producing a good powder, has it?

Secretary BAKER. Yes. The price which the Du Ponts made, as I recall it, to the foreign Governments for the manufacture of smokeless powder, was $1 a pound. The price which it would have cost the Government of the United States on the basis of the original suggestion by the Du Pont Co., amortizing the value of the plant, would have been about 70 cents a pound. The actual cost of the manufacture of powder, with a fair profit in it, not amortizing a very great overhead like that, is somewhere between 35 and 40 cents a pound. The Navy cost has been substantially below that and so has the Army cost, but I cite those last two factors, remembering the price of many materials have since risen, and the price of labor is somewhat higher.

Senator WARREN. As I recall, the price was reduced after the building of the Army plant by more than 40 per cent. Of course, it took a period of three or four years to accomplish that. In the meantime, as I recall it—I have had no different information since—the intention was not so much to manufacture all of our own powder or to cut the private manufacturers out, but to obtain the information we wanted, and to obtain the price through this competition and still allow all of the plants to go on manufacturing as before, so that we might, in case of war, call on these plants for making that class of powder that was only used in war.

Secretary BAKER. That was the view expressed by Gen. Crozier in several hearings, both before the Senate and the House, and I have no doubt the navy yard, too, and seemingly it is the policy adopted by the Government.

Senator MCKELLAR. At the present ruling prices of materials, what is the price at, or what is the cost at, which this is to be manufactured in our Government plant—the new one you speak of?

Secretary BAKER. It is very difficult to tell, because of variance in prices.

Senator MCKELLAR. I understand that; but I thought perhaps in making the figures you reached some conclusion as to what the cost would be before going into the building of the new plant.

Secretary BAKER. It is very easy to have an approximate estimate of an addition at which powder ought to be manufactured if you can have any forecast of the length of time you are going to need such large quantities. If you spread the amortization of the plant over a long period of years it decreases the price. But, leaving the plant out of consideration, I will say two things about it: Nobody knows the cost of powder manufacture in the Du Pont Co.; nobody knows what that is, and I do not know, and it is perfectly proper that I should not know, probably. But, so far as the Navy and Army are concerned, our cost is somewhere between 30 and 35 cents, or 30 and 40 cents.

Senator MCKELLAR. But you think when the new plant is built that approximately those figures can be realized, and certainly they can be realized with the addition of the increased cost of material?

Secretary BAKER. That, of course, depends on a number of things. The price of cotton is one important factor, the price of sulphur, the price of Chile nitrate, and the cost of transportation of tonnage from Chile.

Senator WARREN. Also the price of labor?

Secretary BAKER. Also the price of labor.

Senator McKELLAR. Taking all those things into consideration, you expect to approximate the price the Government now manufactures it at?

Secretary BAKER. I expect to get out of that plant, which is to be a very modern plant, built for the highest economies of manufacture—I expect to get a minimum productive cost.

Senator WEEKS. I understand you that that plant will be ready about the 1st of next September?

Secretary BAKER. Senator, I can only give you my own judgment on that. The Du Pont Co. themselves said that the lowest possible estimate they could make of the time within which they could get it ready would be eight months, beginning perhaps the 1st of November. They suggested that it would be a very hopeful and optimistic thing if they would suggest that perhaps one unit of it might begin production in six months. Their superintendent wrote them a letter, which they showed me, in regard to the Charleston proposition, in which he said it could not be done in 12 months.

Senator WEEKS. Was not this question of powder supply taken up until November?

Secretary BAKER. I can not answer when it was taken up, Senator.

Senator WEEKS. Was there any estimate made as to our requirements of powder under the conditions that prevail and the number of men that were put in the service?

Secretary BAKER. Oh, undoubtedly.

Senator McKELLAR. What are we going to do for powder in the meantime, before this plant is ready?

Secretary BAKER. I think the powder supply is adequate. The present powder supply is adequate for our present needs.

Senator WEEKS. Then this will be simply needed and used for any additional forces?

Secretary BAKER. No; not quite that. I think it would be needed for that, and I think also, as time goes on, it will be found very much better to make more of the powder in this country and less abroad. Mr. Crowell, the Assistant Secretary, has handed me these figures which you may care to see. Suppose I pass this to you, rather than read it?

Senator WEEKS. I think it would be better. I want to ask you if we are buying smokeless powder abroad?

Secretary BAKER. Not abroad. We are buying it from the Du Ponts in very large quantities, but not abroad.

Senator WEEKS. I thought I understood you to say just now there was a difference between the powder made in this country and abroad?

Secretary BAKER. No; I meant by that, only it would be wiser as time went on, and undoubtedly it would be better to have the allies procure larger supplies of manufactured powder in this country rather than take the ingredients there. It takes about 8 pounds of transportation to produce 1 pound of powder abroad.

The CHAIRMAN. Mr. Secretary, are you making adequate preparation for the manufacture of explosives, for the procurement of T. N. T., for instance?

Secretary BAKER. We think so, Senator. We have the greatest expert in the country on the subject working on it, and a very large program that involves not only smokeless powder but all kinds of high explosives.

The CHAIRMAN. The suggestion has been made to me—complaint has been made to me that in the handling of this toluol it was undertaken to be done through an agency; undertaken to purchase it through brokers; and that while 99 per cent of purity is required, that some of the toluol obtained and for which high prices were paid averaged about 88 per cent. Do you know anything about that?

Secretary BAKER. I do not.

The CHAIRMAN. That complaint has not come to you?

Secretary BAKER. It has not come to me.

Senator NEW. Mr. Secretary, with reference to what Gen. Crozier said in his testimony, that the program of the national-defense act was no program at all; he also said it takes a great many people to give orders for manufacture, etc.; also that a great deal of the material needed for our use in this war was not in the country at the time the war broke out. He called attention to the fact that it takes a year to make artillery after the orders are given; that gun carriages and equipment were necessarily let to concerns that—when the contracts were let—had never made them, requiring a great deal of time for the drawings, details, etc., on which those manufacturers could proceed. Do you now think, in view of what has since happened, that there was any error in judgment in May of 1916, or about that time, in not taking steps to prepare the United States for the manufacture of guns and gun carriages, and so on, and to expand upon the national-defense program referred to by Gen. Crozier?

Secretary BAKER. Senator, it is a harsh rule to express a judgment upon a past transaction in the light of subsequent information. I think it would be unjust to require the Ordnance Department to have in advance all the information that could subsequently be brought to it by evidence which at the time had not happened. I am prepared to say that I think it would have been, in view of what has happened, a very wise thing indeed if the Ordnance Department a dozen years ago had been expanded to 1,000 officers, instead of its 97, and they had been insistently active in devising new weapons and making drawings, and all that, but that is in the light of afterknowledge.

Senator NEW. And if true of a dozen years ago, it is more so, perhaps, a year ago, in view of what has happened?

Secretary BAKER. I think that is not unlikely; but to be frank with you, I do not think you ought to attribute more than a very modest share of whatever responsibility there is on that subject to the Ordnance Department, because Gen. Crozier has, in seaon and out of season, urged increases in personnel and in his facilities.

Senator NEW. I am not seeking to put it upon the Ordnance Department at all, but just as a matter of general administrative policy, without any disposition to reflect upon anybody in particular, but call attention to it as a national omission. Now, Mr. Secretary, is it not true that Marshal Joffre and the British high commissioners, when they were here, called our attention to the urgent need for quick American action and urged that we send men and material over there at the very earliest moment possible?

Secretary BAKER. No; that is not true, Senator.

Senator NEW. It is not true that they may——

Secretary BAKER. Both Marshal Joffre and the British high commision felt that it would be wise to have us appear on the European fronts at an early date, but there was not at that time any special urgency on their part that we should appear in any very large force.

Senator NEW. I think there has been testimony before this committee to the effect that——

Secretary BAKER. Senator, if you will pardon me, I think I will ask the newspaper men and the reporter not to deal with the recommendations of Marshal Joffre and the British commission. I think that is a thing we ought not to talk about except among ourselves.

Senator NEW. If you think it is something which in your judgment ought not to go into the record, I am willing to withdraw the question.

Secretary BAKER. Let me make this answer to it. This answer, I think, is entirely discreet and proper. After our entrance into the war the question of the mode of coordinating our military and industrial cooperation with the allies was under constant study, and plans were made, changed, and reconsidered, so that they have been constantly growing.

Senator NEW. I asked that question, Mr. Secretary, because there has been testimony brought before this committee, and I think it is in the record—my recollection is that Gen. Sharpe testified to the fact that the program was changed upon the urgent recommendation of the French and British high commissions. That being the case, I saw no impropriety in the inquiry.

Secretary BAKER. I think there is no impropriety in that statement, and no impropriety in saying that the forces that were dispatched were sent to Europe earlier than they would have been but for the representations of the British and French.

Senator NEW. But is it not true, Mr. Secretary, that those troops were not equipped when they did go?

Secretary BAKER. With what?

Senator NEW. Perhaps equipped; but that they were quite unsatisfactorily equipped with rifles; that they had no heavy artillery—had none, had no artillery; they had no machine guns, such as went over there in response to what was recommended at that time, were unequipped in the sense that——

Secretary BAKER. No, Senator; that is not accurate. The first troops that went over were fully armed with rifles, with more than a necessary supply of wastage of rifles. They had the allowance of machine guns that was deemed proper for organizations of their style; they had the artillery which, prior to that time, had been manufactured and deemed appropriate artillery for divisions of their size.

Senator NEW. Your answer simply applies to the first force that went; it does not apply to any forces that have gone since?

Secretary BAKER. It applies to all the forces that have gone, either at the first or later, with this modification, that as the later forces have gone reliance has been put upon the automatic rifle, which we bought from the French, and upon artillery which we have purchased there rather than made here.

Senator WEEKS. I want to ask one or two more questions about this powder situation. When were our powder requirements brought to your attention?

Secretary BAKER. I can not answer that, Senator.

Senator WEEKS. Do you think it was done in April, June, or November?

Secretary BAKER. I can not answer that.

Senator WEEKS. You mean you do not recollect?

Secretary BAKER. I do not recollect.

Senator WEEKS. When were the negotiations had with the Du Pont people?

Secretary BAKER. I am sorry, but I can not answer that.

Senator WEEKS. Then you have not any recollection?

Secretary BAKER. I have no recollection on that subject. I remember having talked to Gen. Crozier from time to time about it, but the dates have entirely gone out of my mind.

Senator WEEKS. Do you think it was promptly brought to your attention as to what our requirements would be?

Secretary BAKER. I have no basis for criticizing the time. I do not know.

Senator WEEKS. How can we find out whether there has been neglect on the part of some one in that respect?

Secretary BAKER. Senator, I only could ask you to ask Gen. Crozier, who doubtless has talked to you on the subject.

Senator WEEKS. His testimony on that subject, as I recall it, was not very full, and I think his attention—whoever was asking the questions—was distracted. Of course this examination would continue indefinitely, and there is a desire to stop it without getting into side channels, and I do not think Gen. Crozier has made a statemet about the dates of taking up these matters, or pressing them, or coming to a final conclusion, and especially relating to powder.

Secretary BAKER. I am sorry, but I have no recollection on those dates.

Senator KIRBY. There has been no delay in our troops being put in the fighting because of a lack of powder on the other side, has there?

Secretary BAKER. Absolutely none.

Senator KIRBY. There has been no delay about shipping troops to France because of lack of transportation facilities, etc.?

Secretary BAKER. Absolutely none, present or prospective.

Senator WARREN. Are you satisfied with the extent of the artillery program, Mr. Secretary? Do you think we have mapped out a large enough program? These figures have been given to the committee in executive session.

Secretary BAKER. I have them. Of course a perfectly good rule about all heavy artillery, as developed by this war, is to get the program and multiply it by something on the theory that you can never have too much, so to express satisfaction with any program is simply to neglect the rule of multiplication. I think the program as mapped out has fully engaged the resources of the country as to artillery when it is remembered other things must be done.

Senator WARREN. We have had some very impressive testimony on that point, emphasizing the tremendous need for artillery over and above what has been regarded, even up to three or four months ago, as the proper quota per thousand of troops.

Senator WADSWORTH. Not only artillery of the divisions, but artillery of the Army Corps and field armies, and the opinion has been expressed that the program laid down by the War Department was not sufficient.

Secretary BAKER. I can readily understand that, Senator. The artillery program of every nation engaged in this war has grown every day since the war has begun, and that program Gen. Crozier stated to you when he was here he would probably want to increase now, and probably next month would want to increase it again.

Senator WADSWORTH. As a matter of fact, it is true, is it not, that this war is a tremendous competition in industries?

Secretary BAKER. Yes.

Senator WADSWORTH. The side which will bring to bear the greatest numbers in guns and men, which are all dependent upon organized industries, will eventually wear out and subdue the other side?

Secretary BAKER. I think that is the present aspect of it.

Senator WADSWORTH. In view of that state of affairs, will you tell the committee in what respect the Ordnance Department has been reorganized in order to carry on its part of this great industrial warfare?

Secretary BAKER. Yes; I shall be glad to do that at this time, although I had rather hoped to treat that as a part of the general reorganization of the whole War Department and of the whole industrial program.

Senator WEEKS. I move, Mr. Chairman, that the committee now take a recess until 2.30 o'clock p. m.

The motion was agreed to.

(Thereupon, at 1 o'clock p. m., recess was taken until 2.30 o'clock p. m.)

After recess.

The hearing was resumed at 2.30 o'clock p. m., pursuant to the taking of recess.

STATEMENT OF HON. NEWTON D. BAKER—continued.

The CHAIRMAN. Mr. Secretary, we would like to take up with you the subject of quartermaster supplies. Have you any general statement that you desire to make in reference to that?

Secretary BAKER. No; I have not, Senator.

The CHAIRMAN. There are several criticisms of the Quartermaster General's Department, Mr. Secretary, that have developed in the course of the hearings. I hardly know how to bring them to your attention, so as to have a statement from you in reference to it. One of the complaints was a lack of coordination and efficiency in that department; another was a failure to supply the uniforms and equipment necessary for the soldiers—the initial equipment, and, perforce, the other equipment necessary—within the time they ought to have been furnished, and the continued shortage now of overcoats and clothing, and then it seemed to the committee that one of the serious complaints made was the change in the structure of the material used for the manufacture of clothing; that is, reducing it from practically an all-wool or largely an all-wool clothing, prior to the outbreak of the war, to a 50-50 basis—that is, 50 per cent of wool and 50 per cent of reworked wool. It might be that if you care to make a general statement in reference to the conduct of the Quartermaster General's Office it may suggest questions the committee may desire to ask you.

Secretary BAKER. When the necessity of buying in the Quartermaster's Department—buying on an enlarged scale—arose it was at once apparent that an entire change had taken place from anything to which either the department or the country was accustomed, for two principal reasons: Prior to that time the Quartermaster General had, in effect, only to take his market basket on his arm and go out into the market and choose and select from an overabundance of supplies the things he wanted to buy. Now, under the new circumstances the Quartermaster General had to buy in a market in which the supply was inadequate to the demand in many things. Of course, I do not mean generally, but in the principal things, so far as the size of purchases was concerned. In the second place, the Quartermaster General's Department was purchasing only for the Army. The Navy had to make purchases on a large scale of many of the same items in different forms, and sometimes in the same form. In the third place, the allied Governments were making very large purchases in this country in many of those items. I started out to enumerate two particulars. I have already enumerated four. There was an additional item that had to be considered. We had, overnight, to pass from a market in which prices were regulated by free competition into a market in which the Government was a monopolistic and exclusive buyer—a compulsory buyer, and in which competition was practically impossible as a regulator of prices. Those considerations apply not only to the Quartermaster General's Department, but to general purchases by the Government departments. Prior to that time there had been organized the Council of National Defense, and under the Council of National Defense, subordinate bodies, with a view of having them bring to the aid of the Government the best advice which could be gotten from persons in industry and commerce, so that both increased facilities and substitute materials and questions of prices could be acted upon by the Quartermaster General or any purchasing department, with full information, and also so that the needs of the several departments, and of the allies and of the general industry of the country could be kept constantly under survey.

There was at once associated with Gen. Sharpe the agencies of the Council of National Defense for aiding him in these purchases. Enormous purchases were at once undertaken, far in excess of the normal production in the articles in question. New facilities were created, factories and mills which had made much smaller things were diverted into the production of Army supplies, and some substitutions of material were authorized, and those purchases were made. One of the things which became apparent after a while was that manufacturers, in their desire to get large quantity production had overestimated their own capacity for quantity production. Another difficulty that arose was the embarrassment of transportation, both of raw material and of the finished product. Another was the very early need for the organization and dispatch abroad of special forces which cut into the anticipated equipment for

the forces provided by the emergency act, such as railroad regiments, foresters, stevedores, and people who were not normally a part of the War Department organization, but who had to be sent abroad early, and whose equipment encroached upon the anticipated supply.

In addition to that the winter was, I think, earlier, and for the early part very much more severe than is at all customary, particularly in the sourthern portions of the country, where camps have been placed because of the mild weather of early winter; and the result of all of those things, so far as the equipment of troops is concerned, is that there was a shortage of many of the important articles of equipment, including overcoats, blouses, trousers, and perhaps some others. Those shortages were far greater than we had supposed they would be. They resulted, I think, from the causes I have given.

The initial equipment is now substantially complete, and the manufacturing processes are all organized on a quantity production basis, and the increase of reserves from now on will be rapid.

At the outset there was a question to be decided, as to which of two policies ought to be pursued, whether we ought to assemble a large force and begin its training before it could be fully clothed in soldier clothes and equipped, and let the equipment and clothing come along as it could, or whether we ought to postpone the assembling of large forces and delay their training until full equipment was actually in hand. Speaking of my own part in it, I was very earnestly urged by men of great weight to call out large forces at once, and men of distinguished military experience and reputation said to me that it was unimportant whether they drilled in their own clothes or whether, at the outset, they had rifles; that the elements of military training were such that men could drill in their own clothes without arms for a while.

On the other hand, Gen. Smith, of the Quartermaster General's Department, and perhaps others, felt that full equipment ought to be in hand first.

The course which was actually taken was what seemed to me at the time—and I have no reason to criticize my judgment now—an attempt to compose and reconcile those views. It involved calling out, as rapidly as we anticipated the equipment to be in hand, the forces. The Regular Army and National Guard were called out at once, and their recruitment was undertaken. The National Army was postponed as to its calling out several times. The succeeding increments of it were postponed as to the date of their mobilization, and while the net result was that there were at times, sometimes for two or three weeks, an inadequate supply of articles, like overcoats and blouses, there was not, in my judgment, any serious situation caused by this lack of initial equipment.

I do not know what other phases of that you want me to comment on, Senator.

Senator MCKELLAR. If I may, I will ask you some questions which will bring out some questions which are in my mind.

Mr. Secretary, soon after the war began, I believe it has been testified to here, you issued an order that the supplies committee of the Council of National Defense, headed by Mr. Rosenwald or Mr. Eisenman—they are both on it, and I think they both had to do with it——

Secretary BAKER. Mr. Eisenman is really the chairman of the committee.

Senator MCKELLAR (continuing). Directing that the committee on supplies find or designate the sellers and fix the prices and Gen. Sharpe's department, or the Quartermaster General's Department, to actually sign the contracts.

Secretary BAKER. In effect that is so.

Senator MCKELLAR. What authority of law did you have for that, to take away from the Quartermaster General his well-known and well-defined power of purchase for the Army—on what statute did you base that order?

Secretary BAKER. Well, in the first place, I was the head of the Army; the Quartermaster General was my subordinate. In the second place, the law in the case provided that—I forget the language, and I may quote it incorrectly—but in effect it provided that in emergency situations of this kind the Secretary of War should fix prices as he deemed best, and I was surrounding Gen. Sharpe with advice as to prices from expert sources and asking him to rely on their judgment.

Senator MCKELLAR. Mr. Secretary, as a matter of principle, or as a matter of governmental policy, do you believe that a committee of the Council of National Defense, like the supplies committee, where 16 out of 19 members of the committee are themselves selling to the Government, should have a right to fix the prices and designate the sellers that the Government must purchase from and the prices which the Government must pay?

Secretary BAKER. No; I think it would be obviously a bad principle to have a committee composed of persons selling to the Government, even though the particular persons selling to the Government did not participate in the fixing of prices under any contract.

Senator MCKELLAR. It has been testified to here that that is precisely what has been done with the supplies committee of the Council of National Defense at a minimum expense of $128,000,000 of supplies. Do you approve, as the Secretary of War, of that condition of affairs by which these gentlemen—and I believe those interested in the $128,000,000 of sales were on this particular committee and, of course, fixed the prices—do you approve of that method of purchasing?

Secretary BAKER. I do not think any such thing has ever been done.

Senator MCKELLAR. That has been testified to.

Secretary BAKER. I can not help what has been testified to, I do not believe anything like that has been done.

Senator MCKELLAR. Have you ever examined into it?

Secretary BAKER. Many times.

Senator MCKELLAR. I will give you a concrete example. In the testimony yesterday it was testified to by Mr. A. L. Scott, in substance—and if I make a mistake in stating his testimony I hope some members of the committee will say I am inaccurate about it, but I will try to be as accurate as possible—that he was asked by Mr. Rosenwald and Mr. Eisenman to come some time this past year and serve as chairman of a subcommittee on cotton goods, commonly known as duck—the Army duck and kindred articles—of which the Government needed a great quantity, probably more than there was a supply for in the country at the time, considerably more; that Mr. Scott was an expert on this subject; that he examined into the facts, not going to the Federal Trade Commission or other well-known sources of information, but relying, as he stated himself, to a very large extent upon his own knowledge of the trade and trade conditions, he being interested in many mills, all of which were selling to the Government; that he took what he conceived to be a reasonable price; and that the price and the profit on the goods that his companies sold to the Government at this price fixed by him was 12½ or 12 and a fraction per cent. Asked if that applied to each turnover and how many turnovers there were, he stated there was a minimum of six, but an average of nine each year, and that the percentage of profit applied to each turnover. So, according to his testimony, in that way the Government paid Mr. Scott's companies a minimum of 75 per cent profit on the goods a year and a maximum of some 115 per cent of profit, as shown by this witness.

Remembering, now, that he fixed the prices—the reasonable prices—that his companies were selling to the Government, he representing the Government and, of course, interested in his companies, do you approve of that method of buying on the part of the Government?

Secretary BAKER. I can not answer your question, because I do not think anything like that has been done.

Senator MCKELLAR. Assuming it has been done.

Secretary BAKER. I can not assume it. I know to the contrary.

Senator MCKELLAR. If it were done you would not approve of it.

Secretary BAKER. I do not want to answer hypothetical questions. I have investigated that many times. In the first place, Mr. Rosenwald is one of the biggest merchants in the United States. For the past eight months he has given his time, morning, noon, and night to the investigations of problems exactly like that problem. In the second place, Mr. Eisenman is a man of large experience in merchandising. Neither Mr. Eisenman nor Mr. Rosenwald has the slightest possible interest in the sale of anything to the Government.

Senator MCKELLAR. I just wanted to ask you if you knew that Mr. Eisenman was a stockholder in the Cleveland Wool Mills Co.?

Secretary BAKER. He told me he was.

Senator MCKELLAR. I understand he was a very large stockholder, and that that company is doing business with the Government.

Secretary BAKER. He is not a director and has no managerial connection with the company. He stated to me that he was a stockholder.

Senator MCKELLAR. You stated he was not interested?

Secretary BAKER. I mean interested so that it could be associated in any way with his connection with the Council of National Defense. Both of them are men of unimpeachable integrity and established reputation. They have had grouped around them a lot of experts and men interested in the trade. I do not think that is the best way to deal with the questions, but the only way at the outset, until you could collect the information of the industrial world. You were changing from a basis where competition fixed the prices down to where prices

were fixed by arbitrary act. They gathered around them a lot of men who were expert in this business and asked them not to fix prices, but what the elements of cost were, what percentage labor bore to the aggregate product, and the cost of material, etc., and what the overhead expenses were, and out of that this committee undertook to arrive at prices, and Mr. Eisenman and Mr. Rosenwald, who, by reason of their lack of interest and business experience, were able to check up the committee's recommendations and determine whether they were fair recommendations, and the result is not at all what would be inferred from your question. But many, many cases have arisen in which Mr. Eisenman disagreed with the committee and disagreed with the experts and disagreed with interested persons and required them to make lower prices, resulting in the saving of many tens of millions of dollars to the Government.

Senator McKELLAR. Do you know what profit is made by Mr. Scott's companies in that case?

Secretary BAKER. No; I do not know.

Senator McKELLAR. Have you examined into it?

Secretary BAKER. I never heard of Mr. Scott or of his companies.

Senator McKELLAR. Have any of these questions been presented to you, for instance, like the one of Mr. Scott's fixing prices on cotton goods?

Secretary BAKER. Not like it in all essentials, but very much like it.

Senator McKELLAR. You say that the method that had been pursued was the method you had to pursue at the outset until you got things started, as I understood you. Is it the intention of the War Department to buy things through the supplies committee at prices fixed in that way?

Secretary BAKER. No.

Senator McKELLAR. When are we going to stop that?

Secretary BAKER. It is substantially stopped now. It was never intended to continue it very long.

Senator McKELLAR. I want to congratulate you on stopping it now. Then it is not intended to continue to buy goods for the Quartermaster Department on a system by which this supply committee of the Council of National Defense selected by people who sell to the Government fixes the prices and the Quartermaster General simply signs the contract?

Secretary BAKER. No.

Senator McKELLAR. It is not intended to go on any further with that system?

Secretary BAKER. No, sir.

Senator McKELLAR. It is stopped now?

Secretary BAKER. Yes, sir.

Senator McKELLAR. Now, I want to ask you if it has ever been called to your attention—this matter of the Base Sorting Plant?

Secretary BAKER. Just shortly before it was called to your attention.

Senator McKELLAR. Mr. Secretary, it was testified to here that a corporation known as the Base Sorting Plant was formally entered into by three dummy incorporators in New York and that immediately after that corporation was formed—and, by the way, it has a $50,000 authorized capital and $10,000 actually paid-in capital—that after it was incorporated it fell into the hands of a Mr. Kaplan, of B. D. Kaplan & Co.; a member of the firm of B. D. Kaplan; Mr. Meyers, of the Rawitzer Co.; and Mr. Stone, of New York City, all dealers in rags; that that company immediately sent a representative here, and, through Mr. Sam Kaplan, who is a member of the Council of National Defense——

Secretary BAKER. A member of one of the committees.

Senator McKELLAR. This supply committee—that negotiations were entered into for a contract for using the shoddy or the sorting of shoddy for the Government at 6 cents a pound; that they entered upon that work, and after it was entered into—I should state they also entered into a contract for 5 cents a pound for all old overcoats and uniforms and refuse that comes from the Quartermaster's stores—that after these two contracts were entered into this company proceeded with the work; that through the efforts of rival rag dealers the Quartermaster Department was called upon to act, and it sent a young officer out, and the young officer looked into it very thoroughly and found it was a dummy corporation to begin with, and that the profits of this $10,000 corporation would be, on one of the contracts, $400,000, and the estimates on the other contract were far in excess of that profit, and that thereupon, after the matter had gone that far, it was taken to the Quartermaster General, who recommended that those contracts with the Government be canceled, and they were canceled. But in the meantime it appears that every effort in the world was made by Mr. Eisenman to prevent that contract being canceled. They first offered to reduce the amount half a cent a pound.

Secretary BAKER. To half a cent a pound.

Senator McKELLAR. To one-half cent profit.

Secretary BAKER. To one-half of 1 cent per pound profit.

Senator McKELLAR. Which meant——

Secretary BAKER. Which meant half of a cent.

Senator McKELLAR. I think you are mistaken about it, but that is immaterial for the present. Then they offered to do it for nothing, or at actual cost. Now, under those facts, you still did not listen to these gentlemen, but canceled the contract, as I understand. Is that right?

Secretary BAKER. You mean all you have been saying?

Senator McKELLAR. No, sir; I mean, did you cancel the contract?

Secretary BAKER. I never acted but once on it, and that was to cancel the contract.

Senator McKELLAR. Are the facts as I have stated here correct or incorrect?

Secretary BAKER. Why, the main outline of the proposition is correct, but many of the implications are incorrect.

Senator McKELLAR. If the implications are incorrect, will you do me the kindness to say why you canceled the contract?

Secretary BAKER. Because the Quartermaster General recommended it.

Senator McKELLAR. Was that the only reason?

Secretary BAKER. He told me that, having established a waste division in the Quartermaster General's Department for the conservation of otherwise waste material, he was now satisfied that the Quartermaster General's Department could do this work itself; that there was no need for the Base Sorting Co.'s activities; and, as it was a part of my general direction to him to establish this waste-conservation bureau, it met with my approval to take it over.

Senator McKELLAR. At that time you had none of the facts before you?

Secretary BAKER. I had none of the facts before me; no, sir.

Senator McKELLAR. You did it as a matter of form?

Secretary BAKER. Let me correct the last statement. The maximum profit was fixed at one-half of 1 cent per pound.

Senator McKELLAR. Yes.

Secretary BAKER. And not 5½ cents—one-half of 1 cent per pound.

Senator McKELLAR. My reason for making that statement was that it was testified to here that the actual cost to Mr. Kaplan—the actual cost of sorting was 5 cents a pound, and the half cent was just an additional half cent for profit.

Secretary BAKER. That may be.

Senator McKELLAR. You did not look into the question of what reason there was for that?

Secretary BAKER. Not at that time. There was no controversy about the Base Sorting Co. contract that I know of. Let me tell you what happened.

Senator McKELLAR. I should be glad to have you do so.

Secretary BAKER. Gen. Sharpe came to my office one evening and told me that a contract had been entered into with the Base Sorting Plant to save cloth from uniforms and overcoats, and so forth—to save, sort, and reuse other available wools which could be used in connection with garment making, and save the supply of raw wool in the country, which had threatened to become insufficient; that the Quartermaster General's Department, as I knew, had established a waste-conservation division dealing with the whole subject of saving garment refuse and other articles of that kind around the camps, and, in his opinion, the profits on that contract—he said the matter was being investigated—but that the profits to the Base Sorting Plant contract were abnormally large, and, at any rate, it was time to take over that activity, and that the contract should be canceled.

I sent his recommendation to the Judge Advocate General with this request:

"I am recommended to abrogate these contracts. Have I the legal authority to do so?"

I got word from the Judge Advocate General that I had that authority, and I canceled them. That is all I know about that.

Later, when you made inquiry about it and the matter came up, Mr. Eisenman came to me and brought a memorandum which he has since testified to before you in great detail; and in that memorandum it is stated that the original base sorting idea was his; that desiring to make this saving, which had never been made at all in the Army, of scraps, which had theretofore been given to the tailors and cutters, he had gotten the representatives of three principal rag merchants of the city of New York and had gotten them to form a company for the purpose of saving this otherwise waste and valuable product; that they had associated themselves into a company, and that the cost of doing this work was entirely indeterminate and freight charges and insurance charges, etc., were unknown; they had roughly fixed upon 6 cents per pound as the price, and that later

they found it was much cheaper than that; that they had reduced their own profits voluntarily to one-half a cent a pound, and later filed a statement with the Quartermaster General that they did not desire any profits on the service, but desired to do it as a service for the Government. All those facts were testified about before you, and I have no further knowledge of that.

Senator McKELLAR. Did you approve of a base sorting corporation being formed by unknown directors, and, so far as anybody knows, or as far as anybody has testified—and quite a number of them have been asked about it—with dummy directors, as an organization on behalf of the Government?

Secretary BAKER. There is nothing inherently wicked in a dummy director unless he does something wicked or is used as a shield. What they proposed to do was to establish a new means of saving otherwise waste products. It was a thing the Army had never done, and a thing you and I could not do. If Gen. Sharpe asked you and me to rescue these scrap articles, we could not do it, and therefore somebody had to go to somebody who knew how to do it, and when they formed an organization to do it for the Government, under the direct observation of the depot quartermaster, and under a continuous audit of all expenses, so that the Government should not, in any event be wronged by the profits of the enterprise——

Senator McKELLAR. If that was the case, and if you say that in no event the Government——

Secretary BAKER. Not "no event." I beg your pardon. I take that back.

Senator McKELLAR. I was quite sure you would not be willing to go that far.

Secretary BAKER. Yes; you can fool auditors.

Senator McKELLAR. Does not the Government propose, when it makes a contract, to stand by it?

Secretary BAKER. Clearly.

Senator McKELLAR. Clearly—well, if this company was doing a legitimate business and had a contract to do it and there was no wrong about it, and it was a thing being done for the benefit of the Government, and it had a contract to perform that work at 6 cents in one case and 5 cents in the other, would not common justice require the Government to stand by the contract it had made?

Secretary BAKER. Senator, I think the answer to your question depends on the view you take of that entire transaction.

Senator McKELLAR. I want to ask you what is your view? Do you stand by Kaplan's contract or do you not?

Secretary BAKER. I have no more notion on that subject or any more knowledge than you have. But this is a situation as to which two views are possible. You can either regard the base sorting contract as an attempt to make a lot of money by the Base Sorting Corporation out of the Government, or as something created at the suggestion of the Government to conserve material for the Government. On the latter theory, which was the theory certainly in Mr. Eisenman's mind, and always has been in mine, we were getting men who knew the trade to do a job and start it off for us, under the observation of our own employees and officers, under a systematic audit, to run that business until we had learned the details with reference to the cost of sorting ourselves——

Senator McKELLAR. If the Base Sorting Corporation was doing a governmental function, and they had started this work, and it was absolutely in good faith, and if this corporation was organized in good faith and carried in good faith, and the contract obtained in good faith, and had just been started in good faith, and the representations all the way through were in good faith, does it not follow, as night follows day, as reasonable that this contract should not have been taken away from these men?

Secretary BAKER. No; I do not think so. Mr. Eisenman thinks so, but not for that reason. Mr. Eisenman still believes that the Base Sorting Plant should continue to operate as it did, and that it is the wisest arrangement, but I do not believe that. I fail to believe it for this reason. I think in many functions it is necessary to start one way and to change to another, and I am exceedingly anxious to have everything affecting Government distribution and supply done directly by Government employees rather than other agencies, so this sort of thing can be avoided.

Senator McKELLAR. Then you think in the future there will not be any more so-called Kaplan contracts or Base Sorting Co. contracts?

Secretary BAKER. I do not think "Kaplan" is a sufficiently generic term by which to describe contracts.

Senator McKELLAR. I think the country thinks so.

Secretary BAKER. I have not consulted the country, but I should like to answer your question, badinage aside.

Senator McKELLAR. Very well.

Secretary BAKER. There will probably develop a great many things which the Government will want to do, about which we know nothing, and which the Government will undertake to do through private parties in good faith; and as soon as we learn the wise and economic way to do that we will take that over by the Government.

Senator McKELLAR. I want to know, if you feel like saying it, whether or not you, as Secretary of War, are willing to assume the responsibility for the organization of the Base Sorting Plant, about which we have been talking?

Secretary BAKER. I could not escape the responsibility if I wanted to. I am Secretary of War, and what Mr. Eisenman did he did in attempting to perform a service which I intrusted to him, and still intrust to him to perform; so I could not escape that responsibility if I wanted to.

Senator McKELLAR. Does it meet with your approval?

Secretary BAKER. I say "yes." I know now nothing about the Base Sorting Co. contract which in any way makes it an improper contract to be made; and if I were starting all over again with a base sorting contract I would probably recommend that Mr. Kaplan—if he is the right person, and I do not know who the right person is—but that somebody who knew about it be taken into the Government employ and the thing done directly by the Government; but it was a very natural thing, to avoid further complications of governmental functions at that time, to ask him to do it the other way.

Senator McKELLAR. Did you know it as a fact that Mr. Sam Kaplan, who is a member of this supplies committee, was interested in this company?

Secretary BAKER. I did not know it then. I know it now.

Senator McKELLAR. You know it now?

Secretary BAKER. Yes.

Senator McKELLAR. And that he came here on the 25th of July, and the contract that the Base Sorting Co. made with the Government was made on the 28th of July with the committee of which Mr. Sam Kaplan was a member, and that his brother was one of the three owners of the Base Sorting Co.?

Secretary BAKER. I never knew the facts. I knew them when you learned them. I learned at that time the relationship between them.

Senator McKELLAR. Do you think it is a wise governmental policy to permit that kind of dealing in your department? For instance, let me be specific about these things. Here is a member of the committee on supplies. That committee directs the organization of a corporation like the Base Sorting Co. That corporation is owned by one of the brothers of one of the members of the committee. Then you have one of these kind of contracts that we have been discussing, with the result that we have seen—the cancellation of the contract and great notoriety with respect to all that are connected with it. Do you think that it is wise governmental policy for these things to be permitted?

Secretary BAKER. It has turned out to be unwise, because it has given rise to this suspicion; but the only answer that I can give to you is to limit all families to one member, so that no one will have relatives. [Laughter.]

Senator McKELLAR. Don't you think it would be better to select as employees of the Government a centralized force to do the purchasing?

Secretary BAKER. Yes, sir; I think that is wiser, and I have done it; but this is an unescapable consideration. Senator, that you can not get anybody, either as a Government employee or as a private individual, wise enough to buy things who does not know about the things he is going to buy. Whether you put them in uniform, or wherever you put them, you have to act as carefully as you can, and you are obliged to have men who have an acquaintance with the things they are going to do. The way to get an acquaintance with them is by doing them.

Senator WARREN. Mr. Secretary, let me refer to that contract. How did that read as to length of time?

Secretary BAKER. It was to be terminated on 30 days' notice.

Senator WARREN. You had the right to terminate it?

Secretary BAKER. I so understood.

Senator WARREN. I know the contracts usually read that way.

Senator FRELINGHUYSEN. I want to ask a question which is constructive. I want to ask the Secretary if he does not believe that the Quartermaster General's Department could have, through the reserve officers in the various localities, instead of a centralized plant under private control, redistributed the clippings in the districts where there were Government contracts?

Secretary BAKER. Senator, the Quartermaster Department started out with 350 officers, none of them knowing anything about the conservation of wool, rags, and scraps. It was therefore necessary for the Quartermaster Department to bring into its service officers in great number until they now have over 3,000. They have had to train them as they went along. I think they have now arrived at a stage where they can do this

work better than anybody else can do it, and that is the reason I canceled the contract.

Senator FRELINGHUYSEN. The complaint has been that there has been a great deal of commercial jealousy in regard to it, and if the Government is going to handle rags, so to speak, it should handle them through its own department instead of through another concern.

Secretary BAKER. Senator, not only since the war began, but since the world began, there has been that sort of jealousy between the man who gets a chance to do a thing and the man who wants a chance to do it.

Senator FRELINGHUYSEN. I am asking you a practical question, Mr. Secretary. Can not the War Department take care of that better than a private concern?

Secretary BAKER. I think so, or I would not have ordered it that way.

Senator WEEKS. I would like to ask a question.

The CHAIRMAN. Is it about this Kaplan matter?

Senator WEEKS. If I mention Kaplan again in this committee room I ask you to take me to task for it. The Secretary has made one comment which I want to ask about. He spoke of entering into a contract in good faith. Presumably that was done on the part of the Government. Now, Mr. Secretary, what have you to say as to a man who knows the business of sorting rags, who is employed because he does know the business, and who imposes a contract on the Government for four times what it costs to do the work?

Secretary BAKER. Do you mean this 6-cent price?

Senator WEEKS. Yes, sir. There has been ample testimony that it can be done for 1½ or 1⅝ cents.

Secretary BAKER. If it was known at the time that the price of 6 cents was excessive, then the action in making that contract was reprehensible.

Senator WEEKS. These dealers must have known that was excessive.

Secretary BAKER. On that assumption, their position is not defensible.

Senator WEEKS. It could not possibly be.

Secretary BAKER. The statement made by Mr. Eisenman was that neither he nor anybody else knew just what the cost would be.

Senator WEEKS. This committee was not looking for this kind of a contract. It simply happened to stumble upon the Base Sorting Co.

Secretary BAKER. My action was taken before the committee did anything about it.

Senator WEEKS. As a result of an investigation by the Quartermaster Department?

Secretary BAKER. As the result of an investigation by the Quartermaster Department; yes, sir.

Senator WEEKS. What I want to ask you particularly is: Don't you think there is a possibility that that kind of thing may happen again when secrecy is the policy in making contracts or making purchases of supplies?

Secretary BAKER. I think it may happen even when the policy of secrecy is not followed. In fact, nothing but proper vigilance will prevent it, in my opinion.

Senator HITCHCOCK. Who fixed the 6-cent price named in the contract?

Secretary BAKER. I do not know about that. I assume it was suggested by the men who were making the contract and approved by Mr. Eisenman. Mr. Eisenman told me that that price was fixed because it was not known what the cost would be, and that it was to be subject to audit and change.

Senator HITCHCOCK. Was it not fixed first at 5½ cents?

Secretary BAKER. I do not know that.

Senator HITCHCOCK. The testimony shows that it was first fixed at 5½ cents.

Secretary BAKER. I do not know that.

Senator HITCHCOCK. We have been unable to find the reason why it was raised, except that it was the request of the company that was making the money out of it.

Secretary BAKER. I do not know that.

Senator HITCHCOCK. The contract shows on its face that it is intended to give a profit to a certain company. It was entered into for that purpose. That was the reason the company went into it.

Is it not a reflection either on Mr. Eisenman's ability as an expert or upon his good faith in serving the Government that he should agree to a price three or four times as large as the actual cost of doing the work?

Secretary BAKER. Not necessarily, Senator. Of course it shows either a lack of attention to the matter, or, taking your suggestion, a reflection on the good faith of Mr. Eisenman, unless one accepts Mr. Eisenman's statement, which I do, that nothing was known at the time so that a price could be accurately fixed.

Senator HITCHCOCK. When did he protest against the cancellation of the contract?

Secretary BAKER. I do not know that he protested after it had been ordered canceled. He came and told me the facts which I have been telling the committee and which he told the committee. He told me in his judgment it was a proper contract, and he hoped it would be allowed to stand.

Senator WEEKS. Suppose the testimony showed that even after it was demonstrated that the contract was two or three times as high as it should be he still protested against its cancellation?

Secretary BAKER. It must be recalled, Senator, in that connection that when he appeared before the committee and when he talked to me about it, and before I had my first contract with the Kaplan Co., the profit had been reduced to a maximum of one-half cent a pound. There had been filed with the Quartermaster General a letter disclaiming any profits at all, and not only disclaiming any future profit, but there was an offer to pay back to the Government every penny that had accrued up to that time.

Senator HITCHCOCK. The testimony indicates that was done after the probe was started.

Secretary BAKER. No. It was filed at least a month before the probe started.

Senator HITCHCOCK. The testimony is that a man named Loiter, along about the 14th of December, wrote a letter in which he exposed the fact that the contract provided for an enormous profit.

Senator WADSWORTH. It was earlier than that, Senator.

Senator HITCHCOCK. Yes; I think it was November 14 when that started.

Secretary BAKER. That I do not know about.

Senator HITCHCOCK. He gave the figures, and after that Mr. Eisenman protested vigorously against the cancellation of the contract.

Secretary BAKER. Those facts have not been brought to my attention.

Senator HITCHCOCK. They have been brought to the attention of the committee. We were unable to understand why, if he was an expert, he did not know, in the first place, that the contract provided for such a high price; and the cost that was stipulated was suspicious.

Secretary BAKER. I am sorry, Senator, that I can not help myself as to those dates. I have understood, however, and Mr. Eisenman's statement to me contains the fact that the entire contract, in its prosecution, was under audit and under the control of the depot quartermaster, and that the final renunciation of profit was filed with the Quartermaster General long before I heard of the contract at all.

Senator HITCHCOCK. It was only filed after the probe had been begun.

Secretary BAKER. Not after I ordered that canceled. That was the first contract we had with them.

Senator HITCHCOCK. You ordered it canceled, but as I understand it, an actuary or expert bookkeeper had gone through the accounts and made a report to you?

Secretary BAKER. No report was made to me except the one which Gen. Sharpe made, which was a memorandum showing that the profit was excessive.

Senator HITCHCOCK. Mr. Eisenman produced before this committee the report of an expert bookkeeper, which he said he had not read, but had turned over to you. I examined the paper and it showed a very large profit.

Secretary BAKER. I do not want to be in the position of saying that it was not turned over to me, but my recollection is that the only paper I have had from Mr. Eisenman on that subject is this paper [indicating], which is a general statement.

Senator HITCHCOCK. It is an argument.

Secretary BAKER. Yes, sir.

Senator HITCHCOCK. And it does not state the terms of the contract or any dates?

Secretary BAKER. I do not recall having seen the actuary's statement.

Senator HITCHCOCK. The representatives of the Quartermaster Department have appeared before the committee and said that the result of their investigation was to show a large profit.

Secretary BAKER. On the basis of the 6-cent price?

Senator HITCHCOCK. Yes. They intimated that that was the reason the contract was canceled.

Secretary BAKER. That was one reason. When Gen. Sharpe came and told me about it he gave me two reasons: The first was that the department for the reclamation of waste had been adequately organized; and, secondly, the investigation which he

had made showed an abnormal profit. It was on that basis that I canceled the contracts.

Later Mr. Eisenman came to me and told me that prior to that time it had been agreed to reduce the profits, and that later on there had been a total renunciation of profits.

Senator HITCHCOCK. The committee took that as an indication that they were frightened and were running because the probe had been started.

Secretary BAKER. Of course, I can not comment on what I do not know.

Senator MCKELLAR. There is another question that I would like to ask. You have stated, Mr. Secretary, that the purpose of this supply committee was to get men of technical skill and ability to seek out these customers and fix prices and to see that the Government would be protected. The truth is that Mr. Kaplan, engaged in this same kind of business, had been selected by Mr. Rosenwald and Mr. Eisenman and brought here to act as a member of this committee on supplies. Surely this committee could not have been in absolute ignorance as to what kind of a price this Base Sorting Plant should have. Why, under those circumstances, was it that they did enter into the contract which proved so exorbitant when they had this expert advice of Mr. Kaplan?

Secretary BAKER. I have tried to say that in spite of the fact that Mr. Kaplan's brother was engaged in the business, as Mr. Eisenman told me and as he told you, and in spite of that much expert knowledge, there was uncertainty about the cost of doing this work, and that this was put in as an experimental price.

Senator MCKELLAR. So that in that particular instance the expert on the committee was not of much account?

Secretary BAKER. He was a bad guesser.

The CHAIRMAN. Considering this blunder, if you please to call it that, or this attempt to defraud the Government, what has it cost the Government in dollars and cents?

Secretary BAKER. Nothing.

Senator MCKELLAR. Is Kaplan still connected with the committee?

Secretary BAKER. I think his services have been discontinued.

Senator MCKELLAR. I want to congratulate you on that.

Senator KIRBY. I want to ask a question about a statement that Senator HITCHCOCK made. I am informed, in reference to this statement of the actuaries, that it was mailed the other day. When Mr. Eisenman came up he had the statement himself. If the Secretary got one, he was just mailed a copy the other day.

Secretary BAKER. I have not seen it.

Senator. HITCHCOCK. Mr. Eisenman's statement was this, that this statement of these experts showed clearly that they had very carefully examined the books of the concern, apparently under your instructions or the instructions of the Quartermaster General. They show that the cost of operation has been about $78,000 and the profit something over $80,000. Mr. Eisenman was asked some questions about it, and he said he did not read it; that he simply turned it over to you.

Senator MCKELLAR. Turning for a moment to something else, I would like to ask you a question: You issued another order, either through the Quartermaster General's Department or through the Council of National Defense, that secrecy should be observed about the letting of these contracts; or, at any rate, it has been testified here that you issued that kind of an order, and that since you issued that order the facts in regard to those contracts have not been divulged to the public generally. Is it a fact that you issued that order?

Secretary BAKER. Something like that is the fact. I issued an order instructing the withholding from publication of the names and locations of plants manufacturing Army supplies.

Senator MCKELLAR. Mr. Secretary, do you think that is a wise governmental policy, that policy of secrecy about contracts?

Secretary BAKER. Yes, sir; I thought it was necessary under the circumstances, Senator.

Senator MCKELLAR. Do you still think it is necessary?

Secretary BAKER. I am inclined to think it may still be necessary.

Senator MCKELLAR. Do you know that the Navy Department has followed a precisely contrary policy, and that it has worked like a charm?

Secretary BAKER. Yes, sir. I know that the Navy Department's purchases are relatively small and are being made in continuation of an admirable system requiring very little expansion. The amount of difficulty which the Government has experienced—I do not care to enlarge on the subject especially—has been increased by attempts to make trouble for the Government in supplying manufacture, and that was enough, in my judgment, to justify the withholding of that information.

Senator MCKELLAR. Is there not something about the American people that abhors secrecy on the part of contracts with the Government? When you come down to look at it, is it not an unwise policy to withhold knowledge and information with regard to contracts made by the Government, which stands for the people?

Secretary BAKER. Senator, the American people are very wise and very sensible people. They want to win the war and they want the Army to be supplied as rapidly as possible. They want as little of this information to get to our enemies as we do. They do not want to interfere with our preparations; and I want to say that there has never been a suggestion of secrecy by any member of this committee with reference to contracts, except as to the general dissemination of knowledge in places where it might have caused serious difficulty.

Senator MCKELLAR. Do you know whether it would be impossible for other contractors, or would-be contractors, to get information about contracts already made from the committee on supplies?

Secretary BAKER. I suppose I know that inferentially.

Senator MCKELLAR. Do you indorse that?

Secretary BAKER. I would not desire to withhold it from an accredited person, but I should be very loath to give to anybody the location of all the places where the Government is having supplies manufactured, and thus concentrate any hostile demonstration which might be undertaken against Government supplies.

Senator MCKELLAR. Do you think our Navy has been endangered by its policy of openness?

Secretary BAKER. I can not say how much they have been endangered. They have been fortunate.

Senator FRELINGHUYSEN. Did this order nullify the practice or law in regard to public advertising and the publication of awards?

Secretary BAKER. Yes, sir. Emergency purchases were all made after the practice of competitive bidding and open advertisement and award had been suspended.

Senator FRELINGHUYSEN. That was the purpose of the War Department, was it not, when you issued the order?

Secretary BAKER. I do not think the two things were contemporaneous. I think there were a number of fires supposed to be of incendiary origin, and some other disturbances of that sort, which rather brought the attention of my associates to the danger that the Government was under. Then we made that order.

The CHAIRMAN. That was the reason?

Secretary BAKER. Yes, sir.

The CHAIRMAN. What was the date of the order?

Secretary BAKER. I can not remember.

Senator HITCHCOCK. Who asked for that?

Secretary BAKER. I do not remember.

Senator WADSWORTH. Mr. Eisenman testified that he asked for it.

Secretary BAKER. I do not remember it. It did not come directly from Mr. Eisenman. It must have come through military channels.

Senator FRELINGHUYSEN. The secrecy maintained by the committee on supplies and the War Department will not prevent people from knowing where Army contracts are made or with whom they are made, because every employee working on Army contracts knows that he is. The principal evil which seems to exist in this system is that it affords a man, to use a slang expression here, "in the know" an opportunity to tip off his associates in the business. He knows that certain awards are to be made and therefore can give a preferred opportunity to certain manufacturers to secure business, such as the selling of raw material or machinery for the manufacture of these Government products, thus shutting out others who are entitled, or should be entitled, under the open-door policy, to free opportunity to trade with these people. That is the criticism that is leveled against the system.

Secretary BAKER. The criticism, Senator, is not logical. It may very well be that making awards to designated contractors without advertisement deprives somebody who might have had an opportunity otherwise to bring himself to the attention of the awarding party of that opportunity, but when the award has actually been made, the withholding of that from publication deprives no one of any opportunity, because the award has already been made.

Senator FRELINGHUYSEN. In the publication of awards, Mr. Secretary, the trade knows who is the successful bidder and they can offer their merchandise to the successful bidder. That creates competition and lowers prices, whereas if only this committee, which has enjoyed a large amount of business, knows

they can inform the outside manufacturer, and he receives information that others do not get.

Secretary BAKER. I think there is a failure of fact in that. Nearly all of these contracts were contracts where the Government was supplying the raw material at fixed prices and where there was no question of any further saving to the Government, because the contract was actually made and the price fixed.

Senator FRELINGHUYSEN. Mr. Secretary, I happen to know a great many things about this. I come from a large industrial State. I hear very many complaints. I am not taking up details. I am simply saying that I know this, that a certain factory that was being expanded to meet the Government's requirements as to capacity was in the market for machinery, or for certain parts of machinery and raw material, building material, and so on; and that before anyone knew of the award in that particular case there were directed to that concern certain manufacturers who could supply the machinery. They knew it before the outside world, and therefore there was no competition.

Secretary BAKER. I can not answer that, because I do not know the facts in the case.

Senator FRELINGHUYSEN. That is the general situation.

Secretary BAKER. It may be very well that the committee on supplies or the Quartermaster General, in making an award to the A or B or C company, said to the D, E, and F company, "Sell this machinery to this company; we want to give priority orders, and we want to get the machinery to the company, because we are going to use them to manufacture such supplies."

Senator HITCHCOCK. The Quartermaster General testified that he did not select the companies.

Secretary BAKER. I think he did not.

Senator HITCHCOCK. Don't you think that there is danger of building up a system of favoritism and secrecy?

Secretary BAKER. Yes, sir; there is danger.

Senator HITCHCOCK. Hasn't that been the result?

Secretary BAKER. I do not think so. If it has resulted, it has been a minimum. I doubt if it has resulted at all. I am anxious to have it understood that I do not think that that is the ideal way to do things, but when a department with 360 officers is called upon to place contracts involving $800,000,000 of expenditures, or $2,000,000,000 of expenditures, they must use the nearest weapons at hand to do it, and while they are perfecting the organization with a view to getting an ideal system they must make the best use they can of the existing instrumentalities. I think that is what they did.

Senator WEEKS. Let me call your attention to the possibility of gross irregularities in the system. Between the 12th day of April, 1917, and the 30th day of April, 1917, there were let some 20 contracts for blankets varying in price from $2.75 to $6.25. How is anybody going to know—of course the answer would be that there was a difference in the quality of the blankets—but how is anybody going to know that a contract was not given to somebody for a $4.50 blanket that some one else might manufacture for $3.50?

Secretary BAKER. I think it is possible to imagine that some evil was done.

Senator WEEKS. Will you tell us how we can find out?

Secretary BAKER. Ask Mr. Eisenman.

Senator WEEKS. If you should ask Mr. Eisenman questions as long as we have and discover how uncertain are his answers, you would have a clearer knowledge of the difficulty of getting his evidence.

Secretary BAKER. I understood from Mr. Eisenman that he had the facts about every case with him.

Senator WEEKS. How are we going to know what the quality of a blanket furnished by Gimbel Bros. in New York at $6.25 is as compared with a blanket furnished by White & Co., of Boston, at a price of $2.75?

Secretary BAKER. Very easily. Whenever I have talked to Mr. Eisenman about these subjects he has known the exact number of ounces of wool, the quality of the wool—whether it was half-blood or one-eighth blood, or whatever it was. It seemed to me that he had tabulated in his head the most particular and detailed information. I have not been able to find a single case in which he was not able to explain exactly that kind of thing. It is all a matter of record.

Senator HITCHCOCK. Didn't Mr. Eisenman have power and opportunity to buy $4 blankets and pay $6 for them?

Secretary BAKER. It would have been possible for Mr. Eisenman to have deceived the Quartermaster General into paying $6 for a $4 blanket.

Senator HITCHCOCK. He instructed the Quartermaster General?

Secretary BAKER. My instructions to the Quartermaster General were that he should rely upon the facts given him by Mr. Eisenman.

Senator HITCHCOCK. Mr. Eisenman named the man who was to supply the goods and fixed the price, and the Quartermaster General did nothing but sign the contract?

Secretary BAKER. He made the contract.

Senator HITCHCOCK. Was it not possible for Mr. Eisenman to pay $6 for a $4 blanket, or $4 for a $2 blanket?

Secretary BAKER. Yes, sir.

Senator HITCHCOCK. What protection had you for the Government under such conditions?

Secretary BAKER. The penal laws of the country are still in force. In addition to that, we had his reputation as a man of integrity, the observation of his associates, and the constant supervision of the Quartermaster General's Department, which would not have allowed itself to make any grossly improper contracts; besides that, we had Mr. Rosenwald's supervision and my constant inquiry about it.

The CHAIRMAN. It is but fair to say that the Quartermaster General testified that in the negotiations for quantities and prices the Quartermaster's Department had a representative present all the time.

Secretary BAKER. All the time.

The CHAIRMAN. One of his corps?

Secretary BAKER. Yes.

Senator MCKELLAR. Do you approve of a decentralized authority in buying goods, such as has been described? Do you think that is a wise plan?

Secretary BAKER. I have said at least twice that, in my judgment, it was the best plan which could be devised, in view of the pressure and size of the emergency, but that it was preparatory to a very much better plan, which has already been inaugurated.

Senator MCKELLAR. That has been abandoned and done away with. Now, Mr. Secretary, I will ask you if you were advised that the specifications as to uniforms, woolen uniforms, with reference to overcoats, breeches, and blouses have been changed, so that our uniforms and overcoats would thereafter be part wool and part shoddy?

Secretary BAKER. I do not think I was ever advised about that, but I do not like to be positive, because it may have been told me.

Senator MCKELLAR. Do you recall ever having approved these specifications?

Secretary BAKER. I do not recall that.

Senator MCKELLAR. It has been testified here that previous to Mr. Eisenman's going into the committee on supplies no shoddy was used or no reworked wool was used. You understand the common expression of "shoddy," of course?

Secretary BAKER. Perfectly.

Senator MCKELLAR. It has been testified that no reworked wool or shoddy was used in the uniforms, but that he recommended a change in the specifications by which our boys should be clothed in uniforms of 65 per cent raw wool and 35 per cent shoddy. In the case of overcoats, a portion of them was to be 65 and 35 per cent, and the other 50 and 50. In the case of blankets, I believe there was the same proportion—50 per cent raw wool and 50 per cent shoddy. You say that you do not recall having had that submitted to you?

Secretary BAKER. Not in advance.

Senator MCKELLAR. Was it ever submitted to you?

Secretary BAKER. After it was submitted here.

Senator MCKELLAR. Did you approve of that change?

Secretary BAKER. I do not know enough to approve or disapprove.

Senator MCKELLAR. Are you willing for the men who are in the Army, either as volunteers or National Guardsmen or drafted men, to go to the trenches in uniforms that are made partly of shoddy? Do you think it is wise to do that?

Secretary BAKER. Senator, the best information I have on the subject is that the experts agree that the cloth in these uniforms is considered adequate—I mean the admixture of wool and reworked wool. I do not pretend to have an opinion on that subject. I may say that the wool condition in this country is such that it is advisable to conserve wool.

Senator MCKELLAR. Is not wool so plentiful in this country that within the last few weeks the embargo on exports of wool has been removed by the Government?

Secretary BAKER. I can not answer that.

Senator MCKELLAR. If that is a fact, then there is no such shortage as would require that our boys should be clothed in shoddy?

Secretary BAKER. I can not answer that, but I can say that for some months there was serious consideration given to what was regarded as a threatened shortage in wool. Very great

efforts were made by several branches of the Government to secure larger importations of Australian and other wool. The commercial board was exceedingly anxious to economize in wool as far as possible. It may not be unknown to you that we procured from women's dressmaking establishments promises to limit the number of styles with a view to economizing in wool. The French Government made similar efforts. There has been a constant effort to save wool in anticipation of a shortage of the supply.

Senator MCKELLAR. We agree wholly about the necessity of conserving wool and the necessity of the Government having an ample supply of wool for uniforms for the boys.

Secretary BAKER. Entirely.

Senator MCKELLAR. Do you recall a visit of the Boston Wool Dealers' Association on the 3d of April last, at which time these wool dealers offered the Government their entire holdings of wool at a price to be fixed by the Government as of date before the beginning of the war?

Secretary BAKER. I do not remember that.

Senator MCKELLAR. They did not call on you?

Secretary BAKER. Not that I can remember. I was seeing so many delegations at that time that it would not be unnatural for me to forget it.

Senator MCKELLAR. In July afterwards were other holdings offered to you?

Secretary BAKER. I have no recollection of that.

Senator MCKELLAR. Do you recall a visit from Senator King, of Utah, and the president of the Western Wool Growers' Association in October last?

Secretary BAKER. Very well.

Senator MCKELLAR. Did they offer the holdings of the Western Wool Growers' Association?

Secretary BAKER. I remember the visit very well, indeed, but I can not give the details of the conversation. The general purport of the conversation was——

Senator MCKELLAR. We will be very glad to have that.

Secretary BAKER. The general purport of the conversation was that it would be a wise thing for the Government to buy the entire holdings at a price to be fixed by the Government for the purpose of saving the middleman's profit.

Senator MCKELLAR. You did not accept that proposition?

Secretary BAKER. I referred the matter to the raw-material division of the War Industries Board.

Senator MCKELLAR. Did you ever know what became of it? Do you know whether it was declined?

Secretary BAKER. No; I do not think I ever knew what became of it.

Senator MCKELLAR. Mr. Secretary, looking at it as a concrete proposition, of course as soon as war is declared, we all know what the effect is. We know that the inevitable effect of a declaration of war is to send the price of wool up. That is always the case, because we have to use wool for so many purposes, especially for clothing. Don't you think it would have been a wise policy to have taken these various holdings, if they could have been gotten at terms satisfactory to the Government, at the time they were offered?

Secretary BAKER. My recollection is, with reference to the visit of Senator KING and the president of the Wool Growers' Association, that I not only asked them to take it up with the raw-material division of the War Industries Board, but also asked them to talk to Gen. Sharpe about it, because there had been discussions between us about the advisability of buying a supply of raw wool for the purpose of controlling price and preventing its enhancement. That had been taken up with Mr. Eisenman. He was anxious to have it done in order to stabilize the price of wool. Gen. Sharpe had brought it up a number of times. At the outset, however, there was some doubt as to whether appropriations made for other purposes could be used for the storing and the buying of raw material. It had never been done before by the War Department. The Judge Advocate General's advice was asked. He concluded that we had the power to do it. As I understand it from Mr. Eisenman, by my direction a sum of money appropriated originally for cloth was authorized to be expended. When the matter had gotten that far, Senator KING and the president of the Wool Growers' Association called upon me. As it was part of an earlier subject of conversation, I referred it to Gen. Sharpe. Whether or not the conditions justified the War Department in buying the entire supply of wool, I do not know enough to answer.

Senator MCKELLAR. The inevitable effect of changing the specifications of our uniforms, according to Mr. Eisenman's ideas, from all wool, or virtually all wool, to a mixture composed of wool and shoddy, was to increase the price of shoddy in this country, was it not? Would not that increase the price of shoddy?

Secretary BAKER. Undoubtedly.

Senator MCKELLAR. Did it ever occur to you, Mr. Secretary, that the reason for not accepting the woolgrowers' offers of wool at a price to be fixed by the Government was in some way in the interest of shoddy manufacturers in the country?

Secretary BAKER. That never occurred to me, Senator.

Senator MCKELLAR. It would have a tremendous effect upon the price of shoddy.

Secretary BAKER. I think the use of reworked wool by the Government in large wool and clothing manufactories would inevitably tend to increase the value or market price of reworked wools, but I did not consider the question personally.

Senator MCKELLAR. You say there is no serious situation now about overcoats and clothes?

Secretary BAKER. Yes, sir.

Senator MCKELLAR. I think perhaps you received a letter from me this morning, or yesterday morning, in which I quoted a statement taken from a letter from a young man at Fort Oglethorpe, in the Regular Army, in which he says that he has never seen an overcoat yet. I have a great number of letters from boys in many of the camps in which they say that they have never received overcoats or woolen blouses.

A young man from Camp Meade, immediately near us, came into my office the other day. I saw that he was a soldier boy from my home. I saw that he was clad in a very fine overcoat. I said to him, "Well, I am delighted to see that you have got a warm overcoat." He looked somewhat confused. I asked him what was the matter, and he said that when he got permission to come up to see me his officer asked where his overcoat was. He said that he did not have one, and then the officer said, "That will never do. It will never do for you to call upon Senator MCKELLAR without an overcoat. We will scrape up one and give it to you." They borrowed an overcoat for him, and he came over to see me. I am inclined to think, therefore, that your information about the boys being furnished with overcoats, and that there is no serious situation as to overcoats and clothes, is not quite accurate. I have no doubt your figures are all right, as taken from the books, but the actual fact is that those boys have not got the coats.

Secretary BAKER. I have not received the letter which you sent me, but certainly as long ago as three weeks I went down to Camp Meade to see a review of the entire division, and Gen. Nicholson, in inviting me to see the review, with some mirth in his voice told me—and some considerable merriment—that he wanted me to see one division in which every man had an overcoat.

Senator MCKELLAR. I think he was mistaken in that.

Secretary BAKER. And the entertaining part of it was that when I did see those boys, and I saw one man without an overcoat, I asked Gen. Nicholson why it was that that man did not have an overcoat, thinking the joke on him. He said that he would find out. When he asked the young man why he did not have an overcoat, he said he had left it in the tent, because he found it too warm while he was exercising.

Senator MCKELLAR. You think that conditions have been greatly improved as to overcoats and coats?

Secretary BAKER. Very much.

Senator MCKELLAR. And you think there will be clothes enough very soon?

Secretary BAKER. I think the prolongation of apparent insufficiency may be due to the failure of sizes. There have been a great many surprises about this. The Army has for years had preparedness enough to have a schedule of sizes. When they ordered the clothing, shoes, or things of that sort they were ordered according to the schedule of sizes. But we have met with a great many surprises lately. Either we are getting larger Americans or Americans are getting larger; I do not know which.

Senator WARREN. That was about all you did have, was it not—sizes?

Secretary BAKER. Yes. We had a table of sizes. We have now discovered that our difficulty is not to get shoes enough, but to get enough of the larger sizes.

Senator MCKELLAR. I have one other matter that I wish to ask you about, and then I am through. You commandeered the output of the Thames River mills and the Millbrook mills. I think the Millbrook mills are in Connecticut, but I do not know where the Thames River mills are. I think they are in that neighborhood, somewhere. Will you tell me why you did that, and at whose instance?

Secretary BAKER. I have never heard of it. I may have signed a commandeering order.

Senator MCKELLAR. Do you recall signing any commandeering order?

Secretary BAKER. A great many of them.

Senator WEEKS. That is the only case in which mills have been commandeered?

Secretary BAKER. I hardly think so, Senator. That may be the only case in which a clothing mill has been commandeered, but I am not sure about that.

Senator HITCHCOCK. There is a hypothetical question that I would like to ask the Secretary. You have stated that when these Boston wool dealers, almost upon the day that war broke out, offered to the department and to you, as they have indicated, a very large quantity of wool at the price of April 2, you remembered nothing about it.

Secretary BAKER. Yes, sir; I do not remember that visit.

Senator HITCHCOCK. The indications before the committee have been, in all the testimony, that there has been some scarcity of wool and that that was the reason that the shoddy was to be used; also that there has been an enormous advance in the price of wool, and that the failure to take advantage of that offer has cost the Government $150,000,000. Now, my question is this: Would it not have been a great deal better for that offer to have been made to a minister of munitions or supplies who could have acted upon it, instead of turning it over to some one else?

Secretary BAKER. When was that made?

Senator HITCHCOCK. The 3d day of April.

Secretary BAKER. I will say that there was not enough money appropriated at that time for the War Department to have bought one-third of the wool comprehended in that offer if the War Department had had nothing else to do with the money except to buy wool. No minister of munitions or anyone else could have used it for that purpose.

Senator HITCHCOCK. The proposition is twofold. On the 4th of March, Congress had placed at the disposal of the President $100,000,000, without any qualifications, and on the very day that Congress assembled in April, it was ready to make any appropriation. The lack of money could not have been a reason for failing to do this.

Secretary BAKER. It would not make any difference whether it was the Secretary of War or a minister of munitions, there was no money to buy it. The War Department was already $500,000,000 in debt.

Senator HITCHCOCK. That was not the reason that this great offer was not accepted?

Secretary BAKER. It was not brought to my attention.

Senator HITCHCOCK. The War Department later bought some without any further authority, when the offer was made.

Secretary BAKER. When the matter was brought to my attention I authorized the purchase of wool after getting from the Judge Advocate General an interpretation of the law on that particular question.

Senator HITCHCOCK. That offer was referred first to Mr. Eisenman and his committee, but nothing was done with it?

Secretary BAKER. I never heard of that offer.

Senator HITCHCOCK. Is not that a strong argument for the establishment of some power in the War Department to act upon these questions?

Secretary BAKER. No, sir; I do not think so, because later the War Department did take that action.

Senator HITCHCOCK. Hasn't the Secretary of War too many things to attend to?

Secretary BAKER. I do not think so.

Senator HITCHCOCK. So that he can not give immediate attention to these matters?

Secretary BAKER. I think he can; but that is a part of the argument reserved for a later place, I believe.

Senator WADSWORTH. In connection with that offer, it has been testified here very clearly that while the offer was made on April 3, it was met with doubt that the Government did not have the authority to purchase the wool, and it took until June 16 to get an opinion on that question.

Secretary BAKER. That is not quite accurate, Senator. I am not prepared to say that the only doubt was the question of the Government's power; but we were entering into a situation in which there were shortages in a great many things. Wool was not the only thing that there was an anticipated shortage of. There was an anticipated shortage in cotton, in leather, and so on. I could enumerate dozens of things.

Senator WADSWORTH. I understand that, Mr. Secretary.

Secretary BAKER. If the policy of the Government in dealing with materials in which there was a shortage was a monopolistic purchase of the entire supply, it would have exhausted not merely the anticipated appropriations, but all that Congress could have appropriated. There had to be some policy determined upon.

Senator WADSWORTH. I am not discussing for a moment the appropriation part of it at all. My question was for the purpose of finding out why it took from April 3 to June 16 to determine if it was legal.

Secretary BAKER. It did not take that long.

Senator WADSWORTH. That has been testified to specifically in this investigation.

Secretary BAKER. Of course, Senator, that does not mean that either some one or some persons were considering that question, and that question only. A policy had to be determined upon as to whether the way to control the price of a staple product was by purchasing a controlling quantity of the existing supply.

Senator WADSWORTH. The testimony before this committee from those who certainly should have known what was done in that period is to the effect that that period was not exhausted in determining the policy of the Government, but in determining whether the Government had a right to purchase the wool.

Secretary BAKER. I think that is erroneous. It is too narrow a statement. When the question was presented to me as to whether we should buy wool, the first reaction in my mind was, Shall we undertake to buy a controlling quantity of every supply as to which we are short? In the meantime Congress was in session and was considering other methods of price control. It was considering the question of prices of iron and steel, and things of that sort.

Senator WADSWORTH. The testimony is very clear, Mr. Secretary, that the War Department was not debating that point between April 3 and June 16.

Secretary BAKER. I can not help what the record shows, I know, as far as myself was concerned, I had a very serious question whether that was the right way to control the price of all staple products.

Senator KIRBY. The matter under consideration, this specific offer of the Boston wool dealers, you yourself say you do not remember?

Secretary BAKER. I do not remember their visit of April. My first remembrance is that Mr. Eisenman came to see me one day and recommended the price of wool be prevented from rising by the Government making direct purchase of wool.

Senator KIRBY. Do you remember about when that was?

Secretary BAKER. No; I do not; but I think not later than the 2d of April.

Senator WARREN. I refer to that delay, which I recommend on, because it has appeared so many times in this investigation that it takes the War Department literally weeks and weeks to arrive at some decisions which are exceedingly simple.

Secretary BAKER. That was not simple.

Senator WARREN. The legal question was simple.

Secretary BAKER. The legal question was simple, but the policy question was exceedingly complicated, and I do not know at this moment whether the offer the Boston wool merchants made to sell had that part in.

Senator HITCHCOCK. It was the price it was in the market.

Secretary BAKER. Was that what they paid for it, as a matter of fact?

Senator WEEKS. Quite likely not.

Secretary BAKER. How much was the enhancement?

Senator HITCHCOCK. But it was a very much lower price than at present; it has been advancing since.

Senator WARREN. There was a very rapid advancement for four or five months before, and especially during the month of March. I recall it because some transactions came up. Of course, it was lower then than now, but it was higher than it had probably been since the war.

Secretary BAKER. Then what actually occurred, the offer of which had to be considered, was that the Government should take over their entire stock of wool at a price which represented a continuous enhancement for five months, and thus make a very large contribution to the profit of those who held it in the meantime.

Senator WARREN. I do not think you ought to say five months continuous, because it had been increasing since the low price of two and one-half years before, but there was an advancement, and, as I understand this offer it was at the going market price—that is, they would furnish the Government whatever they wanted at that.

Secretary BAKER. It is easy to see, Senator, how those who did consider that suggestion at that time might well have had in mind resort to some price-fixing process with a view to saving at least part of the enhanced price.

Senator WEEKS. I do not think the Secretary ought to allow that statement to remain as a possible reflection on the Boston wool dealers.

Secretary BAKER. Quite the contrary, I had no such intention.

Senator WEEKS. This took place on the 2d of April. The first purchases of wool by wool dealers did not take place more than three months before that time at the most, if I understand the question, and if I am wrong, we have a gray shepherd here who can correct me.

Senator WARREN. It is not usually the case they buy until shearing time, which commences the last of March, but for the last two or three years there have been men in the market, and I say it with a good deal of regret that one lot I was interested in went last February. I say it with regret, because it went at a lower figure, but they have contracted in the West very largely the last two or three years beforehand.

Senator WEEKS. Whatever price the Boston wool dealers paid for this wool, there was absolute certainty there would be an advance in the price of wool immediately after the declaration of war?

Senator WARREN. Oh, yes; and in offering wool the day before or the day war was declared, that certainly was all the men could be expected to do, and knowing the men, I feel confident they did it from patriotic reasons.

Secretary BAKER. I have not the slightest doubt or disposition in any statement in the record I have made to even imply a reflection on the good faith of that offer, and if I have made any such statement in the record I should like to have it understood as withdrawn.

Senator WEEKS. I should like to add that this very morning one of the leading wool dealers in Boston has been to me to say that he believes it should be the policy of the Government to buy the whole domestic clip, and to do it now; that the shearing is commencing in Arizona and southern California; and that the Government should control the wool supply, and in that way control the price of wool, using what it requires and turning over to civilian uses what there is left, and this man added, in entire good faith, that that would mean closing his business.

Secretary BAKER. The only comment I can make on that, Senator, is that identically the same suggestion has been made to me in regard to the purchase of the entire cotton and the entire wheat crop, and it would have involved enormous governmental finances.

Senator WEEKS. The conditions are different; there is not anything comparable to the requirements for wool in any of the great staples, and the limited supply.

Secretary BAKER. But for the arrangements which already had been made for the control of the price of wheat, I think the wheat case would be even more acute than the wool case.

Senator WADSWORTH. We are self-supporting in wheat and in cotton, and we are not in wool; that is the whole difference.

Secretary BAKER. Yes; we are self-supporting in wheat and cotton, and yet neither of them is so readily available for substitutes as wool.

Senator WEEKS. Wheat is much more available as a substitute by using corn.

Secretary BAKER. I am not sure that is so, Senator. It is a question of how ready it is.

Senator WADSWORTH. Eventually, Mr. Secretary, you paid more for the wool

Secretary BAKER. I think that entirely likely.

Senator WADSWORTH. Have you heard it estimated as high as $150,000,000?

Secretary BAKER. I had not heard that.

Senator HITCHCOCK. It was estimated at $150,000,000 the Government lost by not accepting that offer.

Senator WEEKS Not that particular offer; it would not amount to anything like that. The impression which I gave the committee and had myself was to the effect, and I corrected it later, because I obtained figures on the amount of wool which the Boston wool dealers had and found that would be impossible; and then I inquired of my informant, who was a reliable man, and he said it applied to all wools, not only to the wools offered by the Boston Wool Dealers' Association but offered by all others. That fact, that the Government had not taken control of it, affected wool prices.

Secretary BAKER. That, of course, would apply to all wools in the country?

Senator WEEKS. Yes.

Secretary BAKER. All used for export?

Senator HITCHCOCK. That is, all wool that the Government would have required.

Secretary BAKER. No; all wool in the country.

Senator WEEKS. All wool the Government would require was the impression given me.

Senator HITCHCOCK. Then advancement in price of that which the Government has consumed since then, or contracted for, would have amounted to $150,000,000.

Secretary BAKER. That seems to me a very large figure.

Senator WEEKS. I want to say, in my own judgment, that the only thing for the Government to do, and to do now, is to arrange to purchase the wool supply of this country. It will soon be in the hands of dealers, and then the Government will not be able to do it.

Senator WARREN. Mr. Secretary, just one point in connection with the topic that has just been discussed. The Secretary alluded to the lack of money during the month of April with which to make purchases. Mr. Secretary, can you remember what portion of the $100,000,000 which was placed in the hands of the President was allotted to the War Department for emergencies and when it was done?

Secretary BAKER. I do not. There was no definite allotment at the time of that appropriation. Whenever any emergency presented itself we felt free to ask the President to consider it.

Senator WARREN. Gen. Crozier has testified, as I remember it, that no allotment was made to him—to the department—until September; the same day he also testified that the Ordnance Department was handicapped in April, May, and June in placing orders for ordnance supplies on account of the inability of the Government to finance manufacturers; that the manufacturers had great difficulty in converting their plants to new uses; could not finance themselves through the ordinary channels, such as banks; and it was a source of some surprise to me and to some other members of the committee that some of that $100,000,000 was not used to speed up the manufacture of ordnance materials and perhaps other materials, too. Has not the records shown it was not until September that any considerable part of that was allotted to the War Department?

Secretary BAKER. I have no definite recollection about that except two or three times sums were suggested by Gen. Crozier as being appropriate to be expended out of that sum. The question was presented to the President, and in every case he agreed; and finally, in September—if it was September—when Gen. Crozier was very anxious to have some enlarged facilities to be provided for by the Government out of the moneys then in hand, he suggested that the President authorize $35,000,000 of that sum to be put at his disposal, to be disbursed out of that fund for accruing obligations, and I presented the matter to the President, and he at once authorized it. That was in July.

Senator WARREN. Could that have been done to greater advantage in April or May?

Secretary BAKER. I am not sure whether it could or not. As soon as it was presented it was done.

Senator WEEKS. Presented by whom?

Secretary BAKER. Gen. Crozier to me, and by me to the President.

Senator HITCHCOCK. The initiative in such a matter begins with the Ordnance Department, does it not?

Secretary BAKER. Yes; the initiative in that sort of matter would naturally come from Gen. Crozier to me—be suggested by him to me.

Senator FRELINGHUYSEN. I simply want to inquire of the Secretary regarding the question of the uniform. When war was declared was there any discussion by the military authorities regarding the needs for the service on the other side in regard to change in weight of uniform?

Secretary BAKER. I can not answer that; I do not know.

Senator FRELINGHUYSEN. Who would be the proper authority to discuss that?

Secretary BAKER. The Quartermaster General would be the primary authority; of course, as soon as Gen. Pershing was abroad with a staff he would study that question—as, in fact, it has been studied—and there has been an interchange of opinion between Gen. Pershing and the Quartermaster General's Department on that subject and myself.

Senator FRELINGHUYSEN. There has been considerable concern on the part of the committee regarding the fact that the uniforms of our soldiers in weight is 16 ounces, and we are informed that the European armies—the English and French—have a much heavier weight; I believe 20 or 21 ounces. And we have been trying to find out whether, anticipating the service on the other side, that was considered by any of the military authorities before the men were sent over there or before the uniform cloth was ordered.

Secretary BAKER. I can not answer that; I do not know. But I can say this, and it is a positive recollection: I read all of the dispatches from Gen. Pershing, and I can not recall that, from the beginning, there has been a suggestion that the uniform was insufficient.

Senator FRELINGHUYSEN. The question of the importance of a proper cloth, in durability and warmth, is one of the most important questions in regard to the health of the troops; next, possibly, to nourishment. Now, do you not think that it would

be a wise military policy for us to consider that before we ordered our troops to the other side, with insufficient clothing, by direct inquiry from Gen. Pershing or some one else?

Secretary BAKER. Of course, Gen. Pershing was not in France much in advance of the troops that went there; but, to answer your question directly, I think, of course, that a continuous study ought to be made to adapt the uniform to the needs of the service in a particular place.

Senator FRELINGHUYSEN. Well, it was not made. There was no consideration given to that very important problem, although the armies in Europe had been fighting for years with a heavier cloth.

Secretary BAKER. Senator, I can not either confirm or deny. I do not know whether they did or not.

Senator HITCHCOCK. Mr. Eisenman stated before the committee repeatedly that he had made no inquiry concerning the British, German, or French uniforms; that he did not know how long they would wear; could not verify it in the last six months, whereas it was currently reported that both the British and French uniforms lasted three times as long as ours. The matter was not considered at all.

Secretary BAKER. I think it is very important. I have no doubt whatever Gen. Sharpe did consider it, and the weight of the cloth was prescribed by Gen. Sharpe for Mr. Eisenman, and if any change was made it was brought to Gen. Sharpe.

Senator HITCHCOCK. The testimony rather intimated that Mr. Eisenman controlled the cloth, even changing the specifications of the cloths.

Secretary BAKER. With Gen. Sharpe's approval?

Senator MCKELLAR. He did it as a matter of course under instructions from the War Department; that he just merely indorsed what was to be done.

Secretary BAKER. I think that must be a misunderstanding. I never gave him instructions on the weight of cloth; I did not know the weight of the cloth, and do not know now except as told.

Senator MCKELLAR. I think the facts about the matter are that Gen. Sharpe had very, very little authority in the supply department of the Government. His principal duty was simply to sign the contracts; and that portion of the department was run by Mr. Eisenman and has been for the last six months. That is, I think, the testimony before this committee.

Senator WEEKS. It is the testimony of both of them.

Senator MCKELLAR. Yes; both of them.

Secretary BAKER. But I feel quite sure nobody ever suggested before the committee that in the event of any difference of opinion between Gen. Sharpe as to what was wise and Mr. Eisenman as to what was wise, there was the slightest difficulty to get the matter settled.

Senator MCKELLAR. They had no trouble about that, because under the order Gen. Sharpe felt that his duties were practically nominal and went ahead and signed and did whatever Mr. Eisenman said.

Secretary BAKER. I am surprised if the testimony has been quite that.

Senator MCKELLAR. I shall be glad if you will look over the testimony on that subject. I think you will find it pretty strong.

Senator FRELINGHUYSEN. The testimony shows that in the change of the specifications that a committee of wool manufacturers and Mr. Eisenman conferred, and that the specifications were changed; in fact as far as we could learn from the testimony the standards were lowered in the overcoatings and in the blankets, and there was no evidence of approval by Gen. Sharpe. Those specifications ordered were directed to the depot quartermasters, and there is an order here on record that you issued directions to the depot quartermasters to take up all questions of cloth, cloth purchase, specifications, etc., with Mr. Eisenman. Now, this is very important for this reason: The statement is made by experts that the uniform cloth in the Army is not as durable and not as warm as the Army had heretofore, and that Mr. Eisenman and this wool committee, under that authority issued by you, changed those specifications and standards.

Secretary BAKER. Is there no conflict in the testimony on that?

Senator FRELINGHUYSEN. I know of no conflict in the testimony on that.

Secretary BAKER. I have not followed it, but I understood that the woolen manufacturers—somebody, the president or somebody in their association—testified that the cloth was adequately strong and adequately warm.

Senator HITCHCOCK. I think Mr. Eisenman in his testimony denied that he had impaired the quality of the cloth, and only asserted he had changed the specifications of it. I think he denied the quality was impaired, Senator.

Senator FRELINGHUYSEN. The standards were changed, according to the testimony of one of the experts from the Quartermaster Department, and he testified that the quality of the cloth had gradually descended in scale under the specifications of Mr. Eisenman's committee. Now, the only interest I have in this, Mr. Secretary, is this: That there is a very important question—the clothing of the soldiers in the Army—and I think some higher authority than a committee of private citizens should determine how the Army should be clothed.

The CHAIRMAN. Pardon me, but was not the testimony of Mr. Eisenman to the effect that this matter of the change, of the addition of reworked wool, was taken up with the officers of the Army, a board of three or more, and while they protested at first, they afterwards became converted to the propriety of reducing the amount?

Senator FRELINGHUYSEN. I should like to see that testimony. I have tried to find it. I can not find anything in the testimony that there was any authority for the changing of the specifications below that of the Army before. This is not a trial, Mr. Chairman; it is an inquiry. All that I want is to see the Army of the United States clothed as well as the armies of Europe, and with as good clothing and with as warm clothing, and I think it is time now for us to at least recommend to one of the departments which has some authority in the Government to consider this promptly and determine whether any future purchases shall not be of a better grade of clothing.

Secretary BAKER. I shall be very glad to have the question examined by the most competent experts I can find. I entirely share the view that we ought to have the best cloth in the service.

Senator MCKELLAR. May I ask you, in doing that, not to select as experts any interested parties?

Secretary BAKER. Yes; I would be very happy to agree to that if I can find anybody who knows anything about it and is not interested.

Senator MCKELLAR. If you or your department can not find them, if you will call on me I think I can find somebody somewhere.

Secretary BAKER. I will make a better proposition than that: I will be perfectly willing to have the cloth made any weight this committee wants it.

Senator HITCKCOCK. Would it not be wise to cable Gen. Pershing and ask him to make an investigation and report to you whether the quality of the English cloth is better than ours, whether the quality of the French cloth is better than ours, wheher it is more suitable for trench warfare than ours, and whether it lasts longer than ours?

Secretary BAKER. I shall be very glad to do that, but Gen. Pershing has in France a very large staff of officers, a very large number of most competent quartermasters in the Army, men of lifelong experience in clothing in the Army; they are formed into a committee at his headquarters to study questions of clothing and to compare British and French with American practice, and it is their duty, without any instructions from us, to make observations and criticisms, and every day the cables bring a long list of things they suggest.

Senator HITCHCOCK. Have they advised the department that the British cloth——

Secretary BAKER. I never heard anything about the clothing; no, sir.

Senator HITCHCOCK. It is strange that after all these years of experience, that the British, French, and German clothing should be 4 or 5 ounces heavier than ours and nothing said about it, and no notice taken of it. Either they are wrong or we are wrong.

Secretary BAKER. Nothing said so far as appears in the correspondence, but I shall be very glad to ask Gen. Pershing to have his department do that.

The CHAIRMAN. Do you know why Gen. Pershing ordered quite large yardage for his soldiers from the British mills?

Secretary BAKER. Yes; I think because ours had not gotten over in time.

The CHAIRMAN. It was not because of the texture of the material?

Secretary BAKER. No; Gen. Pershing has been obliged to make a number of purchases over there. We have encouraged it every time, as it means so much tonnage less of transportation.

The CHAIRMAN. The quality being taken over by his men, I understand, is of the texture we had when war was declared?

Secretary BAKER. Yes—I am not certain about that. Certainly that originally taken over was of the initial supply, but whether any was given of the lighter weight I can not say.

Senator MCKELLAR. Very little, if any, according to the testimony.

Senator FRELINGHUYSEN. Gen. Sharpe testified, when the committee was convened to inquire in regard to the shortage of overcoats and uniforms, that there were strikes and lack of capacity among the garment workers, and the delays in the deliveries were due largely to that. Now, I procured a list of manufacturers who were making the garments, and certain large contractors who were making a large number of uniforms, and I wired them, asking if they had any strikes in their factories. They stated they had not, and that there was nothing that would interfere with their deliveries; but one concern by the name of Kirschbaum, that is making 4,000 overcoats a day, stated that the deliveries would be interfered with in the future if the drastic rules and regulations prescribed by the Bureau of Labor Standards, which you have appointed, were pressed on the manufacturers. A contract which had been prepared by that committee——

Secretary BAKER. They did not prepare it. They were given the duty of inspecting and the enforcement of it, but they did not prepare it.

Senator FRELINGHUYSEN. What was the necessity of that contract, the change in it?

Secretary BAKER. The contract was made primarily to accomplish three purposes: To protect the garments from being made in congested tenements and subjected to the possibility of inoculation with disease; second, to introduce such a standard of price and conditions of labor as would prevent labor disturbances interfering with a continuous supply. In other words, to get a contented and just dealing with labor supply, so it would not be likely to be interrupted; and, third, to induce an obsolescence of State regulations and necessary minimum safety regulations for the workers employed.

Senator FRELINGHUYSEN. Those standards were not prescribed for any other department, were they—the Marine Corps or the Navy?

Secretary BAKER. I do not know that, Senator.

Senator FRELINGHUYSEN. Or any other branches of the Ordnance or the War Department?

Secretary BAKER. Probably not; but, of course, the garment-making industry is peculiarly an industry which has hitherto been relegated to the tenement house and is largely in the hands of women and children, and is, therefore, the industry in which the greatest abuses of labor and the greatest frequency of labor disturbances have occurred.

Senator FRELINGHUYSEN. When these rules were formulated by this committee were any of the garment workers or various associations—and I understand there are a number—called in conference?

Secretary BAKER. I can not remember that, Senator?

Senator FRELINGHUYSEN. You are speaking about the rules?

Secretary BAKER. Yes; about the rules.

Senator FRELINGHUYSEN. Would it not have created possibly a better understanding if they had been called in?

Secretary BAKER. I can not answer that. There has been no difficulty about it.

Senator FRELINGHUYSEN. There was a difficulty in the shortage of garments, in the production, and we have statements here from the associated boards of trade in Rochester, associations in New York, the board of trade in Newark, and manufacturers in Philadelphia that there was a large capacity for garment manufacturing in those towns, and yet Gen. Sharpe testified that there was a lack of capacity. Now comes the word that by reason of these drastic rules that the capacity production will be greatly curtailed, and many of these garment workers will be compelled to either force the Government to commandeer their plants or decline Government contracts.

Secretary BAKER. Senator, of course you are dealing with very general statements.

Senator FRELINGHUYSEN. That is all I have got. I am handicapped in making an inquiry.

Secretary BAKER. I am simply describing the difficulty of making a comment upon general statements. It will have to be general. Those specifications in that contract were made for the purpose of protecting the people in the garment-working industry against abuses, either as to their safety or their hours of labor, to such an extent as to produce a contented condition in the garment-making industry and not have the supply interrupted by labor difficulties. Now, I think those standards are modest standards; I think every one of them has the approval of the people who have been interested in the garment-working industry for many years. They are not flashed out of somebody's head overnight, but dealt with good conditions in the garment-working industry.

The CHAIRMAN. Was the personnel appointed to do that persons who understand the business and did they know anything about this?

Secretary BAKER. At least two of them were experts—one of them the greatest expert in America on the subject, and a person who has no interest of any sort except the interest of the garment workers.

The CHAIRMAN. Who is that?

Secretary BAKER. Mrs. Kelly.

The CHAIRMAN. Who are the others?

Secretary BAKER. Mr. Kirstein, who is a member of the firm of E. A. Filene, in Boston, and the other a reserve officer, Capt. Crusak.

The CHAIRMAN. I think it has been said here that one was a socialist and one a pacifist. They would not be interested in getting very far——

Secretary BAKER. It is true Mrs. Kelly is a socialist, yet I happen to have known Mrs. Kelly for 20 years, and I know in that 20 years she has devoted her time, without cessation, to the intimate and expert study of the conditions under which women and children work in industry, and I doubt whether anybody in America has contributed as much to the introduction of a proper point of view in the life of our people as it affects the working women and children as Mrs. Kelly.

Senator SUTHERLAND. Some are operating under these rules?

Secretary BAKER. Yes; they are the minimum rules of those factories.

Senator SUTHERLAND. So the prices you are offering these people contracts under were sufficient to warrant their operating under these rules?

Secretary BAKER. Yes; practically every requirement in there, so far as setting a standard, is already imposed by State laws—most of them.

Senator FRELINGHUYSEN. Mr. Secretary, I think this contract is a little bit one-sided. I think it imposes certain restrictions upon the manufacturer that gives him absolutely no appeal, no leeway whatsoever. I am going to suggest that an opportunity be given by your department, when they impose these regulations, and upon a class of industry upon whom you will rely in the future for a large production, that you give them an opportunity to be heard before these regulations are imposed. You fix a minimum wage scale. You impose, in section 18, the determination of this board which you have created finally, that—

> Whenever a determination is required to be made by the said board, such determination shall be final and conclusive on the parties hereto unless otherwise indicated herein.

Now, the exception is an appeal to the Quartermaster General, but it imposes a fine, I think, something like $5 a day. All I have to say about it is this: That my sense of justice and fairness would impel me to the belief and judgment that at least the smaller concerns who are making uniforms should be given an opportunity of a hearing before those drastic rules are imposed by the War Department of this Government.

Secretary BAKER. I should like to make one comment on that, Senator. That contract was made, and its predecessor, as far back as May—this was the second contract covering these things—certainly June; and from that time until now I have been willing to see and have seen everybody who wanted to discuss its terms or wanted them modified, or wanted its enforcement moderated, and I have not yet had a single person come to me with the suggestion that any requirement in that contract was excessive.

Senator FRELINGHUYSEN. This statement was made before this committee that it would impair production of wool, prevent some of the largest uniform-manufacturing concerns in the country from complying with its conditions.

(Thereupon, at 5 o'clock p. m., the committee adjourned until Friday, January 11, 1918, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
UNITED STATES SENATE.
Washington, D. C., Friday, January 11, 1918.

The CHAIRMAN. The committee will come to order.

STATEMENT OF HON. NEWTON D. BAKER, SECRETARY OF WAR—RESUMED.

The CHAIRMAN. Mr. Secretary, there is quite a general feeling amongst those with whom I have come in contact that the outlook for the production of powder is not good. In other words, there is a feeling that with the present production and what the Government proposes to do there will still not be a sufficient amount of powder to meet the requirements of ourselves and, possibly, the demands of the allies upon America. Personally, I know nothing about it, but I wish to place before you a statement that I have received from a gentleman who wrote me in confidence. I suppose that means that it is in confidence only as to the name, which I will give you in confidence, but which I prefer not to be mentioned in the record. I will state what he says about it.

Secretary BAKER. Mr. Chairman, I think the questions of quantity of powder and provision for manufacture had better be discussed in executive session.

The CHAIRMAN. You think so?

Secretary BAKER. Yes, sir.

The CHAIRMAN. Perhaps that would be a better plan.

Secretary BAKER. I would be glad to call attention to the facts, but I think that should be done in executive session.

The CHAIRMAN. Then, I will not put to you the question now.

Senator WEEKS. Let me ask one question about powder at this time. Are you satisfied that sufficient arrangements will be made when the unit which is under construction at Charleston, W. Va., is completed?

Secretary BAKER. How do you mean, Senator?

Senator WEEKS. That sufficient capacity will be provided?

Secretary BAKER. Oh, no; that is only a part of the project.

Senator WEEKS. No provision has been made to undertake this construction at Nashville, Tenn.?

Secretary BAKER. Not as yet. That is a part of the plan that is being pushed forward.

Senator WEEKS. You are depending upon powder from manufacturers who will get their full capacity as soon as contracts are completed, I assume?

Secretary BAKER. The private manufacturers are already working to fullest capacity—at least the Du Pont plant is—and the product of that plant is allocated between the allies and ourselves.

Senator WEEKS. It is rather difficult to ask these questions and not encroach upon the question of amount, which I do not want to do. What I want to get at is this: Suppose we have an army of 2,000,000 men in the field a year from now, which is not at all improbable, of course. That army will require so much powder. Where are you going to get it?

Secretary BAKER. Those are speculations, Senator WEEKS, that I would prefer to deal with in executive session.

Senator WEEKS. I am quite willing to do that; but I must say that I am personally troubled about the powder situation.

Secretary BAKER. I think I can relieve you. I think that the program is adequate.

Senator WEEKS. I do not wish to make any exposure that is going to harm the service, of course.

Senator WADSWORTH. Mr. Secretary, yesterday when we adjourned we were discussing the question of the form of contract prescribed by the War Department in garment-making work. Senator FRELINGHUYSEN was asking some questions at that time. He is not here now, but I suppose he wants to continue along that line. I would also like to ask you if there is a provision in that contract which prevents a manufacturer making the contract having any of the work done outside of his plant?

Secretary BAKER. There is a provision which prohibits it being done outside, except in cases subject to inspection and approval.

Senator WADSWORTH. Approval by whom?

Secretary BAKER. By the Board of Standards.

Senator WADSWORTH. Inspection and approval by the Board of Standards?

Secretary BAKER. Yes, sir.

Senator WADSWORTH. Is the inspection power lodged in the Board of Standards regarded by the War Department as superior to the inspection systems now in vogue in the States under the Labor Department or the Health Department?

Secretary BAKER. I would not say that. The Board of Standards are, in theory of law, simply persons selected by me to advise me. They are my eyes. As I know the character and familiarity of the members of that board with their subjects, I rely on their judgment. The question as to whether they are more rigid in their inspection than the State inspection bureaus is a question that might be answered "yes" or "no." As a matter of fact, the Standards Board has declined to recommend for approval contracts with some companies which are operating in defiance of some of the laws of some States.

Senator WADSWORTH. Has the Board of Standards, within your knowledge, declined to permit the letting of contracts to manufacturers who have some of the work done in what are known as loft factories?

Secretary BAKER. I could not answer that question in that form. They have declined to approve places where the laws, State laws, with respect to fire escapes and sanitary appliances were not complied with.

Senator WADSWORTH. You are sure that they have not exercised the veto power in cases where such laws are complied with?

Secretary BAKER. So far as I know they have not.

Senator WADSWORTH. In the city of New York it has been the custom for many years for garment manufacturers to have several elements in their work performed in what are known as loft factories, these loft factories being installed in very large, modern, concrete and steel buildings, where thousands of men are employed, situated mostly in the middle of the island of Manhattan, a block or so from Fifth Avenue. The impression seems to be that there is a veto on any manufacturer, or some manufacturers, taking contracts for that work if the work is to be done in a so-called loft factory. As a result a large number of people are out of employment. There have been mass meetings, and these people have asked for a chance to work on this Government work.

Secretary BAKER. That is perfectly true. However, the withholding of the approval is not based upon the consideration that the work is to be done in a loft factory. It is based upon sanitary and health considerations and precautions. In many instances, I might say, the withholding of approval by the Standards Board has been conditional, the understanding being that they would withhold it if such and such things were not done in order to bring about the proper conditions.

Senator WADSWORTH. These loft factories are not permitted in the city of New York without compliance with the laws of the State and the health and sanitary regulations of the State.

Secretary BAKER. Senator, I have been mayor of a city and I know from experience, as you probably know, that no matter how excellent a law may be there are always evasions which are difficult to control.

This Board of Standards, being experts, and having the most intimate and personal contact with the conditions, makes its approval, or withholds its approval, based upon personal inspection by competent inspectors, and does not proceed upon the assumption that because the State of New York has passed a certain law the conditions are all right.

Senator WADSWORTH. Of course, Mr. Secretary, I would not urge that the Government should have its work done in plants that are insanitary or dangerous to the life or health of the operators, but I was wondering if there was not some danger that the restrictions might be made so severe and so rigid, as they affect the operators, that the soldiers in the field will be the ones to suffer from a lack of clothing.

Secretary BAKER. Of course, it should be possible to avoid either of the two evils, but the evil of the oppression and devitalization of the lives of women and children in the industry is, at least, equally important, as compared with a slight delay in the provision of uniforms. I hope that these standards are so practical and reasonable that they will not delay the clothing of the soldiers. I can imagine nothing more important to our military solidarity and unity with respect to the clothing of the soldiers than the question that the Government should not permit itself to participate in the oppression of women and children.

Senator WADSWORTH. My views are somewhat in accord with yours, Mr. Secretary, except as to the characterization of the delay as slight. It has been considerable.

Secretary BAKER. That, of course, is a question of judgment.

Senator WADSWORTH. Do you think any of the provisions of that contract would operate as an invitation on the part of inspired trouble makers to handicap the work of the Government? A witness here the other day said it was his belief that it was an invitation for trouble makers, inspired through German propaganda, to come into factories and stir up trouble and make operators delay the production of uniforms. For that reason he and others were declining to sign contracts.

Secretary BAKER. Any requirement in a contract which looks to the betterment of conditions is to that extent an invitation to trouble makers who do not want to comply with the standards, but I think the contract is otherwise free from objection on that point.

Senator WADSWORTH. The witness who was here did not indicate in any way that the trouble makers would be those who did not want to comply with the standards.

Secretary BAKER. Who would they be, then?

Senator WADSWORTH. They would be those who wanted to hinder the work of the Government in this war.

Secretary BAKER. How could they make trouble?

Senator WADSWORTH. I understand there is a provision in the contract which compels the manufacturer to recognize not only a representative of the workers in the factory, which, I concede, of course, is a proper policy, but also anyone who is a representative of the workers without the factory.

Secretary BAKER. I think that is in there.

Senator WADSWORTH. Is not that latter thing an invitation for people to come into that factory—and in many of these factories a large number of the operators can not speak English—and stir up trouble?

Secretary BAKER. I think the absence of it would stir up trouble. If you had a lot of operators who could not speak English and could not present their grievances to their employers, you would deprive them of the right to speak through somebody who could speak English, and I think that might stir up trouble.

Senator WADSWORTH. There are, so far as I know, English-speaking people within the factories. I did not mean to say that no one in the factories could speak English. I believe that a large number can not speak English.

Secretary BAKER. There are places where none of them can speak English fluently.

Apart from that question, there would not seem to be anything that would tend to stir up trouble.

If a manufacturer himself agrees to receive representative persons on behalf of his own employees, and if you and I were workers in a factory of that kind, and somebody wanted to stir up trouble with us, he might very well inflame our imagination if he would say, "Your employer will not let anybody else except yourself come in, and if you come in you will be discharged."

Senator WADSWORTH. Under the form of contract now provided the manufacturers are now compelled to recognize the representative of the workmen from within the factory.

Secretary BAKER. If he accept the contract.

Senator WADSWORTH. Of course, and he does not recognize him if he does not accept the contract. Your arguments would hardly hold good with respect to the suggestion just made that the workmen could be inflamed or terrified if they had one of their own number.

Secretary BAKER. I was trying to find out what a trouble maker would do who came into the factory operating under this contract as distinct from a contract which did not allow the principle of representation. As a matter of fact, the principle of representation is deeply embedded in the whole Anglo-Saxon law, and the poorest man who appears in court is entitled to a lawyer, and the introduction of that principle into the relation of employee and employer is not at all foreign to experience or justice.

Senator WADSWORTH. I am not combating that principle at all, but I am wondering whether, when it becomes a part of the contract between the Government and a man upon whom the Government relies to produce uniforms, it should be confined to a representative of the people in the factory.

Secretary BAKER. Let us take that clause with the other clauses with which it is to be read. I am sorry that I have not a copy of the contract with me. As I recall, it provides that a man who makes one of the contracts agrees to recognize delegations of his own employees or persons from the outside representing delegations of his own employees, who undertake to adjust differences and disagreements with them, but if that fails the Government is to have the right to adjust those differences and disagreements, so that if there should be any oppression on either side the final resort is to the Government, and that power is reserved to the Government in order not to allow threatened disputes between employer and employee to delay production of the necessary garments.

Senator WADSWORTH. I am in complete sympathy with the object in view. Will you say, Mr. Secretary, whether it has come to your knowledge that any considerable number of manufacturers are declining to sign the contracts?

Secretary BAKER. There have been some to whom contracts have not been awarded because they have not been approved by the board, but otherwise I have no knowledge that that was the case.

Senator WADSWORTH. It has been testified here by one of the largest manufacturers that his concern and several others would not sign it.

Secretary BAKER. I have some data about the operation of that board which may be of interest to the committee. May I read a sentence or two of this into the record?

The CHAIRMAN. Yes.

Secretary BAKER (reading)—

In June, 1917, before the creation of the Board of Control of Labor Standards for Army Clothing, the half-century-old practice and tradition of sending Army uniforms, including those for private soldiers, into the tenement houses still persisted.

The consequent protests from philanthropic bodies, reechoed later on by the mayor's committee in New York City, led to the appointment by Secretary Baker of a committee of inquiry. In the light of facts presented to him by this committee, the Quartermaster General made completely effective his previous rulings on the subject summarily forbidding all leakage of private soldiers' uniforms from contractors' factories and workshops into the tenements for hand finishing. Only one woman has since been found in her home at work on privates' uniforms. A change in the specifications which permits machine work in place of handwork has made it unprofitable to send goods out for work in the tenements.

This shows what the board has done and the purposes it had in view and those accomplished. I shall be very happy to include it in the record as a part of my statement.

The CHAIRMAN. By whom was it prepared?

Secretary BAKER. By Mr. Kirstein, who was chairman of the board. I can cite some of the reasons for disapproval after inspections had been made. [Reading:]

The reason for disapproval of almost all of the 52 shops mentioned above was some condition involving fire hazard, as shown by the following more detailed classification:

Cause for disapproval of the 52 shops.

Two means of exit, neither of which was up to standard	21
Two means of exit, of which one was not up to standard	11
Condition of building making necessary installation or improvement of interior fire alarm	5
Only one legal means of exit provided	4
Dwelling house, therefore prohibited for manufacturing purposes	4
Fire hazard from bad housekeeping conditions	3
Doors not up to standard	2
Extremely poor sanitation	2
Total	52

Senator WEEKS. Don't the State law provide for all these things?

Secretary BAKER. The State law was not being observed.

Senator WEEKS. In what State was this?

Secretary BAKER. I do not have that before me. I do not know.

Senator WEEKS. What complaints were made to the governor of the State?

Secretary BAKER. I do not know.

Senator WEEKS. Shouldn't that have been done?

Secretary BAKER. It should have been done.

Senator WEEKS. Why have we a State and National organization doing the same work?

Secretary BAKER. They are working in perfect harmony.

Senator WEEKS. What is the necessity for the two, then?

Secretary BAKER. The State organizations, as I understand it, are not adequately supplied with inspectors.

Senator WEEKS. Did you say this was the State of New York?

Secretary BAKER. I do not know that.

Senator WEEKS. Will you find out where it is, so that attention may be called to the governor of the State, in order that these conditions may be improved?

Secretary BAKER. I will be glad to take that matter up and have the information supplied to the governor of the State.

Senator WEEKS. It seems to me that would prevent a duplication of work and effort.

Secretary BAKER. They are now working in perfect harmony.

Senator WADSWORTH. There is a distinct impression in New York that they have the most rigid system in the country.

Secretary BAKER. My impression is that it is very good.

Senator WADSWORTH. In spite of that institution, the O. K. of the inspectors and city health officers is vetoed by this committee.

Secretary BAKER. I am not so advised.

Senator WADSWORTH. I am not positive of it myself, but it is a very distinct impression.

Secretary BAKER. I would be surprised to know that it is.

Senator WADSWORTH. A vastly increased number of uniforms could be made in that city alone.

Secretary BAKER. This item is in line with what I have said before [reading]:

In 18 out of 52 shops the board already knows through reinspection that the firms have either shifted work to more favorable quarters or actually begun work on required changes, in some cases completed. Six more of these shops will be given up in the event of a new award.

Cause for conditional approval of 17 shops.

Overoccupancy	12
Incomplete interior fire alarms	2
Fire alarm must be installed if 25 or more people are employed above ground floor	2
Required change in exit pending before the board of appeals of the fire department	1
Total	17

The CHAIRMAN. You might insert that into the record.

Secretary BAKER. I will be glad to do it.

REPORT OF THE WORK OF THE BOARD OF CONTROL OF LABOR STANDARDS FOR ARMY CLOTHING THROUGH DECEMBER 15, 1917.

THE SITUATION PRIOR TO THE CREATION OF THE BOARD.

In June, 1917, before the creation of the Board of Control of Labor Standards for Army Clothing, the half-century-old practice and tradition of sending Army uniforms, including those for private soldiers, into the tenement houses still persisted.

The consequent protests from philanthropic bodies, reechoed later on by the mayor's committee in New York City, led to the appointment by Secretary Baker of a committee of inquiry. In the light of facts presented to him by this committee the Quartermaster General made completely effective his previous rulings on the subject by summarily for-

bidding all leakage of private soldiers' uniforms from contractors' factories and workshops into the tenements for hand finishing. Only one woman has since been found in her home at work on privates' uniforms. A change in the specifications which permits machine work in place of hand work has made it unprofitable to send goods out for work in the tenements. This reinforces the ruling.

After the final ruling on the subject by the Quartermaster General, one firm was obliged to take, besides its regular space, a loft at a rental of $9,000, on account of the accumulation of uniforms brought back unfinished from the tenements on so large a scale had been the leakage from this plant.

Efficient factory methods and the application of the most modern machine power now save the time formerly lost under the incompetent arrangements of the tenement-house sweating system, with its hand-workers unsupervised and scattered in many different places.

Keeping the work in factories and out of homes obviously (a) reduced danger of spreading illness among the soldiers through the medium of garments exposed at length to the diseases so common in the tenements; (b) it accomplished a very considerable saving of time; (c) it is an advantage to the women to do the work under standardized factory conditions, subject to regular factory inspection. They can, moreover, now compare together the wages received by each—a thing impossible for isolated needleworkers in the tenements.

So chaotic were the labor conditions in July, 1917, that, at some distance from New York City, uniformed soldiers from the State forces guarded for several weeks the entrance to a uniform factory, the suggestion being thus conveyed to the employees and the public that the Government, fearing forcible interruption of the work, was protecting the contractor and hastening production.

Strikes were in progress also in several shops in New York City, and one contractor was clamoring for military protection. The principal premises of this contractor violated in several important respects the requirements of the State law in regard to fire hazards. Particularly dangerous were the overcrowded lofts, with aisles blocked by clumsy bundles of overcoats, high above the street, with insufficient exits and stairways. Employees reported that they had been threatened with punishment as traitors when they objected to an illegally long working day and to accepting wages at sweatshop rates.

The first activities of the board were suggested by the labor conditions above outlined.

DATE OF APPOINTMENT AND JURISDICTION OF BOARD.

On August 24 Secretary Baker created administratively the Board of Control of Labor Standards for Army Clothing, to promote the steady flow of finished uniforms from the contractors' factories to the quartermasters' depots, the camps, ships, and trenches. This the board is instructed to do by removing, so far as possible, all preventable causes of labor trouble. He continued the personnel of the committee of inquiry: Mr. Louis E. Kirstein, chairman; Mrs. Florence Kelley, secretary; and Capt. Walter E. Kruesi, Q. M. O. R.

The jurisdiction of this board has been confined to labor standards in factories working on Government contracts for Army coats, overcoats, and breeches. The board has no power whatever over distribution of material or inspection and acceptance of product. The board does not give out contracts. It merely approves or disapproves shops referred to it by the purchasing office or depots of the Quartermaster's Department on account of their fire, sanitary, and labor conditions.

OFFICE AND PERSONNEL.

An office was leased at 116 West Thirty-second Street, New York City, September 1, 1917. A staff was appointed as follows:

An expert statistician was placed at the service of the board at a nominal salary by the Institute for Government Research on September 1, 1917.

An office manager was appointed September 1, 1917.

A fire-hazard inspector was appointed on a part-time basis October 1, 1917.

Six inspectors of labor conditions on full-time service were appointed September 28, October 1, October 8, two on October 18 and December 1. The appointment of another inspector is now pending. An inspector of wage conditions was assigned to the board from the New York depot November 5.

Three stenographers were appointed on October 1, November 3, and November 12.

A messenger was appointed September 27.

In addition, four inspectors of labor conditions were appointed at nominal salaries, who are giving occasional service to the board.

As the fire-preventon inspector has for several weeks been called upon for practically full-time service, the regular full-time staff of the board is at present as follows:

One statistician, one fire-prevention inspector, one office manager, seven inspectors of labor conditions, three stenographers, one messenger.

CLASSIFICATION OF LABOR CONDITIONS UNDER NEW CONTRACT.

The work of drafting a new contract between the United States Government and manufacturers contracting for Army uniforms proceeded from the time of the appointment of the board until October 31, when the new form was authorized. This was drafted by legal experts connected with the office of the Secretary of War. The contract in its final form was approved by the Secretary of War, the Quartermaster General, and the board. Labor standards, which are covered by the terms of the new contract, fall under the following general classifications:

Wages and hours.
Condition of shops in respect to safety and sanitation.
Prohibition of child labor.
Prohibition of home work.
Labor disputes into which the board may make inquiry and which it may settle or cause to be settled.

Prior to the authorization of a new contract the board was called upon to report to the depot quartermasters on the physical conditions in factories. Under date of September 27 the depot quartermasters were directed by the Quartermaster General not to let contracts until the board had certified that the shop conditions were satisfactory.

INSPECTION OF SHOPS FOR SANITATION, PROHIBITION OF CHILD LABOR, AND PROTECTION FROM FIRE RISK.

The first request for a report on conditions of a shop came to this board from the depot quartermaster, New York, on September 28, 1917. However, inspection was requested on only one or two shops, until October 13, when a long list was submitted to this board. From that time on the work of inspection of factories and of reporting to the depot quartermasters has continued steadily. Reports have been sent to the depot quartermasters of New York, Philadelphia, and Boston, and to the purchasing office of the Quartermaster General's Corps in Washington. These reports have been based—

In New York City.—(a) Upon inspections made by agents of the board in regard to sanitation and child labor; and (b) upon full reports received by the board from the New York City Bureau of Fire Prevention in respect to safety.

Outside of New York City.—(a) On inspections made by agents of the board in respect to child labor and sanitation; (b) on inspections made by the fire-prevention inspector of the board, or on inspections and reports made by the boards of fire underwriters in various localities.

In New York City every report has included conditions in respect to both sanitation and fire protection. In other localities some preliminary reports have been sent in regard to the safety of the building, the sanitary inspection to be made at a later date in case an award is granted.

A duplicate of the report made to the depot quartermaster or to the purchasing officer is mailed by the board to the firm under consideration.

Original inspections have up to this time been made in New England, New York City, New Jersey, Philadelphia, Maryland, Georgia, Alabama, New Orleans, and St. Louis. The fire-protection inspector is now at work in the Middle West. It is planned to district the country and to have, in addition to the New York force, inspectors with regular headquarters in Boston, in Philadelphia, and in Chicago.

It has been desirable to make some inspections prior to a request for a report where firms are already carrying present contracts and will probably come up for new ones. This is necessary on account of the speed with which reports are desired by the depots as soon as a request is made.

Reinspection has been carried on to a considerable extent in New York City and in other localities whenever a firm has notified the board that the desired changes have been completed.

STATISTICS OF INSPECTIONS.

The board has been asked for reports on 129 firms and has reported on 101. Of the remaining 28, 16 are in the territory which has not yet been covered and 12 are pending. In addition the board has inspected the shops of 59 contractors for which the depot has not requested reports. Of these, reports have been sent in on 11 firms. On 48 material is now available, and reports can be furnished promptly upon request. The depot quartermasters were notified that the 16 firms in distant localities could not be inspected immediately. They were notified to proceed with any contracts pending a report from the board, which would be made at the earliest possible moment. This was done because it was impracticable to effect a satisfactory organization at once for the entire country.

Thus the board has sent in reports on 112 firms. These reports covered 199 shops, as many contractors carry on their work in several shops. The board approved or disapproved each shop on its own merits. In almost every instance, whether the shop was approved or not, the changes necessary to bring it up to standard have been indicated, but where these have been of minor importance the board has approved the shop in general. The board's recommendations have been as follows:

Analysis of reports according to firms.

[Whenever the board has disapproved a shop the report has stated specific changes, the carrying out of which would reverse this decision. Therefore no disapproval is necessarily final. These figures are submitted in detail according to localities in appendix of report.]

Number of firms whose shops are approved	65
Number of firms whose shops were approved conditionally	5
Number of firms part of whose shops were approved and part disapproved	24
Number of firms whose shops were all disapproved	18
Total number of firms reported	112

As will be seen from the above figures, 18 out of 112 firms were entirely disapproved by the board for contracts until necessary changes were made in their shops. Two other firms were the only ones disapproved by the board for reasons apart from shop conditions in respect to safety and sanitation. One of these disapprovals was on account of labor trouble; the other on account of a pending prosecution against the firm by the New York City fire department. [The latter firm has nearly completed the necessary changes which will bring it up to the requirements of the fire department and of the board.]

Thus 20 out of 112 firms, or 17.9 per cent were entirely disapproved. Three of these have since been approved as alterations were completed. Half of these firms were at work under old contracts at the time of the board's inspection. The disapproval of the board does not affect present but only future contracts. Therefore a part of these contractors had time to make the necessary alterations without interruption of output between the date of the board's report and the expiration of their old contracts.

Analysis of reports according to shops.

[These figures are submitted in detail according to localities in appendix of report.]

Number of shops approved	130
Number of shops approved conditionally	17
Number of shops disapproved	52
Total	199

REASONS FOR DISAPPROVAL OF SHOPS AND RESULTS.

The reason for disapproval of almost all of the 52 shops mentioned above was some condition involving fire hazard, as shown by the following more detailed classification:

Cause for disapproval of the 52 shops.

Two means of exit, neither of which was up to standard	21
Two means of exit, of which one was not up to standard	11
Condition of building making necessary installation or improvement of interior fire alarm	5
Only one legal means of exit provided	4
Dwelling house, therefore prohibited for manufacturing purposes	4
Fire hazard from bad housekeeping conditions	3
Doors not up to standard	2
Extremely poor sanitation	2
Total	52

In 18 out of 52 shops the board already knows, through reinspection, that the firms have either shifted work to more favorable quarters or actually begun work on required changes, in some cases completed. Six or more of these shops will be given up in the event of a new award. The situation is as follows:

Shops already given up and work carried on in improved premises	5
Shops to be given up in the event of new awards	6
Shops in which Army work is discontinued	2
(Navy work and officers' uniforms are still being made in these two shops.)	
Alterations now in actual progress	8
Alterations completed and shops approved	3
Total	24

The shops approved conditionally were all in New York. When a conditional approval was given it was usually on account of excess occupancy. The crowding of lofts so that the numbers exceed those allowed by the fire regulations of the city is one of the frequent conditions in the present situation. This is caused by pressure to keep up output and by the unwillingness on the part of the depot quartermaster to allow them to extend into other lofts on account of the danger of their using subcontracting shops and the difficulty of controlling these.

Another bad condition which is prevalent is the obstruction of aisle space. The difficulty both of keeping aisles clear for exit and of keeping the garments from being walked upon and soiled is increased by the bulkiness of the articles manufactured, especially in the case of overcoats.

Cause for conditional approval of 17 shops.

Overoccupancy	12
Incomplete interior fire alarms	2
Fire alarm must be installed if 25 or more people are employed above the ground floor	2
Required changes in exit pending before the board of appeals of the fire department	1
Total	17

Home-work inspection.

Since the 1st of October the time of one inspector has been spent in following up clues as to the existence of home finishing on uniforms made under Government contract in homes. The cooperation was obtained of the New York State child labor committee and of the New York City firemen, policemen, and postmen through their respective departments. This means that there were many observers in all districts reporting on the situation.

During this time only one verified instance was found of home work on the uniforms of enlisted men. However, officers' uniforms are occasionally being found in tenements or en route to homes. These are not made under Government contract, but by private order in the same manner as quantities of civilian clothing.

HOURS.

The attempt to enforce payment at the rate of time and a half for work in excess of eight hours in one day was inevitably deferred to await signing of contracts in the form authorized by the Department of War on October 31.

STANDARDIZATION OF WAGE CONDITIONS.

From the outset the board was confronted with the ultimate necessity of regulating wage conditions. The wage question has been regarded as a cardinal point in labor conditions, both by employers and employees as well as by the general public. It played a prominent part in the discussion of conditions prevailing in contract shops in the public press at the time the mayor's committee of national defense was agitating the subject.

The prevalence of subcontracting and home work is largely bound up with the wage question. The great diversity of wage conditions in shops of different types greatly complicated the situation. The wages paid by firms manufacturing their goods in large factories under their own control differ radically from those paid by subcontractors working for manufacturers in small shops; wages paid by nonunion concerns are generally lower than those paid by concerns working in agreement with trade-unions; again, wages paid in the South are generally lower than those paid in the North. Owing to this diversity of conditions and to the fact that wages paid are an important factor of the price paid by the Government for uniforms, it was felt that it would be necessary to proceed with great caution before taking any definite steps in the regulation of wage conditions.

The board thought it best, therefore, to make first a detailed although rapid survey of wage conditions in shops of the various types mentioned, both in New York City and other localities, before determining upon a policy of regulation. The short time available for this work made it necessary to intrust it to one expert, without organizing a force of investigators, which would have required considerable time. As the reports as to wage conditions prevailing in various parts of the country were received, various methods of regulating wage conditions were brought up from time to time before the board and their relative advantages and disadvantages considered. They were also taken up with the representatives of the United Garment Workers' Union and the Amalgamated Clothing Workers of America. The leading officials of both organizations were emphatic in their opinion that it would be an error for the board to establish minimum weekly rates of wages owing to the numerous difficulties involved. This was also the opinion of various manufacturers interviewed on the subject. The board therefore was finally led to the conclusion that if any regulation of wages was to be attempted it would have to be on the basis of fixing minimum piece rates.

While this seems to offer the only available method of adequate wage regulation, the task is by no means a simple or easy one. While articles of Army clothing are fairly uniform, this is not true as to the methods of their production. Several operations in the manufacture of an Army uniform can be performed in a variety of ways, involving the employment of labor of different degree of skill, as well as varying amounts of labor. In such cases a uniform piece-rate schedule would be an impossibility.

Nevertheless, a careful analysis of the operations involved in the manufacture of Army clothing made in several shops, including the Government clothing factory at the quartermaster's depot in Philadelphia, has convinced the board of the practicability of attempting to regulate wages by means of a minimum standard of piece rates. This work is now approaching completion. It will involve the promulgation of a set of piece rates for each of the five articles of clothing over which the board has jurisdiction (woolen overcoats, service coats and breeches, and cotton service coats and breeches).

In the case of operations, for which two or more methods of production are known to exist, alternate rates will be provided for each of the standard methods known. The rates will be minimum rates, leaving the employers and employees free to agree upon higher rates. They will have the advantage of making the labor cost definitely known in advance to both the contractors and the employees, and as the rates are to be made part of the contract, they will enable the contractor to estimate his profit at the time he takes the contract with much greater certainty than is the case to-day. They will have the advantage of placing all labor, both male and female, both North and South, the slow workers and the fast, upon the same basis of compensation per unit of product, permitting increased earnings as a reward for greater efficiency and skill and placing all contractors upon an equal plane in so far as labor conditions are concerned. They will do away with the unfair competition which exists to-day between employers who pay fair rates of wages through collective bargaining with their employees and those who are able in various localities and parts of the country to obtain the services of unorganized labor at much lower rates of compensation, while receiving from the Government the same price for their garments as is paid to their competitors who are less advantageously situated in this respect.

While the working out of the piece-rate schedules is taking place, a small force of inspectors is being trained in the intricacies of piece-rate adjustment, getting the necessary information at contractors' shops and tabulating data under the direction of the board's statistician.

LABOR DISPUTES.

The board has been called upon to consider the following labor disputes:

A strike in the shop of Jacob Reed & Sons, Philadelphia. Representatives of the company appeared before the board September 18.

A strike in the shop of Mark Cowen & Co., New York City. Representatives of the union appeared before the board September 18.

A threatened strike in the firm of Millar Mandel & Co., New York City. The superintendent of the plant appeared before the board October 2.

A labor dispute in the firm of Krieger Frankel Co., New York City. A member of the firm was given a hearing on October 23.

APPENDIX A.

Table of firms inspected Sept. 28 through Dec. 15.

	Grand total.	Number of reports requested by depots.			Number of firms inspected, reports not requested.		
		Total.	Reported.	Not reported.	Total.	Reported.	Not reported.
New York	90	65	59	[1]6	25	.....	25
Philadelphia	24	9	7	2	15	.....	15
New England	28	28	27	1	.....	.....	.....
Baltimore	13	3	1	2	10	2	8
St. Louis	8	8	7	1	.....	.....	.....
South	9	.....	.....	.....	9	9	.....
Other localities [2]	16	16	.....	16	.....	.....	.....
Total	188	129	101	28	59	11	48

[1] One of these was reported because the firm waived a tender. The rest are pending. Another proved on inspection not to be bidding for uniforms.
[2] Localities in which the board as yet has had no representative.

Analysis of reports of firms.

	Total.	Number of firms whose shops were—			
		All approved.	Approved conditionally.	In part approved, in part disapproved.	All disapproved.

APPENDIX B.
Staff.

Name.	Occupation.	Date of appointment.	Date of leave.	Salary.
		1917.	1917.	
Ruth S. True	Office manager	Sept. 1		$1,500
M. Cuzzin	Typist-messenger	Sept. 27		600
E. Dallet	Stenographer	Oct. 1		1,000
Florence Hyman	do	Nov. 3		1,000
Frances Ritchie	do	Dec. 17		1,000
Mary Orenstein	Labor inspector	Sept. 28		1,600
E. H. Sullivan	do	Oct. 1		1,600
Arabelle McKinstry	do	Oct. 8		1,600
Nellie Richardson	do	Oct. 18		1,600
Frederick King	do	do		1,600
Ruth I. Stone	do	Dec. 1		1,600
Stanley Ries	Fire expert	Oct. 1		[1] 5
Lieut. George Weber	Inspector of wage conditions.	Nov. 5		
Dr. N. I. Stone	Statistician	Sept. 1		[2]
Mary P. Sanford	Labor inspector	Nov. 9		[2]
Helen Stokes	do	do		[2]
Mary Wiggin	do	Dec. 8		[2]
Bessie A. R. Whitnall	do	Dec. 15		[2]
Freda Greenberg	Stenographer	Nov. 12	Dec. 15	1,000

[1] Per diem. [2] Nominal.

Senator WEEKS. I would like to ask the Secretary one or two more questions on that particular topic. As I read that contract, which I have not done recently, it seemed that very large powers were put in the hands of this social welfare committee, not powers relating to the welfare of the people especially, but powers of determining financial and similar questions between employer and employee. In your judgment, has that committee had sufficient experience as business men or women to warrant their being given such very drastic powers as exist in them?

Secretary BAKER. Their powers are to recommend, but I doubt whether a committee would be found which would be better qualified to pass on the question you refer to.

Senator WEEKS. Do you mean financially?

Secretary BAKER. Mr. Kirstein is a member of the E. A. Filene Co., of Boston, Mass. Surely, of all the companies that are entitled to be included among those that are considered best, this one is. It has large business operations.

Senator WEEKS. What is Mr. Kirstein's connection with the house?

Secretary BAKER. He is a partner, I understand.

Senator WEEKS. He is a partner?

Secretary BAKER. I so understand. I may be misinformed about that, but I think so.

Senator WEEKS. How about the other member of the committee? I refer to the male member now. What has been his experience?

Secretary BAKER. Capt. Kruesi is an Army officer, a reserve officer, brought in from civil life, and a social worker rather than a man of industrial experience.

Senator WEEKS. Has he had experience before?

Secretary BAKER. I do not think so.

Senator WEEKS. I assume Mrs. Kelly has had business experience?

Secretary BAKER. I can hardly say that she had experience in the sense of having executive charge of a commercial enterprise, but she has conducted inquiries and investigations covering a period of 20 years into the cost of manufacture, and has gone so thoroughly into that kind of work that I doubt whether anybody knows as much as she does about it, not to say more, with respect to these particular trades.

Senator WEEKS. What I have in mind is that these members of the commission may be, and quite likely are, well versed in everything relating to social welfare, but it seems to me that that kind of work and financial responsibility do not always go together and in harmony. Undoubtedly most people would agree that Billy Sunday was doing a work in his line that was quite wonderful, but he would hardly be able to settle a controversy between you and one of your employees; at least, I should think it would not be advisable for him to do it. The probabilities are that his very life would prevent his passing with good judgment on a judicial question.

Secretary BAKER. He would err on the right side.

Senator WEEKS. The right side is justice.

Secretary BAKER. If you can find it.

Senator WEEKS. I beg your pardon?

Secretary BAKER. If you can find it.

Senator WEEKS. The right side is justice. The right side does not always prevail on either side of a controversy when capital and labor are involved.

Secretary BAKER. No; I suppose it would be difficult to find a single case in which abstract and meticulous justice prevailed, but this committee has no such power to settle financial questions. It cooperates immediately not only with the Quartermaster General but with the depot quartermaster at Philadelphia.

Senator WEEKS. They can make a minimum wage?

Secretary BAKER. They can recommend it.

Senator WEEKS. Can't they make it?

Secretary BAKER. I think not.

Senator WEEKS. My recollection of the contract is entirely astray, then.

Secretary BAKER. They can on the question of settling a labor dispute, but not otherwise.

Senator WEEKS. But can they be legal arbiters in a labor dispute if it is an organization of government for that purpose?

Secretary BAKER. No; I think not. We have no legal arbitration system.

Senator WEEKS. We have what amounts to a governmental activity through a certain board for that purpose.

Secretary BAKER. We have a law, the Newlands Act, which authorizes the Government, in the case of certain labor disputes, to offer conciliatory functions, and in the event of conciliation failing it may cooperate in arbitration consented to and desired by both sides.

Senator WEEKS. You think this board would not conflict with that activity?

Secretary BAKER. Clearly not.

Senator WEEKS. One of the great difficulties we have met in governmental activities has been the amount of conflicting activities, it seems to me. I hardly know whom to appeal to under present conditions. Frequently men complain to me that they are passed along from one bureau to another. They think they have approached the right place to get the information which they desire, and they travel the whole length of the corridor before they finally do connect with the bureau which has that particular matter in charge. What I am particularly desirous to be assured of is that this activity does not conflict with some other governmental operation.

Secretary BAKER. I think it does not in any way possible, Senator. On the theory that the Secretary of War has the right to determine the terms of a contract to be made for emergency supplies it is of first importance to secure rapid and continuous production of cloth. A provision in a contract which requires submission of disputes which would otherwise interrupt the flow of manufacture to the final determination of the Secretary of War, after review by agencies created by him, could not be unlawful.

Senator WEEKS. Have you had complaints from manufacturers of uniforms relative to their inability to get contracts because of technical objections that are made?

Secretary BAKER. No.

Senator WEEKS. Have you ever heard of the American Uniform Co.?

Secretary BAKER. I have heard of it, but I know very little about it.

Senator WEEKS. Do you know anything about it?

Secretary BAKER. I can not remember who it was, but some official of the Government—either a Representative or some one else—brought some one of the American Uniform Co. to me, and I referred them either to Gen. Sharpe or Mr. Eisenman. The subsequent developments I do not know.

Senator WEEKS. I am not going to burden the record or you by going into considerable detail in this matter. In fact, the particular paper which I wish I had here does not seem to be here. As a matter of fact, this company, which had a capital of three-quarters of a million and a list of stockholders unimpeachable in character and financial ability, were unable for various technical reasons to get contracts. In the first place, the Quartermaster's Department seemed to be exceedingly technical about manufacturing on their own property, holding that they must own the property; that, in addition to that, they must own the machinery or have direct lease of the machinery. Do you think that it is good policy to throw that kind of embarrassment around a firm that wants to make uniforms when you are short of uniforms?

Secretary BAKER. All you have said so far I approve of. There are other things that——

Senator WEEKS. You would approve of that kind of a contract?

Secretary BAKER. I would approve of requiring them to have machinery of their own or to have it under such conditions of ownership or lease as to be quite certain they were going to be able to make good.

Senator KIRBY. You want them to be manufacturers, and not contract brokers?

Secretary BAKER. I want to be certain that they can fulfill their contracts when they get them.

Senator WEEKS. How would you be able to get at the standing of a concern except from the point of view of its financial integrity?

Secretary BAKER. I would have to know whether it is properly organized and whether it had any experience.

Senator WEEKS. This particular concern had made 500,000 uniforms for the British Government, or had contracted for 500,000 uniforms, and made a large part within 60 days.

Secretary BAKER. That would certainly be a circumstance to be considered.

Senator WADSWORTH. So far as capacity is concerned,, that would be controlling, would it not?

Secretary BAKER. Not necessarily so, Senator.

Senator WADSWORTH. So far as capacity is concerned?

Secretary BAKER. No. A great many people in this country have taken contracts for Great Britain and France and agreed to turn out——

Senator WADSWORTH. So far as the ability and the capacity of the plant is concerned to manufacture uniforms, the fact that they have manufactured 500,000 for the British would be pretty controlling, would it not?

Secretary BAKER. If they had manufactured them in a satisfactory way and there would be no change in the organization.

Senator WADSWORTH. Assuming that that was the fact.

Secretary BAKER. I think that would be conclusive of the question.

Senator WEEKS. This case was brought to my attention, and I gave considerable time to the examination of it. It seems that there was no reason why the contract should not be given to the American Uniform Co. If you know about that and the reason why they were not given the contract, I wish you would tell us about it.

Secretary BAKER. I have some statement on that.

Senator KIRBY. Is it not a fact, Senator WEEKS, that the records show that the American Woolen Co. was not permitted to have a contract because two of the independent manufacturers, representatives of the American Woolen Co., were in disfavor for having sublet contracts?

Senator WEEKS. I suggest that if Mr. Pollack has any suggestion to make that he write it and submit it to the chairman.

Senator KIRBY. I am asking the question. I just wanted to find out about that.

Senator WEEKS. I am not on the witness stand.

Senator KIRBY. I was just asking the question. Of course, if the Senator objects——

Senator WEEKS. I repeat my suggestion that Mr. Pollack write out his question.

Secretary BAKER. I have no personal knowledge of the ultimate decision of the American Uniform Co. question. I do not know what the record shows on that subject. I shall be very happy to add to my testimony such information as I can secure at the department.

Senator WEEKS. What I would like to know is, definitely, why the American Uniform Co. was not furnished a contract, because they had a large capacity, large capital, and had completed a large work for the English Government. We were in sore distress, apparently, to get uniforms for our people, and yet for one reason or another contracts were not given to the American Uniform Co. and similar concerns. I would like to know from you, definitely, for the record, why that was not done.

Secretary BAKER. You doubtless made inquiries of Gen. Sharpe ,on that subject.

Senator WEEKS. But we did not get any satisfactory reason, either from Gen. Sharpe or Mr. Eisenman.

Secretary BAKER. I do not know that that would be a subject about which Mr. Eisenman would know.

Senator WEEKS. He wrote a letter objecting to the contract being given to them, and, incidental to that phase of the question, Mr. Eisenman denied at one time that he had anything to do with the making of uniforms, and yet the correspondence was on record and was submitted to the committee, showing that he had objected to the contracts being given to manufacturers, and I think in this particular case, too.

Secretary BAKER. I should be glad to add a statement to my testimony on that subject.

Senator WADSWORTH. At one point yesterday during the hearing I asked you or the Assistant Secretary to refresh your memory on the question of the 9.5-inch guns and the French 240-millimeter gun.

Secretary BAKER. The Assistant Secretary tells me that he looked into the matter and he has found we are getting from American manufacturers 8-inch guns of French design; 9.5-inch guns of our own design; and we are making in France the 9.2-inch gun of French design.

Senator WADSWORTH. I thought that was the fact yesterday; in other words, we are not using the 240-millimeter gun.

Secretary BAKER. We are not making the 240-millimeter gun.

Senator WADSWORTH. Or using them?

Secretary BAKER. I do not know whether the 240-millimeter gun and 9.2-inch gun are the same.

Senator WADSWORTH. No.

Secretary BAKER. But we are getting from the French the 240-millimeter gun in France.

Senator WADSWORTH. It is strange, Mr. Secretary, that Gen. Crozier did not accede to that idea.

Secretary BAKER. Mr. Crowell has looked into the matter more recently than I, and he says that his information is that we are getting them from the French.

Senator WADSWORTH. The French 240-millimeter gun?

Secretary BAKER. If that is the equivalent of the 9.2-inch gun, we are getting it. We are getting, of course, the 75-millimeter and the 155-millimeter guns, but whether we are getting the 240-millimeter guns, I am not sure; but I will put that into the record.

Senator WADSWORTH. That was the purpose of my question, because Gen. Crozier had laid before us the entire artillery program, and according to his testimony those are the facts.

The question has arisen in my mind, and it persists in view of the fact of the tremendous need for what is known as middle heavies, of which the 9-inch gun is a type, whether it would not have been better in every way to have taken the French 240-millimeter gun, which has been proved in action for two or three years, whose ammunition is being made in this country in quantity production, and have used that instead of persisting in the design of the 9.5-inch gun, not one of which is in existence and for which no shells have been made.

Secretary BAKER. I am sorry I can not at the moment answer your inquiry, but I will be glad to put it into the record. You doubtless heard Gen. Crozier on the subject.

Senator WADSWORTH. Yes, sir. We asked Gen. Crozier questions along other lines, and at the conclusion of that particular topic the general, as I recollect it, said that that was a suggestion worthy of consideration.

Secretary BAKER. I can not add anything to that, sir.

Senator WADSWORTH. The reason it was impressed upon my mind so deeply is this: The interchangeability of ammunition is of tremendous importance if it can be achieved. I think every soldier and every civilian, for that matter, who thinks about it twice will agree to that. We have established apparent interchangeability with the French 75-millimeter gun by adopting their gun. We have established, apparently, interchangeability with the French 155-millimeter gun by adopting their gun. We had the same opportunity to establish interchangeability with reference to the 240-millimeter gun, but we did not do it.

Senator HITCHCOCK. I think I can tell you Gen. Crozier's reason. He said it was very important to have interchangeability as to small-arms ammunition and even of the small artillery, but there was comparatively so little of the heavy, large-size ammunition and large-size artillery that the interchangeability was not of the same importance.

Secretary BAKER. That is obviously true. The higher the caliber, the less important.

Senator HITCHCOCK. I do not mean by that, Senator WADSWORTH, to indorse that statement, but that was the reason that he gave.

Secretary BAKER. That is obviously true.

Senator WADSWORTH. I question, in view of the testimony given, whether that illustrates a broad view on the part of Gen. Crozier or the War Department. It is a fact that hundreds of thousands of 240-millimeter shells are used, though not as many as are used for the 75-millimeter gun. It is a fact also that 240-millimeter shells were being made in this territory. One of our greatest concerns had capacity for turning them out and continuing to turn them out, and yet that gun was abandoned. There has been no sufficient reason given why it was better to take a new gun of a different caliber, which has never been placed in production, whose design has consumed months and months, and for which there is no capacity.

Senator HITCHCOCK. I did not mean, Senator WADSWORTH, to indorse Gen. Crozier's statement. I was merely giving his reason.

Senator WADSWORTH. I understand that, Senator. I am addressing that remark to the Secretary.

Secretary BAKER. So far as I have knowledge on the subject, I will say that the working out of the program for heavy artillery is necessarily complicated by two considerations—productive capacity and the theory of the offensive. Now, the theory of the offensive, of course, is worked out by Gen. Pershing, and the task of Gen. Crozier is to secure knowledge of the requirements and comply with them. After Gen. Pershing has informed the department what his needs are, and after he has been told what the capacity for manufacture here is, taking his judgment of what the needs are, Gen. Crozier has doubtless made up his program. Of course, it can not be regarded as a fixed program, and the suggestion you have made and submitted to Gen. Crozier, and which you say he said was worthy of consideration, will doubtless be considered.

Senator WADSWORTH. Of course, so far as the problem of productive capacity is concerned, we had no productive capacity for 9.5-inch guns or 240-millimeter guns when we went into the war. That question, therefore, balances itself.

Secretary BAKER. That is hardly completely accurate, Senator. There were in this country at that time at least two, and probably more, manufactories which had the ability to make forgings for large guns and had boring plants and the general accessories and facilities necessary for the manufacture of heavy artillery or middle-heavy artillery, so that there was some question of manufacturing capacity which could be considered.

Senator WADSWORTH. I perhaps have misstated my idea of the situation. I do not mean to say that there was not productive capacity, but that the productive capacity for either was equal.

Secretary BAKER. And was inadequate.

Senator WADSWORTH. Was inadequate, and the same, so that the question balances itself.

Secretary BAKER. Clearly.

Senator WADSWORTH. I have been looking over your written statement of yesterday. Do you think the statement that the initial rush needs are substantially supplied is correct?

Secretary BAKER. Yes, sir.

Senator WADSWORTH. We have not the rush needs of artillery, have we?

Secretary BAKER. Yes, sir.

Senator WADSWORTH. For all purposes?

Secretary BAKER. For all purposes.

The CHAIRMAN. Is that statement entirely accurate?

Secretary BAKER. I understand it is perfectly accurate.

The CHAIRMAN. I can not understand how you can make that statement when you have not got enough guns in the cantonments to train the men.

Secretary BAKER. My mind was not on the American estimate. To that extent my previous statement was too wide. It would be better if we had artillery for training in the camps of this country. I said in my statement that our rush needs are satisfied. I think they are in this sense, that every soldier in France, or every one we expect to send to France, is adequately provided with artillery, either by manufacture or purchase.

Senator McKELLAR. If I may interrupt at this time, I may say to the Secretary that I was talking to a high officer in one of the national camps this morning. Of course, I shall not give his name, but he told me they had no artillery at that camp and had no machine guns at that camp.

Secretary BAKER. May I know the name of the camp?

Senator McKELLAR. I will give it to you in a moment. I have forgotten it.

Secretary BAKER. Can you tell where it is?

Senator McKELLAR. It is near New York.

Secretary BAKER. Is it Camp Upton?

Senator McKELLAR. That is the name, and they have neither machine guns nor artillery.

Secretary BAKER. Do they mean by machine guns either light or heavy?

Senator McKELLAR. He used that expression—that they have no machine guns or artillery.

Secretary BAKER. If he meant that they did not have enough, I agree to it; if he said they did not have any, it must have been a mistake.

Senator McKELLAR. He said "neither." I took it that they did not have any. He said that they have been training the boys without artillery and without machine guns as best they could. Under those circumstances, if this officer directly from the camp is correct——

Secretary BAKER. If he means that they have not as many as they need, he is perfectly accurate; if he means that they have not any, he is inaccurate.

Senator McKELLAR. If he means that he did not have enough, then we have not all that we need.

Secretary BAKER. No; we have not all that we need.

Senator McKELLAR. I understood you to say that we were well supplied.

Secretary BAKER. And much more than that is true. If the Ordnance Department had done nothing else but rush the building of artillery from the 1st of April until now, we could never in that time, by creating additional facilities besides those we already have, manufacture an artillery program adequate for the present needs of artillery for the soldiers in the training camps.

Senator McKELLAR. That is why we thought your statement was inaccurate when you said that the rush needs were supplied.

Secretary BAKER. I had in my mind the effective use of troops in conflict.

Senator McKELLAR. I misunderstood you, as I suppose the others did.

Senator WADSWORTH. The reason I called attention to the statement is this: It goes to the country and will undoubtedly tend to give the impression that there is not a shortage, and the public generally will believe that the rush needs, using that very expression, are substantially filled.

Secretary BAKER. That is so.

Senator WADSWORTH. Mr. Secretary, I beg leave to differ from you on that. Of course, if you confine what are termed the rush needs of the Army of the United States to the furnishing of guns to troops upon their arrival in France, your statement may be correct, but I do not see how it can be given that interpretation.

Secretary BAKER. Nobody will ever suppose that the War Department has finished buying and manufacturing things.

Senator WADSWORTH. Of course not.

Secretary BAKER. What I am referring to there is the original rush needs. The rush needs are such provision of artillery and artillery ammunition as will adequately equip the troops we are to use for defensive and offensive operations. That need is supplied. That it would be fortunate if we had an accumulation of artillery and artillery ammunition for training purposes on this side goes without saying. That we are accumulating the supply is evident; that it will ever be satisfied is not so, because when we get what we want we will need more.

The CHAIRMAN. Is that true, Mr. Secretary, notwithstanding the debacle in Italy and the falling down of Russia? When you made these estimates as to what was necessary to send over, did you have in contemplation that the French Government's manufacture for us might have to be turned into manufacture for Italy?

Secretary BAKER. There has been no suggestion that the Russian or Italian situation would delay for a second the provision that they are ready to make for us.

The CHAIRMAN. It does seem to me that common sense would suggest, in the very nature of things, France is bound to assist in the manufacture of ordnance.

Secretary BAKER. That goes without saying.

The CHAIRMAN. If that is true, she must furnish the ally nearest home?

Secretary BAKER. Very likely.

The CHAIRMAN. So, it seems to me that your statement leaves the impression that America is supplied with all the ordnance necessary.

Secretary BAKER. So far as my purpose is concerned—and I think the statement is a perfect reflection of my purpose—what I want the country to understand is that the troops in France will be adequately equipped with artillery and artillery ammunition.

The CHAIRMAN. Probably.

Secretary BAKER. I do not feel that it is a probability. We rely upon definite assurances from men who know.

Senator McKELLAR. Do you not think it would be better to take the people of the country into our confidence—let them know that while what you have said may be true, nevertheless we have not an adequate supply of artillery in this country with which to train our troops, and that every possible endeavor and effort should be made by all of our people to get these men trained at as early a date as possible?

Secretary BAKER. I agree with you heartily that we should make every possible effort to increase the output, but I do not think it would be taking the people of the United States into our confidence to afflict them with a doubt that you do not entertain.

Senator McKELLAR. While you have no doubt about troops in France being equipped with artillery, it is hardly fair to leave the impression on the American people that all our troops in this country, as well as in France, are thoroughly equipped.

Secretary BAKER. I think my statement is not susceptible of that construction. My statement says that the initial rush needs

are satisfied. It does not say that the complete performance of the largest program has been accomplished.

Senator MCKELLAR. I am very frank to say to you, Mr. Secretary, that it did not make that impression on me. It may be there is something wrong with my understanding. I want to say, however, that I differ from you about the question of rush needs. I think the "rushiest" need of all needs, if I may be permitted to so express it, is the need thoroughly training men in this country before we send them to France.

Secretary BAKER. In that I entirely agree with you.

The CHAIRMAN. Senator WADSWORTH, I interrupted you. Do you wish to continue your line of questioning?

Senator WADSWORTH. The thing that occurred to me in reading the statement through very carefully this morning was that it gives the impression, I think generally, that the situation is a rosy one; that there is nothing to fear; that the rush needs, as the Secretary used that expression, have been complied with; that no greater haste is necessary; that everything is fine. I can not agree with you. I think we have ahead of us a bigger task in the next eight months than we have had in the last eight months. It is the impression that goes out to the country with which I can not agree. It was that point that I wished to bring up, because I believe we are in for one of the greatest crises that this country has ever known. I do not believe that the artillery program of the United States commences to be big enough. I think we have got the most of our work ahead of us, and that the expression "the initial rush needs have been supplied" is not an accurate description of the situation.

We have had it told to us time and time again in this committee that there is a rifle for every soldier that goes abroad; that there will be fieldpieces for every soldier who reaches France and for every division that reaches France. The truth is that they did not know how to use the rifles and fieldpieces when they got them. That is not meeting the rush needs. This is a fight.

Senator NEW. Is it not a fair inference from your answer to this question that until our troops get into actual conflict there are no rush needs?

Secretary BAKER. That is not a fair inference. It does not seem to me so. I do not want to be categorical about it.

Senator BECKHAM. Does the term "rush needs" imply not only sufficient numbers to equip our men after they get over there, but a sufficient number here at home at least to train those who can go to France?

Secretary BAKER. Not to complete the artillery program here.

Senator BECKHAM. But to train as many as we can send over there reasonably well before they go?

Secretary BAKER. Senator, that question can not be answered yes or no for this reason, that the final artillery training of these troops would be difficult here. From now on artillery troops who do go will have had more and more artillery training here and will have less and less to get on the other side. There are very large schools established by Gen. Pershing in France for artillery training, in which he is assisted by French and British officers, to put on the finishing touches when the troops get there, and then they are in association with the French and British troops.

Senator WEEKS. Let me call this to your attention, Mr. Secretary. The finishing touches require three or four months at least. That is to say, the Artillery that went to France in September is still under training, and I assume that they were selected to be sent as among our very best and most adaptable troops at that time, and they are still under artillery training, so that these men who are now in camps in this country, who have not artillery with which to train, if they are sent abroad in the next two or three months to be brought up to the state of efficiency required, have got to have three or four months' training after that before they will be ready for the field, and they will not be ready for the field before the middle of the summer or the early fall.

With reference to rush preparation or rush necessities, let me call your attention to the statement made by Gen. Greble before this committee relative to the ordnance at his camp, Camp Bowie, Tex. The requirements are 224 machine guns, 768 automatics, 17,731 rifles, 12 trench mortars, and 1-pound cannon, three to a regiment. That would be the total requirements if the division were totally equipped. This is what he says:

The following is a list of present shortages, expressed in percentage, of the more important articles of equipment. Rifles, 59 per cent short—

And, mind you, this testimony was given only two weeks ago before this committee, and Gen. Greble had come direct from his camp, bringing the information with him from the reports of the morning of the day before he left—

Rifles, 59 per cent short—

You have given me the impression, and it has been done by others, that every camp had a complete outfit of rifles.

Bayonets, 65 per cent short; pistols, 86 per cent short; cartridge belts, 59 per cent short; machine guns, none on hand, 20 Colts said to have been shipped; automatic rifles, 88 per cent short; 3-inch guns, 88 per cent short; 6-inch howitzers, none on hand; trench mortars, none on hand; 1-pound howitzers, none on hand; artillery harness, 92 per cent short; horse equipment, 81 per cent short; infantry equipment, which includes haversacks, first-aid pouches, and canteens, 88 per cent short; small-arms ammunition, 75 per cent short; artillery ammunition, 95 per cent short of the requirements that are made by the department, the equipment coming under Equipment C.

How can you confirm the general statement that there are no emergency requirements for artillery and other equipment when you know that there is testimony right up to date, within two weeks——

Secretary BAKER (interposing). But I did not make that statement.

Senator WEEKS. I am not speaking particularly of your statement, but I am speaking of the general impression given in the statement which you made yesterday that there were no emergency requirements.

Secretary BAKER. I did not say that. I said the initial rush needs of equipment had been substantially met. At least, I think that is what I said.

Senator WEEKS. I think you ought to define the initial rush needs.

Secretary BAKER. Those are pretty simple words.

Senator WEEKS. They are, but the country reading your statement, Mr. Secretary, in my judgment, will conclude that our encampments are thoroughly provided with every necessity to conduct their operations and their training. Now, evidently, Camp Bowie is not so provided.

Secretary BAKER. Of course, the statement made by Gen. Greble, who is an exceedingly zealous officer, was perfectly accurate when he made it. The number of the rifles in his camp, 59 per cent short, have since been supplied, as I have tried to demonstrate here.

Senator WEEKS. That is, within two weeks?

Secretary BAKER. Yes; but two weeks is a long time when you are getting rifles at the rate of seven or eight thousand a day.

Senator WEEKS. Then those troops have been in camp for a long time without rifles?

Secretary BAKER. Undoubtedly a long time; but not, apparently, without any rifles.

Senator HITCHCOCK. When you referred to initial rush equipment, then, Mr. Secretary, you do not think it is of that importance to train the men with machine guns that they should have rushed equipment after they have been for four months in camp?

Secretary BAKER. It would have been very fortunate, Senator, if we had had machine guns earlier, and yet a substantial part of any first four months in an encampment would have to be taken up with preliminary questions of very elemental military discipline, and I doubt whether machine-gun practice could have been inaugurated very much sooner if there had been a supply of machine guns, not at all discounting the fact that it would have been fortunate if we could have had them. There is the teaching of rifle shooting first, and then the teaching of machine-gun shooting has to follow in order.

Senator HITCHCOCK. The major generals who have testified before the committee all admit that they have machine-gun men, but no guns.

Secretary BAKER. Yes.

Senator HITCHCOCK. And they admit that the time of these men is largely wasted without machine guns.

Secretary BAKER. I think there is a period of instruction which they could profitably use if we had the guns.

Senator HITCHCOCK. Can you give any reason why 1,200 of these machine guns are stored here and not sent to the camps?

Secretary BAKER. I assume, without knowing, that they are for aircraft uses and are not adapted to camp use. I do not know that.

Senator HITCHCOCK. No; they appear to be ground guns, for ground use.

Secretary BAKER. Then I do not know why it has not been done.

Senator HITCHCOCK. And they have not been shipped to France and no adequate explanation has been given, and the committee has been unable to understand why the department contracted for these Browning guns in very large quantities when the department knew that none of the Browning guns could be delivered before next spring, and that not more than one-tenth of the order could be filled before next fall, but, nevertheless, no order was placed for Lewis guns, which were immediately available in large quantities for ground use.

The CHAIRMAN. The only attempted explanation of holding those guns in reserve is that they were held for an emergency—some emergency that might arise.

Secretary BAKER. I will be very glad to look into that. I did not know that that was the fact.

Senator HITCHCOCK. That is rather a small matter, because there are only 1,200, but here was a factory turning out Lewis guns at the rate of 1,800 a month at the time we went into the war. It only required a few weeks to adjust that factory for American ammunition, and those machine guns could then have been turned out in large quantities in ample time to supply all our camps with Lewis guns for practice. Meanwhile they could have gone on experimenting with the Browning gun, which is in an experimental state, and the committee has never been able from anyone to get any adequate reason why that was not done.

Secretary BAKER. I think it has been done, Senator. My information is that it was done.

Senator HITCHCOCK. You mean contracts made?

Secretary BAKER. The contracts were made with the Lewis gun company to produce all the guns they could produce immediately.

Senator HITCHCOCK. Those contracts were made very late, in the first place, and then they were tied up some 60 days by changes, in the second place, and finally they were ordered to make them only for aviation purposes, in the third place, so that it is now the settled purpose of the department not to have a single Lewis machine gun for ground use in France, and we are absolutely dependent on France for machine guns for ground use until next fall.

Secretary BAKER. But the total number of Lewis machine guns which are under contract with the Government is nearly four times as large as the original program for arming the Army with light and heavy machine guns together.

Senator HITCHCOCK. We realize finally that a contract is made, a very tardy contract, and then the order was changed so that they are exclusively for aviation service.

Secretary BAKER. Well, Senator, if they are better adapted for aviation service, the military men will have to determine that. I can not. Emphasis is being put upon the aviation program and it would seem that it was rather a concession to the importance of the aviation program, ground guns being otherwise provided for.

Senator HITCHCOCK. Here is a factory with machines, tools, dies, and jigs, and everything all arranged for the manufacture of these guns, the capacity of which should have been doubled and quadrupled. The department could have placed orders for the manufacture of those guns in three factories, just as they have done with the Browning guns. Up to the present time we have done nothing with the Browning gun except to manufacture machinery to manufacture the Browning gun with, none even turned out, none will be turned out until spring, and we could have been turning out Lewis guns months ago.

Secretary BAKER. But we are turning out Lewis guns, Senator.

Senator HITCHCOCK. But I mean in addition to this we could have been turning them out for ground use.

Secretary BAKER. I think I ought to dissent from your belief that it would have been best to put the Lewis gun into immediate quantity manufacture in two or three factories. That is not easily possible. Those factories would have had to be especially tooled. Dies, jigs, and things of that sort would all have had to be manufactured.

Senator HITCHCOCK. But the patterns already existed, whereas the Browning gun pattern was not in existence.

Secretary BAKER. No, Senator, not on patterns which already existed. At the time we went into this war there had not yet been produced, as I am advised, a single Lewis gun chambered for American ammunition which would work.

Senator HITCHCOCK. The English Lewis gun had to be changed very slightly, and the model already existed in May of last spring, and it would have taken only a few weeks before it could have been manufactured in very large quantities.

Secretary BAKER. But each change, Senator, required a change in tooling, a change in jigs, and before you could get quantity production there would be long delays.

Senator HITCHCOCK. But nothing like the delay that was necessary to create absolutely new patterns for the Browning gun.

Secretary BAKER. I think that is so, although the Browning gun is said to be so very much simpler that its quantity production is a much simpler process than that of the Lewis gun.

Senator HITCHCOCK. But we can not be producing the Browning in any quantity until 1919.

Secretary BAKER. Quite the contrary, Senator. Quantity production of the Browning gun is expected to begin in February.

Senator HITCHCOCK. I have heard the testimony, which has been that we will not get a single Browning gun until April.

Secretary BAKER. But we have nine now.

Senator HITCHCOCK. But we will not get any for use and we will not get one-tenth of those guns before August. We have an itemized statement month by month of what they hope and promise, and next August we will not have one-tenth of that order.

Secretary BAKER. You have statements made here by the Chief of Ordnance?

Senator HITCHCOCK. Yes.

Secretary BAKER. I talked yesterday with Maj. Little, who has been personally inspecting these machine-gun plants and watching them, and I asked him about the progress made with the Browning gun, and he told me that they had already had nine, that they would begin to get them by the hundreds in February, and that in March they would begin to come out in large quantities.

Senator HITCHCOCK. That is not the testimony of Gen. Crozier. The first Browning guns promised are in April, and at my request he gave me personally what I used before this committee, an itemized statement of the number contracted for each month, and he finally conceded the statement I made that it would be next August before one-tenth of the order would be filled, and then they have got to be sent to Europe after that, and then the men have got to be trained in using them, so I believe I am safe in saying that it will be 1919 before the Browning guns can be used in any quantity, if the experiment of their manufacture proves successful.

Secretary BAKER. I do not want to seem to quibble about it, but if I am correctly advised, quantity production of Browning light guns will begin in March. Their transportation to Europe and the use of them by the troops in the spring is a perfectly feasible thing.

Senator HITCHCOCK. Would you change your view if you saw the statement of Gen. Crozier as to the monthly production provided for? Are you speaking of the Browning light gun as well as the Browning heavy gun?

Secretary BAKER. I am not sure that that would necessarily change it, only for this reason, that every effort is being made to speed up this productive process, and if Maj. Little's information is later than Gen. Crozier's it would, of course, to that extent modify it.

Senator HITCHCOCK. Yes; if Gen. Crozier was not advised on his own department.

Secretary BAKER. I do not mean that. I mean if Maj. Little's information, coming right from the factories where he is in daily observation of the progress being made, is later than the information upon which Gen. Crozier relied, then it would be, to that extent, a modification of Gen. Crozier's.

Senator WEEKS. Mr. Secretary, would you modify your views if you read the testimony offered to this committee by the manufacturers who are to make these guns, who said that they could not be delivered in quantity before April or May?

Secretary BAKER. I think their estimate would certainly have some weight.

Senator WEEKS. Would you modify your views if you had a statement from the head of an ordnance bureau in another branch of the service that he did not see how Browning guns could be delivered in quantities before July?

Secretary BAKER. It would affect me if I knew the extent of his observation and knew who he was and how accurate his observation had been.

Senator WEEKS. I understand that Admiral Earle made that statement, although he did not make it to me.

Secretary BAKER. Has he inspected the plants in which these guns are being made?

Senator WEEKS. He has not been a witness before this committee, and of course I do not know, but he is an ordnance man of authority and knowledge.

Secretary BAKER. Of course, we are dealing with things about which casual remarks are not persuasive beyond the extent of information and observation from which they come. It is a manufacturing process. Now, if it be true that these manufacturers and the inspectors of the Government say that they can not get quantity production before April, that is the best reliance we can possibly have.

Senator WEEKS. I was not present when the testimony was given, but I have read it, and my recollection is that that was their statement.

Senator NEW. The president of the Colt Arms Co. testified to that effect. I do not recall his name.

Senator HITCHCOCK. Mr. Secretary, I show you the figures that Gen. Crozier gave me. They were not put in the record, and they were not made public because it was not considered

a favorable showing, but you can see what is to be expected by next August.

Secretary BAKER. I am asking the Assistant Secretary to telephone up to Gen. Wheeler and get the latest information on the subject, Senator.

Senator WEEKS. Mr. Secretary, I want to get back to this question of preparation, because I feel very strongly that the country is going to be unintentionally misled by the statement which you submitted to the committee yesterday. I do not think it is necessary, perhaps, for the country to know everything in detail, but I do think it is desirable that people who are making sacrifices in this war should have relatively correct information and should not be lulled to sleep by a general statement of a condition which does not exist.

Now, let me take a little more in detail this question of preparation of the forces at Camp Bowie. You say the rifles which were 59 per cent short two weeks ago have been supplied?

Secretary BAKER. Substantially supplied, and I think completely supplied.

Senator WEEKS. And the bayonets that were short 65 per cent?

Secretary BAKER. I can not answer about that.

Senator WEEKS. You do not know about that?

Secretary BAKER. I can give you the general figures on bayonets. The total need for bayonets, Senator, for the 1st of January was something less than a million. At that time we had 1,106,000, so that the question is simply one of distribution from then on.

Senator WEEKS. That is, you needed 1,000,000 in addition to what you already had?

Secretary BAKER. No. Well, perhaps in addition to what we already had, but the total requirements for bayonets on the 1st day of January was something less than 1,000,000, and the total deliveries of bayonets up to that time were 1,106,000.

Senator SUTHERLAND. Are these bayonets manufactured?

Secretary BAKER. Oh, yes; manufactured and delivered.

Senator SUTHERLAND. Does that mean delivered at the camps?

Secretary BAKER. No. It means that they are in process of distribution.

Senator WEEKS. Then you say within 30 days there would be an ample supply of bayonets at all camps for the use of the camps?

Secretary BAKER. I think it is safe to say that; it is a pure question of transportation.

Senator WEEKS. If it is a pure question of transportation, I should think it would be within reason.

Secretary BAKER. Yes; it is no longer a question of manufacture.

Senator WEEKS. Pistols, 86 per cent short.

Secretary BAKER. Yes; pistols is the greatest percentage we have. As you know, the substitution of revolvers for pistols is a part of the program, and there is a shortage in pistols and revolvers put together. It is not to be forgotten, however, that the allowance of pistols to our troops is manyfold greater than in any other army.

Senator WEEKS. What do you think the prospects are for the supplying of that shortage?

Secretary BAKER. I think, taking the revolver and the automatic pistol, that the prospect is only fair for an immediate catch-up.

Senator WEEKS. When was the pistol substituted for the revolver?

Secretary BAKER. I can not answer that, sir.

Senator WEEKS. Was it a year ago or two years ago?

Secretary BAKER. Many more than that, I should think.

Senator WEEKS. Then, the revolvers that we are using are simply the type that was used before the substitution was made?

Secretary BAKER. They are military revolvers. I do not know that it is the same type that was used before we put the automatic pistol into manufacture.

Senator WEEKS. Cartridge belts, 59 per cent short.

Secretary BAKER. This table that I have before me gives the total need of cartridge belts up to the 1st of February, which is substantially 15 days off, as 1,300,000, and the total supply now on hand 730,000, a shortage—we were about 55 per cent supplied on the 5th day of January. The table does not show exactly what the expected deliveries are.

Senator WEEKS. Are they limiting the cartridge belts to one type?

Secretary BAKER. I do not know that, Senator.

Senator WEEKS. Is not a cartridge belt a comparatively easy article to obtain? Are there not large manufacturers that make them?

Secretary BAKER. It would seem a relatively easy thing to make.

Senator WEEKS. The impression I have, although I have not any particular information on the subject, was that the capacity of this country for making cartridge belts was very large; that it had been developed in connection with providing belts for European armies, and that for our comparatively small Army it should have been easy enough to obtain sufficient belts for their needs.

Secretary BAKER. I can not answer that, Senator; I do not know.

Senator WEEKS. You think the prospects are not good for complete equipment of cartridge belts for three or four months?

Secretary BAKER. No; I can not answer that. I can say that on the 5th of January the supply was 55 per cent of the needed requirements for February 1, but how rapidly the deliveries are being made I have not before me.

Senator WEEKS. This camp seems to be a little worse off than the others. Machine guns, none on hand. Twenty reported shipped.

Secretary BAKER. You observe that Gen. Greble, in his report, draws a distinction between machine guns and automatic rifles.

Senator WEEKS. Yes.

Secretary BAKER. He is there referring to the heavy Vickers-Maxim type, and I am not surprised that there are none there.

Senator WEEKS. Or the Colt gun?

Secretary BAKER. Or the heavy Colt; yes.

Senator WEEKS. Automatic rifles, 88 per cent short.

Secretary BAKER. Yes. That is the Lewis gun and the Bénet-Mercié, the light type automatic rifle, air cooled.

Senator WEEKS. Gen. Greble, as I think Senator HITCHCOCK has commented, and the other generals who appeared before the committee I think were unanimous in the general statement that the men belonging to machine-gun companies were practically throwing away their time, not having these guns, and it seems to me, Mr. Secretary, that that is a matter that should have your early consideration, as to whether something can not be sent to these camps so that these men may be drilled and given some preparation which will advance them to some degree of perfection in their profession. That is my opinion. Three-inch guns, 88 per cent short. Is there any prospect in the case of that arm?

Secretary BAKER. You have the full manufacturing data on that subject before you. I can add nothing to it.

Senator WADSWORTH. Do you know, Mr. Secretary, whether any of the American-made 75-millimeter guns have been finished and delivered?

Secretary BAKER. Do you mean the 3-inch or the 75-millimeter guns?

Senator WADSWORTH. The 75-millimeter gun, American make.

Secretary BAKER. No; I can not answer that. The figure I have before me gives the requirements to July 1, but does not give the present.

Senator WADSWORTH. You do not know whether any of those have been finished yet or not?

Secretary BAKER. No; I do not. Yes; I do. None of them have been. I have a later table here which shows that none of them have been finished.

Senator WEEKS. I would like to ask a question about these middle-weight cannon, but there are some articles here that seem to me to be of a good deal of importance, and where the shortage is very great. Artillery harness, 92 per cent short.

Secretary BAKER. Artillery harness? I do not seem to have that figure, Senator. It is not in these tables.

Senator WEEKS. Has this question of saddlery and harness been brought to your attention at all, Mr. Secretary? There seems to be a great deal of difficulty in supplying our needs. The fact that this camp is 92 per cent short would seem to confirm the general impression which I have had, and which I think the committee has had, to that effect. Is there any prospect of supplying our needs within any reasonable time, as far as you know?

Secretary BAKER. I can not answer that. I do not know. I have not that figure.

Senator WEEKS. Horse equipment, 81 per cent short.

Secretary BAKER. I do not know what that means, Senator.

Senator WEEKS. Horse equipment? I think Senator WADSWORTH can tell more accurately than I.

Senator WADSWORTH. Very naturally it means saddles and bridles.

Secretary BAKER. That is not in the ordnance. It may be the ordnance supply.

Senator WADSWORTH. It is ordnance, Mr. Secretary.

Secretary BAKER. I have before me saddlebags, saddle blankets, cavalry saddles, cavalry bridles, and the deliveries of saddlebags, for instance, up to December 29, are 149,000. The requirements are slightly in excess of that, but not seriously. Saddle blankets, the deliveries are 246,000. The requirements

are about 150,000 more than that, so that would be about a 60 per cent supply. Saddles, the deliveries are 76,000, the requirements are about 150,000, so that on the 5th of January they were about 50 per cent supplied.

Senator WADSWORTH. That is saddles?

Secretary BAKER. Cavalry saddles.

Senator MCKELLAR. Are artillery horses included in that——

Senator WADSWORTH (interposing). Do you happen to know which type of saddle is meant by that?

Secretary BAKER. Cavalry saddles.

Senator WADSWORTH. But there are two types.

Secretary BAKER. No; I do not know.

Senator WADSWORTH. You do not know whether it was the new type adopted two or three years ago or the old McClellan?

Secretary BAKER. I do not know that.

Senator WADSWORTH. Of course that is exceedingly important. The new one has never been placed in quantity production, but the McClellan saddle has been used in the American Army since before the Civil War and could be turned out, I should imagine, in very large quantities.

Secretary BAKER. I do not know which saddle it is. Senator MCKELLAR, you wanted to ask about horses?

Senator MCKELLAR. Yes; for artillery purposes.

Secretary BAKER. The requirements of horses are given generally, not for artillery purposes only, but are given generally. The requirement was 90,247, and the purchases were 90,733; of mules, the requirement is 131,000 and the purchases 123,000.

Senator WEEKS. There is no difficulty in obtaining mules and horses for artillery, is there?

Secretary BAKER. Apparently not. Both the horse and the mule situation seems to have been provided for.

Senator WEEKS. Now, to go on to the next item in Gen. Greble's statement, Infantry equipment, which includes haversacks, first-aid pouches, and canteens, 78 per cent short.

Secretary BAKER. I have something here, I am sure, on haversacks. I will get it right away. That table compares the needs of February 1 with the supplies on hand January 5. The total number needed is 1,800,000 and the total supply on hand was 936,000, making, roughly, about 60 per cent on hand now.

Senator WEEKS. Small-arms ammunition, 75 per cent short.

Secretary BAKER. The requirements are about three times the deliveries to the 5th of December, but the curve of deliveries is much more rapid in its rise than the curve of requirements, seeming to indicate that the progress was rapid last year.

Senator WEEKS. Are all the available small-arms ammunition makers in the country being used?

Secretary BAKER. I can not answer that.

Senator WEEKS. You mean you do not want to answer it or you do not have the information?

Secretary BAKER. I do not know.

Senator WEEKS. You do not know to what extent they are being used?

Secretary BAKER. No.

Senator WEEKS. Have you had any talk with Gen. Crozier about that? I ask this because I do not recall having asked him the question. I have been told that they were not being used.

Secretary BAKER. I can not answer that, sir; I do not know. If he has talked to me about it, it is not in my memory at the present moment.

Senator WEEKS. Artillery ammunition, 90 per cent short. It does not seem to me that that is an especially important item of shortage if you have not the artillery, but according to the schedules they do seem to be 90 per cent short.

Secretary BAKER. That is not unnatural, I should think. Quantity production is in process.

Senator WEEKS. Turning over to some other matters of equipment, and this is also Gen. Greble's statement, especially equipment relating to transportation of a division, escort wagons required, 405; on hand, 362; leaving a deficiency of 43. In all of these other cases, with one exception, the division has none on hand. Rolling kitchens, required 116; ration carts, required 113; water carts, required 109. Do you want to look these up?

Secretary BAKER. It would probably take a long time to look up all of them, and I doubt whether I have data on some of them. I have here only a summary of the major items.

Senator WEEKS. I will just read these, Mr. Secretary: Motor cars, 46. There is one motor car on hand. Motor trucks, 245. These are the requirements I am reading. Tactical supply trucks, 12; rolling kitchens, 10; motor cycles, with side cars, 105; bicycles, 259; spring wagons for artillery regiments, 7; water carts, trail mobiles for sanitary trains, 6.

Now, there are none of those means of transportation on hand in that camp with the exception of wagons, which I read.

The CHAIRMAN. You might add to that, further, Senator WEEKS, that the testimony before the committee is that that is one of the accessories that is short in Europe according to the testimony before this committee. That is motor transportation.

Secretary BAKER. Yes; that is true. It is short in Europe chiefly for transportation reasons, but it is short in these camps for an additional reason. The production of standardized and interchangeable equipment, which is standardized and of the very greatest importance, is in quantity production now.

Senator WEEKS. You refer to the motor truck?

Secretary BAKER. I am referring to the motor trucks; yes.

Senator WEEKS. That would not apply to most of these articles?

Secretary BAKER. It would not apply, of course, to things like kitchens and to escort wagons, but it would apply to motor equipment generally.

Senator WEEKS. It would not apply to bicycles, or motorcycles, would it?

Secretary BAKER. No; it would not apply to either of those.

Senator WEEKS. I should think the only one would be motor cars and motor trucks that that would apply to.

Secretary BAKER. Probably not motor cars; motor trucks, I should think, chiefly.

Senator WEEKS. The motor trucks required for a division, according to this schedule, are 245.

Secretary BAKER. I wonder, Senator, whether you are comparing the motor equipment for a division in mobile operations with the number on hand. These divisions are stationary now. They do not require all these motor transportation escort wagons, unless they move.

Senator WEEKS. Well, they may require them in a day if they are ordered to move.

Secretary BAKER. If they are ordered to move within the United States they might need them, if they were ordered to move otherwise than by rail.

Senator WEEKS. This is Gen. Greble's statement, and what he has given as requirements, or, as I understand it, the standard fixed by the department?

Secretary BAKER. Exactly.

Senator WEEKS. And as far as the quartermaster's stores are concerned they come within equipment C class, which is very definite in every article included to make up that standard requirement.

Secretary BAKER. Exactly. Now, that standard requirement is the equipment a division should have in operation. Instead of buying promiscuous and indiscriminate truck equipment and motor equipment, which would have to be discarded when the division actually went into operation, the plan is to supply them with standardized equipment when they need it.

Senator WEEKS. That is, motor trucks?

Secretary BAKER. That is motor trucks and wagons, escort wagons.

Senator WEEKS. They have the escort wagons, practically.

Secretary BAKER. Yes; substantially.

Senator WEEKS. But, why, nine months after the declaration of war, should there be an encampment where there are no rolling kitchens, for example?

Secretary BAKER. I can not answer that, Senator.

Senator WEEKS. Does it not seem pretty unreasonable that somebody has not provided such articles as that?

Secretary BAKER. I am not sure. The answer is probably pretty easy. I am hazarding this answer as the right one. A rolling kitchen, of course, is needed in the field. The standard equipment for a division might require 100 rolling kitchens, but when they are in a permanent camp they do not need rolling kitchens, so that the accumulation of that unstandardized equipment which they are not going to use would be an unnecessary thing to do.

Senator WEEKS. I do not think you are quite correct in that statement, Mr. Secretary. For example, there is an encampment at Spartanburg, S. C., where I understand their target range is 30 miles from the camp. Necessarily they have to be away from the camps several days. I should think that would be the very time they would need a rolling kitchen, if ever.

Secretary BAKER. But, as a matter of fact, I feel quite sure that you have never heard the slightest suggestion that the men at the target range at Spartanburg are not adequately fed?

Senator WEEKS. I have not heard that.

The CHAIRMAN. Right in that connection, is it not true that with every division there is a tactical unit of expert motorcycle and motor-truck men who have to be trained for usage in Europe?

Secretary BAKER. Yes.

The CHAIRMAN. Is it not a delicate proposition to master the handling of these motor trucks?

Secretary BAKER. Yes, sir.

The CHAIRMAN. What preparation can, therefore, be made for training these men if they are entirely lacking in facilities?

Secretary BAKER. They are being trained in very large numbers at Black Point, a special camp erected for the purpose, and given highly specialized training.

The CHAIRMAN. That is in Florida?

Secretary BAKER. Yes. Forty thousand of them are there.

Senator WEEKS. I want to say, Mr. Secretary, referring to the question of food, that in my judgment the complaints that are being made about food are practically negligible. I think the food is good at practically all the camps. I think there is not much basis for complaint on that score.

Secretary BAKER. I have not heard any.

Senator WEEKS. We occasionally have a complaint from a homesick boy.

Secretary BAKER. I have not even had one about the food.

Senator WEEKS. Sent to you through his mother?

Secretary BAKER. Not even one about the matter.

Senator WEEKS. I think if you were representing the State, you would have them.

Senator MCKELLAR. A good many.

Senator WEEKS. But I think they are negligible. When are these camps going to be fully supplied with all that they require in order to make them ready for service?

Secretary BAKER. No comprehensive answer can be given to that, Senator.

Senator WEEKS. Can anybody give an answer to that?

Secretary BAKER. As to the particular items, different men would undoubtedly give you the answers based on the most accurate recent survey of the progress being made in procuring these accessories.

Senator WEEKS. Have they got to go on an exploring expedition?

Secretary BAKER. Not at all.

Senator WEEKS. And call in Tom, Dick, and Harry in order that we may inform ourselves whether the service is being conducted as well as it should be?

Secretary BAKER. No, Senator; and you have not done that. You have called in Gen. Crozier and gotten very detailed information from him.

Senator WEEKS. Yes.

Secretary BAKER. You have called in Gen. Sharpe and gotten very detailed information from him. Now, if there be an item about which they have been uncertain or indefinite, or which was overlooked, or which has subsequently occurred to any member of the committee, I shall be most happy to include in my statement a comprehensive and complete answer as to that item or detail.

Senator WEEKS. Then I would like to have you put in the record the time when we may expect that all of these articles which I have read, ordnance and equipment, will be supplied to every encampment in the United States.

Secretary BAKER. That is, you want me to put into the statement a forecast as to the time when complete equipment on each of these items mentioned by Gen. Greble will be supplied for the troops now in training?

Senator WEEKS. Yes; now in training.

Secretary BAKER. I will be very glad to do it.

Senator WADSWORTH. Mr. Secretary, have you any system in your department by which you receive, say once a week, or twice a week, reports showing the percentage of progress?

Secretary BAKER. Yes, sir.

Senator WADSWORTH. Then, you would know, ordinarily, what the percentage of progress was in all this equipment?

Secretary BAKER. Yes.

Senator WADSWORTH. Judging from that percentage of progress, I should imagine you could tell when the progress would be completed.

Secretary BAKER. Yes; as to some of the items that the Senator has been discussing, the smaller items of equipment, the less urgent in their need.

Senator WADSWORTH. As an example, have you a statement which tells you from day to day the progress made in the designs of heavy artillery?

Secretary BAKER. Not a system which tells me from day to day, but a system which tells me from day to day the progress, and weekly reports of the needs of the Army and the deliveries and anticipated deliveries on all the major items of supplies.

Senator WADSWORTH. From your recollection of that report, could you say that you knew whether or not the designs for our artillery program are completed?

Secretary BAKER. This report does not contain that. It contains the needs of artillery, deliveries of artillery, and anticipated deliveries, but does not deal with questions of design. Now, in Gen. Wheeler's office there is a room which is devoted solely to progress charts, which is kept corrected not only day by day but by hour, so that every bit of progress which is made in the entire Ordnance Department is graphically stated on those charts, and whenever I want to see any particular item of the kind you have suggested, I can go into that room and look at it.

Senator WADSWORTH. Do you happen to know whether the designs are completed?

Secretary BAKER. I do not remember.

Senator WADSWORTH. Do you happen to remember whether orders have been definitely placed for all the different classes of artillery?

Secretary BAKER. I do not remember that. I think it is quite unlikely that they have been.

The CHAIRMAN. Do you other members of the committee have any questions to ask? Have you finished, Senator?

Senator WADSWORTH. On that point, Senator; yes. I do not know whether anybody else wanted to ask about the ordnance or clothing. I have no more questions on that point.

Senator MCKELLAR. I wish to ask a few questions about clothing. Mr. Secretary, on yesterday, as I understood you, you stated that the purchasing of supplies by the committee on supplies has been stopped now. Is that a correct statement?

Secretary BAKER. I told you it was in process of being stopped, Senator, and I think it has stopped now.

Senator MCKELLAR. What is going to be done with that committee?

Secretary BAKER. The committee will disappear as a supply committee.

Senator MCKELLAR. And the members thereof will not be any longer connected with the Government?

Secretary BAKER. I can not say that.

Senator MCKELLAR. What do you propose to do with them? I am speaking now of Mr. Eisenman, Mr. Scott, and Mr. Kaplan, and the other gentlemen on that committee.

Secretary BAKER. I can only answer with regard to Mr. Eisenman. I have had some talk with Gen. Goethals, and, as I remember it, he desires to take Mr. Eisenman into his own office as a part of the Quartermaster Department. The other members of the committee I do not know about.

Senator MCKELLAR. So that it is the intention of the department to discontinue the supply committee, but to employ Mr. Eisenman to really conduct it?

Secretary BAKER. That is a possibility. I will not say that he will conduct it, but to use Mr. Eisenman's experience and judgment and knowledge in coordination with other people in the Quartermaster Department.

Senator MCKELLAR. Virtually, that will be conducting the matter precisely as it has been done before?

Secretary BAKER. I think not.

Senator MCKELLAR. Except that Mr. Eisenman will be employed at a salary?

Secretary BAKER. Either commissioned or employed at a salary.

Senator MCKELLAR. You can not say what will be done with the other members of the committee?

Secretary BAKER. I have never heard it suggested.

Senator MCKELLAR. Whether it will be disorganized?

Secretary BAKER. The committee will be discontinued.

Senator MCKELLAR. The committee will be discontinued. Will the committee be discontinued whether Mr. Eisenman goes into the service of the Government or not?

Secretary BAKER. Yes.

Senator MCKELLAR. In other words, you have determined to stop the purchase of supplies by this particular committee?

Secretary BAKER. The reorganization of the Quartermaster Department has now reached a point where the services previously performed by that committee will no longer be necessary, but will be performed directly by the Quartermaster Department itself.

Senator MCKELLAR. Virtually under the control of Mr. Eisenman, if the plans of the department are carried out?

Secretary BAKER. That has been suggested. Not virtually under his control. You asked me particularly about Mr. Eisenman, and I was very glad to tell you. Gen. Goethals told me that he desired to bring Mr. Eisenman over into his own office, but whether he has worked out an arrangement to do that I do not know.

Senator MCKELLAR. I would like for it to go on record that I, as one member of this committee, desire to protest against the employment or commissioning of Mr. Eisenman in any purchasing department of the Government.

Of course, I do not ask you to make a reply to that unless you desire to, but I want to protest against it, because of the developments that have occurred in this committee in connection with Mr. Eisenman and Mr. Kaplan, and in the fixing of prices by that committee, of which Mr. Eisenman is virtually the head.

Secretary BAKER. I would like to say this in reply, Senator, that I feel quite sure that you and all the members of the committee desire to have the most capable and reliable people employed whom we can find, and I so regard your statement on that subject as a thing to be weighed.

Senator MCKELLAR. Yes, sir. I wish to say this. So far as I am concerned the developments in this committee have shown, in my judgment, that while Mr. Eisenman may be equipped in one sense to supply the Army with the supplies necessary in the Quartermaster Corps, that the revelations in regard to this committee of which he has been the managing and controlling agent are such that I do not think that he ought to be further employed by the Government; and when I congratulated you yesterday on having dissolved the committee it was on the theory that Mr. Eisenman and all the other members of the committee would be discharged, and not upon Mr. Eisenman's being retained by the department in another capacity for the same purpose.

Secretary BAKER. Senator, let me make this comment on that.

Senator MCKELLAR. I would be glad for you to make any statement you like.

Secretary BAKER. I have been in fairly close contact with Mr. Eisenman's work since he has been here. I do not like to deal in language of superlatives, but I think his zeal and his desire to serve the Government were a very fine exhibition of business judgment and of loyal service to the Government, of which anybody might be proud. That he may have made some mistakes is perfectly obvious. That there may be things in this record which ought to be very seriously considered in the matter of his employment, of course, is true, since you say so, and I will be very glad to examine the record fully.

Mr. Eisenman would not want to stay in the service—and I would not want him to stay in the service—if there is anything in the record in the slightest degree reflecting upon him. My observation has been that his services have been of a very high and patriotic order, and that he has conserved the interests of the Government in every respect.

Senator MCKELLAR. And you indorse him in everything and in every respect?

Secretary BAKER. I indorse everything that he has done of which I am advised.

Senator MCKELLAR. You indorse the organization by him of the Base Sorting Plant, and you indorse also, as I understand your proposition, the fixing of prices for cotton duck by Mr. A. L. Scott, on the committee, whereby the Government pays a profit on the purchases under the prices fixed by Mr. Scott and approved by Mr. Eisenman of from 75 to 150 per cent?

Secretary BAKER. Senator, I do not want to say that, because I do not know anything about the latter of those two instances. So far as the Base Sorting Plant is concerned, I can only say that, on the statement of facts made to me, the expedient, while not a desirable expedient to be permanently followed, was probably a wise thing from a business point of view at the time it was done.

The CHAIRMAN. May I say, as one member of the committee, that I think the conclusion reached by the Senator from Tennessee on the question of profit on this duck may not be the conclusion reached by other members of the committee. Of course, each member can draw his own deduction from the testimony that is in. That is his own inference, and I think other members of the committee would reach an entirely different conclusion as to the amount of the profits.

Senator MCKELLAR. Mr. Secretary, I want to ask about what has been done by the department as to the matter of nitrates?

Secretary BAKER. I think I asked the committee to consider that and powder supply both in executive session. I would be glad to have them consider it there.

Senator MCKELLAR. Then, I would like to ask you about one other thing. On October 10, 1917, there was an order issued by you, and in the fourth division of which, on page 2, is found the following:

> Vacancies in the grade of colonel and lieutenant colonel will be filled as far as practicable by the promotion of officers selected from those serving in the next lower grade in the same arm of the service, in the same division to which the organization in which the vacancy occurs is assigned or attached for service.

As I understand, that means that where a man is appointed from the Regular Army—say a graduate of West Point is given a temporary appointment as an officer in the National Army—that thereafter during the continuance of this order he will be ineligible for appointment in the Regular Establishment provided, and that he will lose his place and that men far lower than he is on the list will be promoted over him. Is that correct?

Secretary BAKER. I do not think that is the meaning of that, Senator. It does not seem so to me.

Senator MCKELLAR. I will say that many complaints have come to me that that will be the effect of that order, and I would like to call your particular attention to it and say——

Secretary BAKER (interposing). May I read that section?

Senator MCKELLAR. Yes, sir. I do not think men, for instance, who had graduated in the academy in later years should be, by virtue of that order, if it does have that effect, promoted in the Regular Establishment over men who had graduated long before.

Secretary BAKER. All that I get out of this is much simpler than that. "Vacancies in the grade of colonel and lieutenant colonel"—let us take a particular instance. Assume a colonel of an Artillery regiment, or a lieutenant colonel of an Artillery regiment, the vacancy there will be filled as far as practicable by the promotion of officers selected from those serving in the next lower grade. That would be majors or lieutenant colonels, in the same arm of the service and in the same division. So that it would mean this: That if a colonel of an Artillery regiment, if a vacancy occurs there, the vacancy would be filled by the appointment of a lieutenant colonel of Artillery in the same division, or a major of Artillery in the same division, and would not result in one or the other of two things being done, either bringing somebody from the Philippine Islands or the Panama Canal, who happens to be next on the seniority list, and leaving a vacancy for a long time, or putting in charge of an Artillery regiment an Infantry or a Cavalry major.

Senator MCKELLAR. Then it might well occur that in the case that you illustrated, a man who happened to be in that particular division and who had graduated in the class, say, of 1912, would be promoted over a man who had graduated in 1916 in the Regular Army.

Secretary BAKER. Yes; it might happen.

Senator MCKELLAR. Would not that be very detrimental to discipline in the Army, and would it not cause a great deal of discontent?

Secretary BAKER. I think not, Senator.

Senator MCKELLAR. I just ask you to consider it.

Secretary BAKER. I will be very glad to consider it; but I have considered it many times. In the Regular Army, in time of peace, the rule of seniority is the only rule that has ever been agreed upon or has ever gotten a normal acceptance among the Army; but in time of war, when the Army is expanded and is made up of the National Army, the National Guard, and the Regular Army, and scattered over the face of the earth, seniority is wholly impossible. If a vacancy occurs in colonelcy in France, we can not bring the man next on the list in the Philippines and put him over there, and in active operations we can not transfer a man from Cavalry to Artillery, for example. We have to limit it to the arm of the service in which he is engaged; so that the rule which has been adopted, and it seems to be a fair rule, is to have, as far as practicable, promotions in the division. A division is a large body. It is a unit; it has a single commander; and it seems reasonable to have those promotions in the division, in the National Army, without affecting the standing of officers on the regular roster of the Regular Army. I would be very glad to consider it, if it is causing any inconvenience.

The CHAIRMAN. I have had it suggested to me that young officers who have been promoted from the Regular Army to the rank of major in the National Army practically lose their standing in the Regular Army, so far as promotions are concerned. Promotions of their juniors in the Regular Army might be made ever so fast, but the young men who are transferred to the rank of major, for instance, into the National Army stand still, or might stand still, and see their juniors promoted regularly in the Regular Army.

Secretary BAKER. That could not be The promotions in the Regular Army go on silently and unobserved by the seniority rule.

The CHAIRMAN. What becomes of the place of these two majors formerly filled in the Regular Army?

Secretary BAKER. They may be occupied by National Army majors, or something, but a captain of the Regular Army is promoted to major according to his seniority. If he is absent, doing duty as colonel, he is major of the Regular Army and colonel of the National Army.

The CHAIRMAN. Do the young men who have gone over in the National Army from the Regular Army maintain their standing all the time in the Regular Army?

Secretary BAKER. Absolutely.

Senator MCKELLAR. And are promoted without regard to their service in the National Army?

Secretary BAKER. They are promoted in the Regular Army so far as their standing on the Regular Army roster is concerned.

Senator MCKELLAR. Well, I do not see any occasion for complaint if that is the fact. That will remedy the complaint that I make here.

Senator KIRBY. Those appointments, then, are in the nature of temporary appointments.

Secretary BAKER. The National Army commissions are all temporary commissions, and a man's status in the Regular Army is unaffected by his temporary assignment to duty in the National Army, under National Army commission.

Senator KIRBY. I refer to promotions in the field. If, perchance, they would be over men in other sections of the country, would those be in the nature of temporary?

Secretary BAKER. Only temporary, Senator.

Senator HITCHCOCK. Mr. Secretary, in the admirable statement you submitted yesterday I understood you to say that purchases in the Quartermaster Department began December 20, 1917. Perhaps I am wrong about that.

Secretary BAKER. No, sir; I did not intend to say that, if I did say it.

Senator HITCHCOCK. Do you remember when those purchases did begin?

Secretary BAKER. Purchases of what, Senator?

Senator HITCHCOCK. Of supplies for the Quartermaster Corps. Was there any particular time when they began making contracts?

Secretary BAKER. Oh, no; they were continuous.

Senator HITCHCOCK. Continuing right along?

Secretary BAKER. Oh, yes. Enormous purchases of supplies were made prior to December.

Senator WADSWORTH. Mr. Secretary, some one testified here, I believe, that there were quite a number of troops going over, artillerymen, who had never even seen field guns or rapid-fire guns. Do you know how long it takes to make out of a raw recruit a trained artilleryman, or one fit for active service?

Secretary BAKER. No; I do not, Senator; but the statement which was made was accurate to this extent, that very large training schools were established in France for Artillery, and a very large number of officers were sent over there to be trained, many of whom probably had not handled artillery ordnance; but they have been over there for many months going through those schools in series, and the only question was whether it was better to establish the schools there or here.

Senator WADSWORTH. Is that for the enlisted personnel?

Secretary BAKER. No; those are officers' schools; but there are schools for the enlisted personnel as well.

Senator WADSWORTH. Are they taught firing on ranges over there, or are they taken to the front?

Secretary BAKER. They are taught firing on the ranges first and then taken to the front.

Senator WADSWORTH. How long are they kept on the ranges?

Secretary BAKER. I do not know that, Senator. The officer's task in modern artillery, of course, is a very much more intricate and scientific task than that of the enlisted men. They are required to master the use of range finders and mathematical instruments, and things of that sort.

Senator WADSWORTH. In advance of the introduction of a War Department appropriation bill, is it the custom of your bureau chiefs in the War Department to supply estimates to you covering the needs of their particular bureaus for the ensuing fiscal year?

Secretary BAKER. Yes.

Senator WADSWORTH. Do you revise those estimates?

Secretary BAKER. Yes.

Senator WADSWORTH. Do you cut them down and raise them?

Secretary BAKER. Perhaps it would be better instead of answering questions to say exactly what happens. The bureau chiefs make out their estimates. They are taken up by the General Staff and studied, and in the event of any recommendation for modification proceeding from the General Staff or the Chief of the General Staff I would consider that, send for the bureau chief, and hear both sides of it, and finally determine it.

Senator WADSWORTH. Has it been the practice, within your knowledge, either in your own case or your predecessors, to reduce the estimates as they finally reached you through the General Staff?

Secretary BAKER. I do not recall any personal act of mine in ever reducing an estimate on my own unguided judgment. I do not remember having reduced any estimates on advice of the Chief of the General Staff.

Senator WADSWORTH. In the year 1916, for instance, did the estimates submitted to the Congress include within their limits everything that the Army thought it ought to have?

Secretary BAKER. They certainly included everything which was recommended by the General Staff, but I do not think that would fairly be held to mean that they included everything that the General Staff would have desired if it felt free to present a maximum program. Long experience with the subject naturally makes them want to present a reasonable program, one that they can defend before the committees.

Senator WADSWORTH. In other words, do you mean that the estimates, for instance, in that year might have been toned down as it were, for fear Congress might consider them excessive?

Secretary BAKER. I would not like to say that. You gentlemen have been dealing with these estimates for a long time, and I think you are perfectly aware that each bureau and each officer in the department has ambitious programs for his division, and he has argued out with members of this committee and the members of the House committee the advisability of certain features of that. Doubtless their estimates are prepared with a recollection of previous discussions with the committee and the desires of the committee that the program shall be reasonable.

Senator WADSWORTH. In view of the world-wide situation which existed in 1916, do you think that the estimates submitted to the Congress were sufficient?

Secretary BAKER. In view of what has since happened, I should say probably it would have been very much wiser if they had been very much more.

Senator WADSWORTH. In view of what must have been known by the General Staff and the War Department through the avenues of information which the War Department necessarily must have, and which the Congress does not have and the public does not have, do you think they were large enough?

Secretary BAKER. Senator, I think I ought to say that I think they were large enough, in view of the fact that even those submitted were reduced, many of them. To have put in larger estimates would have led, in all likelihood, to further reductions. But I say that not critically at all.

Senator WADSWORTH. You mean reduced by the Congress?

Secretary BAKER. Yes; both the House and Senate committees, as I recall it, reduced the estimates made by the department in 1916.

Senator WADSWORTH. My recollection of it was that in some very important items, at least, Congress raised the estimates.

Secretary BAKER. I do not remember that, Senator.

Senator WADSWORTH. Gen. Crozier testified here that he had men arranging a much larger artillery program for several years, and had been urging it, as I remember his testimony, through the years 1915 and 1916, and before the outbreak of the European war, but that his estimates, coming from the bureau with his approval, were reduced, and that when they reached Congress they did not reflect his best judgment as to what was needed.

Secretary BAKER. I have not Gen. Crozier's recommendations in mind at the moment, but it is a fact known to you that the habit and practice of the War Department is to appoint boards to lay out programs of long-continued manufacture, and the most adequate study of the artillery program that has been made by the War Department within recent years was that made by the so-called Treat Board, which decided on types, sizes, and quantities. That program was deemed adequate at the time it was made, and deemed adequate for some year or two after that.

Senator WADSWORTH. When was that made, do you remember?

Secretary BAKER. I can not give you the date.

Senator WADSWORTH. Do you remember the year?

Secretary BAKER. No; I do not. It was an established program when I came to the War Department.

Senator WADSWORTH. When you came to the War Department it was an established program?

Secretary BAKER. Yes.

Senator WADSWORTH. Now, was anything done in the War Department to hurry that program and to anticipate the need?

Secretary BAKER. Yes. It was argued most earnestly to the committees, and a more or less definite understanding reached between the Ordnance Department and Congress as to how rapidly that program should be fulfilled, and each time Gen. Crozier appears before this committee or the House committee he argues the program, the rate of progress on it, and how long it would take to complete it, and whether it ought

to be speeded up and accelerated. That was all very carefully argued to your committee.

Senator WADSWORTH. Yes, Mr. Secretary; but the rate of progress that could be made was so limited by the amount of money appropriated for the year.

Secretary BAKER. Yes.

Senator WADSWORTH. My recollection is that this committee at least gave the department all the money it asked. What I want to find out is should not we have been asked to give it more?

Secretary BAKER. Senator, in view of what has happened, it would have been very much wiser if much larger estimates had been made.

Senator WADSWORTH. Mr. Secretary, was not the possibility—yes, the probability—of this event that has happened within the minds of the War Department in 1916?

Secretary BAKER. Of course, the War Department, Senator, is a war department, and it is constantly assuming that it may be called upon to perform its function, and therefore these contingencies, or the possibility of being obliged to raise armies and equip them and use them in the defense of the Nation, was constantly present in the minds of the department.

Senator WADSWORTH. Did the War Department, through you or through any other proper official, make any vigorous recommendations in 1916 to the effect that our program of supply in all respects should be greatly hurried?

Secretary BAKER. I can not answer that any more than to say that Gen. Crozier and I personally appeared before the committee and urged as hard as we could the appropriations asked for. We did not ask larger appropriations. In view of what has since occurred in all likelihood it would have been wiser to ask much larger ones.

Senator WADSWORTH. Secretary Baker, the appropriations you asked for were in conformance with the five-year increment program of the Army, were they not?

Secretary BAKER. Some of them were; yes.

Senator WADSWORTH. Well, generally so?

Secretary BAKER. Yes; I think generally so.

Senator WADSWORTH. In view of the world situation of 1916, do you not think it would have been wiser to have anticipated that program?

Secretary BAKER. I think it would as I see it now, looking back. In view of the later knowledge I think it would have been wiser for you and wiser for us.

Senator WADSWORTH. Could it not have been foreseen then?

Secretary BAKER. It was as obvious to you as to us then, Mr. Senator.

Senator WADSWORTH. Oh, no; scarcely. We have not the methods of information that you have.

Secretary BAKER. But no one in the country was blind to the fact that there was a war going on in Europe in 1916.

Senator WADSWORTH. But the administration was best informed, through its Diplomatic Service and through other means of information, as to what the probabilities of the United States going into war were.

Secretary BAKER. I can not say that in 1916 I personally felt that we were certainly going into the European war.

Senator WADSWORTH. Of course, I would not expect that you felt certain that we would be going into the European war, but the probabilities were certainly, as it turned out since.

Secretary BAKER. As it turns out since we have gone in, and if we were as wise in 1916 as in 1917 unquestionably the estimates asked for in 1917 and 1918 would have been asked in 1916.

Senator WADSWORTH. In view of the disclosures, Mr. Secretary, that have been made and given to the public involving the publication of intercepted dispatches, disclosing the cynical and sinister purpose of the German Government to flout us and to continue to flout us, many of which dispatches and operations were written or conducted in 1916, was it not well within the ability of the War Department or of the administration to foresee the inevitable?

Secretary BAKER. I do not know what dispatches you are referring to, Senator, but quite generally I decline to discuss the diplomatic relations of the Government.

Senator WADSWORTH. They were discussed to the public, Mr. Secretary, and given out by the State Department?

Secretary BAKER. Yes.

Senator WADSWORTH. What steps did the Council of National Defense take to prepare the war-making machinery of the Government to meet the event that has overtaken us?

Secretary BAKER. There is an annual report of the Council of National Defense that details those steps in very great detail. They are far too detailed to summarize in a sentence or two.

Senator WADSWORTH. When was the council first organized?

Secretary BAKER. Its early organization was very shortly after the law organizing it, but its organization in its later form did not take place until later. The permanent organization was not effected until March, 1917. The early organization, however, had been very active prior to that time.

Senator WADSWORTH. The organization was not completed until March, 1917?

Secretary BAKER. Its permanent organization was not effected until March, 1917.

Senator WADSWORTH. When was the act of Congress enacted?

Secretary BAKER. The statement in the annual report is—

The Council of National Defense, although created under the act of Congress approved August 9, 1916, was not fully organized until March 3, 1917.

Senator WADSWORTH. The Council of National Defense consists of five Cabinet officers, does it not?

Secretary BAKER. Five or six.

Senator WADSWORTH. You are the chairman, are you not?

Secretary BAKER. Yes.

Senator WADSWORTH. Can you tell us what progress was made shortly after August 29?

Secretary BAKER. Very great progress, Senator.

Senator WADSWORTH. In what respect?

Secretary BAKER. The most conspicuous thing done was the industrial survey of the country, which, prior to that time, had been inaugurated by Mr. Coffin and some others as private individuals, involving a survey of the facilities of every manufacturing plant in the country, and the classification of them, and a card cataloguing and indexing of those which were convertible from one form of industrial occupation to another. The activities of the council from the date of its first meeting were constant, and, in my judgment, exceedingly helpful toward the main purpose.

Senator WADSWORTH. Did the council take any action to increase the appropriations?

Secretary BAKER. No; it did not.

Senator HITCHCOCK. Mr. Secretary, would you like to revert to this delivery of machine guns, concerning which we were having some discussion a few minutes ago?

Secretary BAKER. Yes, sir.

Senator HITCHCOCK. Do you think there is any propriety in keeping these figures confidential?

Secretary BAKER. I think it would be better to pass that paper around.

The CHAIRMAN. The figures which you have secured by telephone from the War Department indicate a possible delivery by the end of July of machine guns equal to about four times the figures which Gen. Crozier gave us. What is the cause of the change in the estimate?

Secretary BAKER. I do not know that, sir. I have not seen Gen. Crozier's figures except as you gave them to me.

The CHAIRMAN. These were the figures taken from a written statement which he had before him, and show how many light Browning guns and how many heavy Browning guns were to be delivered each month; and it appears from this statement that up to the end of July only one-tenth of the Browning contract could be delivered at that time, which led me to say that the Browning gun practically would not become a factor until the year 1919. These revised figures that you have given show an astonishing change, and I think an impossible change. For instance, you were providing in the later months of the present year—say, September and October—for machine guns to be delivered at the rate of almost a thousand per day. Now, there has never been in the history of manufacturing any such accomplishment as that.

Secretary BAKER. That must be all makes of machine guns.

The CHAIRMAN. No; just the Browning gun. They are not segregated, the heavies and the lights, but such a thing was not contemplated. It is three times what Gen. Crozier said was possible per month at that time, and these immediate deliveries are so entirely out of joint with the contracts made and the promises which he exhibited that I would like to have them reconciled in some way.

Secretary BAKER. I just telephoned to Gen. Wheeler, or Mr. Crowell did, for anticipated deliveries under existing contracts; and that, I suppose, is what you asked for, is it not, Mr. Crowell?

Mr. CROWELL. Yes.

The CHAIRMAN. Either Gen. Crozier did not present the correct figures to us or else there has been some important change made in these deliveries; and, in either event, I think we ought to know as to that.

Secretary BAKER. There is this change, that at least one and probably two very large factories which were otherwise engaged when Gen. Crozier was talking with you about it have since

been converted to the manufacture of machine guns. Is not that true?

Mr. CROWELL. Yes; that is true.

The CHAIRMAN. That is not possible, because none have gun-manufacturing machines.

Secretary BAKER. But I mean they have been diverted to it and are in course of change, and these figures are anticipating their deliveries. These are the prospective deliveries up to a late date.

The CHAIRMAN. I would like to have those segregated, if possible, for the use of the committee—those referring to the Browning heavy and light together. You feel sure, do you, from such authority as you have, that Gen. Crozier's figures, given to us some 10 days ago, as to the delivery of Browning guns are inaccurate and that something has occurred since that time?

Secretary BAKER. Senator, I would not like to say that, because I have not those figures, and the possibility of misunderstanding is too obvious; but what I have tried to do and what Mr. Crowell has been trying to do for us by telephone was to talk with the man who does know and who has at his hand the means of information.

The CHAIRMAN. I will say to you that Gen. Wheeler was here present when Gen. Crozier gave the testimony, and he was in consultation with him in the meantime, and my recollection is that that was less than two weeks ago.

Secretary BAKER. We can solve the whole problem, but we can not solve it by anything I can contribute, because I have no personal information about it beyond the papers; but we can solve the whole problem by having Assistant Secretary Crowell go back to the department and get Gen. Crozier's figures and compare them with Gen. Wheeler's figures and find out the discrepancy.

The CHAIRMAN. I think we should have that. According to the absolute, unqualified testimony of Gen. Crozier we could not hope for one-tenth of these by the 1st of August.

Secretary BAKER. I will be glad to have those figures verified.

The CHAIRMAN. Senator THOMAS, of Colorado, had to leave the room and he asked me to inquire of you why it is that men who have been drafted into the National Army are not able, in accordance with the promises that were held out to them, to get assigned to such qualifications or work as they are fitted for. The Senator had in mind instances of men whom he knew personally to be mechanics who had utterly failed to be recognized as mechanics and were treated merely as privates, and some complaint of that sort has come to me and to other Senators, and we would like to call it to your attention and suggest that the value of the Army would be a good deal increased and justice would be done to a great many men if some organized effort should be made to examine into the qualifications of these privates and let them have an opportunity to follow out the skilled work that they are qualified to do.

Secretary BAKER. Senator, I would like to be heard on that for a moment. The War Department does not recognize in any drafted man a right to elect his service. The Government determines where he can be of most service, and the fact that a man may regard himself as a mechanic or be a mechanic does not give him the right to demand of the War Department that he be assigned to a particular kind of occupation or service.

The CHAIRMAN. Very true.

Secretary BAKER. But we have had made the most elaborate occupational census of the men in the Army which has ever been made of any similar number of men. It is in a card catalogue, so that at the camp, by pulling out a drawer and laying a ruler along the tops of the cards, you can pick out every man in that camp who is an automobile mechanic. By laying the ruler along another set of indentations in the cards you can select every painter, carpenter, lawyer, doctor, every machinist, and there is a complete classification of occupations.

The demand for mechanics in the Army is exceedingly large, enormous, as a matter of fact, and when we have a request from the Aviation Corps or from the Engineers or from the Ordnance Department for mechanics of a particular kind, we pull out the drawer and lay the ruler along the line that indicates the men who are familiar with that sort of business, and we select out of that camp its quota, its contribution, to that withdrawal from the division of that particular type of men.

It is not possible to withdraw them all from one camp because it disorganizes the military discipline and the tactical formations, which are already in process, so that there are still in the camps competent mechanics who have not yet been withdrawn for assignment to mechanical operation, but the means for doing it are there, and as soon as it can be done it is being done.

The CHAIRMAN. That is all I wanted to develop.

Secretary BAKER. It is a very complete system.

The CHAIRMAN. It is being followed out?

Secretary BAKER. It is very complete.

The CHAIRMAN. It was a statement held out to the country not only to encourage those that were qualified, but to show that the Army would be given the very highest possible efficiency. Of course, we get complaints, and although we discredit them more or less, I realize that there may be some justice in some of them.

Secretary BAKER. I think I have a statement here which I would like to hand to you personally, as you are interested in it. It is the completest occupational card-index system that has ever been made of a similar number of men.

Senator WADSWORTH. I have heard that that was being most excellently done.

Secretary BAKER. It is being done by Prof. Walter Dale Scott and some of his assistants, and I think is a most searching and careful analysis.

Senator FLETCHER. Does it include shipbuilders?

Secretary BAKER. Yes; and not only that, but we have been able to supply to the Emergency Fleet Corporation a very large number of those men, and they have been furloughed from the Army into what we call the engineering reserve, and then placed on the inactive list, so far as the Army is concerned, and they have gone to work in the shipyards.

The CHAIRMAN. Along the same line, I have a suggestion from an Army officer. He had no right to make it to me, but he did. In this rule with reference to the apportionment of a soldier's salary, so much to his dependent wife, children, or mother, as the case may be, that while these young men have been receiving their proportion of the salary, the apportionments have not yet been made to the dependents, in many cases. Do you know anything about that?

Secretary BAKER. I have had some complaints of that kind, Senator. Not only that kind, but I have had complaints of slowness in paying the soldiers themselves in the camps, and I have looked into it two or three times, each time finding that the difficulty comes from the inaccurate way in which names are written and spelled in lists. They have to be carefully compared, and when a company officer makes out the list of his men and spells a man's name wrong and it is compared with the controlling list, then if there is a man in the company whose name is not on the controlling list and it is short a man who ought to be there, it has to be sent back for correction, and until the Army gets to know itself better that sort of thing is inevitable.

The CHAIRMAN. I suppose so.

Senator NEW. Mr. Secretary, you spoke a moment ago of several factories being brought into the manufacture of machine guns since this testimony given by Gen. Crozier.

I would like to ask, if it is a fair question, if the Government has advanced money to any of these companies or to any company for the purpose of building or equipping its plant?

Secretary BAKER. Yes; I think so, Senator. The Government has done this. You authorized it by an act of Congress, authorized the department to advance not in excess of 33⅓ per cent of the contract price on anticipated deliveries upon the receipt of proper security for the advance, and the War Department has appointed a board of men of large experience in such matters to take up with the individual manufacturer the question of the kind of security he gives, and those securities are deposited in the Federal Treasury and have been the basis of advances to a great many men.

Senator NEW. Objection has been made, Mr. Secretary, according to statements made to me by certain managers, that they have offered to do work for the Government, proving themselves equipped to do the work, and that they have been denied the opportunity to do it, while at the same time the Government has, at its own expense, equipped other plants to which contracts have been given. Is there anything you care to say on that?

Secretary BAKER. As a general statement, I could not reply to it. This is true, that contractors who are already engaged in the class of business we desire to have expanded have doubtless been preferred to factories which have been engaged in similar business but are ready to convert their enterprise, but each case has to be taken by itself. The effort of the department has been, as far as permission by Congress goes, and upon adequate security to protect the Government, to assist manufacturers to carry forward their financial and manufacturing operations.

Senator WEEKS. Mr. Secretary, I want to get back to one of the matters which we were discussing about shortages. It is a comparatively minor matter, and yet I have found the contracts here in the testimony, and that is the question of belts. The contracts were let in the months of April and May of last

year for 1,800,000 belts, which will be enough to supply the Army with one belt apiece at least. Now, it would seem from that that there should be no lacking in the belts supplied, and yet Gen. Greble testifies that they are 65 per cent short in his camp.

It went on from that, and contracts were let in July for 1,565,000 more; in August, for 1,060,000 more; and in the months between August and November, for 720,000 more, or about 5,000,000 belts. A belt is a simple, easily made piece of equipment, and it is most surprising to me that there should be a shortage in any camp.

Secretary BAKER. I have nothing on the subject of belts, Senator, in this weekly report.

Senator WEEKS. Will you be good enough to look that up and see if the shortage is due to a lack of distribution or transportation or to the failure of the manufacturers to furnish the belts within the contract time? I am just curious about it.

Secretary BAKER. Yes; I will be very glad to look it up.

Senator WEEKS. That is one item that it seems to me there should not be any question about.

Secretary BAKER. I would be very glad to look it up, Senator.

The CHAIRMAN. You are going to start in now, Senator FRELINGHUYSEN?

Senator FRELINGHUYSEN. Yes.

The CHAIRMAN. I thought it might be a good time to take a recess until half past 2.

Secretary BAKER. Mr. Chairman, I have a Cabinet meeting this afternoon. I can probably be excused from the Cabinet meeting if you prefer to go on this afternoon.

The CHAIRMAN. We want to suit your convenience.

Secretary BAKER. I can give you the entire day to-morrow, and be glad to.

The CHAIRMAN. Whichever you prefer.

Secretary BAKER. I think it would be better for me to be at the Cabinet meeting if I could.

The CHAIRMAN. Very well, sir.

Senator WEEKS. Then we have no other witness for this afternoon, have we Mr. Chairman?

The CHAIRMAN. No.

Senator FRELINGHUYSEN. I only want to inquire of the Secretary regarding the matters of cantonments.

The CHAIRMAN. Well, you might finish with that.

Senator WEEKS. When we get into the cantonment question I apprehend some members of the committee will want to go into that.

Senator MCKELLAR. Yes. I think we had better adjourn until to-morrow morning.

Senator FRELINGHUYSEN. Why $134,000,000 was spent in cantonments at a profit of 2.98 per cent. I wanted to inquire into that a little bit.

The CHAIRMAN. We have not touched the cantonments.

Senator FRELINGHUYSEN. I have some information which will probably be illuminating to the committee, and I would like to make some inquiries of the Secretary in regard to it.

Secretary BAKER. Perhaps you would be good enough to give me what you have, Senator, so I will be able to be sure of my own statements about it in the meantime.

Senator FRELINGHUYSEN. It relates entirely to the testimony of individuals regarding prices paid for labor at the cantonments. I do not know that you have any official information regarding that.

Secretary BAKER. No; I do not think I have on that subject.

Senator FRELINGHUYSEN. I move we adjourn, Mr. Chairman.

(Whereupon, at 1.05 o'clock p. m., the committee adjourned until to-morrow, Saturday, January 12, 1918, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
UNITED STATES SENATE,
Washington, D. C., Saturday, January 12, 1918.

The CHAIRMAN. The committee will please come to order.

STATEMENT OF HON. NEWTON D. BAKER, SECRETARY OF WAR—RESUMED.

Mr. Secretary, do you desire to make any general statement about anything over which we have gone heretofore?

Secretary BAKER. Mr. Chairman, I was asked several questions as to which I said I would get some further information. There were three of those statements which I will now make.

Senator HITCHCOCK asked me why 1,200 machine guns were left undistributed. I looked into that last night, and I found that this represents what is left of some 3,000, of which the remainder have been distributed, giving 20 to each National Army cantonment and 50 to the National Guard, and some to the Aviation Service. This was done in this way because in the beginning the National Guard was at full strength and the National Army were partially filled. Under the present plans the Lewis guns are not used in France, where our troops are at present furnished with the automatic Chauchat rifle and the Hotchkiss machine gun, with which they are supplied after reaching France. The Ordnance wish to retain about 200 of these rifles for experimental or other purposes, and the remaining 1,000 will be distributed partially to the camps and partially to the Aviation Service. They have only been on hand about one month.

The CHAIRMAN. There was a suggestion here, possibly not a positive statement, that there were a great many of the Lewis guns made for the European army that were never delivered. Whether they have been commandeered or whether the United States has taken control of them I do not know. Do you know, Mr. Secretary?

Secretary BAKER. I do not know. It would not be easily possible for us to use them; even if we got them, we could not use them in this country.

The CHAIRMAN. They could be used only for practice purposes?

Secretary BAKER. Yes.

The CHAIRMAN. You do not know whether there were any such or not?

Secretary BAKER. I do not know.

The CHAIRMAN. Do any of the members of the committee desire to ask the Secretary any further questions?

Senator WEEKS. Do you mean about that particular matter, Mr. Chairman?

Secretary BAKER. Mr. Chairman, perhaps it would be well to permit me to finish these statements in answer to questions about which I said I would get information.

A report from the Chief of Ordnance, January 5, states that there have been ordered 36 batteries for delivery by June next to be secured from the British Government. Further orders will be given at Midvale and at Bethlehem for further deliveries up to 90 batteries, which is the requirement for 30 divisions, allowing 25 per cent for replacements.

Senator WADSWORTH. Ninety batteries of 9.2's?

Secretary BAKER. Yes, sir; that is the program.

Senator WADSWORTH. But there are none of the 240 millimeter French guns ordered?

Secretary BAKER. We are getting the 240-millimeter guns from the French in France. I do not know whether this is in evidence before you or not, but—that statement was inaccurate. We are getting from the French 75's and 155's, both guns and howitzers. We are getting the English pattern of 8-inch howitzer, and 9.2 howitzers, and our own 9.5 howitzers. We are not getting the 9.5, or its equivalent, the 240 millimeter.

Senator WADSWORTH. That was the understanding.

Secretary BAKER. I have a table which I will be glad to show to the committee, but which I do not desire to put into the record, which gives the quantities delivered and under contract, and the increase in these arms projected forward to December, 1918, from the 1st of January.

Senator WADSWORTH. We have got that in our executive sessions. We have had the complete Artillery program showing the quantities of each caliber.

Secretary BAKER. This shows the monthly deliveries, showing the rather rapid rise in American deliveries month by month.

Senator WADSWORTH. Gen. Crozier said that they were promised, but he did not expect the promises could be lived up to, although the manufacturers were doing their best.

Senator WEEKS. In discussing the matter of the 1,200 Lewis guns which have not been distributed, and this last subject, you say, in both cases, that they will be. When will those 1,000 guns be sent to the Army posts?

Secretary BAKER. I assume immediately.

Senator WEEKS. It seems to me to be a pertinent inquiry why it was not done a month ago?

Secretary BAKER. I think that is pertinent, but a month ago is not so long ago. The theory upon which they made distribution was to take the 3,000 available guns and distribute them to the National Guard and National Army in relatively the same proportions. The earlier distributions were sent to the National Guard because their numbers were full. They have apparently retained about 1,000. They want to keep 200 for experimental purposes. They had to turn over the remainder, partially, at least, to the camps and the aviation or aircraft committee or section. At any rate, it leaves something less than 1,000 still to be distributed. Obviously it would be well to let the National Army when assembled have those weapons, but until recently it was not done. It was not complete, and other freight orders were given precedence.

Senator WEEKS. Gen. Crozier testified that those guns were being kept for some possible emergency. I did not understand

at the time and I do not know now what the emergency could have been. It seems to me that a delay of 30 days in sending those guns to our recruits for training purposes, and in those other matters, is the essence of the whole problem that we are discussing, and there should not be a delay even of a day. My criticism is that instead of acting promptly there is delay in almost every action.

Secretary BAKER. The fact is that the railroad congestion in this country has been very great. A system of priorities was worked out by which Government material was given priority, and everybody in the Army and everybody in the Navy had a right to put a tag on a car and say, "This is a priority order," because it was a Government shipment. As a result of that, practically everything the Government had to ship was marked priority, and the consequence was that the priorities became jammed.

Senator WEEKS. Let us take the case of these Lewis guns; where are they?

Secretary BAKER. I think they are at the Springfield Arsenal, but I am not sure.

Senator WEEKS. There is an encampment within 60 miles without guns.

Secretary BAKER. I am not certain of that.

Senator WEEKS. Substantially without guns.

Secretary BAKER. I am not so sure, but surely less than they could use. It is fair to say that.

Senator WEEKS. Let us assume that that is practically true. Why would it not have been well to use those guns and supply that division and let us have one division actually at drill with the guns that they are likely to use or similar guns?

Secretary BAKER. That would have been a possible thing. Of course, the fact is, in the distribution of arms the effort has been to distribute the largest quantities to those divisions nearest ready to go abroad. Camp Devens, to which I suppose you refer, is a National Army camp, and it may well be assumed has had less training than some of the National Guard and Regular Army camps, where the arms would have been more useful.

Senator WEEKS. The National Guard camps were not as readily available for this particular purpose.

Secretary BAKER. It would have been a bad principle of distribution to send these guns to Camp Devens merely because it is nearest, when some other camp more remote was going to use them first.

Senator WEEKS. I think that is the very essence of the principle of distribution and is one of the great difficulties with the railroad situation in this country to-day. We buy supplies manufactured in Illinois and deliver to New York when exactly the same supplies are manufactured in New York. That is one of the faults of the railroad system. These things should be distributed at the nearest point.

Secretary BAKER. As a general statement, that is perfectly obvious. It is thoroughly ideal.

Senator WEEKS. It may be ideal, but I do not think it is impossible.

Secretary BAKER. It is impossible on any sudden order.

Senator WEEKS. It is?

Secretary BAKER. It requires large storage facilities and means of distribution from particular places.

Senator WEEKS. From the Army's standpoint, it may be ideal, but not from a business standpoint.

Secretary BAKER. It is ideal from a business standpoint. We can not accumulate things in Chicago unless we have storage houses to put them in.

Senator WEEKS. That is true.

Secretary BAKER. If the storage houses are at Springfield Arsenal then the accumulations must be at that place until the new centers of distribution can be created.

Senator WEEKS. Mr. Secretary, we are discussing the general topic rather than the details. Let me ask about the orders which you have stated will be given at Midvale and to the Bethlehem Co. Why haven't they been given?

Secretary BAKER. Because they have not the additional capacity at the present time. They are increasing it as rapidly as possible.

Senator WEEKS. Why not give the order?

Secretary BAKER. They have had orders to increase the forging capacity, and as soon as it is increased orders will be given.

Senator WEEKS. You think in that particular case there will be no delay in final delivery?

Secretary BAKER. I think not. One of the early things done was a conference with the Midvale and Bethlehem people by which enormous extensions of their facilities for forging were created. Their forging capacity was not at that time allocated to particular arms, but the extension was authorized, and as soon as that is available the arms most needed will be the ones that they will be put to work on.

Senator WADSWORTH. Evidently the mind of the department has been changed with respect to the 1,200 Lewis guns since Gen. Crozier testified, because he testified it was not the intention of the department to distribute them to the camps.

Secretary BAKER. Of course, Senator, having heard Gen. Crozier's testimony you know what was in his mind. However, upon consultation with the Ordnance Department yesterday that was the information that I received.

There is one other thing to which I desire to call attention. Some one told me—I think it was Senator MCKELLAR—that he had talked with an officer from Camp Upton, as I recall, and he left the impression that there were no machine guns and no artillery at Camp Upton.

Senator MCKELLAR. He did not leave me under that impression; he stated so.

Secretary BAKER. You remember that you and I debated whether he meant relatively none or absolutely none. I told you, as I remember it, that if he said absolutely none, he must have been in error.

There are at Camp Upton four 3.2-inch guns, eight 3-inch, and in addition 20 Lewis and about 50 Colts and 30 Chauchat, four 4.7-inch have already been shipped from the arsenals, but we have no record of their arrival.

A letter from the commanding general of the division, Gen. E. M. Johnson (in the absence of Gen. Bell) dated December 21, states—

> That there has been firing by field artillery for the instruction of all gunners of the regiment; that everything is going along well here; that of course the artillery, machine guns, etc., are not fully equipped.

That shows, however, that there had been actual firing.

Senator HITCHCOCK. These 1,200 guns, then, are not being kept for emergency purposes, but will be distributed to the camps?

Secretary BAKER. Yes, sir. To reconcile Gen. Crozier's statement with that, it is possible that Gen. Crozier had in mind a larger distribution to the aviation section than now seems necessary. That may have been what he had in mind.

Senator HITCHCOCK. But those are not aviation guns.

Secretary BAKER. No; they are not aviation guns.

Senator HITCHCOCK. They are not aircraft guns. We discovered the presence of these 1,200 guns because there was no accounting for them. Gen. Crozier said they were in storage. When asked why, he said it was to meet some emergency that might arise. That was the way the matter came out.

Secretary BAKER. The fact that they are manufactured for ground work does not prevent their being mounted for aircraft use.

The CHAIRMAN. But the guns, Mr. Secretary, are quite different.

Senator MCKELLAR. Yes; they will have to be changed for that purpose.

Secretary BAKER. The tripod would have to be taken off.

Senator MCKELLAR. And the air-cooling arrangement would have to be taken off.

Secretary BAKER. I do not know about that.

Senator HITCHCOCK. And the Lewis Co. is manufacturing an ample number of aircraft guns?

Secretary BAKER. The Savage Co.?

Senator HITCHCOCK. Yes.

Senator MCKELLAR. I had a telegram from the editor of one of our leading papers, in which he asked me to ask you how many pieces of artillery are in Camp Sevier.

Secretary BAKER. I will be glad to find out for you. I do not know.

Senator MCKELLAR. It seems that he has been there. Then he asks me to ask you this question. He states that, owing to the scarcity of uniforms and clothing, the boys who are able to are compelled to buy clothing in order to protect themselves from the cold. They buy the clothing from the merchants in the towns surrounding these camps, and the merchants charge them 50 per cent more than the civilians have to pay. Now, has the department taken any steps to look into these matters and to protect the soldiers against the profiteering of the men in business around the camps?

Secretary BAKER. Two steps. I fancy the thing he refers to is officers' uniforms rather than the men's uniforms.

Senator MCKELLAR. Oh, no. Our information is that the boys in all these camps who were able to, when it was cold and when they had no woolen clothing, bought overcoats in these neighboring towns, and bought them at tremendous prices.

Secretary BAKER. I will still say two steps. I will leave out the question of the officers' uniforms. Gen. Goethals some days ago—perhaps more days than I now remember—directed the

quartermasters of the camps in which there was any remaining shortage of uniforms to buy all that could be bought in the nearby towns and distribute them among the soldiers.

The other step was to institute a pretty thorough inquiry as to where the uniforms came from around these camps.

Senator McKELLAR. Carrying out the view expressed by this able and splendid man, a man who is thoroughly in sympathy with what we are doing, would it not be a good idea to have some one posted at these various camps to see that the soldiers are not preyed upon by the merchants surrounding the camps? In other words, I think the soldiers are entitled to every protection from the Government when they are taken into these camps.

Secretary BAKER. Senator, every chamber of commerce in towns near camps is actively in cooperation with the War Department and is operating upon its own commercial people with a view to preventing an extortionate raising of prices to the soldiers. Operation of the regimental camp exchanges is already being conducted for the purpose of protecting the soldiers against an improper rise of prices in near-by places, and that subject has been under observation and correction from the very beginning.

The CHAIRMAN. Mr. Secretary, I have no disposition to cavil about these things, but your general statements before this committee are calculated to leave the impression that all these things are really in the hands of the troops. I saw the commanding officer of Camp Sherman just a moment ago, as I came over here, and I asked him about his supply of clothing. I asked him if he was fully supplied. He said "No; not yet," that they were several thousand short in his command. Now, it may be that that condition is inevitable——

Secretary BAKER. Is that at Chillicothe?

The CHAIRMAN. No. Camp Sherman.

Senator WADSWORTH. That is Chillicothe.

The CHAIRMAN. It may be that that is inevitable, but the effect of your statement upon the country is to lull the people into a feeling of absolute security that everything has been done. I do not think it has been.

Secretary BAKER. Senator, I think this country is entitled to feel secure.

The CHAIRMAN. I think the country is entitled to know the conditions.

Secretary BAKER. So do I. When they know the conditions they will feel secure. I do not know the facts about Camp Sherman. Let me ask the Assistant Secretary about that. [Addressing Mr. Crowell:] When you were at Camp Sherman three or four weeks ago did you learn that there were as many as several thousand men without blouses?

Assistant Secretary CROWELL. No. There are new recruits coming in every day. They, of course, have no uniforms at all. I should say that 95 per cent of the men were in uniform four weeks ago.

Senator McKELLAR. Well, 95 per cent still leaves a number of them without uniforms.

Senator HITCHCOCK. Do you have any of the figures?

Secretary BAKER. No. I only asked Mr. Crowell that because he was an eyewitness. He went out with the object of discovering the exact state of the equipment. To have the commanding officers or anybody else tell a Senator, or tell anybody else, that there are thousands of men without blouses, unless that is a fact, is a very serious matter.

The CHAIRMAN. The men are bound to testify when they come here, and the testimony of Gen. Greble and Gen. Wright was to the same effect. This officer was not volunteering the information to me.

Secretary BAKER. I do not criticize the propriety of your asking him nor the propriety of his answering, but I am simply raising the question as to the truth.

Senator HITCHCOCK. Here is the trouble, Mr. Secretary. We have specific testimony on certain points, and your testimony seems to contradict it completely. For instance, I have in my hand here a statement made by the Quartermaster General before this committee. He showed us a certain shortage of supplies upon November 30, and yet the impression that you have given the committee is that there was no such shortage.

Secretary BAKER. I have not testified, Senator HITCHCOCK, as to November 30; but what I have been trying to give you was the latest information.

Senator HITCHCOCK. You spoke of three or four weeks ago.

Secretary BAKER. November 30 was longer than that.

Senator HITCHCOCK. This is in November—November 30. If this were true then, certainly conditions could not be expected to be so wonderfully improved since. Here are some of the shortages which the Quartermaster General gave: Blankets, 18 per cent short; cotton breeches, 42 per cent short; woolen breeches, 40 per cent short; cotton coats, 59 per cent short; woolen coats, 48 per cent short; cotton cloth, 13 per cent short; summer drawers, 19 per cent short; wool drawers, 20 per cent short, and so on down the entire list, until we come to overcoats, 46 per cent short on the 30th of November. That means that the department was that much short, and after it receives these things they have to be shipped to the camps.

Secretary BAKER. Does that mean that that shortage existed in initial equipment, or does it mean that they were short in the distribution of garments to the camps?

Senator HITCHCOCK. This much short on contracts for delivery to the Quartermaster's Department. According to his testimony, they have a shortage of 46 per cent on overcoats. That is the shortage in the Quartermaster's Department. After he receives them, they have got to be shipped to the camps.

Secretary BAKER. I have no figures with me at present as to the number of overcoats delivered to-day, but it is a very large number, because an enormous industry is devoting its entire time to the production of overcoats and blouses.

Senator HITCHCOCK. I agree with the chairman of the committee that you seem to have the impression and want to give it to the committee that everything is lovely.

Secretary BAKER. Quite the contrary, Senator. What I want to give to the committee is an exact and accurate picture of the conditions as they are now. That there was a shortage of overcoats and blouses and trousers is perfectly true, but the figures that you have here are figures that were taken at the climax of that shortage, when the railroad trains of this country were caring for the distribution of large supplies which had not reached the camp, which had not been distributed in the camps, and when the factories in the country were turning out large additional supplies. What I want you to have is a knowledge of the fact that since these discouraging figures were made, the further distribution of supplies and the further production of supplies has created a very much better condition. I do not characterize it as perfect, of course.

Senator HITCHCOCK. You state, then, that during December and the first half of this month that has all been cured?

Secretary BAKER. I did not say that. I am trying to deal in universal affirmatives or universal negatives. I am trying to give you the figures. Take the overcoats. I gave you yesterday the exact number of overcoats.

The CHAIRMAN. The fault I have to find, Mr. Secretary, is this: If the Congress, or if this committee, or if the people are satisfied from your general statement that everything is all right, or as near right as it is humanly possible to have it, they will say that no further legislation is necessary; you can not better conditions by any legislation, and there should not be any legislation. On the other hand, when the exact status of things on the ground and in detail is disclosed to the committee, why then something seems to be necessary in the way of legislation and there should be some change in conditions if a better condition is to be brought about.

Secretary BAKER. I wish to make it clear to the committee that I welcome the cooperation of the committee, whether its suggestions are along legislative lines or lines of administrative readjustment. I welcome it in every form.

The CHAIRMAN. That is one of the purposes we have in view.

Secretary BAKER. Clearly, but I must insist that the facts as they are, and which I am trying to give you, are proper facts to be given, and if their effect results in reassurance in the mind of the country, then the country is entitled to that reassurance. If the things we have done demonstrate that there is no predicate for legislation, then we are fortunate.

I have before me the requirements for overcoats and the delivery for overcoats. Up to the second day of October the deliveries of overcoats were in excess of the requirements. On the 13th day of October (this is in the weekly report) the requirements suddenly greatly exceeded deliveries. That was due to the fact that a large number of additional men had been called out to draft in the National Army, and the needs then ran up until they reached a maximum on the 30th of November, when they were at the highest point above the line of delivery. On the 30th day of November there was a shortage of a considerable number of overcoats.

Senator HITCHCOCK. That corresponds with my figures?

Secretary BAKER. It does not correspond with 46 per cent, so that must have meant distributed rather than received overcoats. On the 1st day of December, the line of need and the line of supply met, and from that day forward the line of supply has been greatly above the line of need. On the 29th day of December, the total number of overcoats on hand—whether distributed or not I can not tell from these figures; there is great difficulty in delay—but on the 29th day of December the total number of overcoats delivered to the Army

was 2,221,000 and the needs on that day were 1,164,000. That is the form in which I get the weekly report, Senator HITCHCOCK. [Handing Senator HITCHCOCK the report.]

The CHAIRMAN. That, of course, would not disclose, Mr. Secretary, whether there had been an absolutely pro rata distribution of these supplies. In other words, on a paper showing there might be absolutely enough to go around, but practically there might not be enough to go around.

Secretary BAKER. Exactly.

The CHAIRMAN. The testimony has been that, due to faulty distribution, some cantonments and some divisions have plenty of things, while others are short.

Secretary BAKER. Yes, sir. That has happened many times with regard to particular items. When the draft was applied, 687,000 men were drawn, 500,000 of whom were to go into the National Army. The camps to which these men were sent were distributed over the country, and a camp which to-day might have 40,000 men, might to-morrow have 35,000 men, so that an accumulation of supplies on the basis of its first population would throw the whole matter out of adjustment, and the result of changing the men and sending them from one place to another was that there was oftentimes an oversupply at one camp and a shortage at another.

Senator WADSWORTH. In addition to that, Mr. Secretary, the Quartermaster General miscalculated on the sizes, so that there were many thousands of uniforms and coats that could not be worn by any of the soldiers.

Secretary BAKER. The fact is, whether there was miscalculation or not, that the tables of sizes, prepared as the result of many years of experience, was found to be impracticable for the use of the men drafted into the Army, because they were larger men.

Senator WADSWORTH. The figures before the committee show that the men in the National Guard are also larger men.

Secretary BAKER. Undoubtedly, but the table of sizes, the result of many years of experience, was the only guide we had, and we ordered on the basis of experience. Then we had the new experience of larger men volunteering in the National Guard and in the National Army.

Senator WADSWORTH. That would not hold true as to shoes, because the experience of the past had shown too many small sizes.

Secretary BAKER. Even in the shoes, more than anything else, the large sizes turned out to be in great demand—larger sizes than experience provided for.

Senator WADSWORTH. But that was back in 1916.

Secretary BAKER. I do not know that. The extent to which it was known is less than that.

Senator WADSWORTH. Twenty-nine thousand men at El Paso were put through a fitting and over 81 per cent were shown to be wearing shoes too small. That was in a report made to the department in 1916.

Secretary BAKER. That subject was considered by the so-called Munson Board, which revised the style of the shoe and the shape of the last, and finally got what is now known as the standard army shoe. The whole question of fitting and sizes was submitted to a very expert board, which I think got an excellent shoe, so far as I am able to learn.

Senator WADSWORTH. The shoe, as I understand it, is quite excellent, but the sizes are not. They do not conform.

Secretary BAKER. There may be too many small sizes.

The CHAIRMAN. Referring to the question of supplies, was your attention called by Gen. Greble to the conditions at Fort Bowie before he went to the Continent of Europe? Did he call your attention to housing conditions and the lack of clothing for the troops?

Secretary BAKER. Not to my personal attention that I can recall.

The CHAIRMAN. It seems to me these matters should have been called to your attention by some one. As long ago as the 24th day of September, Gen. Greble complained to not only one department of the Government, the Quartermaster's Department, but I think to the Health Department as well, that they were housing too many men in the tents, these pyramidal tents; that there was a lack of clothing along certain lines, and so on, but he did not get any answer to that until some time in December, when the very things he predicted would occur, had occurred.

Secretary BAKER. That raises a very singular situation. When the question of building cantonments was raised, I had a conference with the Surgeon General and some half dozen or dozen of the most distinguished men in the medical profession in the country. Dr. Mayo, as I recollect, was one; there was Dr. Welch, of Baltimore, and Dr. Martin, of Chicago—men of very great distinction. They raised the question as to whether the plans for the cantonments were adequate in the matter of cubical contents per man, and they were all satisfied that the plans as approved prior to that time by the Surgeon General's office did not give adequate space. The question was raised as to whether the wisest thing was to suspend the building program, which was already far advanced, and remodel it and make some readjustments. It was decided that it would be satisfactory, upon their recommendation, if we used the plans as they were, but got from Congress authority to make additional buildings, so that later we could spread out the congested population. As a matter of fact, the reorganization of the size of the companies came about at that time and further helped the situation, enabling us to take three barracks, each of which had been taken for a single company, and distribute the three between two companies. When we got that far I asked them what should be done about canvas camps, and they said they gave them very little concern; that tents are very well ventilated, so that we need not look for special trouble from the canvas tents, no matter how congested they were.

It was agreed that they might be inconvenient, in that the young men could not get about so easily, but they expressed regret that all the camps were not to be in canvas instead of cantonments. They thought it would be a safer thing from a health point of view. Now, as a matter of fact, the opposite turned out to be true. The camps in which there was the most sickness were the canvas camps, and the shortage of tentage in this country has been one of the most serious limitations upon our ability to enlarge the number of tents and spread out the population. Whether or not that condition is due to congestion in these tents, which the boys have unduly closed up tight because of the cold weather, or whether it is due to the fact that the canvas camps are made up of men who have come from sparsely settled parts of the country and who had not been subjected to the contagion of measles, the doctors do not know.

The CHAIRMAN. Whether the doctors knew it or not, Gen. Greble predicted on the 24th day of September that unless greater air space was given these young men they would have an epidemic of the very disease that they did have.

Secretary BAKER. Measles?

The CHAIRMAN. Yes. He evidently knew, whether the doctor did or not, but it was not until his return some time in December that he got any relief.

Secretary BAKER. You asked me whether he had reported to me. I suppose you want me to answer that question. So far as I recall, I did not see him until he returned from Europe and before he had revisited his camp.

The CHAIRMAN. He reported it to General——

Secretary BAKER. To Gen. Bliss or Gen. Bell.

The CHAIRMAN. He testified that he reported it to the Surgeon General and the Quartermaster General.

Senator WEEKS. Gen. Greble testified in that matter, when he was asked to whom he reported, "I reported to four men. I did not know which particular man would do it." So he evidently made four reports of the condition. That was in September, and the first reply that came was from The Adjutant General on the second day of November.

Secretary BAKER. I can not understand why he was uncertain as to whom he should report, because he knew that his report should go to the Chief of Staff.

Senator HITCHCOCK. That is one of the things that has been developed, that no one knows where to go in the department to get action.

Secretary BAKER. Well, Senator, that is simply a failure of information. There is no uncertainty about where to go.

Senator HITCHCOCK. May I read to you the experience of a young man who had a device that he submitted to the War Department in September. A number of these matters have come to my attention. I suppose some devices are worthless; but if they are, there should be somebody there to wipe them off the map and spend no further time on them. The fact is, however, that if anyone goes to the department with a device he is sent from pillar to post, and in the course of time he visits 20 or 30 different people, and one refers him to another. Instead of anybody being able to give an answer of yes or no, one is referred from one place to another. This man had a cooker, a little device for cooking food.

Secretary BAKER. I know about that.

Senator HITCHCOCK. He went first to the quartermaster department in New York on September 18. The quartermaster there thought it was a good thing and sent him to Camp Upton. He went there on the 21st. After four days he saw Gen. Bell. Gen. Bell thought it was a good thing and sent him to the Quartermaster's Department at Washington. He went to room 324. He saw a captain there who did not think much of it. He went back to the quartermaster in New York, who advised him

again to go to Washington to see Col. Penrose in the Quartermaster's Department. He saw Col. Penrose on October 14. Col. Penrose thought it was a good thing, and he told him to go to the chief clerk of the Ordnance Department. He, too, thought it was a good thing, but he told the young man that he would have to go to the equipment division on F Street. He went there to see Maj. Simpson, who thought that it was a good thing, but he said he would have to see Capt. Pratt.

Capt. Pratt thought it was a good thing, and brought it before Gen. Babbitt. Gen. Babbitt wrote him to come to New York and he met him. Gen. Babbitt took it into the field to try. Gen. Babbitt liked it, but Capt. Pratt said that he would have to go to the equipment board down in the War College. This was on December 18. Then he had to hunt up the equipment board in the War College. He was told there that he must see Col. Anderson. Nobody gave him any letter of authority to do a certain thing, but they kept referring him from one place to another. He was unable to see Col. Anderson the first time, so he went a second time. Col. Anderson thought it was an excellent thing, and he said if he could get four of them he would send them to Gen. Pershing to try. He gave him four specimens, and they were sent to Gen. Pershing. The young man thought that possibly they might be lost on the transport and he wanted duplicates. So he visited the War College again, and they had duplicates made and put them in the hands of Maj. Wallace and they were taken over to Gen. Pershing. Now, after Gen. Pershing reports on it it may be used next summer, but it can not possibly be used this year.

Is there not some way that those things can be acted upon? Is not there some one who knows the proper people to go to and who is the proper man to decide such a question?

Secretary BAKER. Senator, that is probably a very unusual case. Of course, the inventive genius of the American people has been aroused by the war. Literally thousands of devices are sent into the War Department every day. They come to me in my personal mail. I get everything from fireless cookers down to submarine-protection devices. The situation is not so simple as one might imagine. If he were only one, or if he were only one of a few thousand of men it would be simple, but it is not a question of a few thousand; he is one of many tens of thousands. There are probably men in the world who know enough to look at a new device and answer the question whether it is intrinsically excellent, but that does not mean that a device of this kind will work in France. That requires the opinion of men who can express opinions from different points of view. Now, this particular cooker may have been an excellent one. I remember your interest in it.

Senator HITCHCOCK. This is a new one.

Secretary BAKER. Unless I am in error about it, you did send up a man who had a cooking device.

Senator HITCHCOCK. I will tell you what that was. He had a container for keeping food hot. He was connected with the Thermos Bottle people. This was a method of keeping food hot for 10 hours. He had heard these complaints about the men in the front trenches having cold food. This was submitted to the War Department in September. The container was made of paper and was very light and cheap. It was made in sizes from a quart up. That was submitted in September, and, as I recall it, they were unable to get a test of it until October or November. When it was tested it was found good. It actually kept food hot for 10 hours, but nothing was done.

Secretary BAKER. My recollection was that it was rejected as impracticable. It did keep the food warm for 10 hours, but it was found impracticable.

Senator HITCHCOCK. This man was never able to find out about it.

Secretary BAKER. I remember writing you on the subject and telling you the result of the inquiry.

Senator HITCHCOCK. I do not remember the letter. I wrote the Quartermaster General finally and asked why a report could not be made on it. He wrote back, or one of his assistants wrote back to me, stating that the fireless cooker took the place of that, and that it was not necessary. Upon investigation, I found that the smallest size of fireless cooker contained 10 gallons, and it is utterly impossible to take these 10-gallon containers through the sinuous trenches. I wrote him and called attention to the fact that this small container could be used in the front trenches, but I never heard anything in answer to that. It may have been a failure, so far as I know.

Secretary BAKER. My recollection is that it was found impracticable. Let me see if I can not fairly state this situation. Here is an army of a million and half men. Any change in their equipment means, in the first place, a disorganization of the existing equipment. It means enormous additional expense. In spite of the fact that all these bureaus have been in the process of expanding their official personnel, they are dealing largely with persons untrained in military usage, having little military experience. The Ordnance Department, for instance, with 3,000 officers, has just 97 who are trained. The Quartermaster's Department, with 3,000, has 350 who are trained. You or I, if we should put on a uniform, might pass a very favorable judgment on a food container, and yet, not having had previous military experience, our judgment might be defective from a military point of view; so that it is necessary, in dealing with weapons or with articles conducive to comfort, to sort out of this vast mass those which are sufficiently excellent to justify the recquipment of the entire Army.

Senator HITCHCOCK. I realize, Mr. Secretary, the burden that you have upon you or that the department has, but I say that when enterprising Americans do take ideas to the department they never can know where to go, and instead of being given an answer and being treated in a businesslike way, they are referred from one man to another until they run the gantlet of twenty or more men, no one with authority, but each one wasting his time.

Secretary BAKER. What practical substitute could there be?

Senator HITCHCOCK. A business concern, such as the War Department has got to be in time of war, would organize so that there should be a definite place to go for everything, and it should not be a succession of references to boards or offices.

Senator BECKHAM. In the Navy Department there is a special board that deals solely with inventions.

Secretary BAKER. There is in the War Department, too.

Senator HITCHCOCK. These officers are not only wasting time of and irritating Americans who go there, but they are wasting the time of the Government.

Secretary BAKER. The equipment division of the General Staff is the proper place for those things to go. There is no reason for anybody to have any doubt on that subject, except that the number of transactions is so vast and the number of persons volunteering is so great that they have not got the information.

The CHAIRMAN. This shows that there has been a reference.

Secretary BAKER. They referred him back to Gen. Babbitt in the Ordnance Department, evidently with the suggestion that he try it.

Senator HITCHCOCK. Another man would have an entirely different experience. He might start at another place and have an entirely different route.

Secretary BAKER. I do not think that necessarily follows, Senator. I do not think the fact that one man started wrong would mean that all would have the same experience.

Senator HITCHCOCK. They go down to the War Department and they can not find out what they want.

Secretary BAKER. I hear these complaints. I sit in my outer office from 12 to 1 o'clock every day, and I see everybody who wants to see me.

Senator HITCHCOCK. I do not doubt that you are burdened.

Secretary BAKER. Oh, no; I do not complain. But everybody who can not find where to go can see me personally, if he wants to. He can see my secretary, who is very helpful in these matters. He can see the Assistant Secretary. They can find out by going to my office where to go if they do not know. This young man with his cooking device could have asked me personally if he wanted to.

Senator HITCHCOCK. I think that would hardly be the proper thing.

Secretary BAKER. It is sanctioned by frequent usage.

Senator HITCHCOCK. I realize that you have a tremendous burden on you, but it seems to me that that is all the more reason why there should be some organization in the department to simplify the operation.

Secretary BAKER. There is. There is not a citizen of the United States who can not walk into the office of the Chief of Staff, who knows the whole Army organization from top to bottom. He can walk into Gen. Bliss's office and say, "I have a fireless cooker which I think will be a good thing. To whom shall I submit it?" Gen. Bliss would touch a button, get a messenger, and send the messenger with the man to the person to whom it was to be submitted. If he goes to the depot quartermaster in New York, who is probably a civilian, having no knowledge of the Army, or if he goes to Camp Upton, to Gen. Bell, he simply starts in wrong. The only thing we can do is to have a system and make its operation known as well as we can.

Senator WADSWORTH. The depot quartermaster at New York must be a Regular officer.

Secretary BAKER. I think he is Col. Dalton. He is a Regular officer. The depot quartermaster in New York is pretty nearly

the busiest man of anybody I ever saw. It seems unlikely that he saw this particular man.

Senator WEEKS. Do you suppose he is any busier than you are?

Secretary BAKER. I am sure he is; I am sure he must be. He deals with a vast mass of detail which I deal with only from a supervisory point of view.

Senator WEEKS. Wouldn't he have these matters collected for him by subordinate officers?

Secretary BAKER. Undoubtedly. If each person who calls on the depot quartermaster had to be seen by him personally, 50 hours a day would not suffice.

Senator HITCHCOCK. Has there been any serious consideration in the department with reference to getting hot food to the men in the trenches?

Secretary BAKER. Yes, sir.

Senator HITCHCOCK. Has anything been adopted?

Secretary BAKER. I can not answer with definiteness. Gen. Pershing's quartermaster staff has examined in detail French and British devices and appliances and has quite definitely recommended to the Quartermaster Department the sort of device they think good for that purpose. In addition to that, several devices, notably the one which you called to my attention, were submitted to Gen. Pershing by cablegram.

The CHAIRMAN. Are there any more questions?

Senator FRELINGHUYSEN. I should like to ask the Secretary, in view of the testimony of Mr. Eisenman that there was sufficient clothing manufactured in the latter part of August and September to provide the garment workers, and in view of the fact that Gen. Sharpe testified that the capacity of a certain class of machines used to manufacture those garments was practically all used, whether there was any condition with regard to labor or otherwise which prevented the utilization of all the capacity of all the garment workers in the country?

Secretary BAKER. I think there may have been. I can not answer that question definitely. What you have in mind, I suppose, is the use of the sweatshop system that was prohibited from the very beginning.

Senator FRELINGHUYSEN. I do not understand that it was entirely the sweatshop system. I understand there was a large number of factories in Rochester and Newark and in other cities that would have complied with the conditions, but they found they could not secure opportunity or permission from the War Department. They offered their facilities, but they were refused.

Secretary BAKER. I do not know the facts about that. The depot quartermaster in Philadelphia, who was awarding those contracts, was awarding them, as I was told at the time and have since been told, as rapidly as they could be awarded.

Senator FRELINGHUYSEN. Do you know whether any effort was made to make a census of the garment-factory facilities in the country, in order to provide sufficient uniforms for delivery?

Secretary BAKER. I do not know. I assume there was, but I do not know it.

Senator FRELINGHUYSEN. Is there any information in your department on that subject?

Secretary BAKER. There is no information in my personal possession.

Senator FRELINGHUYSEN. It was up to the depot quartermaster in Philadelphia?

Secretary BAKER. It centered there.

Senator FRELINGHUYSEN. Who is the man to get the information from?

Secretary BAKER. I can get it for you, and I will be glad to do so.

Senator FRELINGHUYSEN. I think, Mr. Secretary, that a constructive suggestion would be that it might be a good plan to take some census of that kind, so that if you have to exhaust the facilities in the future you will know where you can get the garments made.

Secretary BAKER. If it has not been done.

Senator FRELINGHUYSEN. We do not seem to have information whether they have done it or not.

Secretary BAKER. The information is readily obtainable. I think it will turn out that in the depot quartermaster's office in Philadelphia there is an exhaustive list of persons.

Senator FRELINGHUYSEN. I did not intend to ask the question about health conditions, but as long as the chairman has asked one or two questions and we have had some testimony about health conditions, especially from Gen. Greble, I wanted to ask you in your judgment if the building of hospitals was done on correct lines and expedited as rapidly as possible? It would seem from the testimony submitted that the hospitals were not completed, if they are completed now, until December, and in many cases sewerage systems had not yet been installed. Gen. Greble testified that out of 24,000 men in his camp 8,000 went to the hospital in November.

Secretary BAKER. The building of hospitals upon correct lines is, of course, an expert question upon which my opinion would not be worth while. The hospital plans of the Surgeon General were worked out in conjunction with a board of hospital experts under the immediate advice and guidance of the most distinguished medical men in the country, and I include in that Dr. Victor Vaughn, the greatest sanitarian, perhaps, in the country; Dr. Welch, of Johns Hopkins Hospital in Baltimore; Dr. Mayo; and Dr. Janeway—a very distinguished company of men—and in addition to that there were hospital construction experts, so the plans of the hospitals had the approval of the highest obtainable authorities.

Senator FRELINGHUYSEN. When was this done?

Secretary BAKER. Very early.

Senator FRELINGHUYSEN. Do you know about when?

Secretary BAKER. I can not give you the date of any definite approval they made, but I saw that body and discussed plans with them at least as early as June, probably in May, but there have been some differences of opinions among architects. I have had two or three hospital architects send me word that they thought an improvement in the design of the hospitals could be made and I have sent all those to the Surgeon General, who submitted them to this advisory council, and perhaps some changes have been made.

The question as to whether they were completed rapidly or not is a question as to which two answers have to be given. In the first place, some of them, apparently the contractor, took the theory that it was better to have 85 per cent of his entire program 100 per cent done than to have 85 per cent of it done and 15 per cent still to be done, so that in some of them there was uniform progress made of barracks, storehouses, and hospitals, and in others they finished first the one before they began the other.

Senator FRELINGHUYSEN. There are no barracks at the National Guard camps.

Secretary BAKER. There are no barracks at the National Guard camps. They were pressed forward as rapidly as possible, in my judgment.

Senator FRELINGHUYSEN. Do you think it was a mistake not to have built barracks at the National Guard camps?

Secretary BAKER. I think not, Senator. The medical men told me that it would be better to have all the men in camps rather than in cantonments.

Senator WADSWORTH. Secretary Baker, are you continuing the building of new hospitals?

Secretary BAKER. I can not answer that we are building new hospitals. The original bed capacity provided for each of the camps was deemed adequate. Some additions are being made.

Senator WADSWORTH. I do not mean necessarily at the camps alone, but elsewhere?

Secretary BAKER. I think so, Senator. I have a report here on that subject which probably will answer the question for us.

Senator WADSWORTH. Your answer will be sufficient, Mr. Secretary, if you feel quite sure that more are being built, because I wanted to comment on the design of one of them.

Secretary BAKER. I can not answer that, but I can say this, that every hospital, or addition to a hospital, which the Medical Department, advised by this expert body of civilian physicians, has suggested, has been authorized.

Senator WADSWORTH. Complaint has come to me, Mr. Secretary, about the design of these hospitals, and the complaint has come from very representative men, architects, and physicians, particularly with respect to the design of the hospital at Spartanburg, which I myself have gone through very thoroughly. It consists of 58 separate buildings, and they stand on high brick piers, with floors exposed, the roof is ventilated to the open air, or was when it was designed, and there is no ceiling inside, and for a climate to which the thermometer has gone to 6 below zero. It reminded me of the hospitals in the Panama Canal Zone. The result has been a tremendous expenditure of fuel, great difficulty in keeping the wards warm because the cold wind whistles underneath the floors, and the ventilation has had to be boarded up on the roof and the inside of the buildings ceiled, and hot-air heaters placed in the middle of the floor of each ward, and I was going to express the hope that that type of hospital would not be duplicated.

Secretary BAKER. I can not answer, Senator; I do not know. I only know that that hospital, and every other hospital which has been built, had the approval of this group of experts.

Senator WADSWORTH. That surely shows that they did not know that climate.

Secretary BAKER. I do not think anybody knew the climate of the United States until this year.

Senator MCKELLAR. It has been testified that a number of these hospitals at these cantonments had not been completed a week or 10 days ago. Have they been completed now?

Secretary BAKER. I can not answer that they are entirely completed; for the most part they are.

Senator MCKELLAR. And, then, there was testimony that the sewerage arrangements and the water arrangements have not been completed in many of them.

Secretary BAKER. That is perfectly true. That goes, of course, to the convenience rather than to the safety of the use of the hospital.

Senator MCKELLAR. Do you not think it practically goes to the safety of the patients in the hospital to have water and sewerage?

Secretary BAKER. I think not.

Senator MCKELLAR. Mr. Secretary, could you ascertain and give us facts as to how many of them have been completed, and how many have got sanitary arrangements at this time and water facilities?

Secretary BAKER. Yes; I can get the latter, but I can not tell you how many have been completed in the sense of the last nail struck, because that is the tailing off of a long job, and I do not know when anybody could fix that date.

Senator MCKELLAR. With many hundreds and sometimes many thousands of men sick in these camps and with their parents writing to Senators every day, sometimes dozens of letters coming in complaining, of which I got several this morning, do you not think it would be wise on the part of the department to look into these hospital arrangements where so many of the boys are sick? Do you not think it would be a wise public policy?

Secretary BAKER. So wise that it was done a long time ago and has been constantly continued. I sent Gen. Gorgas in person to inspect every camp in which there was an unusual prevalence of disease, and have instructed him to have his medical representative at each camp make constant reports of each need as it is foreseen or arises, and to have every change made in a hospital that should be made.

Senator MCKELLAR. Which was very, very excellent, and was a very proper thing, and I, for one, commend it most heartily, but the thing we want to know now is, have those recommendations of Gen. Gorgas been actually carried out and whether these men in camp now have sufficient completed hospital facilities, such as sanitary arrangements and water arrangements, because I, for one, believe that there should not be a hospital without sanitary arrangements and water arrangements. I think a hospital without those arrangements is practically no hospital.

Secretary BAKER. Merely a question of substituting hand carried water for automatically supplied water.

Senator MCKELLAR. It seems to me it ought to be easy enough for your department to tell us to what extent those arrangements have been finally completed at each camp.

Secretary BAKER. Perfectly easy, Senator.

Senator MCKELLAR. Will you give it to us?

Secretary BAKER. I will be delighted to do it; I will put in the record as to each camp the present state of completion of each hospital.

Senator MCKELLAR. That is all.

The CHAIRMAN. Mr. Secretary, you have made some changes in the conduct of the Ordnance Department. Will you explain to the committee just what changes have been made?

Secretary BAKER. That deals with the question of the organization, Senator.

The CHAIRMAN. Yes, sir.

Secretary BAKER. I would like to deal with that comprehensively, if Mr. Crowell will get me a supply of blue prints which I have had prepared to bring down here. I think I can supply one to each member of the committee, and I can then discuss it on the basis of that exhibit.

The CHAIRMAN. You may make the statement in any order in which you please, Mr. Secretary, and in such a way as you please, and your general narrative answer will suggest whatever questions the committee wants to ask.

Secretary BAKER. The first chart in this folder is the War Department as it was traditionally, as I found it, unchanged. It shows at the top the Secretary of War with certain assistants, the military bureaus reporting through the Chief of Staff, and the civilian bureaus and personnel bureaus reporting more or less directly to the Secretary of War.

I think anybody looking at the chart will agree that it is an impossible war organization of the War Department, because it confers the organization directly up to the Secretary of War as an individual and imposes upon the Secretary of War an impossible personal task of coordination.

The CHAIRMAN. That is the organization of it up to what date?

Secretary BAKER. That is the organization of it up to, I think probably it would be wise to say, the 1st of January, 1917. Very few changes were made from then until April, but some were made.

As to each of those bureaus, the subdivisions are shown. In the Ordnance Department, for instance, taking it as a type, there is the division of base depots, carriages, gun carriages, motor transportation, and things of that sort; the division of civilian personnel, equipment, finance, gun division, nitrogen fixation, personnel—that is, military personnel—property, small arms, supply, procurement, inspection, requirements and statistics, industrial service, organization and methods, and progress.

That is, in effect, a supply organization. In other words, it is an organization in which special members of the organization are intrusted with the production of special articles, and a man would be at the head of the small-arms division and he would be an expert in small arms, and he would procure, inspect, and distribute small arms, making the small-arms division under such an organization as that a complete entity charged with small arms, and having no relation except as it functioned through the Chief of Ordnance with the question of procurement and inspection in other divisions.

The CHAIRMAN. All of those different branches reported to you through the Chief of Staff?

Secretary BAKER. Through the Chief of Ordnance and the Chief of Staff.

The CHAIRMAN. They have nothing to do with The Adjutant General?

Secretary BAKER. Not on the manufacturing questions, but on the questions of personnel they had to do with The Adjutant General. On the manufacturing and supply questions they dealt throught the Chief of Staff.

Now, the second chart shows the present situation.

The CHAIRMAN. At this date?

Secretary BAKER. At this date only. This limitation must be made on that statement. The Ordnance Department and the Quartermaster General's Department as they are shown here are in process of becoming what they are here shown to be, and have made substantial progress in that process.

The CHAIRMAN. How long has this army been organized on this second chart?

Secretary BAKER. Different parts of it at different times. The Ordnance Department, for instance, has since May been becoming this. The Quartermaster General's Department has since May been becoming this. The immediate coordination of it under the war council—as you notice off to one side the war council dates from its creation about a month ago, but it would be impossible to say just when the general plan was sufficiently coordinated to be described by this chart. It has been a progressive thing and at the present moment is substantially as here shown.

The CHAIRMAN. May I ask you in a general way before you explain this chart whether the establishment of this war council and the functions to be performed by it are not a duplication of the work in the General Staff?

Secretary BAKER. I think not, Senator.

The CHAIRMAN. We may want you to explain that a little later.

Secretary BAKER. I can do it now in a second. The General Staff is for the purpose of studying and advising the Secretary of War through the Chief of the General Staff on technical military questions—strategic and technical. The War Council is for the purpose of coordinating the supply needs of the Army in the field with the War Department.

The CHAIRMAN. Practically, as at present composed, the same gentlemen whose methods of coordination have been under investigation in the committee, compose the War Council, do they not?

Secretary BAKER. Two of them, Gen. Sharpe and Gen. Crozier.

The CHAIRMAN. Yes.

Secretary BAKER. But that is, of course, a minority representation in the War Council. Gen. Weaver is on it, Gen. Crowder is on it, Gen. Pierce is on it, the Chief of Staff is on it, the Secretary of War is on it, the Assistant Secretary of War, and one civilian has already been appointed, Mr. Day.

The CHAIRMAN. May I ask if you will expect any better coordination of the work of the department under these gentlemen, who have had the chance to coordinate, than you have had in the past?

Secretary BAKER. If I get a continuance of work as good as they have done, I shall be very fortunate.

The CHAIRMAN. I do not think the committee would be entirely satisfied.

Senator MCKELLAR. Do you think that applies to the Ordnance Department and the Quartermaster General's Department?

Secretary BAKER. Taking them separately, the Ordnance Department from the first day of April until now has been progressively improving its personnel, its methods and its output. Of the Quartermaster General's Department the same thing can be said.

Senator MCKELLAR. So then you think Gen. Crozier's department and Gen. Sharpe's department are fully up to the standards of what the country ought to expect, and that they ought to be continued in charge of these two departments?

Secretary BAKER. Neither of them is in charge now of the department of which he was in charge during the greater part of this period, but I think when you take the limited assistance which either of those gentlemen had, the necessity he was under of enormously expanding and training his organization, the vast problems submitted to their limited and insufficient personnel, that the progress made by each of them is of a most satisfactory character.

Senator MCKELLAR. Why, Gen. Sharpe had the assistance of the committee of the Council of National Defense on supplies, did he not?

Secretary BAKER. And it was of very great value to him.

Senator MCKELLAR. So you approve entirely of the standards as established by those two departments?

Secretary BAKER. Senator, I do not want to mislead even myself in my answer to that question. I am perfectly free to say that if the 3,000 officers now in the Ordnance Department had been in the Ordnance Department on the first day of April and had known as much then as they now know, they would have been able to do very much more work, very much more rapidly than they were, coming in from civil life and being educated and trained at the time they were working.

The CHAIRMAN. Now, Mr. Secretary, if you will go ahead and explain that chart.

Secretary BAKER. This shows the President as the Commander in Chief, with the Secretary of War as his immediate subordinate; the Chief of Staff and General Staff dealing with strategic and tactical and military questions; the War College Division of the General Staff; then the War Council is shown on the right-hand side as an immediate advisory aid to the Chief of Staff, an assistant dealing with statistics, and then two assistants, one in charge of purchase and supply, dealing with five bureaus of the Ordnance Department which do deal with purchase and supply questions, and another assistant in charge of troops and troop movements.

The CHAIRMAN. Are either of these men to be civilians, or are they Army men?

Secretary BAKER. The assistant on the right-hand side of the chart, as you face it, dealing with troops, is to be a military man. The man in the other place is an assistant to Gen. Pierce, an Army officer who has been on the War Industries Board from its beginning, and who will be assisted by civilian experts.

The CHAIRMAN. Let me say there, Mr. Secretary, I think there is a great deal of testimony here, and I am not sure but that some of it comes from Army men themselves, that while these military men are men of distinguished ability, very many of them are lacking in that business experience which would enable them to organize this great industrial enterprise, and to get the output necessary for the Army and Navy.

Secretary BAKER. I think there is a great deal of justice for that.

The CHAIRMAN. And yet you are practically continuing that same system?

Secretary BAKER. No; I am not, Senator, if I understand it correctly. I understand that your statement is that many of the military men are lacking in that sort of business training and experience and judgment. I think that is perfectly true. Unhappily, it may be true of business men as well, but what I am trying to do is to select military men who have business judgment for association with civilians brought in from the outside who are experts, so that the supply divisions will be conducted on the highest industrial and business basis.

The CHAIRMAN. That is the proposition involved in the assistant purchaser of supplies.

Secretary BAKER. That will be Col. Pierce, a man, I think, who must be known to you all; he has appeared before your committee a great many times, a man that has always had charge of the correlation of estimates and the general supervision of estimates and supplies in the department.

Senator WADSWORTH. What is his rank to be?

Secretary BAKER. He is a colonel of the Regular Army and his nomination, I think, is pending before the Senate for brigadier general of the National Army.

Senator WADSWORTH. The Chief of Ordnance has the rank of major general, has he not?

Secretary BAKER. Yes. The Acting Chief has the rank of brigadier general.

Senator WADSWORTH. The Chief of Ordnance, of the rank of major general, reports through the brigadier general?

Secretary BAKER. The Chief of Ordnance is at present a member of the war council. Administrative control of the Ordnance Bureau is being performed by Gen. Wheeler, who is a brigadier general of the National Army and a colonel of the Regular Army.

It is not a question of reporting through so much, as it is a question of correlating needs. If I may explain what I mean by that, it is this: The Surgeon General, Chief Signal Officer, Chief of Engineers, the Chief of Ordnance, and the Quartermaster General are all purchase and supply departments. In order to prevent conflict of need and conflict of order in the department itself, the needs of their respective departments are brought to the division of purchase and supply, which is a centralized agency to correlate and to settle priorities and clearance in the War Department.

Senator WEEKS. Will the Surgeon General continue to purchase under this plan?

Secretary BAKER. Yes.

Senator WEEKS. He will purchase for his department?

Secretary BAKER. He will purchase for his department.

Senator WADSWORTH. And the Chief Signal Officer?

Secretary BAKER. The Chief Signal Officer in the same way.

Senator WADSWORTH. And the Chief of Engineers—all of them?

Secretary BAKER. Yes.

Senator WADSWORTH. Then, you still have five purchasing agents.

Secretary BAKER. Correlated, however, in the purchase and supply department. I do not see any inconvenience in that.

Senator WADSWORTH. Who is going to be the chief who will give the decision in this matter of coordinating the purchases?

Secretary BAKER. It will be coordinated in the purchase and supply department, which will have Col. Pierce, or Gen. Pierce, as the case may be, with civilian experts associated with him, to advise and aid him, and the correlation of those five purchasing departments will be through that agency.

Senator WADSWORTH. Mr. Secretary, will the brigadier general, in that position of assistant purchase and supply, have the final decision over the recommendation made by five major generals under him?

Secretary BAKER. It may be, but that is not at all unprecedented.

Senator WADSWORTH. Is it wise?

Secretary BAKER. I think so. All the bureau chiefs, until within six months, were brigadier generals except the Surgeon General and the Quartermaster General.

Senator WADSWORTH. They reported to a superior officer?

Secretary BAKER. They reported to the Chief of Staff.

Senator WADSWORTH. And to the superior officer to brigadier general?

Secretary BAKER. Yes. These report to Chief of Staff, all of them.

Senator WADSWORTH. Well, Mr. Secretary, they report to the brigadier general, one grade below them.

Secretary BAKER. Yes.

Senator WADSWORTH. And he is supposed to rearrange the differences and consolidate and coordinate their recommendations, and necessarily he must have something of a veto power over their recommendations in making a recommendation in turn to the Chief of Staff?

Secretary BAKER. Senator, it never had occurred to me before that there was the slightest difficulty about that, but it is so corrigible that it need not take up our time. We can make Col. Pierce a major general and be done with it.

The CHAIRMAN. Mr. Secretary, what economic or military reason is there for practically eliminating the Quartermaster General and the Chief of Ordnance? Why did you practically eliminate those generals from the headship of their several departments, placing them in a position which, it seems to me, is one of inocuous desuetude, and yet put a subordinate in their places?

Secretary BAKER. There would be no reason for it if that was what I was doing.

The CHAIRMAN. But that is what is done.

Secretary BAKER. No; it is not what was done.

The CHAIRMAN. You put Gen. Crozier into the war council. You have put Gen. Weaver into that council. You have put Gen. Sharpe into that council, and the Ordnance Department and the Coast Artillery Department and the Quartermaster General's Department are in the hands of acting officers.

Secretary BAKER. Yes.

The CHAIRMAN. Why is that?

Secretary BAKER. For this reason, Senator: The War Department operations have now enormously expanded. The detail of those bureaus is very great. Gen. Crozier—and I will take him as a type—is a man of most brilliant mind. He has had long experience in the study and observation of ordnance. I do not want Gen. Crozier's time taken up with administrative detail. I think the Government would be vastly better off with what Gen. Crozier can give us if half of his time was spent out of the War Department walking around.

The CHAIRMAN. Then he is still Chief of Ordnance?

Secretary BAKER. Technically so, but freed from all administrative control of the actual operations of the bureau, and put upon a council where his ripest counsel and best thought can be brought to the service of the Government.

The CHAIRMAN. It may be a wise policy.

Senator HITCHCOCK. Gen. Crozier, when he was here, tried to enlighten the committee as to the method of procedure when he decided to adopt the modified Enfield rifle, and the Ordnance Department first provided that 7 parts should be made interchangeable; later they revised it and made 44 parts interchangeable; later they revised it again and made 51 parts interchangeable, and, as I recall it, he told us that each one of these decisions of his had to go to the War College and be examined, and then after they had studied over them for some time, and possibly consulted with him, they referred it, as I recall it, to the General Staff, and they considered it for a while, and then it went to the Chief of Staff, and finally got your approval. Now, is that process just as long under this system that you have devised?

Secretary BAKER. There must be some misapprehension of Gen. Crozier's testimony. That never happened.

Senator HITCHCOCK. Possibly I misunderstood it. Tell us what was done.

Secretary BAKER. It is an inescapable necessity that the man who manufactures the articles must be correlated with the man who is going to use them. The constant argument as between the Army in the field and the supply bureau is between the man who uses and the man who makes. Therefore, it is always necessary with regard to any article of equipment not to have it considered solely from the point of view of economic production or ease of manufacture, or its looks, but to have it actually tried on the man who is going to use it, so that some arrangement must be made to bring the manufacturer and the user together. That coordination is through the Chief of the General Staff. So, when Gen. Crozier was considering the modification of the Enfield rifle, he undoubtedly referred the adoption of that weapon to the Chief of Staff, so that its availability as a weapon in the hand of the user could be considered. The Chief of Staff is free to and may have consulted the War College Division, or the General Staff made up of officers o. the line; that is, men who have been in contact with troops, men who have had experience in the use of articles. He may have referred it to them for their opinion as to whether the Enfield rifle was a good rifle to carry, whether it was properly balanced, whether its bayonet went on properly, whether its lock worked as men were accustomed to work locks on rifles in use. That question may have been considered through the Chief of the General Staff, and he could take that advice if he saw fit, but no necessity for that occurred unless the Chief of Staff, in order to coordinate the user and the maker, felt that it was wise to consult the user for his own information.

The CHAIRMAN. Mr. Secretary, what is the essential difference between the plat on page 1 as to the former organization of the Army and that on page 2 which you say is at present in force?

Secretary BAKER. It represents rather better if instead of attempting to compare those two you follow on to chart 3, which takes up the ordnance organization alone.

The CHAIRMAN. Taking the bureau separately?

Secretary BAKER. Yes; taking the Ordnance Bureau separately for a moment. When I first showed you the organization of the War Department I characterized it as an organization built on objects or subdivisions according to special devices. This organization which is now in operation in the Ordnance Department is the functional organization, and it no longer divides into the small-arms division and into the gun division and the equipment division, and that sort of thing, but it now divides according to the function of procurement, production, inspection, and supply.

The CHAIRMAN. May I ask you to state in a general way by whom this present organization was worked out?

Secretary BAKER. Gen. Wheeler.

The CHAIRMAN. For the Ordnance Department?

Secretary BAKER. Yes.

The CHAIRMAN. Assisted by Gen. Crozier?

Secretary BAKER. Directed by Gen. Crozier to do it; but, so far as I know, not assisted; but he may have been.

The CHAIRMAN. Were you going to explain its function?

Secretary BAKER. Yes; I was.

Senator MCKELLAR. Mr. Secretary, before you do that, would you mind explaining why Gen. Crozier was removed by you as Chief of the Ordnance Department and placed in on this department?

Secretary BAKER. I have just explained that.

Senator MCKELLAR. I was out of the room. I am sorry I missed it. I will read it, though, in your testimony.

Secretary BAKER. Here we have an organization which heads up to the office of Chief of Ordnance and is composed of three main bureaus: A general administrative bureau, which has to deal with the management of arsenals, finance, property, legal matters, personnel, and confidential information; an engineering department, dealing with design, experiment, invention, test, specifications, determination of types and construction; and a control bureau, dealing with estimates and schedule of requirements, industrial relations, methods of organization, production, research, and information.

Those are the three main divisions in the office of the Chief of Ordnance. The operating divisions are now no longer, as they were before, a specialist for small arms, a specialist for guns, a specialist for gun carriages, a specialist for equipment, but a procurement division, which places all orders and contracts with private manufacturers and arsenals.

Then the production division which follows up supervises and regulates production, and deals with products and all production matters excepting those relating to price or quality.

Third, an inspection division which inspects all ordnance stores, handles all questions relating to quality, supervision of production with respect to quality and, fourth, the supply division, which receives and distributes all stores.

The effect of that is this: When a program is made up for the production of arms, that is to say, a million rifles, to take a perfectly simple illustration, it is turned over to the procurement division and they place the contract for a million rifles, having placed at its disposal the designs made by the engineering bureau immediately under the chief, it makes the contract and turns over the contract to the production division. The production division then follows up and sees that the raw material supplies are adequate, sees that proper arrangements are made with the manufacturer, and that they are followed up from day to day, somebody in the factory to see how they are actually keeping up with their schedule.

The inspection division at the same time is notified and goes on with its inspections.

Prior to this organization, if we had in Pittsburgh, for instance, small arms being manufactured, small arms ammunition being manufactured, and perhaps heavy arms ammunition being manufactured, we had inspectors from three different divisions there following up three different things.

Now, we will have in the large centers of war department manufacture an inspection branch of the general inspection office, and one or more inspectors will be able to follow through all the things with which they are familiar, thus making a great economy in the inspection force. Then, when the inspection division and the procurement division have driven the contract through to actual production, the supply is turned over to the supply division which is notified in advance of the dates of deliveries, provides storage and warehouse facilities, and out of the warehouses and stores, or from the factories, directs the distribution to the actual user.

The CHAIRMAN. Mr. Secretary, when did this evolution, or this change in the Ordnance Department, begin to be conceived? Was it since you went in or did Mr. Garrison suggest or recommend some reorganization of the War Department?

Secretary BAKER. I can not answer that, sir; I never saw any such recommendation. He may have done it.

The CHAIRMAN. I do not know anything about it. Somebody asked me. This change has been going on how long?

Secretary BAKER. The first branch in this change took place in April by the creation of the supply division, which is one of the divisions in this organization. Gen. Crozier asked Gen. Wheeler—Col. Wheeler, as he was then—to take charge of the

supply department and to organize it along modern lines. He began by bringing in from civil life a lot of civilians who were associated with very large industrial companies that had the question of storage and supply, and the first completely organized division in the Ordnance Department was the Supply Division under Col. Wheeler. As soon as that was completed Gen. Crozier asked him to extend that reorganization through the rest of the department. His direction to start it was as early as May, and he was at work on this design from May until it was finally completed.

The CHAIRMAN. Has it been in vogue in the procurement of supplies for the Army that was raised since April?

Secretary BAKER. Not all of it. The Supply Division has been in vogue, I should say, since July in its present highly organized condition, and it is an organization which I am sure the members of the committee would like to see if some opportunity arose for you to see the Supply Division. You go into a room filled with charts, with mechanical devices for exhibiting the source of supply, and the process of distribution, the dates on them being kept up hourly by corrections, so that every article of supply as to its exact quantity on hand, its distribution, the need for it somewhere else, is all shown graphically on these charts.

The CHAIRMAN. The next chart shows proposed reorganization of the Quartermaster's Department.

Secretary BAKER. The next chart shows the reorganization of the Quartermaster's Department.

The CHAIRMAN. Who worked that out?

Secretary BAKER. That was worked out by Gen. Goethals.

The CHAIRMAN. It is not yet in operation?

Secretary BAKER. Not fully. Some parts of it are. I said by Gen. Goethals, and yet it is necessary to say that some parts of it are actually in operation and are the result of reorganization under Gen. Sharpe.

The CHAIRMAN. Why was it found necessary to make any changes in the organization you had?

Secretary BAKER. For two reasons—first, the organization as we originally had it was for a very much smaller volume of business. Individuals could spread their effort over very much wider ranges, relatively, than they could when the thing came on such a mammoth scale, but it could not have been done earlier in many instances because the men in the several departments were not yet trained for their tasks adequately to undertake a new function.

The CHAIRMAN. It was found necessary to coordinate the work of each of these departments?

Secretary BAKER. Yes, sir.

The CHAIRMAN. To handle the immense amount of business that they had?

Secretary BAKER. Well, that, and also a change in function, Senator. For instance, before the war began, before we got into the war, each of the divisions of the War Department had its own storage facilities. There was no special problem of transportation. But now we have come to a time when the question of storage and transportation is almost the controlling question in our operations, and it is on such a large scale that it reaches all over the United States and deals with facilities that hitherto have been devoted to private business.

The CHAIRMAN. Where is the connecting link, transportation facilities between the Ordnance Department and the Quartermaster General's Department, and these other bureaus?

Secretary BAKER. That appears on page 2. Gen. Goethals, in addition to being the Acting Quartermaster General, is the Chief of Storage and Transportation. That appears down at the bottom of the page.

The CHAIRMAN. Yes. He occupies that position, too?

Secretary BAKER. He occupies that position, and you observe from the chart that each of the supply divisions, and in certain aspects the Adjutant General's division dealing with transportation, all center about the Chief of Storage and Transportation, so that Gen. Goethals now is superimposed in this function upon all the coordinated divisions of the department.

The CHAIRMAN. It is proposed to organize that with civilian forces?

Secretary BAKER. Yes. There has been already assigned as the head of that bureau, immediately under Gen. Goethals, a vice president of one of the western railroads, assigned by the Secretary of the Treasury.

The CHAIRMAN. The office of the Quartermaster is disclosed on that map. You have divided that up into subheads?

Secretary BAKER. Yes, sir. By the way, I should have said on the Ordnance Department that it is the intention in the purely civilian occupations, like procurement and production, to head those subdivisions in this functional organization with civilian experts.

Now, in the Quartermaster General's Department the same thing is true. In traffic and storage it is not unlikely that a railroad executive will be immediately under Gen. Goethals. In the remounts I think entirely likely a military man will be. In the supplies, a civilian. In the cantonments, I think probably that organization has not yet been reorganized. I do not know that it needs it. Gen. Goethals will give that his attention as soon as he can. In reclamation there is a division started by Gen. Sharpe and is pretty well organized now. Experts in the reclamation of waste products were brought in from civil life and organized a bureau for the salvage and repair of articles otherwise wasted. That division is already organized. The priority division, of course, will consists of delegates from the other divisions so that they can coordinate their needs by consultation, and the administration will be a mixture of civilians and military men.

The CHAIRMAN. You think that when it is put into force that will more nearly coordinate the force of that department than they have been?

Secretary BAKER. Very much more.

Senator WADSWORTH. Mr. Secretary, the line underneath all this organization, or supporting all this organization, there must be vast industrial effort?

Secretary BAKER. Yes, sir.

Senator WADSWORTH. There will be thousands of factories, and I think it is safe to say hundreds of thousands of men and women, if the war goes on two or three years. The Government may find itself compelled to build towns for the housing of workmen, which has already become a very serious question; to have to go into the coal mines, in the steel mills, control somewhat if not entirely the iron-ore production; in fact, the industries of the whole country, if this war proceeds for two or three years longer, will have to be mobilized and organized on a vast scale, an industrial problem, pure and simple. Who, in this organization, as here depicted, will be the driving power to supervise that?

Secretary BAKER. Nobody in what you have seen, Senator. Thus far we have dealt solely with the coordination of the War Department to present its needs to the central supervising and advising body. The next chart will answer your question, I think.

Senator WADSWORTH. You refer to the War Industries Board?

Secretary BAKER. The one in which the War Industries Board figures, but this chart is not solely devoted to that subject.

The CHAIRMAN. Who worked that out?

Secretary BAKER. It was worked out by Mr. Willis, the president of the War Industries Board, in conference, however, so far as the War Department is concerned, with Gen. Wheeler, Gen. Gorgas, and some conferences with a good many civilian experts, organization experts.

Senator WADSWORTH. Mr. Secretary, who in that last chart to which you referred will have the supreme power, under the President, of course?

Secretary BAKER. Supreme over what, Senator?

Senator WADSWORTH. Over the industrial organization necessary for the supply of the Army?

Secretary BAKER. No one person will have the supreme power over the entire industry of the United States.

Senator WADSWORTH. Will any one board or bureau have the supreme power?

Secretary BAKER. I do not like to hesitate over a term. If you mean will any board or bureau under this chart have supreme power over the entire industry of the United States, I must say no.

Senator WADSWORTH. I mean for the supply of the Army, Mr. Secretary. Of course that will be enormous as it goes on.

Secretary BAKER. If you will let me follow through the operations of the Army on this chart, I think I will give you as much of an answer as the chart will give to your question.

This chart shows the four agencies of a public character needing to deal with industry so far as the War Department is concerned, and which is named first here. It consists of five supply departments, coordinated as I have indicated to you on the other chart through the supply and control section. They present a solid front, and the War Department's needs are thus brought to a single person as the person to express them. In the Navy Department the same thing is true. The Bureau of Supplies and Accounts is already that thing for the Navy. Admiral McGowan is the head to whom all those things come, so that the Navy Department speaks through a single representative. The Shipping Board, while a very large consumer of supplies through the Emergency Fleet Corporation, speaks of course through the president of the Shipping Board, and the allied purchases in this country, which are vast in volume, and must be taken cognizance of in dealing with the industries of

the country, consist of the three persons designated by the allies to do their purchasing in this country, Judge Lovett, Mr. Baruch, and Mr. Brookings, and they constitute a single element. So, we have four agencies dealing with questions of industry and commerce, questions of supply whose needs must be correlated and satisfied.

On the other side of this chart you have the kind of things with which they must deal. Mines, factories, blast furnaces, foundries, forges, machine shops. They are simply illustrative. They are not, of course, intended to be an exclusive classification. The last one, for instance, is converted establishments. That deals with the whole question of those industrial establishments which can be diverted from one form of manufacture to another. That is illustrative of the kind of agencies with which the first group must deal in order to satisfy their needs.

Immediately after the first group you find another illustrative column, purchases requiring to be cleared. In the markets in the United States at present there are many articles for which the supply is greater than the demand. There are many articles as to which the supply is substantially equal to the demand. There are many articles in which the supply is inadequate to the demand. The latter list is a growing list.

The articles that are stated here, for instance, oil, chemicals, acids—I take them haphazardly—forgings, machine tools, are articles which, when we have searched the market, have been found to be inadequate in their supply to the aggregated demand of the four purchase agencies representing the public and the allies.

Therefore, it is necessary to have some agency to which these four can go with regard to articles which belong in these restricted or insufficient classes in order to have three things done: To have clearance of their respective needs, priority in the order of satisfying their respective needs, and, third, an increase in facilities.

Therefore, if we will follow this chart through, you will find that it works like this: Suppose that the Ordnance Department decides that it needs 1,000,000 rifles. Now, the production of 1,000,000 rifles means supplies of raw material—steel. It means supplies of labor, expert labor. It means factory facilities of a particular kind. The Ordnance Department expresses that need through the central supply agency shown on the other chart, and the representative of that body appears before the clearance committee shown immediately under the administrative section of the Council of National Defense. That committee meets daily. When the representative of the War Department gets there he will find, perhaps, that the Navy needs 250,000 rifles, or needs something that will require steel, or needs something which requires the same sort of labor or manufacturing facility. Correlation takes place in the clearance committee. They say to the Ordnance Department, "There are certain factories which are available to make rifles; you can place your contract there"; and to the Navy Department, "Your needs can be supplied in some other place."

Senator HITCHCOCK. Who says that, Mr. Secretary?

Secretary BAKER. The clearance committee.

Senator WADSWORTH. With what authority?

Secretary BAKER. They say it with authority.

Senator HITCHCOCK. Authority of the War Board?

Secretary BAKER. Yes.

Senator WADSWORTH. Authority of law?

Secretary BAKER. Not authority of law, but authority of common consent under the direction of the Supreme Commander.

Senator HITCHCOCK. This clearance committee is a committee within the War Industries Board?

Secretary BAKER. Yes.

Senator HITCHCOCK. And the representative of the Ordnance Department, after it has been decided that they must have those things, goes to the clearance committee?

Secretary BAKER. Goes to the clearance committee and correlates there his need with any conflicting need.

Senator MCKELLAR. Is that a volunteer committee?

Secretary BAKER. My recollection is that it is a volunteer committee.

Senator HITCHCOCK. Then that committee directs the Ordnance Department where to go to make the contract?

Secretary BAKER. Yes, sir; then the contract goes back to the Ordnance Department and is made there.

Senator MCKELLAR. And then the Ordnance Department acts without any further conference with the Secretary of War or anybody else?

Secretary BAKER. Yes; it all acts under the direction of the Secretary of War.

Senator HITCHCOCK. I wanted to get a little further information with regard to this process that you described so interestingly. For instance, in June, 1917, as I understand it, you adopted an artillery program. Supposing Gen. Pershing wrote advising you that he wanted 1,000 heavy guns as soon as possible. What would you do with such a request? Say he wanted a 9-inch gun, a thousand of them, what would you do?

Secretary BAKER. The minute that information came to me in a cablegram from Gen. Pershing, that cablegram would be sent to the War Industries Board.

Senator HITCHCOCK. To the War Industries Board?

Secretary BAKER. To the War Industries Board and to the Ordnance Department. I am assuming now that the program is agreed to and that Gen. Pershing's request in that respect is one which can be satisfied. As soon as I have decided it—and we must assume an affirmative decision to get anywhere—I send notice to the War Industries Board that a requirement of the War Department is going to be 1,000 9-inch guns. They immediately look to the industries over here and they begin to inquire. They have a card catalogue and a complex index that they keep up to date on the unused or convertible manufacturing facilities of the country. They supplement their information; they find out all they can about it.

In the meantime I have at the same time sent that cablegram to the Ordnance Department. The Chief of Ordnance puts it at once into the hands of his engineering section, assuming that any designs have to be drawn, but if an established design is to be used, if it is simply multiplication of an existing weapon, he sends it to the procurement section. The procurement section notifies the supply section that he needs the guns and that is correlated in the clearance committee, which has gotten word in advance, as far as we knew it, that the needs were to be anticipated, and when the War Department again goes to the clearance committee they say, "You need 1,000 guns. The available raw material in the country is insufficient. We have decided to convert, or recommend conversion of, A establishment and B establishment and C establishment to the making of forgings. We recommend that you take those and that you make your contracts with them for the forgings, and with E, F, and G for the completion of your manufactured product." Then the Ordnance Department knows where the raw material is to come from; it knows where the establishments are which could be readily converted to its manufacture, and the procurement division proceeds to make its contracts.
